APPENDIX G.

AFFIDAVITS PRODUCED IN SUPPORT OF THE CASE OF HER MAJESTY'S GOVERNMENT.

No. 1.

DOMINION OF CANADA,

Province of Prince Edward Island, Queens County, to wit:

I, ALEXANDER M. MCNEILL, of Cavendish, in Prince Edward Island, farmer and fisherman, a justice of the peace for Queens County, Prince Edward Island, make oath and say :

1. That I have been actively engaged in the fisheries off my farm at Cavendish since the year 1851, and have personally carried on the fishing.

2. I have had three boats engaged fishing every season, employing seven hands besides myself, and at the same time cultivating my farm.

3. The first few years my catch was not very good, owing greatly to the presence in such great numbers of the American fleet.

4. The numbers of this fleet throughout the gulf—I don't know but I have counted from my own shore over one hundred sail of American fishing-vessels, and that within three miles of the shore.

5. I attribute the poor boat-fishing of years gone by, during the Reciprocity Treaty, to the presence of the American fishing fleet.

6. Their custom was, to the number of from sixty to one hundred sail, to harbor in Malpeque, and then start out in the morning for the fishing grounds. If they saw a small boat taking mackerel, they would steer straight for them, going to windward and drift down, throwing bait, and either take the fish away or injure the boats: This was common for years, and very largely and materially prejudiced the boat-fishing.

7. During the past four or five years we have not been much annoyed with them. The British and Canadian cruisers had something to do with keeping them in order, and during the last two years only a small fleet has frequented the gulf.

8. The consequence has been that the catch by the boats has been very largely increased, and also the number of fishing-boats, which has more than doubled during the past four years. Many new boats are being built, and my opinion is that their number will increase every year.

9. During the past nine years my catch would average about one hundred barrels each season; but I do not make a business of fishing. In fact, I only prosecute it about two months in the season, combining fishing and farming.

10. I would think the number of fishing-boats at Rustico harbors would number about one hundred and fifty.

11. My twenty years' experience has proved to me that the best mackerel-fishing around our coasts is about a mile from the shore, in from seven to ten fathoms of water.

12. All the fish caught by the boats are taken within a mile of the coast, many of them within half a mile, during the months of July and

August; but during the months of September and October the boats take their catch further out, say two miles or two and a half. It is a very rare occasion that they go out three miles, or beyond it.

13. Of the total catch in the boats, over nine-tenths are caught well within the three-mile limit.

14. The American fishing-fleet have always fished on the same ground as the boats. They go in as close and closer to our coast than half a mile, commence throwing over bait, and drift off, taking fish with them off the shore, and when they lose the fish tack for the land again and renew operations. I can't say the proportion of their catch taken within the limit, because they sometimes make a good catch outside in deep-sea waters. The fleet have always fished within the three miles before the abolition of the Reciprocity Treaty and afterwards. They never gave up. The cruisers frightened them a little, but as soon as they were past, the fishing-vessels went right to work again and fished as before.

15. I prosecute the herring-fishing in the spring for bait, and get enough for that purpose, and to a small extent the cod-fishing, but my previous statements have entire reference to the mackerel fishery. The herring are all taken close to the shore.

ALEX. M. MCNEILL.

Sworn to at Charlottetown, in Queens County, Prince Edward Island, this 18th day of June, A. D. 1877, before me.

E. JAMES SALMER,

*Commissioner for taking Affidavits in the Supreme Court,
and Notary Public for Prince Edward Island.*

No. 2.

DOMINION OF CANADA,

Province of Prince Edward Island, Queens County, to wit:

I, HUGH JOHN MONTGOMERY, of New London, in Prince Edward Island, merchant, make oath and say:

1. That I am aged thirty-six, and have resided all my life, excepting the last four or five years, on the north shore of this island, and have prosecuted the fishing business both in boats and schooners, and profess to have a good knowledge of the business, having been mixed up in it all my life.

That during the past four or five years I have resided at Clifton, about four miles from the sea-shore, and have traded a good deal with the fishermen, and acquired, from actual experience, and from a prolonged and constant intercourse with the fishermen, a thorough knowledge of the different branches of fishing, as carried on along the shores and coasts of this island.

That one season I commanded a schooner of my own, and fished in her along the north side of this island, and up the Bay Chaleur. That during the last few years the increase in the boat-fishing around this island has been enormous, between fifty and sixty boats fishing out of the New London Harbor, and from one hundred and fifty to two hundred out of Rustico Harbor, while other harbors with which I am not so minutely acquainted, such as Malpeque, Cascumpec, Tignish, Nail Pond, Mimenegash, Egmont Bay, Murray Harbor, Souris, Tracadie, and Saint Peters, send out, every season, very large numbers of well-equipped fishing boats.

That during the past winter still larger preparations were made for the coming season, and I fully believe the number of boats fishing around the coasts of this island will be, this year, largely in excess of

previous years. That the increase in the number of fishing-boats does not seem in the slightest to lessen the number of fish; on the contrary, from the increased quantity of bait used, the effect is rather to keep the fish within the fishing limits where the boats fish.

That from my experience I would be prepared to swear that at least three-fourths of the total quantity of mackerel caught in the schooners are taken within the three-mile limit, while of the boats I believe almost the entire catch is taken within such limit.

That for the past two years the American fishing fleet in the gulf has been small, while for many years previously it would average six hundred sail.

That the presence of the fleet along the shores injured the boat-fishing because of the mode of fishing, which was, with the wind off shore, to approach the shore as closely as possible and commence fishing, keeping constantly throwing bait and drifting to sea, taking the mackerel off the shore with them and away from the boats.

That, as a general rule, my experience has led me to conclude that the American fishing-vessels usually secured two fares during the season in the gulf, and in some cases as many as three fares would be secured.

The vessels ranged, as a rule, from sixty to seventy tons, and a single fare would be in the neighborhood of six hundred or seven hundred barrels.

That in the spring of the year large quantities of herring are taken around our shores, which are used chiefly for mackerel bait.

That during the season I myself commanded my little schooner, whose tonnage amounted to twenty-seven tons, my catch was 190 barrels of mackerel only, but this I accounted for because I only fished two months out of the season, the vessel being engaged during the rest of the season in the carrying trade; and during the same season my catch of codfish was one hundred and seventy-five quintals of codfish, and three hundred and fifty barrels of herring.

HUGH J. MONTGOMERY.

Sworn to at Charlottetown, in Queens County, this 18th day of June, A. D. 1877, before me, the erasures opposite my initials being first made.

M. McLEOD,

*Commissioner for taking Affidavits in the Supreme Court
of P. E. Island.*

No. 3.

DOMINION OF CANADA,

Province of Prince Edward Island, Prince County, to wit:

I, JOHN D. WHITE, of Alberton, in Prince County, in Prince Edward Island, cooper and trader, make oath and say:

1. That I have now resided twenty-five years on Prince Edward Island, during twenty-three years of which I have been engaged in the fishing business.

2. Before coming to Prince Edward Island, namely, in the years forty-one and forty-two, I fished off the American coast. The result of the first year's catch was one hundred and sixty barrels, and of the second, seventy-three barrels. Both catches were all made nearly thirty miles from land. No mackerel were then taken by the American fleet off the coast of the United States excepting a long distance from land; none were taken within three miles of the coast.

3. In the year 1852 I came to Prince Edward Island, and in the year 1854 settled at Tignish and engaged in the business of coopering and

fishing. I kept a fishing-stage and employed a number of boats and men, and have continued steadily in the business ever since.

4. In 1860 I removed my business to Alberton, and I am now largely engaged in the business, employing one schooner, ten boats, and fifty-six men.

5. The increase in the boat-fishing has been large of late years. The numbers and the catch of the boats have more than trebled since 1854.

6. From Hardy's Channel to Kildare Cape, a distance of about thirty miles, there are seven fishing-stages, and in the harbor of Cascumpec alone there are thirty-nine large fishing-boats, the average cost of which is about three hundred dollars.

7. All the mackerel taken in and around this part of the coast, for many miles, are taken at a distance between one-quarter of a mile and two miles from the shore. A few may be taken outside of two miles from the shore, but none are taken outside of three miles.

8. The average catch of the boats for a period of twenty years has been from seventy to eighty barrels of mackerel each every season.

9. The American fleet have largely frequented this coast. I would say that from 1854 to 1874 the average number of the mackerel fleet of American vessels frequenting the Gulf of St. Lawrence ranged between four hundred and four hundred and fifty per season.

10. A large portion of this fleet frequent the shores around Cascumpec and take their catches there. They catch their fish close to the shore, about the same distance as the boats, that is between one-quarter and two miles from the shore. A very small proportion of the catch of the American fleet is taken outside of the three miles. The practice of the fleet is to run in close to the shore, throw out bait and drift off, some times taking the schools of fish with them.

11. The boats fishermen dislike the presence of the American fleet very much. It interferes sadly with the catch of the boats. The Americans dress their fish on the deck and throw the offal overboard, and this offal destroys the fishing-grounds.

12. In my opinion, nine-tenths of the fish taken by the American fishermen are taken within the three miles from shore, and I am quite sure if they were excluded from these limits they would have to abandon the fisheries in the gulf altogether. It would be useless and senseless for them to prosecute the business.

13. If American fishermen were excluded from our waters I would not care for the duty of two dollars per barrel levied in the United States. The demand for mackerel is well known, the quantity required is known, and we would have the business to a large extent in our own hands if the Americans were excluded from our shores. If they increased the duty the consumers would still, in my opinion, have to pay the increase.

14. The privilege of landing to get supplies and transship is a very valuable one. The mackerel season is very short, and this privilege is equal to an extra trip and is so looked upon by the Americans.

15. The new mode of fishing with purse-seines has a very bad effect on the fishery. It not only entirely disturbs and scares away the fish, but a very large number of small mackerel and other kinds of fish are taken and destroyed, thrown away dead, and the waters thus polluted.

JOHN D. WHITE.

Sworn to this third day of August, A. D. 1877, before me.

STANISLAUS F. PERY,

J. P. for Prince County, Prince Edward Island.

No. 4.

I, SYLVAN F. ARSINEAUX, of Tignish, in Prince County, Prince Edward Island, inspector of fish, make oath and say :

1. I have had charge of a fishing-stage for the last twenty years on this shore. I used, during that time, to be myself actually engaged in fishing, always in boats. I am now fish inspector for this county.

2. There are over two hundred and thirty boats engaged in the fisheries between Minnigah and Kildare; I know this from my own actual experience. The average catch of mackerel would be about forty-five barrels for each boat; for codfish and hake, the average for all the boats would be about forty quintals each. The average catch of herring for all boats would be about twenty barrels; the fishermen only try to get enough herring for mackerel bait and for home use.

3. The boats have trebled in number in the last ten years, and they are three times better boats; they are larger, better sailers, better rigged and fitted out. There is a large amount more money invested in the boat business than there was ten years ago. The business has enormously increased.

4. The boats carry, on an average, crews of four men each.

5. I would account for the increase in the number of boats, and the increased attention given to the business, by referring to the increase of population. There are greater numbers of fishermen springing up all the time; they are more enterprising, and they find the business pays. The boat-fishing also affords employment to numbers of men.

6. With some few exceptions, the boats get their fish close to the shore. The best fishing-ground is looked upon as inside of three miles of the shore.

7. For the last ten years the American fleet-fishing off the coast has averaged, I should say, about five hundred sail. When the cutters are not here, the Americans must catch three-quarters of their fish inshore. When the cutters were here they also caught more fish within three miles of the shore than outside, but not so much as when the cutters were away. They used to dodge the cutters and get inshore. There were not enough cutters to keep them off altogether. The Americans were frightened off a good deal by the cutters. If the Americans were prevented from fishing within three miles of the shore, it would not be worth their while to fit out for the gulf fishery. It would not pay them.

8. When the Americans come down they do a great deal of harm to the boats, as they throw a great deal of bait and draw the fish out. They come inshore, throw out bait, and draw the mackerel out after them. This leaves our boats without fish and destroys their chance of a catch. They have better bait than we have, and are enabled to do this damage.

9. Our fishermen look upon the coming of the Americans as an injury to the boat and island fishermen; the vessels draw away the fish. The fleet, in fact, puts an end to the good fishing, and are the cause of great loss to us.

10. The Americans, when they see boats getting fish, come up and "lee bow" them, thus depriving the boats of the fish. "Lee-bowing" is getting to windward of the tide or current and throwing out bait and drawing off the fish. The American schooners also frequently drift down upon our boats, when the latter have to get out of the way. The boats are often injured by the vessels drifting down on them.

11. It would certainly be an advantage to the Americans to be able

to transship their fish here. They would thus be able to fit out again for fishing and go back to the grounds without losing much time ; whereas, if they had to go home with their loads they would lose from three to four weeks right in the middle of the fishing season. It would be also a great advantage as enabling them to watch the fluctuations of the mackerel market, which is very variable.

12. The mackerel season here lasts from about the end of June till the middle of October. The Americans get here about the end of June. Some of them are off here now.

13. The mackerel I believe come down from the direction of the Magdalen Islands, or from the southward and eastward, and work northward and westward till some time in August, and then work back, and they strike this island both ways. The Americans follow the course of the fish.

S. F. ARSINEAUX.

Sworn to at Tignish, in Prince County, Prince Edward Island, this 28th day of June, A. D. 1877, before me.

JOSEPH MACGILVARY,
J. P. for Prince County, Prince Edward Island.

No. 5.

I ALEXANDER FRANCIS LARKIN, of Nail Pond, in Prince County, Prince Edward Island, fish-trader and fisherman, make oath and say :

1. That I have been engaged in fishing and in the fishing business practically for over twenty years, in both boats and vessels, and know the fishing-grounds right round this island, particularly the north end of this island. I have been on board of fishing schooners four years, in one of which I owned an interest, and the last year I was master of her.

2. The first two years that I was on board a schooner was in the Pearl, with Captain Champion one year and with Captain Fidele Gallant another year. Our catch of fish that year was small, as we were not fitted out for the business, and were only out a small part of the season. That was eighteen or nineteen years ago.

3. That I fished in the schooner Rechabite for about two years, but only for part of the season. I owned a third interest in her, and the second year I was master of her. She was thirty-seven tons burden. She was only out about five weeks that year, as we took freight both spring and fall. We caught in that time about three hundred quintals of codfish each year. All these fish were caught within three miles of the shore.

4. The American schooners often very seriously interfere with our cod-fishing schooners, as they often carry away the nets our schooners have out for catching bait. The greater part, I should say nine tenths, of our island-catch of codfish are caught within three miles of the shore. Another very serious trouble that the Americans cause our cod-fishing within three miles of the shore is, that when we put out our set-lines the Americans, when springing their vessels up to anchor for the purpose of fishing mackerel, often in getting in their gear interfere with our set-lines, and this trouble is increasing, as we are going more in for set-lines now. The set-lines are now taking the place of hand-lines, and the island coast will soon be a perfect network of set-lines. I myself have now about three thousand hooks out in set-lines.

5. That the Americans interfere very seriously with the cod-fishing and with our set-lines within three miles of the shore by their seining.

They throw a purse-seine of sometimes one hundred and fifty fathoms in length, and sometimes twenty in depth, and sweep the bottom, thus often causing great loss to our cod-fishing, besides disturbing our boats lying at anchor. This I look upon as a most serious trouble, and it is increasing.

6. That when mackerel strike in here and we have a biting school of them, I consider the coming of the Americans as the end of the fishing; they interfere with our boats and draw the school right off the coast, and break up the school. They do this by throwing bait and drifting away, drawing the mackerel after them. In a number of cases they drift down on the boats, and I have known a number of boats to be dismantled by them. Often the boats have to get under way to get clear of them.

7. The privilege of transshipment I consider is a very great one to the Americans; they are thereby enabled to come into our harbors, pack out and send home their fares by railway, without losing much time, and I believe they can refit here much cheaper than at home. This must save them at least three weeks in each trip, in the matter of going home, which would be equal to another trip in the course of the summer. They also get their fish home much quicker, and can take advantage of the fluctuations of the markets. I have known instances of Americans making as much as three and four trips a season into Charlottetown to transship.

8. Since having the Island Railway, they can pack out in Alberton with greater facility than in Charlottetown, and without leaving the fishing-ground.

9. The cleaning of large quantities of mackerel on our coast by the Americans, and throwing over the offal, injures our cod-fishing.

10. The American schooners often cause great injury and annoyance to our boats fishing mackerel, by drifting down upon them and taking away the mackerel, and compelling the boats to give way.

11. To my own knowledge a large fleet of American schooners fish around this island, from New London Head to North Cape, and thence to West Point, and generally within three miles of the shore. Masters and crews of American vessels look upon it as a very great privilege to be allowed to fish near shore, and if they were not allowed to do so, I do not believe many of them would fit out for the gulf fishing.

12. When the cutters were about, the American captains used to run the risk of capture and loss of vessel and outfit, in order to fish inshore, and some of them were taken. The cutters did protect our fishermen a good deal and our boats enjoyed greater security, but our coast was not sufficiently protected; there were not enough cutters. I believe that about ten schooners, as cutters, would protect the fisheries from Scattered, in Cape Breton, all the island coasts, and up the New Brunswick coast to Misko, and probably up the Bay Chaleur. Schooners of fifty or sixty tons would be the best cutters. In fact, that number would cover the whole mackerel fisheries for Cape Breton, Magdalen Islands, and New Brunswick, and would effectually keep the Americans out of the three-mile limit.

13. Large quantities of herring are now seined every year at Magdalen Islands by American fishermen, and they ship these herring away to Sweden, Norway, and southern markets.

14. The Americans derive great benefit from being able to go down to the coast of Newfoundland, to Bay Fortune, and up to Bay of Islands, where they catch large quantities of herring, which they freeze and send down to bait their George's fishing fleet, and also to their city markets.

15. After the Magdalen spring fishing is over the Americans often go up to Anticosti and fish and seine herring there.

16. The Americans, also, both at the Magdalens and at Cape Breton, land and seine for bait for their cod-fishing, and they even go into the rivers and catch gaspereaux for bait.

17. Taking our coast from Mimmigash to Nail Pond, in this county, I believe that the fishing outfit has increased five or six hundred per cent. in the last ten years; that is, in the number of boats and their cost. I would estimate the number of boats between Mimmigash and North Cape at from one hundred and fifty to two hundred; and from North Cape to Alberton I should estimate the increase during the last ten years at from three to four hundred per cent. I would reckon the number of boats in that distance at from one hundred and fifty to two hundred; there must be fully that many. I should say that the whole number of all these boats take crews of three men each on board of them, and that they furnish employment to one man for each boat on shore.

18. Our fishing at this end of the island is only in its infancy; our men are only getting skilled and trained to it.

19. The reasons for the increase in the number of boats are that men of capital and experience, seeing the fishing to be a fruitful source of trade, have invested capital, and have encouraged men to build and go into the boat-fishing.

20. I consider that after this we will have a distinct fishing class of people, that is when the lands are all taken up, which they are now. At present, and in the past, the men fished when they had time for farming. Now, we have men who depend entirely on the fishing, and these secure large quantities of fish, and their number is increasing fast. I consider that we are now at the beginning of a new departure in trade in this country owing to the fishing. In my experience, I depend upon men who depend entirely on the fishing to get fully three times as many fish as those who look partly to other means of support.

21. With regard to the value of our fisheries, I consider them very valuable. We have herring in early spring; immediately after, and during the herring-fishing, we have codfish. The herring-fishing lasts from about the 1st of May to the 5th of June. At times there are large quantities of herring on our coast, and they are about the same quality of fish as the Magdalen Island herring. They never yet have been fished as an article of export, but only as mackerel-bait and for home consumption. Very much larger quantities can be generally procured than are required for those purposes.

22. After the cod-fishing we have fish consisting of mackerel and ling, or hake, right through till late in the fall, till about the beginning of November. So far as I know, from actual experience, this part of this island is one of the choice spots for fishing in the Gulf of Saint Lawrence. Large numbers of the Nova Scotian shore fishermen come right round here to fish. We never have had a complete failure of fish, although in blustery years we catch less than in other years. The regular fishermen, even in the worst years, have always made fair wages.

23. I should put the average catch of mackerel per boat, for all boats engaged in fishing, at about fifty barrels, and for those engaged in cod-fishing, taking one year with another, for ten years past, about fifty quintals of codfish and hake. Until late years our boats and outfits have been of a very rude kind, not to be compared to that of the Nova Scotians or Americans, and that is one reason I think our fishery is only in its infancy.

24. I look upon our lobster-fishing here as of very great, in fact of

inestimable, value. We have an inexhaustible supply of them. This branch of the fishing might be pursued here with very great advantage. A great advantage in this fishery would be the abundance of fish offal which we have for bait, and which is now going to waste.

25. Hake sounds here are a very valuable article in our fishing. They are procured from the hake or ling. Each quintal of 280 pounds of ling will give on an average about $3\frac{1}{2}$ pounds of sounds. Within the last ten years the price of these has ranged all the way from 25 cents to \$1.50 a pound, making an average value of 75 cents, in gold, a pound. The value of the sounds is, on an average, worth from 75 to 100 per cent. more than the fish from which they are taken, and the sounds are, therefore, a very important consideration in fishing.

26. With improved winter-communication, large quantities of trout, smelt, and some bass might be exported. The value of these fisheries, if the means of trade were opened up, would be greatly enhanced, and would be well worth going into.

27. We have had one or two instances in this part of the island of men attempting the salmon, and they have proved that it may be made a success in fishing. Our people do not yet know the value of this fishery, which I believe will become very valuable.

28. Our men are now becoming more and more acquainted with the habits of the fish and with the general laws by which their movements are governed, and with their improved knowledge of the habits of the fish and increased facilities for taking them they are now much more able to get catches.

A. F. LARKIN.

Sworn to at Frog, or Skinner's Pond, in Prince County, Prince Edward Island, this 28th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,

J. P. for Prince County.

No. 6.

I, JAMES CONROY, of Kildare, lot or township No. 3, in Prince Edward Island, farmer and fisherman, make oath and say:

1. I have been engaged in fishing and farming for over twelve years. I have fished all the time, except one summer, in boats.

2. The number of boats fishing off this part of the shore is increasing. The number has more than trebled in the last ten years. The boats are a great deal better now than they were formerly. They are in better shape every way—more suited to the purpose. There are \$10 spent in the business along this shore now to the \$1 spent ten years ago.

3. The boats around about here are small, as the people do not make a specialty of the business, but farm as well. The boats carry about three hands each.

4. All the mackerel caught along here are caught within three miles of the shore. The greater part are caught within a mile and a half and one mile of the shore. Near the shore is by far the best fishing ground. In the spring and fall the cod-fish are caught close to the shore. In the summer they are farther off. The mackerel is the principal and most valuable part of the fishery.

5. When an American fleet comes in they certainly do injury to the boat-fishing. The more vessels that come down, the more damage is done to the fishing. I have seen a fleet of some hundred Americans fishing off this shore within a couple of miles.

6. The year the cutters were about the Americans were pretty well kept off. It is a great inconvenience to them to be kept out of the shore fishing. With an off-shore wind they often throw over bait and draw the mackerel off. Certainly the shores around here are a benefit to the Americans.

7. The mackerel fishing begins about the first of July, and lasts till the end of September, any way.

8. As a general thing, people here with nets can get as many herring as they want; they are used for bait. Every boat uses on an average seven or eight barrels for the season, that is, the small boats along here, The large ones use much more.

JAMES CONROY.

Sworn to at Kildare, in Prince County, in Prince Edward Island, this 27th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,

J. P. for Prince County, Prince Edward Island.

No. 7.

I, JAMES F. WHITE, of Alberton, in Prince County, in Prince Edward Island, merchant, make oath and say:

1. That I have been engaged in the fishing business for the last fifteen years as the owner of boats and vessels. I know the fishing grounds well, and I know where both boats and schooners fish, and the best fishing grounds. At the present time I have one schooner and ten boats, carrying about fifty men, engaged in fishing.

2. That about forty boats are fishing out of Cascumpec Harbor during the present year. These forty boats are manned by about one hundred and fifty men. The average yearly catch of each boat is about seventy-five barrels of mackerel, fifty quintals of codfish, and fifty quintals of hake. Herring are caught along the shore, and are used for bait. Each fishing stage, in an average year, uses about three hundred barrels of herring for bait.

3. The American fleet generally enters the bay during the month of June or the beginning of July. The mackerel are then generally on shore. The Americans are often afraid to follow the mackerel as close to the shore as the fish come, owing to the water being too shoal, close to the shore, for their vessels, and then they launch their boats and follow the mackerel inshore in them.

4. The mackerel generally move off shore about the first of October. The off-shore catch is very uncertain, owing to the weather in the fall being often bad.

5. During the summer months the Americans invariably fish within three miles of the shore, and do very much damage to our boat-fishing. They come in among our boats and draw off the mackerel. For the past ten years I think the average number of American vessels would be two hundred and fifty, and they average five hundred barrels each year. The year before last (1875) some vessels took eleven hundred barrels out of the bay in three trips. Last year the mackerel were scarce, and the highest catch about three hundred and fifty barrels. I never knew the mackerel so scarce in the bay as they were last year. This year (1877) the prospects are good, the mackerel plenty; the bay appears to be full of them.

6. When the cutters were about, watching the fishing grounds, the American fleet would go out of the harbor, send one of their number to

keep watch off Kildare Cape, while the balance of the fleet would fish inshore, and the watching-vessel would signal if there was any sign of the cutters. Whenever such signal was given, they would stop fishing and stand out to sea. When the cutter was gone they would come in again. I have seen this done myself.

7. Fully three-quarters of the schooners' catch is taken within three miles of the shore, and I may say the whole of the boats' catch.

8. The number of boats fishing here has trebled in the last three years. The reason of this increase is that other business is depressed, and fishermen from the United States, Newfoundland, New Brunswick, and Nova Scotia are coming here to settle, attracted by the good fishing, so that we are now able to get crews to man our boats, which formerly we were unable to do. Another reason is that the year 1875 was a very good year, and owing to the successful prosecution of the fishing that year people's attention was turned to the business, and they were incited to go into it.

9. The boat-fishers all look upon the arrival of the American fleet as the end of the good fishing. Too much bait is thrown from the vessels, and the boats have to give way to the vessels. The shore fishermen always look upon the arrival of the fleet to fish among them as a great loss and injury to them.

10. Generally there are more than enough herring caught along the shore for bait; this year, however, the herring fishery was a failure.

11. The Americans land here a good deal and transship their fish. This is a very great advantage for them. The advantage is that, when a vessel starts for a trip, she can only fit out for a short time, some five or six weeks, and having the right to transship, they are able to refit. They in this way save about a fortnight each trip, which amounts to an additional trip, for the summer. They can also generally buy their barrels and salt here cheaper than at home. They often come here and buy all their barrels, bringing none from home. I have supplied them myself. The right of transshipment saves them time.

12. The mackerel season is short, lasting, at the outside, from about the middle of June till the middle of October.

13. The mackerel, in spring, come down the Nova Scotian shore, and then strike up the bay to the Magdalen Islands, from there some shoals move toward the bend of this island, and others toward Bay Chaleur, Gaspé, and round there. The Americans are well acquainted with this habit of mackerel and follow them. They have very smart schooners, and follow the fish along the shore, taking their cue, to a great extent, from what they see our boats doing.

14. In average years, the shores of the Gulf of Saint Lawrence are lined with mackerel. It is their home. American skippers of long experience say that they never want to go further than three miles away from Cascumpec Harbor to catch mackerel.

15. It is a very great advantage for the American cod-fishermen to be allowed to come inshore to get bait, ice, and other requirements.

16. The mackerel are the principal part of our fishery, and when our men go out the mackerel are the principal object they have in view.

JAS. F. WHITE.

Sworn to at Cascumpec, in Prince County, in Prince Edward Island, this 26th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,
J. P. for Prince County.

No. 8.

I, MEDDIE GALLANT, of Big Mimmigash, in Prince County, in Prince Edward Island, fisherman and fish-dealer, make oath and say :

1. That I have been engaged in fishing for the last twelve years. I have fished myself entirely from boats. I also owned a vessel called the "Break-of-day," for two years engaged in fishing. I am acquainted with the fishing grounds from this part of the island round Tignish, New London, Rustico, and nearly round to the east point of this island. I have also been in the herring fishing at the Magdalen Islands.

2. That there about two hundred and forty boats now engaged in fishing between Campbellton, on this shore, and the North Cape of this island—a distance of about twenty-two miles. From the North Cape to Cape Kildare there are at least one hundred and sixty boats engaged in fishing. From Kildare Cape to Cascumpec Harbor there are at least eighty boats engaged in fishing.

3. In the last five years the number of boats engaged in fishing in the above distances has at least doubled. At this run alone there has been a very great increase. Eight years ago there were only eight boats belonging to this run, now there are forty-five. The boats are twice as good in material, fishing outfit, in sailing, in equipment, in rigging, and in every way, as they were five years ago. There is a great deal more money invested in fishing now than there was. Nearly every one is now going into the business about here. The boats, large and small together, take crews of about three men each. That is besides the men employed at the stages about the fish, who are a considerable number.

4. The reasons for the increase in the number of boats and in the capital invested in the business are, that people find it pays. It has always, even in the worst years, paid us here. Another reason is that people are getting so numerous that they have to go into fishing as a means of support. They cannot get employment in other ways, and there is not enough land for them, and they are always able to make good wages. I never yet knew a year when a man would not make good wages if he stuck to the fishing. When I was fishing myself in a small boat I used to make from fifty to sixty dollars a month off my own line.

5. That there is a class of men springing up who are entirely devoted to fishing, and make their living by it and by nothing else. This class has only begun to come on within the last few years.

6. That in the summer of 1874, which was a good fishing year, my own boats, four in number, caught eleven hundred barrels of mackerel, or two hundred and seventy-five barrels each boat. One man in one of these boats caught twenty-six thousand three hundred mackerel on his own line, and the lowest number caught by any fisherman on board my boats was about seventeen thousand mackerel. Three of those boats carried three hands each, and the fourth boat carried four hands. In the year 1875 my boats, six in number, averaged eighty barrels each; they also got some ling and codfish. Last year, which was the worst year we ever had, we caught in my boats, seven in number, an average of seventy barrels of mackerel each boat. We do not do much in cod and hake fishing here. This year gives good signs of good mackerel fishing, as the mackerel are now much thicker than usual in the bay, and we have already caught some. Taking one year with another, for the last five years, the average catch of mackerel for each of my boats has been one hundred and twenty barrels. My average catch is, I

believe, the largest on this shore; the other boats would average about one hundred barrels each. This is on the south side of the North Cape.

7. The best mackerel fishing we ever have here is about two miles off the shore. Three-quarters, and in fact nearly the whole, of the mackerel are caught within three miles of the shore.

8. The American fishing-schooners generally come down here fishing about the 1st of July, and stop till October. I have seen three or four hundred sail of them out here fishing. Last year there were not quite so many. They fish right in among the boats. When the Americans see the boats getting fish they come right in among them, and the boats have to move away and give them room. They take the school of mackerel from the boats, and the boats have to move away somewhere else to try to raise the fish. I have often seen this done by the American schooners. I have seen boats come ashore with their spars knocked out by the Yankee schooners. The way they take the mackerel off is that they come in among the boats and throw their bait, which is generally better than ours, and then, instead of lying to anchor, they drift off, carrying the mackerel with them. They thus cause great loss and injury to our boat-fishing.

9. Before the American schooners come around we generally have good fishing, but when they come we find our fishing begin to slack off; it is not so good. They throw so much bait that small schools of mackerel are sunk and feed on the bottom, and we sometimes have bad fishing for a fortnight after that. The Americans clean their fish on board of their vessels and throw the offal overboard, and that destroys the fishing. When we used to gib the mackerel on the fishing ground and throw the gibbs and refuse over, we always found that the fish left the place, so that we had to give up cleaning out on the fishing ground, and now we bury the offal on shore, so that it will not get into the run and be carried out to the fishing grounds. I therefore believe that the American practice of throwing the offal overboard does great injury to the mackerel and other fisheries. It surfeits the fish and frightens them off.

10. When the cutters were about here they used to frighten the American schooners off a good deal, but the cutters that were here were too big for the purpose. Their smoke could be seen ten and fifteen miles off, and that gave the schooners plenty of time generally to escape. I have often seen the American schooners clearing out to sea on an alarm of the cutter's approach. I believe a few schooners of sixty or seventy tons each, well fitted out and well manned, would, as cutters, be quite sufficient to protect all the inshore fisheries. Ten would certainly be enough. The reason the schooners would make the best cutters is that they could not be readily distinguished from the American schooners, and some of them could always be on the ground.

11. The right of transshipment is of very great value to the Americans. It saves them at least three weeks each trip, and that right is the very best of the fishing season. That, in the season, would be fully equal to a trip saved to the schooners. They can come into our ports and discharge their catches, and take out another outfit, and lose little or no time, not more than two or three days. They can always get refitted here. They can get their fish into the market much quicker owing to this right. They are enabled to catch good markets. The mackerel-market is a very uncertain one, and it is a great advantage to be able to send the fish into it on short notice; and owing to the right of transshipment, mackerel can now be sent to Boston in four or five days, instead of taking three or four weeks. The fish are also better by

being sent in quick. I have found, by actual experience, that the longer mackerel are kept on board of the vessels the worse they get, and a week or ten days less on board makes a big difference. When left on board long the mackerel get knocked about and get to look bad; they also get warm and the pickle often sours on them.

12. The herring fishery around this island is very valuable, as to it the island fishermen owe their supply of bait, and they also use the herring for home consumption.

13. At the Magdalen I have seen the Americans seining herring and loading large vessels with them. They seine the herring close in to the shore, and get large quantities of them. In the spring of 1876, when I was down herring-fishing at the Magdalen Islands, there were over two hundred sail of American vessels fishing for herring, and they were all fishing right inshore. The Americans not only take the herring home from the Magdalen Islands, but also ship them away to the West Indies and to other markets. That herring fishery is a very valuable one.

14. The mackerel generally strike the Magdalen Islands first and then come down here. Experienced fishermen know how the mackerel come, and take advantage of that knowledge. The Americans know all about the habits of the mackerel and follow them. As soon as the mackerel get scarce at the Magdalen Islands the Americans come right down to this island after them.

MEDDIE GALLANT.

Sworn to at Big Minnigash, in Prince County, in Prince Edward Island, this 30th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,

J. P. for Prince County, Prince Edward Island.

No. 9.

I, JAMES SKERRY, of Cascumpec, in Prince County, Prince Edward Island, fisherman, make oath and say :

1. That I have been in the fishing business, one way or another, for over ten years, most of the time in boats and three years in American schooners.

2. That the number of boats along this shore has increased in the past few years, and the boats are a great deal better. The boats, taking one with another, average about four hands each.

3. That I sailed in the fishing schooner *Lady Franklin*, of the State of Massachusetts, on a fishing trip in the Gulf of St. Lawrence, about eight years ago, and two years later in the American schooner *Gamecock* of Boston.

4. That we came into the bay in the *Lady Franklin* about the twentieth of July, and fished until sometime in November. She was about sixty-four tons burden, and carried sixteen hands. We caught about two hundred and seventy-five barrels of mackerel in her; that was a poor season.

5. That I went into the bay in the *Gamecock* about the 1st of August, and stopped in the bay till sometime in November. She was about 90 tons burden, and carried 18 or 19 hands. We landed one load of fish in Charlottetown out of her and then went into the bay again. The trip we landed in Charlottetown we had about 400 barrels of mackerel. The second trip we did very badly; only taking about 50 barrels.

6. There is certainly a great advantage to be able to transship. Another trip could very nearly be made while going home with a load of fish and refitting. By being able to transship here that time is saved,

and when the markets are up it is a great advantage to be able to transship and catch the market. The schooners can refit here just as cheaply as at home, and without losing much time.

7. The fishing grounds are best near the shore. The best catches the Americans ever make is in near the shore. The best fishing grounds are at the Magdalen Islands, up the Bay Chaleur, and at the north side of Prince Edward Island. In all these places they fish in near the shore. I should say that fully three-quarters of the mackerel caught on board the vessels in which I fished were caught close inshore. The way the Americans do is to come inshore, throw bait, and drift off, carrying the fish off with them. The Americans could never make good catches when kept from fishing within three miles of the shore. It would not be much worth their while to come into the bay at all, if they could not fish within three miles.

8. When the cutters were about they did a great deal of harm to the American fishing. When the cutters hove in sight the vessels, even if they were getting the mackerel, had to leave and make off the land. Half a dozen schooners, as cutters, would keep the American fishermen clear of the fishing places off this island.

9. The American schooners do a great deal of harm to the island fishermen. They come in and heave quantities of bait and drift off the shore, drawing the mackerel after them. They are also a great nuisance, as they come in and lee-bow the boats; that is, they run up to leeward of the boats, and throw bait and sail up under the lee-bow of the boats, drawing the fish clear away from the boats.

10. This year promises to be a good year for mackerel. I have seen more schools of mackerel this year already than I have seen any year during the last six years.

JAMES SKERRY.

Sworn to at Cascumpee, in Prince County, Prince Edward Island, this 30th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,

J. P. for Prince County, Prince Edward Island.

No. 10.

I, JOHN CHAMPION, of Cascumpee, in Prince County, Prince Edward Island, fisherman, make oath and say:

1. That I have been engaged in fishing for ten years, and have a practical acquaintance with all its details. Part of my experience has been in boats, and four years in island schooners, of which I was master, and one summer in an American fishing schooner.

1. That there are fully fifty boats sailing out of Cascumpee Harbor engaged in fishing. During the last five years the number of boats along this shore engaged in fishing have fully doubled. The boats are very much better than they were then; they are now a splendid class of boats. I do not think they can be much better. They are better in sailing, better sea-boats, and better equipped in every way for fishing.

2. That the reason I would assign for the increase in the number of boats is that people find that the fishing business is a paying one.

3. The average crew of the boats all through, large and small, would be four men each, clear of the men employed about the fish ashore; there are a considerable number of men employed on shore in connection with the boats.

4. That the average catch of codfish per boat, out of this harbor, would be about one hundred quintals. They would average at least twenty-five barrels of herring a boat, but all the boats do not go in for herring fishing, or the average for each boat would be much larger; if all fished the average would be one hundred barrels, worth \$3 a barrel. The average catch of mackerel per boat would be about eighty barrels, some catch more and some less, worth \$8 a barrel.

5. The mackerel are nearly all caught inside of three miles of the shore, that is the best fishing for both codfish and mackerel. The half of the codfish are caught within three miles of the shore.

6. The sounds of the hake are an important item in fishing, there are about three pounds of sounds to the quintal of hake. Each boat lands on an average about one hundred and fifty pounds of sounds in a year. The sounds are worth from eighty cents up to a dollar and a quarter per pound. There is also about a gallon of oil, worth about sixty cents, to the quintal of hake, so that the sounds and oil are worth considerably more than the fish from which they are taken.

7. That the sea lobster-fishery is very valuable in this part, and is now being pretty extensively prosecuted. The best and nearly all the lobsters are caught out to sea, from half a mile to one mile from the shore. The lobster-fishery is increasing. There are now about five thousand lobsters a day caught here.

8. That I commanded the island schooner *Alberton* for three years, commencing in the year 1868. She fished each year, but only for about two months each season. She was twenty-eight tons burden, and carried a crew of ten hands. The first year she took about two hundred barrels of mackerel; the second year she did about the same. In fact, she averaged two hundred barrels of mackerel each year. She did not fish the whole season any year.

9. That I commanded the island schooner *Bay State* in the year 1873. She was also of twenty-eight tons burden, and carried ten hands. She did not fish quite two months. She took one hundred and seventy-five barrels of mackerel.

10. That in the year 1872 I fished for two months in the bay on board the American schooner *Flying Fish*, of seventy-five tons burden, carrying eighteen hands. She landed five hundred barrels of mackerel, only making the one trip.

11. The principal part of the schooner fishing is done within three miles of the shore. Some of the American vessels do all their fishing inshore. About three-quarters of the fishing done by the *Flying Fish* was done inshore.

12. That I do not think that it would be any advantage whatever for the Canadians or islanders to have the right to fish on the American coasts. We would not bother with it, as our own fisheries are so much better. There is an occasional good year for fishing on their shores, but not very often. Last year was a good year on their coasts.

13. On an average, there are eight hundred American vessels engaged in the cod, hake, and mackerel fisheries in the bay—that is, including this island coast, the Magdalen Islands, the New Brunswick and Nova Scotian coasts. There have been as many as fifteen hundred sail in a season, according to their own accounts. I myself have seen three hundred sail of them in a day.

14. That the American schooners do a great deal of harm to the boat fishing. They have run into boats; they come in and lee-bow the boats regularly; they also come in and throw large quantities of bait, and

drift off drawing the mackerel after them. They sometimes spoil a boat's summer's work.

15. Their cod-fishermen do harm to the fishing by throwing overboard the offal to the codfish. We know well enough when we see the American fleet coming that there is an end to our good fishing. The fishermen here look upon the arrival of the Americans as a serious injury and damage to the island fishing.

16. That there is, on an average, three hundred sail of American vessels every year engaged in herring fishing at the Magdalen Islands; they seine the fish, and take, on an average, about one thousand barrels each vessel. The herring fishing there is right inshore. I were herring fishing at the Magdalen Islands three years, and each year there were about three hundred sail of Americans there fishing. They send some home and more they ship away to foreign markets. That herring fishery is a very important trade to them.

17. That the right of transshipment is a very great advantage to the Americans, in two ways: they can ship their fish in time to catch good markets, which is very important to them, as the mackerel market is a very fluctuating one; they also save ten days clear fishing, right in the heart of the fishing season, that is clear of the three days they would take to unload and refit her. In good years that would amount to another trip in the course of the summer. The fish are also better and command higher prices by being sent up quickly; if kept in the vessels till they get to market, they are not nearly so good nor worth so much.

JOHN CHAMPION.

Sworn to at Alberton, in Prince County, Prince Edward Island, this 30th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,
J. P. for Prince County.

No. 11.

I, SEBASTIAN DAVIDSON, of Tignish, in Prince County, in Prince Edward Island, accountant, make oath and say:

1. I have been connected with the fishing business as accountant and bookkeeper in different establishments for over twenty years in this part of the country. The business, so far as I have been engaged in it, has always been with boats.

2. There are a hundred boats fishing from Kildare to the North Cape of this island. The number of boats, I should say, has doubled in the last ten years. The quality of the boats has very much improved; they are fitted out better, have every requisite for fishing, and are better sailers than formerly; they can now stay out, instead of being obliged to return to shore every evening.

3. The American fleet is not now so numerous as it was a few years ago. A few years ago, before the Reciprocity Treaty was done away with, I should say it numbered from three to four hundred sail. I have seen them as thick as bees all along the shore. They used to fish all along this shore, up Bay Chaleur, at the Magdalen Islands, at Port Hood and other places, within three miles of the shore along here.

4. The herring fishery is important for bait about here; it was a failure here this year except in traps.

5. The right of transshipment is a great advantage to the Americans, inasmuch as they can land their first, refit, and be on the grounds again without much loss of time. They are also enabled by virtue of this right to take advantage of the fluctuations of the markets, and can even

sell their fish "to arrive." Under ordinary circumstances, I should say that the right of landing their fish, instead of taking them to the States in their own vessels, would be a saving of a fortnight each trip. They used to make two trips a summer.

SEBN. DAVIDSON.

Sworn to at Tignish, in Prince County, in Prince Edward Island, this 27th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,

J. P. for Prince County, Prince Edward Island.

No. 12.

I, WILLIAM CHAMPION, of Cascumpee, in Prince County, Prince Edward Island, fisherman and fish-dealer, make oath and say :

1. I have been engaged in fishing for over ten years in both boats and schooners, one summer of which time I fished on board the American schooner *Banner*, of Belfast, Me.

2. There are fifty boats, I should say, fishing out of this harbor (Cascumpee) at the present time. The number has trebled in the last ten years. But Kildare, Tignish, Mimmigash, Nail Pond, and that way generally, the number has increased at a greater rate than here. The boats themselves are also very much better than they were some years ago. The number is still increasing ; has increased ten boats this spring in this harbor alone.

3. The average catch of mackerel for each boat is about seventy-five barrels, and about fifty quintals of codfish, and the same of hake.

4. Each boat carries on an average a crew of four men.

5. The boats fish along the shores, mainly within three miles of the shore. There are about nine-tenths of the mackerel caught by the boats caught within three miles of the shore ; the best ground is within that distance. About two-thirds of the codfish and half the hake caught in boats are caught within three miles of the shore ; in fact, the best ground for the two last-mentioned fish is about three miles out or thereabouts. Down eastward on this island, and about Port Hood, Antigonish, Cape George, and other places in that direction, the boats, and also the American schooners, fish close inshore.

6. I fished two summers in an island schooner, and one in the American *Banner* ; the *Banner* was about eighty tons burden ; I was fishing in her the year the cutters were around for four months ; we had a license to fish, so the cutters did not disturb us. She carried a crew of sixteen hands ; we caught four hundred barrel of mackerel, of which we transshipped three hundred at Charlottetown ; we were only three days out of the bay landing and transshipping the fish, and saved more than a fortnight in time.

7. The year I was in the *Banner* she and other American vessels used often to drift down on the boats, and used often to "lee-bow" them, throwing out bait, and taking the fish away ; there were about four hundred Americans fishing that year ; we fished right up in the Bay Chaleur and around the other shores of the provinces ; there were also a great many seiners out that year.

8. The average number of the American fleet each year is between four and five hundred. They catch on an average between five and six hundred barrels of mackerel each ; the Americans fish as a rule near the shores ; I do not think it would be worth their while to come down to fish unless allowed to fish within three miles of the shore ; the

fishermen and captains say they would not come down if kept away from the shore fishing; our captain insisted on getting a license before he would fish, and he and the crew paid for it; if there were enough cutters about, the Americans would keep away; ten or twenty small vessels fitted out as cutters would keep them off; schooners would be best for cutters.

9. By fishing near the shore the Americans do a great deal of harm to the mackerel, they chuck out so much bait. They have the very best of bait, and can carry the mackerel off shore with them, as the mackerel follow the bait. They "lee-bow" the boats and prevent their catching fish. The Americans often get right in among the boats fishing and spoil their chances of a catch.

10. Fishermen in boats look upon the arrival of the American fleet as the ruin of the good fishing, and I know it to be the fact. Their coming is thus a very great loss and injury to boat fishermen. The boats lie at anchor and the schooners drift down upon them, when the former have to get out of the way.

11. The mackerel fishing begins as a rule about the twenty-fifth of June and lasts till about the end of October.

12. The right of transshipment is a very great advantage to the Americans. They are thus enabled to take advantage of the markets. When we transshipped the three hundred barrels at Charlottetown we got twenty-four dollars and fifty cents American currency a barrel for them; had we been obliged to take them down ourselves we would have got to the market more than a week later with the fish than they arrived by transshipment, and then the price would have been seventeen dollars American money a barrel, so that by the transshipment of those three hundred barrels we saved exactly two thousand two hundred and fifty dollars American money, or seven dollars and a half a barrel, besides being able to remain on the fishing grounds. There were a number of other Americans at the same time who transshipped at the same time and gained in the same way. The right of transshipment also enables them to refit and save a great deal of time during the fishing season.

13. The mackerel come in here in the beginning of the season from the southward and eastward, and work northwardly and westwardly till about the middle of August, and then work back, striking this island both ways. The Americans know all about this and follow the fish. They know the course of the fish so well that they occasionally lay in wait to meet the schools of mackerel. I have known them go into Georgetown and wait in this way.

14. The Americans seine the fish and do a great deal of harm. I have known them off the Nail Pond shore, while seining for mackerel, strike upon a school of herring and take about five hundred barrels, which they threw away and the herring were destroyed.

WILLIAM CHAMPION.

Sworn to at Alberton, in Prince County, Prince Edward Island, this 26th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,

Justice of the Peace for Prince County, Prince Edward Island.

DOMINION OF CANADA,

Province of Prince Edward Island, Kings County, to wit :

I, JAMES McDONALD, of East Point, in Kings County, in Prince Edward Island, mariner and fisherman, make oath and say :

1. That I have been personally engaged in the mackerel and cod fishing since the year 1848, and since the year 1854 I have been master of a fishing vessel. From the year 1848 to 1853 I was fishing in American vessels. I commenced the mackerel fishing in 1850. At that time the number of American vessels engaged in the mackerel fishery would be about 500 sail, and that year their average catch would be 600 barrels per vessel, of which fully nine-tenths would be caught inshore, within the three-mile limit.

2. From the year 1853 to 1860 I was fishing in British vessels. During that time there would be an average of 450 American vessels in the gulf engaged in the mackerel fishery.

3. That since the year 1860 I have still been engaged in the mackerel fishing. That the average number of American vessels during the fourteen or fifteen years next succeeding the year 1860, in the gulf, engaged in the mackerel fishery, has been 400. The average catch of these vessels during that time would be about 500 barrels per vessel. And I have no hesitation in saying that nine-tenths of all the mackerel caught within the last fifteen or seventeen years has been caught within the three-mile limits.

4. That when the mackerel arrive at the gulf they first strike the Magdalens, but there are none caught till they reach the Bay Chaleur and Seven Islands, where the first fare of the season is generally obtained. They then cross over to North Cape and along the north side of the island, keeping inshore.

5. That in the latter part of the season, from the middle of September to the first part of November, the weather will not permit of fishing any distance from the shore, being too rough ; and during that part of the season not one barrel in 5,000 is caught outside the limits.

6. That during the last two or three years the number of American vessels fishing in the gulf has fallen away considerably, owing partly to the mackerel not frequenting our coasts during these years in such large quantities as in former years, but this year the prospects are good.

7. That the right to transship is of great advantage to the Americans, as they thereby save time, and gives them an extra trip which they would not otherwise have.

8. That the large amount of offal thrown overboard by the Americans poisons the mackerel, and is an injury to the fishing ground.

9. That when we saw boats fishing near the shore we made a practice of sailing down on them, and with our good bait took all the mackerel, and the boats would have to give up till the mackerel came back again. The vessels coming in among the boats are also likely to scatter the mackerel, and the boats not being able to follow them any distance, lose them altogether.

10. That the Canadian and British cutters and men-of-war did not prevent the Americans from fishing within the limits, for when they saw one of them coming they stood out to sea till she passed, and then resumed their fishing operations within the limits again.

11. From an experience of nearly thirty years spent in mackerel fishing I would say that the best mackerel-fishing ground is close inshore, say

from one-half a mile to two and one-half miles from the shore, off the north side of the island, and that if the Americans could be prevented from fishing within the three-mile limit they would not frequent our shores at all for the purpose of fishing. During the last six or seven years the mackerel have kept more inshore than in former years. In fact, during the last few years, scarcely a mackerel would be caught outside the three-mile limit.

12. There is also a large fleet of American vessels engaged in the herring fishery off the Magdalens, Labrador, and Newfoundland; I should say about two hundred and fifty sails. These vessels are generally of a larger class than those engaged in the mackerel fishery, some of them carrying as many as three thousand barrels. From my experience and personal knowledge I would estimate that the Americans catch and take from these shores 150,000 barrels of herring annually, all of which are caught close up to the shore and well within the three mile limit. They also buy large quantities of herring from the shore-fishermen in Newfoundland, but these are not included in the above estimate.

JAMES McDONALD.

Sworn to at Souris, in Kings County, in Prince Edward Island, this 26th day of June, A. D. 1877, before me.

JAMES R. MACLEAN,
J. P. for Kings County.

No. 14.

I, JAMES H. DAVIDSON, of Tignish, in Prince County, Prince Edward Island, fish-dealer, make oath and say:

1. I have been for the last seven years running a fishing stage at the North Cape, and have been engaged in fishing all my life, as a practical fisherman, in boats all the time except one year, when I was on board the schooner Frank of this island.

2. That I believe there are fully two hundred boats fishing between Cascumpec Harbor and North Cape. During the last seven years the number of boats engaged in fishing has certainly trebled. The boats are better models, better rigged, better equipped, are better sailers, and are superior in every respect to what they used to be. During the last ten years the capital invested in the boat-fishing business along this coast has multiplied tenfold, and that is a moderate statement.

3. The boats will average three men to a boat, all round, for crew, and one man on shore, so that the two hundred boats would give, during the summer, constant employment to eight hundred men, and the number of boats is constantly increasing. I believe that the fishing in this part of the island is still in its infancy.

4. I should put the average catch of mackerel per boat, taking one year with another for the last ten years, at seventy-five barrels, and the average catch of codfish and hake at fifty quintals. The boats nearly always catch as many herring as they require. They get abundance for mackerel bait, for home use, and some to export. The boats would require, on an average, fifteen barrels of herring for bait, each boat, during the mackerel season.

5. Seven-eighths of the boat-fishing is done within three miles of the shore. All the mackerel and herring are caught within that limit, the codfish sometimes further out.

6. The reason for the increase of the number of boats is that people find it a profitable business, and the young men are going into it more and more. There is a special class growing up now, who are entirely devoted to and altogether dependent on fishing. Those men who devote

themselves entirely to it and study the habits of the fish, are by far the best and most successful fishermen. The business of fishing is now becoming respectable, whereas formerly it was not considered so. The fishery affords employment to an increasing population, which has not land of its own to farm. People gather from the inland parts to the fishing parts, in order to get employment in fishing. People come from other provinces here attracted by the fishing. It is particularly the mackerel fishing that is increasing.

7. The year I was out fishing in the Frank; we made a poor year's fishing. We made two trips in the bay and caught only three hundred barrels of mackerel. The Frank was about sixty-three tons and carried seventeen hands.

8. The year I was in the Frank was the year the cutters were around, and there were a good many Americans kept away and some taken. We were all in and about the American fleet that year, and they would number three hundred sail. They know the inshore fishing is the best and they will run risks rather than not have it. I do not think it would be worth their while to come down here to fish in the gulf if they could not fish within three miles of the shore; and it certainly would not be worth their while if they could not fish within the three-mile limit. I should certainly say that seven-eighths of the catch of the American catch is caught within three miles of the shore.

9. They lie among the boats. When they see the boats getting mackerel they come up and lee-bow the boats, throwing bait and drawing off the fish, when the boats have to leave. They certainly do harm to the fishing by throwing the offal overboard. By it the fish are glutted and poisoned. They also interfere with the bait-nets and get foul of the set-lines and trawls. The set-lines are now being used very much along here, and are increasing very fast, and as they increase, the damage done by the Americans is becoming greater.

10. The right of transshipment is of very great consequence to the Americans, as they save the time they would otherwise consume in going home with their fish, and that right in the middle of the fishing season. The time saved in this way would certainly be equal to another trip for the vessel during the season. By having this right they are also enabled to take advantage of the markets, so that if the price of mackerel is up they can at once send their fish up to take advantage of the high price. They can do this even if they have only a few fish. The mackerel market is one of the most fluctuating in the world, so that it is a very great advantage to get them into market quickly. The mackerel also get worse-looking the longer they are kept and command a smaller price. If they are kept in the hold of the vessel they are getting poorer all the time. By being transhipped this deterioration is avoided.

11. There are plenty of salmon off this shore, and since attention has been directed to them, the salmon fishery is found to pay, and when properly attended to it will become very profitable. They are caught off this coast in nets and traps. It is only recently that they were known to be there. There are also plenty of shad and some bass off this coast, which can be caught in traps.

The sounds taken from hake are now very valuable. For three years here the price of sounds averaged a dollar a pound, and the lowest price they have sold for was thirty-five cents. They would average seventy-five cents a pound one year with another. I would say that about four pounds of sounds are got to a quintal of green hake weighing two

hundred and eighty pounds. The value of the sounds is greater than the hake from which they are taken.

13. Codfish tongues and sounds are also put up and sold to some extent out of this island and are valuable.

14. The oil taken from the codfish and hake is of considerable importance, and there would be, on an average, about half a gallon, worth twenty-five cents, taken from every quintal of hake and codfish.

JAMES H. DAVIDSON.

Sworn to at North Cape, in Prince County, Prince Edward Island, this 28th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,

J. P. for Prince County, Prince Edward Island.

No. 15.

DOMINION OF CANADA,

Province of Prince Edward Island, Kings County, to wit :

I, JOSEPH CAMPBELL, of Souris, in Kings County, in Prince Edward Island, master mariner, make oath and say :

1. That I have been personally engaged in the fisheries since the year 1855. From 1855 to 1858 I was fishing in boats off the north side of the island. We caught all our fish at that time within three miles from the shore.

2. That from the year 1858 to 1867 I was constantly and actively engaged in fishing aboard American vessels, and during that time I fished on all the fishing-grounds.

3. We got our first fare generally in the Bay Chaleur. Fully nine-tenths of this fare would be caught close inshore, within the three-mile limits.

4. The mackerel, after leaving the Bay Chaleur, strike across to the North Cape of Prince Edward Island, and some of them return to the Magdalenes. We generally got our second fare from the north cape of the island to East Point and at the Magdalenes, generally catching the fish within the limits. I would say that fully seven-eighths of this fare is caught within the three-mile limits.

5. From the year 1863 to 1867 the average number of American vessels fishing for mackerel in the gulf would, in my opinion, be about five hundred sail, and during those years the catch was good, averaging about six hundred barrels per vessel per season.

6. From my personal knowledge and actual observation I would say that fully seven-eighths of that quantity of mackerel were caught inshore, that is, within three miles from the shore.

7. Our usual mode was to go in close to the shore ; if in bold water, close up to the rocks, throw our bait and drift off, the mackerel following after the bait. When we lost the mackerel we again tacked for the shore.

8. That the American fleets of fishing-vessels very materially injure the boat-fishing off shore. The Americans have always made a practice of sailing down among the boats, and by throwing bait and drifting off draw the mackerel away with them. This is a very common occurrence, and must have been a great injury to the boat-fishing.

9. I think that the large amount of offal thrown overboard by the fishing fleets has a tendency to injure the fishing. The fish eat up this dirty and poisonous food and they will not then follow or take the bait. In this way this practice must be very hurtful to the fishing-grounds.

10. That the American vessels fished within the limits almost as much after the expiration of the Reciprocity Treaty as before. The treaty did not seem to make any material difference. The cutters did not to any extent prevent the Americans from fishing within the limits, as we could always see them coming, and had time to get outside the limits. Sometimes we merely pulled up our lines and fishing-gear, and as soon as the cutter would pass we would resume our fishing.

11. From the year 1867 to 1872 I was master of a British fishing-schooner. During these years there would be about four hundred and fifty American vessels in the bay, and their average catch per vessel would be about four hundred and fifty barrels per season. Fully seven-eighths, in my opinion, of all the mackerel caught in the bay by Americans during the years between 1867 to 1872 would be taken within the three-mile limit.

12. The American vessels in large numbers would often sail down on the few British vessels fishing in the bay and lee-bow them and by their larger numbers generally succeeded in drawing away the fish from the British vessels.

13. The right of transshipping is a great benefit to the Americans. They thereby save time enough to make an extra trip, which they could not otherwise make without this right.

14. That I have also been engaged for several years in the herring-fishery off Labrador in American vessels. There are about two hundred and fifty to three hundred American vessels engaged on the coasts of Labrador, Newfoundland, and the Magdalenes in this fishery. These vessels are of a larger build than those engaged in the mackerel-fishery. The average quantity taken from these coasts by these vessels would be about one thousand barrels per vessel per season, making a total of from 250,000 to 300,000 barrels per year. A proportion of this quantity is bought from the fishermen along the coasts of Newfoundland. I would say about one-half are bought. All the herring are caught close in-shore, from one-quarter to one-half mile from the shore.

JOSEPH CAMPBELL.

Sworn to at Souris, in Kings County, in Prince Edward Island, this twenty-seventh day of June, A. D. 1877, before me.

JAMES R. MACLEAN,

J. P. for Kings County.

No. 16.

DOMINION OF CANADA,

Province of Prince Edward Island, Kings County, to wit :

I, ALEXANDER CHIVERIE, of Souris, in Kings County, in Prince Edward Island, formerly fisherman, now merchant, make oath and say :

1. That I commenced mackerel fishing in the year 1847, in an American schooner named the "Triton." In those years there would be from 500 to 600 sail in the bay. The schooner I was in was generally in company with 100 to 200 sail. At that time I did not hear anything of the three mile limits. It was not till the year 1852 that I first heard any talk regarding the limits.

2. The first year I was fishing, we left the American ground in the fall in September, and came to the bay. We fished off the north part of Cape Breton and caught the whole of our fare within three miles from the shore.

3. The custom generally adopted by the fishermen is to go within a mile of the shore, heave our bait and then drift off, taking the fish with us.

4. The cutters did not to any extent prevent the Americans fishing within the limits. They would simply sail off till the cutters had gone by and commence fishing again within the limits.

5. I remained fishing in American vessels till the year 1867. I would say that the average number of American vessels fishing mackerel in the bay, between the years 1847 and 1867, was from four hundred to five hundred sail each year, and that the average catch per vessel during those years was 400 barrels each season.

6. That without a doubt two-thirds of the above quantity was caught within three miles from the shore.

7. That in the year 1867 I was master of a British fishing-schooner. The first trip of that season we fished between the Miramichi and Bay Chaleur. During that trip the fish played chiefly inshore, about a mile from the shore. At times during that trip I would be getting a good catch, when the American vessels, to the number of fifty or sixty, would come along, and by drawing off the fish spoil my fishing. During that trip the Americans, I would say, caught fully three-fourths of their fare within the three-mile limit. During the second trip of that season I was fishing on the north side of the island and caught all that fare within three miles from the shore. On several occasions during that trip a fleet of American vessels would come up alongside and spoil my fishing.

8. That since that year I have not been personally engaged in fishing, but I have owned fishing-stages and have had boats engaged in shore-fishing.

9. That I have noticed the American vessels come in among the boats fishing from one to two miles from the shore, heave their bait, and draw off all the mackerel. The boats would then be obliged to give up fishing for that day. This is a very common practice among the American vessels, and I have noticed it on several occasions during the last few years.

10. That the numbers of boats engaged in prosecuting the mackerel fisheries have largely increased during the past few years.

11. That fully three-fourths of all the mackerel caught in the boats is caught inshore well within the three-mile limits.

12. Without a doubt the Americans would not come to the bay at all for fishing purposes if they could be kept outside of the three-mile limit altogether.

ALEXANDER CHIVERIE.

Sworn to at Souris, in Kings County, in Prince Edward Island, this twenty-seventh day of June, A. D. 1877, before me

JAMES R. MACLEAN,

J. P. for Kings County.

No. 17.

I, JAMES J. MORRISAY, of Tignish, in Prince County, Prince Edward Island, fish-stage proprietor, make oath and say :

1. I have fished for four years and have been proprietor of a fishing-stage at Frog Pond the whole time. The first year I had one boat, and caught about forty-five barrels of mackerel in her ; that year I also got about one hundred and twenty barrels of herring, worth about three dollars a barrel ; I caught about ten quintals of codfish in that boat the same year ; she was a small boat.

2. The second year I had five boats, and caught about four hundred barrels of mackerel. I also caught about eighty quintals of ling the

same year, in those boats, and about sixty of codfish, and about two hundred and fifty pounds of sounds, then worth sixty cents a pound.

3. The third year I had six boats, and caught about one hundred and sixty barrels of mackerel, and about forty quintals of codfish and hake, and about fifty-five barrels of herring. That was a really poor year.

4. This year (1877) I have nine boats, and have caught about fifteen barrels of herring. I have also more codfish already caught than I had the whole of last year. This promises to be a good year, so far as I can judge.

5. At Nail Pond I should say the number of boats has increased about one-fifth during the last three years. I think the boats are now much better built, rigged, and fitted out than they were.

6. The average crew of the small boats is about three men, of the large boats the crew would be four men. There are twenty dollars now invested in the business to the one there was ten years ago.

7. The boats get near about the whole of the mackerel caught by them within a mile and a half to two miles of the shore; the boats very seldom go beyond two miles out. The hake are generally caught within three miles of the shore, and the codfish generally further out.

8. About three years ago I have seen as many as three hundred American schooners anchored off this shore, within a mile. I have seen some of them fishing so close inshore that they got aground. The principal part of the fishing that I have seen the Americans do, has been within three miles of the shore. Taking one year with another, I do not think it would be worth their while to fit out for the gulf fishing if they could not fish within three miles of the shore. I have heard the American captains say so.

9. I have seen the Americans drift down on the boats, not minding the latter, on several occasions, and on several occasions the boats, lying at anchor, had to cut their cables to save themselves from being sunk.

10. The Americans spoil the fishing in this way: they see the boats fishing and drift down on them, when the boats have to get out of the way and thus lose the mackerel. They have also better bait than we have and by its means draw off the fish, and they throw out a great deal of bait.

11. Very few Americans fished within three miles of the shore the year the cutters were here. I saw them within three miles of the shore, when they saw the cutter's smoke, clear out.

12. Whenever the Americans heave in the fishermen from boats grumble and complain that the good fishing is at an end, and that the Americans sink the mackerel with bait. The boat-fishermen look upon the arrival of the Americans as a serious loss and injury to themselves.

13. The mackerel season here lasts from about the 20th of June till about the middle of October.

14. I would look upon the right of transshipment as a very great privilege to the Americans, as they could ship away their mackerel without losing much time going with them, and by this right they would be enabled to catch the markets, two or three days often making a very great difference in the mackerel market. They are also enabled through having this right to refit here instead of losing time going home for that purpose.

15. About three years ago the Americans did some seining here, but I have not seen them doing any since.

16. I would give as a reason for the increase of the number of boats that the young men think they can do better in it; and also because the

population is increasing, and also the spirit of enterprise among the people.

JAMES MORRISAY.

Sworn to at Tignish, in Prince County, Prince Edward Island, this 27th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,
J. P. for Prince County, Prince Edward Island.

No. 18.

I, EDWARD HACKETT, of Tignish, in Prince Edward Island, merchant, and member of the Local Parliament for the first district of Prince County, make oath and say :

1. That previously to the last two years I was personally engaged in the fishing business for about fifteen years. Part of this time I carried on a fishing business, and part of the time I was engaged as a practical fisherman.

2. There are now about one hundred boats fishing out of Tignish Harbor alone. The number has increased very much within the last few years. There are larger and better boats now than there were ten years ago; they are better built, rigged, and equipped now than they were then. There is also more capital, by a large amount, invested in the business than there was ten years ago, and the crews are more experienced in fishing than the crews were then.

3. The boats would average about four men to each boat, some having more and some less. The boats, taking one year with another, would have an average catch of fifty barrels of mackerel to each boat, and they would also average about fifty quintals of codfish and hake to the boat. This is taking the average for both big and small boats.

4. The reason of the increase in the number of boats is, that more people embark in the business and invest capital in it, because they found the fishing to be a remunerative business, and also from the increase of population and of enterprise.

5. The herring fishery, as a general thing, is a very reliable fishery; the fishermen generally catch enough for bait and for home consumption. About ten barrels to a boat, of herring, are required for bait during the mackerel season. This year the net fishing of herring was a failure.

6. The boats invariably fish for mackerel, and almost invariably within three miles of the shore. The best mackerel fishing-ground is from one mile to two miles and a half from the shore.

7. The American vessels generally come off here in June, and are reported to make generally two trips in the summer. They generally also fish within three miles of the shore. They take a very large quantity of mackerel in among the boats and are a great annoyance to the boats. They come in among the boats and throw bait and drift off, carrying the fish with them. They come in among the boats and often run them down; they are careless to the injury they may do to the boats. When they see a boat getting mackerel they make straight for it and draw off the mackerel by every means they can employ, throwing out bait in large quantities.

8. I have often counted a hundred American vessels fishing between North Cape and Cape Kildare, a distance of not more than ten miles; and that would be only a small portion of the whole fleet.

9. The right of transshipment is a very great benefit to the American

fishermen. When they land their catch of fish they can at once fit-out again and be on the grounds again without the loss of time they would incur by being compelled to go home with their loads. They thus save from two to three weeks in the trip, and that in the very best of the fishing. That would amount to a trip saved in the course of the summer. They are thus enabled also to watch the fluctuations of the markets, the mackerel market being a very variable one, and a few days often making a very great difference in that market.

10. The boat fishermen always rave when they see the Americans come here in numbers, and look upon their arrival as a great loss to themselves.

EDWARD HACKETT.

Sworn to at Tignish, in Prince County, Prince Edward Island, this 27th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,
J. P. for Prince County.

No. 19.

I, MAURICE O'CONNOR, of Kildare Cape, in Prince County, Prince Edward Island, fisherman, make oath and say:

1. That I have been engaged in the fishery as a business for the last eight years; before that I had been fishing for about two years. I have fished in boats out of Kildare, Nail Pond, and Rustico in this island.

2. There are about forty boats fishing off this shore, this side of any harbor. These are mostly smaller boats than those that fish out of the harbors. They are made small so that they can be easily beached in case of a storm or any other necessity, there being no place of refuge for them on the shore. They are mostly owned by farmers, who want to haul them up often. The number has trebled within the last ten years, and the boats themselves are far better. There is more than twelve times the capital invested in the business on the shore now that there was ten years ago. These boats carry on an average a crew of about three men each.

3. The Americans used to fish off this shore in large numbers. I have seen hundreds of them fishing right inshore among the boats. They stretched right up the shore from this cape as far as one could see.

4. The Americans sometimes run in among the boats and hurt them. If they see the boats getting fish they run in and "lee-bow" the first thing, throwing bait and taking the fish away. Unless there is a very large body of mackerel where they are fishing, the boats have no chance.

5. The Americans prefer the shore fishing. They fish close in when the wind is off shore, drifting off and taking the fish with them. They throw very much pogie and clam bait, which enabled them to take off the mackerel. I do not think they would come down here to fish if not allowed within three miles of the shore. The boat fishermen always look upon the arrival of the American fishermen as a great injury to the boat fishing. The Americans throw so much bait that the mackerel get gorged and will not bite, but go off, the Americans following them.

7. The cutters kept the Americans off the shore a good deal, but they used always try to steal in again. They used to come in then and drift off. When a cutter was anywhere near, the Americans kept off; that was a great advantage to the boatmen, as they then had all the shore fishing to themselves.

8. The best fishing-ground for mackerel is near shore, within three miles of it.

9. One reason for the increase of the number of boats is that the population is increasing and there are plenty of young men about who want

employment, and they find the fishing pays them fully as well as farming.

10. There are large quantities of herring caught along here as a general thing. Probably ten barrels of herring to a boat are used for bait in the mackerel fishing.

11. Off Nail Pond the Americans often seine for mackerel, and I have seen them off here looking for the mackerel in order to seine.

12. This year I am engaged in the salmon fisheries off this coast. The salmon are caught in nets and traps. The salmon here are very fine. The average weight of those caught by me this year has been twelve pounds each. They have been caught on this shore weighing thirty-six pounds. The salmon-fishing has only lately been started here. It will pay I believe, and the trade in salmon is springing up. When properly looked after this branch of the fishery will become very valuable. The salmon are all caught off the shore and not in the rivers.

MAURICE O'CONNOR.

Sworn to at Kildare Cape, in Prince County, Prince Edward Island, this 27th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,
J. P. for Prince County, Prince Edward Island.

No. 20.

I, ALEXANDER LARKIN, of Alberton, in Prince County, Prince Edward Island, merchant, make oath and say :

1. That I have been engaged in fishing for twenty-five years, principally in the boat-fishing; I have had vessels in the business. I have been carrying on the business at stages.

2. There are about two hundred boats engaged in fishing from Cascumpec to the North Cape. The number has greatly increased during the last few years. The boats are a very much better class of boats now than a few years ago; they are larger and better fitted out. There is also much more capital invested in the business now than formerly. The average crew of each boat, taking large and small together, would be at least three. There are also a number of shore-men employed in connection with the boats. The greatest quantity of the fish, I should say over three-quarters of the whole catch, is caught within three miles of the shore.

3. I account for the increase of the boat-fishing, because people found it profitable to go into fishing.

4. I have several times known over three hundred sail of American fishing-schooners to be in this harbor at a time, and it was never considered that more than half their fleet were in. They used very often to fish inshore, and often to the injury of our boat-fishermen; they come among the boats, which are getting fish, and bait the school of mackerel, and carry it off.

5. The Americans, when the cutters were about, always evaded them if possible, even at a risk to themselves. The cutters kept them off to some extent, and made several seizures.

6. The right of transshipment here must be an advantage to the Americans, but I cannot state to what extent.

ALEXANDER LARKIN.

Sworn to at Alberton, in Prince County, Prince Edward Island, this 29th day of June, A. D. 1877, before me.

JOSEPH MACGILVRAY,
J. P. for Prince County.

No. 21.

I, GILBERT PERRY, of Frog Pond, in Prince County, in Prince Edward Island, owner of fishing stages and fish dealer, make oath and say:

1. That I have been engaged in the fishing business about eighteen years; fifteen years of that time I have been actually engaged in fishing, and am well acquainted with the fishing ground around here. My experience has been in boats.

2. There are at least one hundred and fifty boats engaged in the fishing between Frog Pond, Skinner's Pond, and Nail Pond. There are sixty-three boats engaged in the fishing at Frog Pond alone. Each boat would average a crew of three men each; no boat less than three; some more.

3. The number of boats at Frog Pond alone has increased twenty boats within the last year, and I would say there are ten times as many boats engaged in the fishing as there was ten years ago, and the number of stages are greatly increased. The boats themselves are getting better every year, being better sailers, better equipped, and better rigged than they were.

4. Taking one year with another, the boats (large and small) average about fifty barrels of mackerel in the season, and on this shore they average about thirty quintals each, cod and hake. As a general thing sufficient quantities of herring are taken for bait and for home use. Each boat on this shore requires about twenty barrels of herring for mackerel bait during the season.

5. The reasons I would give for the increase for the number of boats is, the increase in population and trade, the trade becoming more and more opened up, and the business affords employment to a large number of men who could not otherwise get employment. The great reason is, that the fishing business is so very remunerative.

6. I should say that the average number of American vessels fishing in the bay during the last ten years would be over four hundred. They generally come down here about the first of July and fish all summer; they fish all across, between here and the New Brunswick shore, this side of the island being opposite the New Brunswick shore.

7. When the cutters were about here they frightened the Americans off a good deal. Very few of the Americans fished inside that year. That, of course, would greatly injure their fishing; the best of their catching is within three miles of the shore. I don't think it would pay them to fit out for fishing unless allowed to fish within three miles of the shore. That year, when they used to come in here to water, they used to complain that the cutters caused them great loss.

8. When the American fishermen see our boats getting mackerel, they come among them, throw large quantities of bait, and draw off the fish; they sometimes drift down on our boats, and I have sometimes seen them upset and sink our boats.

9. I consider that the right of transshipment would be a very great advantage to the Americans, particularly in a good fishing season, as by means of it they are enabled to land their fish, refit for a new voyage, and be on the fishing grounds in a very short time. I consider they save at least two weeks each trip, which would be equal to another trip for the season.

10. The Americans used to do a good deal of harm here seining the mackerel. Two or three years ago, in particular, they used to catch large

quantities of fish, not one half being mackerel, the rest being herring and other fish, which were destroyed and thrown overboard.

GILBERT ^{his} × PERRY.
mark.

Sworn to at Frog Pond, in Prince County, in Prince Edward Island, this 28th day of June, A. D. 1877, before me, the same having been first read and fully explained to the said Gilbert Perry, who signed by his mark.

JOSEPH MacGILVRAY,
J. P. for Prince County.

No. 22.

I, AGNO J. GAUDET, of Nail Pond, in Prince County, Prince Edward Island, fisherman and fish-trader, make oath and say :

1. I have been engaged in the fishing business for about fourteen or fifteen years, part of the time in boats and three years in the schooner Frank, the years of 1866, 1867, and 1868. In the schooner we fished all around the island, from West Cape to East Point, Magdalen Islands, Bay De Chaleur to Point Le Pau, and along the Cape Breton shore. She was over sixty tons burthen, and had a crew of from fifteen to eighteen hands. The first season we got shipwrecked and did not do much, the second year we went seining and got over two hundred barrels of mackerel and some thirty or forty barrels of herring.

2. I consider that within the last thirteen years the boats have increased seven fold, they carry an average crew of three men each, besides giving employment to a great number of shore-men ; taking one year with another, they average about fifty barrels of mackerel each. As a general thing, we catch as many herring as we want round this coast, for mackerel-bait and for home use. The best mackerel fishing is done from the shore to two miles and a half out.

3. Along this coast the Americans very often fish mackerel within three miles from the shore, and I believe it is a great advantage for them to have the privilege of fishing within three miles of the shore.

4. I consider the right of transshipment a great advantage to the American fishermen ; by doing so they can transship their mackerel here, refit, and return to the fishing-grounds without losing much time, and thus save a fortnight each trip, which, in a good fishing-season, would be equal to another trip.

AGNO J. GAUDET.

Sworn to at Nail Pond, in Prince County, Prince Edward Island, this 28th day of June, A. D. 1877, before me,

JOSEPH MacGILVRAY,
J. P. for Prince County.

No. 23.

I, WILLIAM S. LARKIN, of Nail Pond, Tignish, in Prince County, Prince Edward Island, fish-dealer and fisherman, make oath and say :

1. I have been engaged in fishing for thirteen years, principally in boats, but one summer in a schooner, the Rechabite, and am well acquainted with the fishing-grounds.

2. I made a trip of three days, in June, 1874, on board of the American schooner Cynosure, of Booth Bay, Me., in which time we fished

close to this shore and took two hundred barrels of mackerel. She took six hundred and seventy barrels of mackerel in eight days that trip. She was about one hundred tons burden and carried fifteen or sixteen hands. Her catch was all caught within three miles of the shore.

3. There must be fully two hundred boats fishing between Mimmigash and Nail Pond, and I should say more. The last three years the number of boats has doubled, and more. The boats themselves are of a better quality than they were three years ago. The capital invested in boat-fishing has also doubled or trebled during the same time.

4. The reason there has been such an increase is because people found the fishing to pay.

5. Each boat, on an average, carries a crew of about three men. A number of shoremen are also employed in connection with the boats.

6. As a general thing the boats get their codfish from three miles out to a half mile from shore; the spring codfish are right in handy the shore; the mackerel range from half a mile to three miles off; the greater part of the mackerel are caught about a mile and a half from the shore; in the fall of the year they move off to about three miles; I should say two-thirds of the fish here are caught within three miles of the shore; the ling are caught about two miles and a half to three miles from the shore.

7. Some years, some of the boats catch over two hundred barrels of mackerel each; taking one year with another for the past ten years, I would put the average catch of mackerel at fifty barrels per boat. I would put the average catch per boat, taking all sizes, of codfish and ling, at about fifty quintal.

8. When the Americans come here they fish in about from one to three miles from shore. I have seen them so close that they have run aground.

9. When there is a fleet of Americans here they hurt the boat-fishing and draw off the fish. Their bait is better than ours, and they throw it and draw away the fish from our boats. While they are here the boats do not do much, as a general thing. The fishermen look upon the arrival of the Americans as the break-up of the boat-fishing.

10. The right of transshipment is a great advantage to the Americans, because they can unship their fish here and send them home while they themselves can go on with their fishing; they would thus save from three to four weeks a trip; that would be equal to a trip saved during the summer. Another advantage is that they can send on their fish, even half loads, in time to catch the good markets, which they could not do if obliged to go home with their cargoes, and as the mackerel is a very variable market this is a very great advantage.

11. The mackerel season lasts on the shore from the first of July until toward the end of September. The Americans get here about the beginning of July. The Americans seine for mackerel along here.

WM. S. LARKIN.

Sworn to at Nail Pond, Tignish, Prince County, in Prince Edward Island, this 28th day of June, A. D. 1877, before me.

JOSEPH MacGILVRAY,

J. P. for Prince County.

No. 24.

DOMINION OF CANADA,

Province of Prince Edward Island, Prince County :

I, MICHAEL FOLEY, of Alberton, in Prince County, in the said Island and Dominion, merchant, make oath and say :

1. That I am at present and have been for the past three years doing business in Alberton aforesaid, and that an important part of my business consists in prosecuting the fisheries on the north and west coasts of this island.

2. That I furnish supplies to about eighty fishing boats, which supplies consist of bait, hooks and lines, provisions and necessary clothing for the men on board said boats ; and that the men required to complete the crews of said boats, and to cure and land the fish taken by the boats, would amount in the aggregate to four hundred men—a few more or less.

3. That I am in frequent communication with the fishermen in my own employ, and with others who prosecute the fisheries on their account (and whose catch of fish I purchase), and consider myself capable of furnishing correct information as to the manner in which the shore fisheries of this province are carried on.

4. From my own personal observation, and from information obtained in the manner set forth in the preceding section, that nearly if not all the mackerel taken by the boats are caught within three marine miles from the shore, though a large boat may take in the season fish further off the land.

5. In a good season a boat's crew will catch between 50 to 80 barrels of mackerel, besides a quantity of herring, codfish, and hake, and the greater part of the codfish and hake are caught more than three miles from the coast line, but within the three-mile limit, and the herring are caught within three miles of the shore.

6. The boats are sometimes interfered with while fishing by American fishing schooners coming near them, throwing a large quantity of bait and by that means taking away the fish that may be around the boat ; the schooners frequently drift and come in contact with the boats when the latter are at anchor, fishing, thus causing serious damage to the boats and their outfit.

7. In the summer of the year 1868, I was in charge of my own vessel, the *Lily Ada*, of the burden of 55 tons, and was master of said vessel and continued to use the said vessel during the fishing season of that year for fishing only, and myself and crew of said vessel caught 250 barrels of mackerel, three-fourths of which catch were taken within three miles of the coast, and the remainder were taken within the three-mile limit, and during that summer my vessel was in company with the fleet of American fishing schooners on the coast of this island fishing, and the fish so taken by the different vessels of the American fishing fleet were caught at or near the same fishing grounds and in the same manner as those fish taken by my vessel.

8. For the past three years I have furnished supplies to fishing stages built for the purpose of packing and curing fish at Mimmigash, Hayward's Cove, Frog Pond, Black Pond, Nail Pond, Kildare, and Cascumpec Harbor, and these stages are visited by me almost daily during the fishing season, and from my observations made at the different stages, which are all in prominent places on the beach, I should say that fully one-half of the fish caught by the American schooners (fishing at or near that part of the coast) are caught within three miles from the shore, and

the greater part of the remainder of their catch are taken within the three mile limit.

9. A great advantage accrues to the American fishermen fishing on the coasts of this island, from the fact, from their right of transshipment, as when a large catch of fish is made, they can with very little delay transship their cargo, and immediately resume the fishing; they are also enabled to take speedy advantage of a profitable market.

10. The harbor of Cascumpec is at present frequented by the vessels of the American fishing fleet, and is near the fishing grounds and easy of access, and if the same is improved, it would to a very great extent add to the safety of the vessels fishing on the coasts of this island, and materially assist and make secure the American fishing schooners while engaged in the fisheries on the coasts of this island.

11. That great facilities are engaged by the American fishermen on the coasts of this island, by being unable to secure clam and other bait and by replenishing their supply of wood and water from the shores of this province.

12. That fishing in boats has increased to a very great extent during the last few years, and the boats now employed are larger and in all respects better found than those formerly used.

13. I have been for twelve years master mariner and ship-owner, and have been during that time sailing principally in the Gulf of St. Lawrence and am well acquainted with the coasts of this island.

M. FOLEY.

Sworn to at Summerside, in Prince County, in Prince Edward Island, the 26th day of June, A. D. 1877, before me.

JAMES W. HOWE,

*Commissioner for taking Affidavits in the Supreme Court,
and Notary Public for Prince Edward Island.*

No. 25.

DOMINION OF CANADA,

Province of Prince Edward Island, Kings County, to wit :

I, MARSHAL PAQUET, of Souris, in Kings County, in Prince Edward Island, farmer and fisherman, make oath and say :

1. That I have been personally and actively engaged in the mackerel fishing in the Gulf of Saint Lawrence from the year 1860 to 1869. In 1860 I commenced fishing in an American vessel, the Morning Star. We made two trips to the gulf during that summer, and caught 450 barrels. During that season there were about 500 American vessels in the Gulf of Saint Lawrence prosecuting the mackerel fishery. Their average catch during that year was small, not more than 300 barrels per vessel. During six weeks of that summer we were on Bank Bradley, and did not get any fish. We then came down to Bay des Chaleurs where we got a few. We left the bay and crossed over to the island, where we caught most of our fare, about two-thirds, within three miles off the shore.

2. That in the year 1862 I fished mackerel in the American vessel Mary W. Dodge. During that year there were at least 500 American vessels fishing mackerel in the gulf. The average catch of that season was small, not over 350 barrels per vessel, two-thirds of which would be caught within the three-mile limits.

3. That in the year 1864 I was again engaged in mackerel fishing, aboard the American vessel S. A. Parkhurst, of sixty tons burden. During that year we made three trips to the gulf, making a total catch

of nine hundred and fifty barrels, fully three-fourths of which we caught from one to three miles from the shore; there was a large number of American vessels in the gulf that season—over five hundred; the catch was very good, some of the vessels taking as many as thirteen hundred barrels. I should say the average catch that season would be over six hundred barrels per vessel. Averaging the ten years between 1860 and 1870 that I was engaged in the fishing, I would say that the American fleet would number four hundred sail each year—their average catch would be four hundred and fifty barrels per vessel each season, and of this number, without a doubt, two-thirds were caught inshore within the three-mile limits.

4. Our usual custom in fishing was to sail in close to the shore—from one-half to one mile of the shore—heave our bait, and drift off, taking the mackerel with us. Time and again when I was fishing in American vessels, we have gone in among the boats fishing near the shore, and, heaving our bait, which was generally superior to that used in the boats, take all the mackerel with us, and the boats would have to wait for another school to come along.

5. During the year 1868 I was boat fishing out of Souris Harbor. The Americans, when they saw us catching in the boats, made a practice of coming in among us and attracting away the mackerel, which they always succeeded in doing. They would thus draw all the fish away from the boats and the shore, and in some cases it would be a week or more before we would get a catch worth speaking of. This practice is very injurious to the boat fishing. Since the year 1870, I have noticed, while engaged in trading in fish, that the American vessels have continued this practice.

6. There were as many mackerel caught inside the limits since the Reciprocity Treaty has expired as before. In fact, the expiration of the treaty did not seem to make any difference with regard to the limits. The cutters did not prevent, to any extent, the Americans from fishing within the limits, as they would generally keep a good lookout for the cutters, and when they saw a cutter in the distance would stand off till she had passed, and then commence fishing within the limits again.

7. From my experience and personal knowledge, I would say that the Americans would not come to the Gulf at all if they could be wholly prevented from fishing within the limits, as fully two-thirds of all the mackerel taken are caught within from one to three miles off shore.

MARSHAL PAQUET.

Sworn to at Souris, in Kings County, in Prince Edward Island, this 27th day of June, A. D. 1877, before me.

JAMES R. MACLEAN,

J. P. for Kings County.

No. 26.

DOMINION OF CANADA,

Province of Prince Edward Island, Kings County, to wit :

I, PETER DEAGLE, of Rollo Bay, in Kings County, in Prince Edward Island, make oath and say :

1. That I was personally engaged in the mackerel-fishery from the year 1864 to 1870, in American vessels.

2. That I commenced fishing in the American schooner Northern Chief in 1864, and during that year we took nine hundred and forty barrels. In 1865 I fished in the Safronia, from Gloucester, and that season we caught seven hundred barrels. The next year I was in the S. A. Parkhurst, and we caught six hundred barrels. In 1867 I fished in

the Northwester, also from Gloucester. This year was not as good as former ones. Our catch was five hundred and eighty-five barrels. In 1868 I made one trip late in the fall of the year. Our catch for that trip was ninety barrels. In 1869 I fished in the Pescadore, and that year we made two trips, catching, during the first, two hundred and twenty barrels, and, during the last, one hundred and seventy barrels, making three hundred and ninety barrels for that season.

3. That during the six years from 1864 to 1870, my opinion, from actual observation, is that there were about four hundred American vessels of an average in the gulf each year, and that the average catch per vessel would be about four hundred barrels each season.

4. That I have no hesitation in saying from my personal experience during that time that at least three-fourths of all the mackerel caught in the Gulf by American vessels have been taken within the three-mile limits.

5. The cutters did not trouble us anything to speak of, and I do not think they interfered with vessels fishing within the limits to any extent.

6. At that time there were large numbers of boats fishing off Rustico and Tignish. The catches of these boats would no doubt have been much larger if the Americans did not visit our coasts and fish inshore.

7. Judging from the large proportion of the fish caught by the Americans within the three-mile limits, I am of opinion that they would not come here at all for fishing purposes if they could be wholly prevented from fishing within the three-mile limits.

PETER DEAGLE.

Sworn to at Souris, in Kings County, in Prince Edward Island, this twenty-seventh day of June, A. D. 1877, before me.

JAMES R. MACLEAN,

J. P. for Kings County, Prince Edward Island.

No. 27.

I, SAMUEL PROWSE, of Murray Harbor, in Kings County, Prince Edward Island, member of the local government, make oath and say :

1. That I have been engaged in the fishing business in Murray Harbor for eleven years.

2. That there are about forty boats or more engaged in fishing out of Murray Harbor, the values of which would run from one hundred and fifty to five hundred dollars each ; there are also six or seven schooners. These boats take crews of about four men each, besides the men employed on shore, who number about thirty men.

3. That there are a large quantity of fish taken by small boats along the shore, of which we have not the means of forming a correct estimate. The boats above mentioned, together with what fish are taken in the immediate vicinity by the small boats along the shore, take over three thousand quintals of codfish and over four thousand of hake. There cannot be less than seven thousand pounds of sounds taken from these hake, worth, at a low estimate, fifty cents a pound. The codfish are worth about three dollars, and the hake two dollars the quintal. There are about four thousand gallons of oil taken from these fish, worth from forty to forty-five cents a gallon. The fishing-stages here pay little attention to mackerel fishing, as the cod-fishing off here is the more profitable, and fishermen get the mackerel chiefly for bait, and they are dependent on the mackerel for their codfish bait. The Americans, by destroying the mackerel fishing on the shore, injure our cod-fishing.

4. That the principal part of the codfish brought into this harbor are caught along the shore, between Wood Island and Souris.

5. That it is not an unusual thing to see from eighty to a hundred sail of American fishing vessels hove to, fishing mackerel between this and Georgetown, many of whom fish on Sunday as much as on any other day. The number above mentioned are the vessels seen at one time, and by no means include the whole number of their vessels in the Straits. I could not make an estimate of the amount of fish taken by them, but judge it must pay them well to come here to fish, otherwise they would not continue to come.

6. That the Americans interfere with our boat hake-fishing, as the boats are dependent on the shore mackerel-fishing for bait, and the Americans come in, throw large quantities of bait and glut the fish, so that they will not bite and the boats cannot get them. Complaints are also being continually made by the fishermen that the garbage and offal from the fish thrown out by the Americans injure the fishing. Now, also, by the use of set-lines for codfish and seines for mackerel, much larger quantities of fish are taken by the Americans than formerly.

7. That by having the right to land their fish here and transship them, and refitting, I believe the Americans are enabled to make an additional trip in the season, which they would be unable to do were they obliged to take the fish home in their own vessels. They can also watch and take advantage of the fluctuations in the mackerel markets, which are very variable.

SAMUEL PROWSE.

Sworn to at Murray Harbor, in Kings County, Prince Edward Island, this 30th day of July, A. D. 1877, before me.

MALCOLM MACFADYEN,

J. P. for Kings County.

No. 28.

DOMINION OF CANADA,

Province of Prince Edward Island, Kings County, to wit:

I, DANIEL MCPHEE, of Big Pond, in Lot Forty-five, in Kings County, in Prince Edward Island, fisherman, make oath and say:

1. That I have personally been engaged in the mackerel and cod fishing in the Gulf of Saint Lawrence since the year 1863.

2. That in the year 1863 I commenced mackerel-fishing in the American vessel Messina, and that during that year we fished in the Bay Chaleur, and took home with us six hundred barrels of mackerel during the fishing-season of that year, one-third of which quantity, I would say, was caught within three miles of the shore.

3. That during that season, and up till about the year 1870, there were about 500 American vessels in the Gulf of Saint Lawrence engaged in the mackerel-fishery.

4. That during the years intervening between the years 1863 and 1870, my opinion is that the average catch of mackerel per season would be 500 barrels per vessel.

5. That from my experience and from my personal observation, I would say that one-half of the total quantity of mackerel caught by the American fishing-fleet has been caught within three miles of the shore.

6. That during the years 1867 and 1868, I would say that 100 of the American vessels fishing in the Gulf of Saint Lawrence took out a license, paying fifty cents per ton for the privilege of fishing within the three-mile limits.

7. That those vessels that did not take a license (and which were by

far the greater number), if they were fishing within the limits, would hoist sail when they saw a Canadian cutter coming, and go outside, wait till the cutter had passed, and then go back within the limits and resume the fishing again. That the cutters did not, to any appreciable extent, prevent the fishing within the limits.

8. Our usual custom was to go in close to the shore in fleets of 50 to 60, heave our bait and then drift off, taking the fish with us. If we saw a boat from the shore catching mackerel, we would lee-bow them, that is, we would go close on to her, heave our bait and draw off the mackerel; the boat would then have to wait for another school of mackerel. This would often occur and in every case would spoil the catch of the boat.

9. That during the last two or three years the number of American vessels engaged in the mackerel-fishery in the gulf has not been so numerous as in previous years, owing, no doubt, to the fact that the mackerel have not, during these last two or three years, frequented our coasts in such numbers as in previous years. This year, however, the prospects are good for mackerel-fishing.

10. That about 200 of the American vessels get their bait on the Nova Scotian coast, and in my opinion, without the bait obtained there they could not carry on the fishing.

11. That the Americans also take large quantities of herring from our coasts, about 10,000 barrels from the Magdalen Islands a year, all of which would be caught close up to the shore. There are 40 American vessels engaged at Fortune Bay, in Newfoundland, in prosecuting the herring-fishery, averaging about 500 barrels per season per vessel, all of which are caught close to the shore. There is also a fleet of 20 American vessels that fish at Bay of Islands in the fall of the year, averaging 700 barrels per vessel per season, which are all caught well within the three-mile limit. Then there is also a fleet of 40 American vessels which fish off Grand Manan. They average 350 barrels of herring per vessel, which are all caught close to the shore.

12. That the mackerel on their arrival in the gulf first strike the Magdalen Islands, then across over to the lower Canadian shore, Seven Islands, and Bay Chaleurs, and then come down along the west shore, keeping close inshore. They then strike across to North Cape, in Prince Edward Island, and thence hugging the shore closely move along toward East Point.

13. That, in my opinion, if the Americans were prevented altogether from fishing within the three-mile limit, they would not frequent the gulf at all on account of the great risk they would run in getting a fare at all outside that limit.

DANIEL MCPHEE.

Sworn to at Souris, in Kings County, in Prince Edward Island, this twenty-sixth day of June, A. D. 1877, before me.

JAMES R. McLEAN,

J. P. for Kings County.

No. 29.

I, MALCOM MCFADYEN, of Murray Harbor, South, in Kings County, Prince Edward Island, merchant and fish dealer, make oath and say:

1. That for the last ten years I have been actively connected with the fishing business, and I have had some experience in it for a long time. One year I was myself fishing on the Labrador coast, and I have been nine years buying, curing, and trading in fish at Murray Harbor.

2. That out of this harbor there are about forty boats and six or seven schooners engaged in fishing. The number of boats has increased very much. The boats are now larger than they used to be, and are decked boats. The cause of the increase is that fishermen have prospered here during the last ten years. There is a class of people who go in for fishing and nothing else. They live better than those who go in for both farming and fishing, but fishing is a help to them all round.

3. That these boats carry on an average about four men each as crew; that would be clear of the men employed on shore, who here are about thirty in number.

4. That these forty boats catch, in the aggregate, about three thousand quintals of codfish and four thousand quintals of hake, in the season, on an average. Codfish are worth about three dollars and hake two dollars a quintal. There are about seven thousand pounds of sounds in these, the price of which varies from thirty-five cents to one dollar a pound. The oil amounts to about three thousand five hundred gallons, worth, all round, forty cents a gallon. The catch of mackerel here varies from three to six hundred barrels in the season. The fishermen do not go into mackerel-fishing so much as into cod-fishing. There are also a few herring taken on this shore for bait.

5. That the codfish are caught along the shore and on the Banks, principally on Fisherman's Bank. They are all caught in the Straits. The mackerel are caught along shore.

6. That of late years I should estimate the number of American vessels fishing in the Straits at about two hundred sail. They fish their mackerel principally along the shore, and the codfish on the Banks. There are not many of them cod-fishing here, they are mostly mackerel fishermen. Some of them make two trips to the Straits, transshipping the first trip at the Gut of Canso. I should average their mackerel catch in the Straits at about three hundred barrels to a vessel.

7. That the American fishermen do a very great injury to our boat-fishing. They come up among our boats, when the latter are getting mackerel, and throw large quantities of bait and glut the mackerel, so that the fish stop biting and the boats can get no more of them. This is what is called lee-bowing. The Americans also clean their fish on the grounds, and this practice does great harm. In cod-cleaning the offal is thrown overboard, and I believe the fish eat the offal and bones, and the water is poisoned around. At any rate, the fish are driven away from the grounds when the offal is thrown overboard. I should say the mackerel offal has the same effect, but there is not so much of it.

8. That fishermen are all opposed to the coming of the Americans, on account of the harm the latter do to the fishing. The coming of the Americans is looked upon as the end of the good boat-fishing for the season. They also injure the morals of the fishermen, as they have no regard for Sunday or any other day. They also sometimes come on shore and break and destroy many things about our villages and shores.

9. That the lobster-fishery is now a large business here. There are a number of lobster-preserving factories on this island now. They are caught along the shore in three or four fathoms of water, or about half a mile from the shore. I do not know that there are any Americans, except one in Souris, engaged in this business here at the present time, but there are a good many of them along the Nova Scotia shore. This fishery everywhere is all carried on and the lobsters caught close to the shore.

10. That a good many of the American cod-fishermen get bait at the Magdalen Islands and ice at Canso. They have not bait on their own

shores for this fishery, and are obliged to depend on our shores for their codfish-bait, so that their cod-fishery is dependent on our herring-fisheries for its existence. They go very extensively into the cod-fishery. They also get our herring, not only for bait but also to ship to Sweden and other parts of Europe. There were a lot of them at the Magdalens this spring getting herring for that purpose. They take the herring in seines and nets. The herring are caught right on the shore.

11. The seining at the Magdalens does a lot of harm, as there are such numbers of herring killed. The seines sometimes take up thousands of barrels, and only part of these can be cured. They are killed or smothered in the seines, and the seines are finally tripped and the dead fish thrown away.

12. That at the Labrador I have seen the Americans seining for cod-fish. They also trawl for them very extensively. This is a very destructive way of fishing. In the spring of the year the trawls catch up the mother fish before they spawn, and millions of fish are lost in this way. The young cod taken on the trawls are also thrown away, as being too small for keeping. Numbers of the fish also get killed on the trawls and get knocked about. These also are thrown away. We receive little or no benefit from these vessels in return for the injury they do us, as they do not trade here except for such things as they cannot get at home. We don't collect even anchorage dues from these vessels, although they get the benefit of our harbors and lights. They also get their wood and water on our coasts, without which they could not fish.

13. The value of the right of transshipment is a great deal to the Americans. It saves them a trip home, which would save them a month in the best of the fishing. That would represent a save in money of from five to eight hundred dollars a vessel. They can also refit here just as cheap as at home. It would generally be an advantage, as enabling them to get their fish into market early, and thus catch the good early markets. They transship to a large extent at Canso. Only for this right to transship the last trip to the gulf would be lost, as they would not be able to go home and return soon enough to make it.

14. That at this factory or stage we put up from one hundred and fifty to two hundred thousand cans of lobsters in the season, the net value of which is about twelve dollars and one-half a hundred. At retail they are sold for much more than that.

MALCOLM MACFADYEN.

Sworn to at Murray Harbor, in King's County, Prince Edward Island, this 30th day of July, A. D. 1877, before me, the erasures and interlineations opposite my initials having been first made.

SAMUEL PROWSE,

A Justice of the Peace for Prince Edward Island.

No. 30.

I, CHARLES W. DUNN, of Murray Harbor, in King's County, Prince Edward Island, fisherman, make oath and say:

1. That I have been engaged in fishing for about twenty-eight years, winter and summer, in both boats and vessels, having fished in the cod fishing on the Banks for about seven winters. I have also fished mackerel in this gulf with the Americans from the summer of 1868 till 1871, and also in the halibut fishery on these coasts.

2. That there are all of forty sail of boats engaged in fishing off this harbor, and there have been a number added to them in the last two years

since I have been here. These boats are decked boats, and carry crews of four and five men each.

3. That these boats are all engaged in cod and hake fishing, and do not go in for mackerel fishing except for bait. These fish are all caught along the coasts, some on this shore and some on the Nova Scotia shore.

4. That I was down here in the gulf mackerel fishing, in the schooner William T. Merchant, of Gloucester, United States, for one whole season—five months and four days. That was in 1868. We took 900 barrels of mackerel in her. She was sixty-seven tons burden, and carried fifteen hands.

5. That in 1869 I was in the Ada L. Harris, of the same port, fishing, for two months or about half the mackerel season, in the gulf. We took out 500 barrels of mackerel. She was registered at forty-eight tons, and carried twelve hands.

6. That in 1870 I was about two months and a half fishing in the gulf, in the Reunion, during which time we got 430 barrels of mackerel. She was seventy-four tons, and carried fifteen hands.

7. That in 1871 I was in the Rambler for eight weeks fishing in the gulf. We took out 280 barrels of mackerel. We came in the gulf late that season. She was sixty-three tons, and that time carried thirteen hands.

8. That fully three-quarters of the fish taken in these schooners were taken close to the shore, or within three miles along this island, Miscou, Bay Chaleur, the Magdalens, and other places on the British coasts. Taking the season through, the inshore fishing is the best. I believe that it would not be at all worth while to fit out for this gulf, if the vessels were not allowed to fish inshore.

9. That I was two seasons or parts of seasons seining on the American shore for mackerel. One of these seasons I was there for seven weeks, and we only got one hundred and twenty barrels. We then came down into this bay, at the end of the season, and caught two hundred and eighty barrels. The second year I was out there we did not do much. The American shore is not such good fishing ground as the gulf. On their shore the hookers have little or no chance, as the seiners have broken up the fishing.

10. That I have been cod-fishing for seven or eight winters on George's and the Grand Banks in American vessels. We used to trawl, and have taken two hundred and twenty thousand pounds of salt fish in three months. The bait we used to use were all herring brought from the Nova Scotia, Newfoundland, and other British shores. These fish are taken fresh and frozen, and kept in ice. There is no bait to be had on the American shores, except a few herring near Eastport, and some porgies, but those last are no good except a few for the George's fishing. All this fishing for codfish is entirely dependent on the Dominion and Newfoundland herring-fisheries, and without these herring the cod-fishing could not be carried on, and would have to be given up. The ice is got on the American shore first, and then is got on the Nova Scotia shore. There is a large fleet of American vessels engaged in the cod-fishing.

11. That there is also a fleet of some eighty or ninety sail of Americans trawling for halibut on these coasts. There are quantities of halibut caught at Boone Bay, right round Anticosti; up the Quebec River, near and above Seven Islands, up as far as Trinity Bay. These are all caught close to shore in three or four fathoms of water. At Anticosti we could often see the halibut on the bottom when we were trawling. This would be about two or three hundred yards from shore. I have

seen ten thousand halibut a day caught at Anticosti in water where we could see bottom. This halibut fishery is the best paying fishery that I have ever been in. I have made ninety dollars in twelve days as one of the hands at this fishery.

12. That the seining breaks up and destroys the fishing, as it breaks up the schools of mackerel and scares the fish. The seiners also take both big and small fish, and all sorts of fish, and they only save the good mackerel. The herring, small mackerel, and other fish are all killed in the seines, and these are thrown away. These fish all sink to the bottom and putrefy and hurt the bottom, the feeding-ground of the other fish, and I think it poisons the other fish to eat this rotton stuff. The seining has broken up and destroyed the fishing on the American shore, and that is the effect it always has. They break up and destroy the hooking with the seines. This has happened on the George's grounds.

13. That the years the cutters were round they interfered with the American fishing and spoilt catches. I was out then myself, and we used to have to keep a man always on the lookout, and then when we saw the cutter's smoke we had to clear out. Some of their vessels were taken by the cutters.

14. That the right to land here, transship their mackerel, and refit is a very great advantage to the Americans, as they save on an average three weeks each trip by not having to take their fish home in their own vessels. This would be equal to an additional trip for the season. Then they can buy provisions and refit cheaper here than they can at home. They can also watch and take advantage of the changes in the mackerel market. If a skipper has any fish he can telegraph on to his owner and can have the fish sold in the early market and at the early prices. The mackerel are also liable to get rusted and injured by being kept long in the holds of the vessels. This injury is avoided by landing the fish and sending them on in steamers without loss of time.

CHARLES W. DUNN.

Sworn to at Murray Harbor, in King's County, in Prince Edward Island, this 31st day of July, A. D. 1877, before me, the erasures and interlineations opposite my name having been first made.

MALCOM McFADYEN,

J. P. for King's County, Prince Edward Island.

No. 31.

I, JAMES HOWLETT, of Georgetown, in King's County, Prince Edward Island, fisherman, make oath and say:

1. That I have been engaged in fishing for fifteen years, in vessels belonging to the United States. I have fished all about Bay Chaleur, from Port Hood to Seven Islands, at the Magdalens, all along this island coast, and two years mackerel-fishing on the American shores, and many winters cod-fishing.

2. That I should say the American fleet in this gulf numbers three hundred and fifty to four hundred sail, for certain, each year. The number varies; last year there were few schooners in the bay.

3. That in the Affodite, an American schooner of about sixty-eight tons, and carrying fifteen hands, we landed two trips at Causo, and carried two home, making four in all, averaging two hundred and seventy-five barrels each trip.

4. That in the Alice G. Wanson I fished one season in this bay, and

we carried home four hundred barrels of mackerel. She was seventy tons measurement, and carried sixteen hands.

5. That one summer, in the *Energy*, a large schooner of one hundred tons, we took home four hundred and fifty barrels.

6. That I was in the *Glenwood* for the fall trip, or about half the season; in her we carried home two hundred and seventy five barrels. She was a schooner of about sixty-five tons, and carried fourteen or fifteen hands.

7. That I was in the *Rose Skerret*, fishing in this bay for the first trip of about two months, July and August, and we took home two hundred and five barrels. She was about seventy-five tons, and carried seventeen hands.

8. That I was one whole season in the *Pescadore*, fishing in the bay for two trips. We carried home in all five hundred and fifty barrels. She was about fifty-eight tons burden, and carried fourteen hands.

9. That I was in the *C. D. Oliver*, for two-thirds of the season, when we carried home two hundred and seventy-five barrels of mackerel.

10. That in my experience of fishing in the bay, we averaged, for the whole season, from five to six hundred barrels of mackerel each year.

11. That one season in the *John Somes*, we took home seven hundred barrels of mackerel. She was about sixty-five tons burden, and carried fifteen and sixteen hands.

12. That in the first part of the season, the fish caught in these vessels were mostly caught between West Point and North Cape of this island; in the latter part at North Cape, Magdalens, Port Hood, and some at Sydney.

13. That I was half of two seasons on the American shores, mackerel-fishing; two hundred and fifty barrels was the most we got. Most of the mackerel there are seined, and I think the seining prevents the hooking.

14. That there is a large fleet of American vessels engaged in the cod-fishing. All the western and Grand Bankers get their bait from the Newfoundland and Dominion shores. They also get their ice there too. The cod fishery is dependent on these herring fisheries for its existence, as without the herring you cannot get codfish.

15. That there is also a large halibut fishery off Newfoundland, Grand Banks, and the Nova Scotia shores. These use herring for bait, and other small fish, but they do not use so much herring as cod fishermen.

16. That the right of transshipment is of value to the Americans, in this way, that they can thereby save three weeks on the trip, which, in good years, would amount to about a trip saved. They can refit at pretty much the same rate as at home.

17. That I believe that trawling and seining are ruinous to fishing, as the trawls catch up the old mother codfish before they spawn. The seining does harm, as it catches big and small, and the small are never used; and when large catches are made there are quantities of fish killed in the seines—and these are lost. I have known vessels take two or three hundred barrels more than could be saved, and these had to be tripped out and went to the bottom.

JAMES HOWLETT.

Sworn to at Georgetown, in King's County, Prince Edward Island, this 31st day of July, A. D. 1877, before me.

DANIEL GORDON,
J. P. for Prince Edward Island.

No. 32.

I, JOHN GRAHAM, of Cavendish, in Queen's County, Prince Edward Island, fisherman, make oath and say:

1. That I have been engaged in fishing off this island, in boats, for about fifteen years, and am acquainted with the fishing grounds.

2. That there are fully forty boats along this beach without reckoning the harbor, and the number is increasing every year. The number of boats along here has doubled, if not trebled, in the last five years, and the boats are better now than then, being better modeled and better built.

3. That these beach boats carry, on an average, crews of three men each; in the harbors the boats carry average crews of five men each, that is, besides the stage men employed on shore, of whom there are a good number.

4. That the average catch of mackerel along this beach would be about one hundred barrels to the boat. The bulk of these fish, I should say three-fourths, are caught within one mile and one-half to two miles from the shore. In the fall, the harbor boats sometimes go further off.

5. That one reason for the increase in the number of boats is, that people can now ship away their own fish, even in small quantities, whereas, formerly, they had to sell to the dealers here for what the latter chose to give. We can always get the cash for the fish now, while for farm-produce and in other business we cannot. It is found to pay now, which is the great reason for going in for fishing. Fishermen handle a good deal of money which they could not get in any other way.

6. That the American fishermen come down here about the first of July, and stop all summer. Sometimes I have seen as many as one hundred and fifty sail of them from this stage at one time, all fishing close to the shore; they fish where the boats do. Latterly, they have been using seines; at one time last year (1876) I saw three of them seining off this shore. I look upon their seining as an injury to our fishing. There were not so many of them here last summer as in some former years, but there have been seventy sail of them off the shore at a time last year.

7. That the Americans often do harm to our fishing by coming in among the boats and taking away the fish. They come in near the shore and throw a lot of bait and then drift off to sea and the fish follow them. We never calculate on doing much for some days after we see the Americans coming inshore, as the fish get full of bait and will not bite. They come in among the boats which are getting fish and lee-bow them, thus causing the mackerel to leave the boats. I never want to see them coming round. After their fleet comes round we cannot do much with the boats. I think that throwing over so much bait, and also throwing the offal of so many fish overboard, injure the fishing.

8. That it is a great advantage to the Americans to be able to come here and fit out for fishing and transship their fish when they have them. They come into Charlottetown and fit out, and they often go into the same port to ship away their fish. They save enough time by having the right of transshipment, to make another voyage to the fishing grounds. The fish get poorer in look and in quality by being kept long in the holds of the vessels, and by being transshipped they are saved from this deterioration, and consequently command higher prices.

The fishermen are also enabled to take advantage of the fluctuations of the fish market, and catch good prices.

JOHN GRAHAM.

Sworn to at Cavendish, in Queen's County, Prince Edward Island, this 11th day of July, A. D. 1877, before me.

ALEX. M. MCNEILL, J. P.,
Commissioner for taking Affidavits for Queen's County.

No. 33.

I, JOHN R. McDONALD, of St. Margaret's, in King's County, in Prince Edward Island, farmer and fisherman, make oath and say :

1. That I have had a practical acquaintance with the fishing business for the last eighteen years, all in schooners, both belonging to this island and to the United States. I have fished out of Gloucester, in the United States, for seven years, and I know the gulf-fisheries well. I have been master of fishing schooners for the last eight years, excepting the present year (A. D. 1877).

2. That at the present time I am carrying on a fishing business at New London Harbor, in Queen's County, in said island. There are about one hundred and fifteen boats belonging to and fishing off the New London Harbor and beach at the present time, and I believe they are increasing. There are a lot of new boats fishing here now, and a lot of stages have been put up here during the past year. The reason I give for the increase in the number of boats, and the increased quantity of money invested in boat-fishing, is that, when the people carried on fishing on the coast in a small way, they found the business to pay, and then they went more into it, and the more boats they put into the business, the greater were their profits in proportion to the number of boats employed. It does not cost very much more to run ten boats fishing than it does to run six, because the stages and all the shore expense and outfit would be the same, and the only additional expense would be the actual cost of the new boats with their outfits, and the extra feed and wages of the men on board them, while the profits would be larger. In short, as far as my experience goes, I find the fishing to be a paying business, although some years are better than others.

3. That the boats are now much better built, better rigged and better equipped in every way than they were five years ago. People now take pride in their boats.

4. That the average crews of the boats are about four men to each boat, besides those employed on shore, who are employed at about the rate of four to six men to six boats.

5. That I should call one hundred and fifty barrels a fair average catch of mackerel per boat for the season, taking one year with another ; but less than that would pay well.

6. I should think that all the mackerel are caught within three miles of the shore. I found in vessels that I could do nothing more than three miles from the shore. Within the last three or four years none have been caught outside of three miles.

7. That I fished for eight years on board of island schooners in the gulf, as captain. I fished in the schooners Letty, Corsair, Octavia, George S. Fogg, Little Belle, belonging to this island.

8. That I went out fishing in the Corsair about eight years ago. She was of about forty tons burden, and carried a crew of twelve hands. She made two trips that season, mostly along the island shore, and

partly in Bay Chaleur. On board of her, that season, we caught about four hundred and fifty barrels of mackerel.

9. That the year after I was on board the Corsair I fished in the Octavia, a schooner of sixty-four tons burden, belonging to Charlotte-town. She carried seventeen hands, and we made three trips, two of which were along this island shore, and one up the Bay Chaleur. In the three trips we caught eight hundred and fifty barrels of mackerel. We did not go in for any other kind of fishing. In both those vessels nearly all the fish were caught inshore, about two miles and from that in being the best fishing. Fully two-thirds of our catches were within two miles of the shore, and nearly all within three miles of the shore.

10. That I fished on board the Letty for two years. She was a schooner of fifty-seven tons burden and carried sixteen hands. We fished altogether on the island coast, and the first year made two trips, and caught five hundred barrels of mackerel, nearly all of which were caught near the shore. The second year we fished in the same places, and caught about four hundred and ninety barrels of mackerel.

11. That the year after I was fishing in the Letty I went in the George S. Fogg, of this island, a schooner of one hundred and three tons burden, and having a crew of twenty-one men. We made two trips in her, and caught in the two trips about seven hundred and eighty barrels of mackerel. These were all caught along the island shore and Nova Scotia coast. Nearly all were caught within three miles of the shore.

12. That last year (1876), which was the worst year I ever knew, I was out in the Little Belle, of thirty-eight tons burden, and carrying twelve men. We only caught one hundred and eighty barrels that year. The fish were too close to the shore for schooners to do much.

13. That almost all the American fishermen fish close in to the shore of the different provinces of the Dominion, and I do not think the Americans would find it worth while to fit out for the gulf fishing if they could not fish near the shore. The year the cutters were about the Americans did not do very much, although they used to dodge the cutters and fish inshore.

14. That I fished on board of American schooners for about seven years in the gulf, and during those years we used to land from six hundred to one thousand barrels the season, averaging about eight hundred barrels. We used then to generally fish about the Magdalen Islands, and close in.

15. That the boat fishermen complain that the American schooners break up the schools of mackerel and injure the boat fishing. They throw so much bait that the fish get glutted and sink to the bottom; won't bite, and very often leave the grounds. The Americans also leebow the boats whenever they see the latter getting mackerel, and take the fish away, when there is no use for the boats to stop there any longer.

16. That the right to land at our ports and harbors, ship away their fish, and take in a new outfit without having to go home, is a very great advantage to the Americans. Outfits are cheaper here than in the United States, and labor also is cheaper, such as coopering. They save a great deal of time, as they can go in and send away their fish and take in a new outfit, and be back on the ground without losing much time, while if they had to go on to the States they would lose about a fortnight each trip, which would amount to a good trip saved in the summer. They can also watch the fish markets and ship away their fish as soon as they land, if the price is up, selling them "to arrive." The mackerel market is a very fluctuating one, so that it is a great advantage to be able to transship without delay. The fish also are getting worse the

longer they are kept in the holds of vessels. The pickle is apt to sour or run off, in which latter case the fish rust, and they get knocked about by the tossing of the ship, and they thus become of an inferior quality by the time they get to market, and command smaller prices.

17. That I have fished for herring at the Magdalen Islands for four or five springs, and there has always been a large number of American schooners fishing herring there. They seine the herring, catching large quantities. They send a great many of these to Sweden and Norway and the West Indies, besides to the United States. At the Magdalen Islands they fish right inshore; in fact they drag the seines to the shore.

18. That in my opinion the American plan of seining is injurious to the mackerel and other fishing, as they only keep the good large fish, and throw the small ones and the other kinds of fish overboard, and they are destroyed.

19. That the mackerel strike about the Magdalen Islands first in the spring, and then they strike down toward Bay Chaleur, and then to North Cape of this island. At the Magdalen Islands they are caught in nets in the spring, and a great many Americans catch them there. The Americans know all about the way the fish strike, and they follow them as the fish go from place to place.

JOHN R. McDONALD.

Sworn to at French River, in New London, in Queen's County, in Prince Edward Island, this 12th day of July, A. D. 1877, before me.

JOHN SHARPE,
Justice of the Peace.

No. 34.

I, COLIN MCKENZIE, of French River, in New London, Queen's County, Prince Edward Island, farmer and fisherman, make oath and say.

1. That I have been engaged in fishing, for twelve years, fishing off the north side of this island, in both boats and schooners, and have fished herring in the spring at the Magdalen Islands, and also on the north coast of Newfoundland. I have been dealing in fish, and had a good opportunity to see the fishing there.

2. That there are over one hundred boats fishing out of this harbor, and off the shores in this neighborhood. Four years ago there were not half so many as there are now, and the number is still increasing fast. The boats are of a superior quality in every respect to what they were four years ago. The capital invested in boats has more than doubled within the same time. There are now about twenty fishing stages and more built for carrying on the fishing business, and six years ago there were only one or two.

3. That the boats carry crews of four men each, on an average, and there are three men to every four boats employed as stage men; that is, not reckoning the coopers and others employed on shore. The boats also furnish employment to the vessels in the carrying trade during the dull freight season. There is also a lot of money put in circulation through the country, which creates a trade for the country about the stages.

4. That the boats, on an average, catch about one hundred barrels of mackerel each during the season, worth about one thousand dollars. As soon as the mackerel are shipped we can draw and get the cash for them.

5. That I should say that one reason the boats are increasing in number is that good fishermen can now be obtained. Another reason is

that there is now a surplus population growing up, who have no land, and take to fishing for employment. The chief reason for the increase is that the business is found to pay.

6. That the boats along this part of the island catch large quantities of codfish before the mackerel season comes on, but the principal part of the boats leave off cod-fishing when the mackerel come. If followed up here, the cod-fishing would be valuable.

7. That there are considerable quantities of herring caught about here in the spring, and if people went into herring-fishing they might get as many herring as they wanted. We get herring also down at the Magdalen Islands. The herring are used for bait during the mackerel season, and also for home use. Each boat, on an average, wants about twenty barrels of herring for bait, during the season.

8. That nearly all the mackerel and all the herring taken by the boats are caught inshore; that is, within three miles of the coast line. About half the codfish are caught within the same distance from the shore.

9. That I have fished in schooners belonging to this island for several seasons. That I fished in a schooner called the Garland about twelve years ago, a schooner of about fifty tons burden and carrying eight hands. We fished in her off this island for the whole season, and got at least three hundred barrels of mackerel. Most of these fish were caught inshore.

10. That I fished for a season in the schooner Hannah, of this island, also of about fifty tons burden and carrying eight hands. We fished off this island; that was about eight years ago. We caught about three hundred barrels of mackerel in her, the greater part of which were caught close to the shore.

11. That I fished, about seven years ago, for a couple of seasons on board the Minnie R., carrying nine hands. In her we fished along the island shore and up the Bay Chaleur, and caught about two hundred and eighty barrels each year, but we did not fit out till nearly the first of August. In all these vessels we traded along through the spring, and did not fit out for fishing till late. Every year we fished I noticed that we used to fish closer to the shore, which I consider shows the mackerel are working closer to the land.

12. That during the seasons I was fishing in schooners there were large fleets of American fishermen fishing in the gulf. They used mostly to fish within three miles of the shore, especially during the last two years I was out. I should say that at least two-thirds of their catch of mackerel were caught inshore. I have seen some of their vessels take their entire loads close inshore, never going off.

13. That, taking one year with another, for the last eight or ten years there have been fleets of American schooners fishing in this gulf, of about four hundred sail each year. For the last two years they have not been so many; the reason for that is that they have had good fishing on their own shores in those two years, which they do not often have. During the last two years I should not think there were more than three hundred of them in the bay.

14. That the American schooners often interfere with the boats, by coming in, throwing bait, and drifting away, taking the fish with them. They, in fact, break up the boat-fishing to some extent. Their coming is looked upon as an injury to the boats; fishermen would sooner not see them coming. When the boats are lying at anchor getting fish, the vessels drift down and lee-bow the boats, spoiling their fishing for that time.

15. That I was down at the Magdalen Islands some years ago, herring

fishing, and there were a hundred sail of American fishing-vessels getting herring there. They would take on an average eight hundred barrels each; they ship them away to the West Indies and to other places. The herring there are all caught in the bays and harbors, and are caught with seines, which they often drag to shore. That fishery is valuable to the Americans, as they will get large returns for small outlay, and many of their cod fishermen take their bait at the Magdalen Islands.

16. That I have been getting herring at Newfoundland and have seen large numbers of American vessels fishing there. They fish there all winter. They freeze large quantities of the herring caught there for bait for their George's fishing-fleet; in fact, Newfoundland supplies nearly all the bait for their George's fishing.

17. That in the spring nearly all the mackerel coming here, come by Cape North and through the Gut of Canso, and then they strike the Magdalenes; and the herring come in the same way. From the Magdalenes the herring and mackerel strike up for Bay Chaleurs and for the coasts of this island and for Anticosti, and toward fall both mackerel and herring work back again in the opposite direction. The American fishermen know all about this habit of the fish, and follow them as they swim, and catch them at the different shores.

18. That I am of opinion that, for some years back, it would not pay the schooners to fit out for the gulf fishing if they were prohibited from fishing within three miles of the shore, that is, for herring and mackerel.

19. That when the cutters were about they used to frighten off the American schooners to a large extent. I have seen them here and in the Bay Chaleurs have to clear out when the cutter was coming, even when they were getting good fishing. The reason they were not kept off altogether was that there were not enough cutters to watch the coast.

20. That I consider the right to land here, transship, and refit is very valuable to the Americans, as they would save a fortnight each trip, right in the heart of the fishing season, which would amount, in a great many cases, to a trip saved in the season. They are enabled, owing to having the right to transship, to take advantage of favorable prices in the fish-market, which is very fluctuating. Besides that, by transshipping, they can get their fish into market in better order than if they kept them on board their own vessels. The fish, by being kept in the holds of the vessels, are apt to lose pickle, and rust, and mackerel are fish that need repacking.

COLIN MCKENZIE.

Sworn to at French River, in New London, in Prince Edward Island, this 12th day of July, A. D. 1877, before me.

JOHN SHARPE,
Justice of the Peace.

No. 35.

I, ALPHONSO GILMAN, of Malpeque, in Prince County, Prince Edward Island, fisherman, make oath and say:

1. That I have been following the fishing for about seventeen years in both boats and schooners; that I have been engaged in fishing out of this island about six years, and out of the United States the rest of the time in schooners.

2. That out of Malpeque Harbor and on the shore there are about fifty boats of all sizes engaged in fishing, and the number has increased considerably during the last two years. These boats carry crews on an average of about four men to a boat; that the boats engaged in cod-

fishing average about forty quintals a boat for the season, and the average catch of each boat engaged in mackerel-fishing, not reckoning dories, would, along here, be about thirty barrels.

3. That these fish caught by the boats are caught not further than three miles from the shore.

4. That, taking one year with another, there will be seven or eight hundred schooners engaged every year in fishing in the bay, of which about six hundred sail are Americans. These schooners generally fish around the Magdalen Islands, in the Bay Chaleur, in the bend of this island, around the East Point, around Margaree. In the bend of this island these schooners generally fish close inshore, and at the other places from ten miles out to the shore. Within the past ten years the greater part, over half of the mackerel taken by schooners, would be taken within three miles of the shore.

5. That I have fished in about twenty schooners, both island and American, and these schooners would average three hundred barrels for the season.

6. That the right to refit and transship here saves time to the Americans, as they can save about three weeks each trip by being able to land here and transship without having to take their fish home in their own vessels, and that would amount to a trip saved during the season. There is the further advantage that, by transshipping, they are able to take advantage of the markets for fish, which is a very variable market.

7. That when the mackerel first come in to the bay they generally come up toward Bay Chaleur, Gaspé, and round there, passing the Magdalen Islands on their way. It is up there that the American fleet generally goes first to catch fish.

8. That I am an American citizen, and have fished for years out of Boston, Gloucester, Camden, Frankfort, and Belfast, in the United States.

ALPHONSO GILMAN.

Sworn to at Malpeque, in Prince County, Prince Edward Island, this 13th day of July, A. D. 1877, before me.

H. S. MARSHALL,

Justice of the Peace for Prince County, Prince Edward Island.

No. 36.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, E. MARSHALL, of the island of Anticosti, county of Saguenay, Province of Quebec, fisherman, make oath and say as follows:

Was born in the State of Maine, United States; have carried on the shore and vessel mackerel-fishery for about thirty years, consecutively, till 1870; twenty-two years I spent in the shore and vessel mackerel-fishery at Prince Edward Island; for six seasons previous was master of American fishing vessels in the Gulf of St. Lawrence, and from 1867 to 1870 was master of the S. G. Marshall, which was seized for supposed illegal fishing inshore in Gaspé Bay. The names of the vessels of which I was master were the Orelia, of C. C. Gazel, of Alexandria, Va.; Oasis, of Ingham, Mass.; Chance, of C. C. Duroc, of Boston (a seining vessel); and the S. G. Marshall, of Prince Edward Island.

1. The fishing by American schooners was very extensive from 1852 to '70. During that period the number of American vessels which have

visited the shores of the Gulf of St. Lawrence for fishing purposes, yearly, amounted from 300 to 500 sail. This I have seen with my own eyes. Each vessel having an average of 12 men for a crew. All these were mackerel-fishing. The places where the Americans fished most during that period were on the shores of Cape Breton, Prince Edward Island, New Brunswick, and on the shores of Bay of Chaleur, from Port Daniel to Dalhousie, and east, from Port Daniel to Bonaventure Island, in Gaspé Bay, and on the south shore of Gaspé, from Cape Rozier to Matane, and on the north shore from Groisie to Goodbout River. I have fished myself nearly every year in these places, and I never missed my voyage.

2. Each of these vessels has made good fares every season, and some of them have made two trips of mackerel. Each of these vessels has made yearly a voyage of about 400 barrels.

3. The Americans catch their mackerel with seines and hand lines.

4. My opinion is that codfish gurry should not be allowed to be thrown overboard on any fishing ground around the shores, because it injures the small fish and drives away the large fish. This is my experience. For instance, if we throw codfish gurry on a fishing ground in the night, we could not find a fish there in the morning.

5. Mackerel caught by the Americans during the period mentioned above, have all been taken inshore, with the exception of a few barrels. The mackerel which I caught myself were all taken inshore.

6. The inshore fishery is by far the most valuable for all kinds of fish. In fact there are only two places where fish are taken in any quantity outside; the Orphan's and Bradley Banks. But the Americans don't resort there.

7. When American vessels come to fish among the boats, they entice all the mackerel away; it is my experience; I have enticed mackerel away from the boats myself often. This is done by the Americans whenever they get the chance.

8. Most of the Americans are supplied with either purse or hauling seines. The hauling seines have been in use for the last forty years, and the purse seines for mackerel, for about fifteen years.

9. The fishing with hauling seines is all practiced from the shores, and the purse seine in deep and shoal water.

10. Within the last five or six years most of the mackerel are caught in the gulf with the seines.

11. The use of the hauling seine has been mostly practiced on our shores from Port Hood to Cape Chat, on the south shore, and Goodbout to Seven Islands, on the north shore. I have practiced seining for three years from Gaspé Basin to Goodbout and Matane, and I have done well. In eleven days I stocked \$7,000 in Gaspé Basin, and I have seen at Goodbout, about twenty-three years ago, two American vessels loaded in one haul of the seine. The purse seines are mostly used now for mackerel.

12. I believe that the practice of seining is injurious to all kinds of fish, more especially to mackerel, because it destroys small and large fish.

13. The bait that the Americans use for taking cod and halibut, is all caught inshore or bought from the inhabitants at Anticosti and the north and south shores. Bait is taken with nets and seines.

14. Codfish, haddock, halibut, and pollock, are caught by American fishermen in inshore waters. And the same fish are also caught by the Canadian fishermen inshore.

15. The herring are all taken inshore, and is an important fishery. Four hundred barrels have been taken by the Americans at Fox Bay

this spring. They take herring for bait and for sale in their own and foreign markets.

16. On an average the Canadian mackerel are larger than the American.

17. The principal breeding and feeding grounds of mackerel are at Magdalen Islands, P. E. Island, Bay Chaleur, and Gaspé Bay. Mackerel feed on lance, herring, shrimps, and other marine animals floating in or about the surface of the water inshore.

18. I consider it a great advantage to American fishermen frequenting Canadian waters to be allowed to land, dry their nets, and cure their fish.

19. The privilege granted to the American fishermen by the Treaty of Washington, to be allowed to transship their cargoes, is of the greatest advantage to them, in this respect, that it enables them to keep on the fishing grounds, and to double and triple their fares.

20. The American fishermen could not carry on the fishery of cod and halibut if they were not allowed to catch bait inshore or to buy it from the inhabitants. If they buy it instead of catching it, it is because they save time and find it more profitable.

21. I consider it a great advantage to Americans to be allowed to resort to Canadian inshores for ice. Not later than last week an American schooner fishing halibut here, lost her fare by not having ice.

22. The privilege of fishing in American waters is of no advantage to us. I never knew of any vessel from here ever resorting there to fish.

23. Fishing by Americans in Canadian waters injures their fisheries. Let us suppose for an instant that Gaspé Bay was full of mackerel and 50 sail of vessels come in and fish one day, and you could not find a fish there next day; that is my experience.

E. MARSHALL.

Sworn to the best of his knowledge, information, and belief, at Anticosti, county of Saguenay, Province of Quebec, Dominion of Canada, this 23d day of July, 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 37.

DOMINION OF CANADA,
Province of Nova Scotia :

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, JAMES A. NICKERSON, of Margaret's Bay, in county of Halifax, Province of Nova Scotia, master mariner, make oath and say as follows :

1. I have been engaged nearly all my life, either directly or indirectly, in the fishing business. For about eight years I was engaged in the mackerel fisheries and commanded the vessel. Two of the years were immediately before the Reciprocity Treaty and the other six were during its continuance.

2. My vessel, the *Argo*, was about sixty tons burthen, and my average catch per season was eight hundred barrels.

3. I fished along the northern and eastern coast of Nova Scotia and Cape Breton and Prince Edward Island, and followed up to Bay of Gaspé and the Bay de Chaleur.

4. My best catches were taken off the north coast of Cape Breton, from Shittegan to Hanley Island, Port Hood, and I never caught any of

the fish to speak of beyond three miles from the shore. I am certain and positively swear that fully nine-tenths, and I believe more than that proportion of my entire catch was taken within three miles of the shore; the nearer to the shore I could get the better it would be for catching fish. One reason of that is that the mackerel keep close inshore to get the fishes they feed on, and these little fishes keep in the eddies of the tide quite close to the shore.

5. If I had been prevented from catching fish within these three miles I am satisfied I could not have got any fish at all.

6. Along Prince Edward Island the fishermen sometimes get good catches more than three miles from the shores. This is caused by the large fleets of vessels who only fish when the wind is off shore, drawing the schools of mackerel out into the gulf by throwing bait while fishing and drifting off from the land. It is necessary, however, for the fishing vessels to go close inshore before they can raise the mackerel and to draw them off. If the fishing vessels were kept out of the three-miles belt or limit the same result would follow as off Cape Breton; no mackerel would be taken.

6. Later on in the season the fishing fleet, by constantly throwing bait and drawing the mackerel from the shore, manage to get the fish in deeper water, and then, sometimes, catches are made at long distances from the shore.

7. In Bay de Chaleur catches of mackerel are sometimes made or taken more than three miles from shore, but this is the result of their being drawn off shore by the fleet fishing, the same as off the other coasts I have spoken of.

8. The American fishing fleet frequented the gulf in great numbers during the years I fished, but their numbers varied greatly, sometimes numbering five hundred and sometimes one thousand.

9. These American fishermen got their catches in the same places we did. They took the fish close in to the shore; that is, by far the larger proportion of them; and the opinion of the American fishermen was universal that, if they were excluded from fishing within these three miles off the shore, they might as well at once abandon the fishery.

10. The fishing was principally carried on by hook and line, but since the Treaty of Washington Americans have used, to a considerable extent, purse-seines to catch the mackerel.

11. I am satisfied that the fishing grounds are seriously injured by the American fishing fleet throwing over the offal from the mackerel when cleaning them; and I am acquainted with localities where the fishing was temporarily destroyed from this cause. Boat fishermen never throw over the offal; they carry it on shore with them.

12. I was one of the officers of the Sweepstake, one of the Canadian marine-police cruisers, one year—the year 1869—and of the S. G. Marshall during the years 1870 and 1871. The S. G. Marshall was another of these cruisers. Our duties were to enforce the law preventing American fishing vessels from fishing along the inshores. The two first years our station for cruising lay between Picton and St. Paul's Island, and the last year from Shediac to Gaspé, including the Bay de Chaleur. My experience was that the Americans constantly endeavored to get into the prohibited ground to fish. The first few weeks we commenced cruising we were stationed at the Gut of Canso, and we boarded all the American vessels that passed through, and warned them not to fish within three miles of the shore on pain of being seized and forfeited. Notwithstanding that warning, they kept continually creeping in, and we eventually seized the A. H. Wanson, while fishing within three miles

of the north shore of Cape Breton. At that time there were at least fifty American fishing vessels fishing at the same place, and within three miles of the shore, but we could only seize one. The others left for home almost immediately, saying it was useless to prosecute the fishing unless they could do so within three miles of the shore.

13. During the first two years we were cruising we were constantly finding them fishing within three miles of the shore. They could not raise the fish outside and were obliged to come in. We kept constantly warning them, but they as constantly and persistently kept fishing inside the limits and close to the shore. The last year (1871) when cruising between Shediac and Gaspé, we did not see many of them violate the law by coming within the limits, but when I ran over to Prince Edward Island I saw great numbers of them fishing within three miles of the shore, as many as thirty at one time. At that time they were allowed by the island government to fish there, as I understood, but I had no authority to interfere with them.

14. The experience gained by me during these years when I was engaged in these cruisers, and my own previous knowledge, gained from years of practical experience in the business, convinces me, beyond a doubt, and I have no hesitation in stating it under oath as my firm, deliberate, conviction, that if the American fishermen were prohibited or could be strictly prevented from fishing within three miles of the shore, they would entirely abandon the British-American waters altogether, so far as mackerel are concerned.

15. The inshore fisheries are of so much more greater value than the outshore or deep-sea fisheries, that the latter would be utterly useless by themselves and without participation in the inshore fishery.

16. The Americans do use the purse-seines for catching mackerel on our coasts, and their use has the effect of driving the fish into deep water and away from the ordinary fishing grounds. I am not aware that they have been used extensively; my opinion is that they have not been.

17. I am aware that the American fishermen buy large quantities of bait all along the coasts of Nova Scotia and Cape Breton. I cannot say whether they catch it to any extent themselves. Without this bait they could not carry on the cod-fishery at all. When I speak of not being able to say whether they catch bait, I wish to confine that to the herrings. I am aware that they fish for and catch squid in Canseau, Guysboro, and along the eastern coast of Cape Breton in considerable quantities. I have seen them catching these squid every time I have been along the coast in the squid season. These squid are among the very best bait for codfish, far better than herring. They are taken close into the shore, sometimes up against the rocks. They would prefer buying the squid to catching them if they could buy them, but they cannot, because the people do not catch them to any extent. Squid are taken with a jig; they are not taken in nets.

18. Since the Washington Treaty, the American cod-fishers have been able to get their supplies for the cod-fishery, besides their bait and ice, along our coasts, and the consequence is there has been a marked increase, I would say fifty per cent., of these American cod fishers. Being able to obtain bait and ice so near and so easily, they have their trawls extending from Cape Sable to Cape North, in Cape Breton, and a consequence is, in my opinion, that the best fish are prevented coming inshore, and are lost to our shore fishermen. Without being able to get the bait, they could not do this.

19. The herring fishery is entirely an inshore fishery. None are taken outside. It extends round the entire coasts of Nova Scotia, New Bruns-

wick, Prince Edward Island, and Lower Canada, and are chiefly taken by Dominion fishermen, and used as bait, or sold as such to the Americans.

20. The food of the mackerel is various, depending upon the season. A small fish called a shrimp, and another called brit, and small herring, the season's spawn, are the food they generally feed on. These small fish are found in the tide-rips, in the small bays, and off from points, but close to shore, within half or quarter of a mile from shore or less. That is where the mackerel are first found, after rising from spawning. They feed there for a time, until they fatten, and then they begin to move farther off from shore, and, after getting fat, move southward again. The mackerel breed along the coasts and in the bays of Nova Scotia and New Brunswick and Quebec. They go into shoal water to spawn, unless disturbed.

21. The privilege of transshipping their fish is a very valuable one to American fishermen, because it saves so much of their time at the very season when it is most valuable. In this way they are enabled to make an extra trip at least, and some of the more fortunate two trips, and, consequently, make very much larger catches. Without this privilege I don't believe many of the Americans would prosecute the mackerel fishery on our coast. * * * I form this belief from my intercourse with the American fishermen themselves.

22. The privilege of fishing in the American waters is of no use or benefit to Canadian fishermen.

28. United States fishermen coming into our inshores professedly for fishing purposes, take advantage of it to trade with the inhabitants, and sell them large quantities of smuggled goods from the United States. This is quite prevalent.

29. I have been for the past four weeks ill from the effects of a tumor which I have had removed from my throat, and am still in the doctor's hands and unable with safety to move about much.

JAS. A. NICKERSON.

Sworn to at Halifax, in the Province of Nova Scotia, this — day of July, A. D. 1877, before me.

WM. ACKHURST, J. P.

No. 38.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, JOHN L. INGRAHAM, of North Sydney, in the county of Cape Breton, in the Province of Nova Scotia, fish merchant, make oath and say as follows :

1. I have been engaged in the business of fish merchant during the past twenty years, and am at present so engaged, and am well acquainted with Canadian fishermen and American fishermen in this locality, also with the buying and selling of fish, bait, ice, and fishermen's supplies.

2. I have seen at one time two hundred American fishing vessels in this harbor. In the summer of eighteen hundred and seventy-six I have seen as many as thirty at one time. In these vessels there are from ten to fifteen men each.

3. These vessels fish often within one-half mile of the coast, north and east of Cape Breton, and all around.

3. They take from one hundred to five hundred barrels of mackerel

each ; some take from one hundred to one thousand quintals of codfish. This amount they take each trip. They get them around the shore, on Grand Bank, and wherever they can. The mackerel men make two trips, and those catching codfish make an average of at least two trips, some making three trips.

4. I have been well acquainted, during the past 20 years, with the amount of fish taken by vessels around this locality, and have found that the amount varies, being sometimes good for two or three years, poor for two or three years, and again good for another two or three ; they have been rather poor for the last two or three years. This year the mackerel have been reported plenty east of Cape Breton, and will probably be plenty again for a number of years.

5. The fishing is mostly done with hooks and trawls, the Americans trawling in deeper water than Canadian fishermen.

6. The American heavy trawling destroys the mother fish. They catch the larger fish, and often throw over any small ones taken, thus injuring the fisheries.

7. During and before the Reciprocity Treaty of eighteen hundred and fifty-four the American fishermen fished close to the shore, following the fish close in and wherever they could take them. Since the Treaty of Washington, they come along the shore, fish close in, within three miles of the coast. When our armed vessels come, they leave ; and when the armed vessels go away, they return.

8. The inshore fishing is, in my opinion, of more value than the fishing outside, as the fish make in towards the shore, and if the Americans could not come in and get bait, and ice to keep their bait, the outside fishing would be of no benefit to them whatever, the privilege of fishing and purchasing bait, purchasing ice and supplies being invaluable.

9. The American fishermen use seines in deep water and also on the shore, and Canadian fishermen complain that by these seines they take great quantities before they can get inshore, and break up the schools of fish.

10. The Americans get all their bait within three miles of the shore, in the bays, creeks, and harbors, by fishing for it with hook and line, and with nets. They also purchase large quantities, because, they say, it is more convenient to do so at times.

11. The American fishermen, to my knowledge, take codfish and haddock inshore by trawling and hooking them, and Canadians in the same way.

12. Almost all herring fishing is done inshore, and the Americans catch them for bait, and they often sell herring thus caught. This I know well, having purchased herring from them all along the coast.

13. The Americans catch very large quantities of mackerel, and I have often heard American masters say that our mackerel is much superior to that caught in American waters, being larger and fatter.

14. I have been informed by American fishermen that the mackerel feed inshore and places where the water is shoal, and I have known American vessels catch a cargo of over 300 barrels of mackerel in a week within five miles of this harbor, and I know of no reason why it may not be done again within the next eight years. The right of transshipping at such a time would be of great value, as also the right to land and dry their nets.

15. The right of taking bait in our bays, creeks, and harbors is, in my opinion, invaluable, for without this privilege they would be unable to prosecute the fisheries.

16. American fishermen purchase bait at times, because, they say,

it is more profitable for them to do so. I have sold them large quantities of ice to pack their bait—from 10 to 12 tons per vessel each fishing trip—without which they could not keep their bait. They take about two tons at one time, and frequently return for more ice and bait in order to complete the trip.

17. I sold yesterday two American fishermen ice to pack their bait. They also buy flour, beef, oil, and molasses when they run short of stock taken from home.

18. I have been engaged in the buying and selling of fish for not less than twenty years, and am acquainted with many Canadian and American fishermen, and I have never known or heard of any Canadian fishing vessel fishing in American waters, and do not know of any practical advantage that would arise from doing so.

19. If American fishermen were excluded fish would undoubtedly be more plentiful. There would be more Canadian vessels employed not having to compete with American fisherman, and I also believe that if American fishermen were totally excluded from our markets and from fishing in our waters these markets of our own would afford sufficient inducement to carry on fishing extensively and prosperously by our own people.

20. I believe that any diminution in the mackerel trade will not be of long continuance, and know of no reason why it may not be better than it has ever been.

21. American fishermen come around the southern and eastern coast of Cape Breton by dozens through the Canal and Bras d'Or Lake and wherever it suits them.

22. From information I have received from masters of Canadian and American vessels I have been led to believe that there have been, year after year, a thousand American vessels fishing in Canadian waters, the number of which I have no information may have been as great.

JOHN L. INGRAHAM.

Sworn at North Sydney, in the county of Cape Breton, in the Province of Nova Scotia, this 18th day of July, A D. 1877, before me,

W. H. MORSE,

J. P. for the County of Cape Breton.

No. 39.

I, JOHN J. MCPHEE, of Big Pond, Township number forty-five in Kings County, Prince Edward Island, fisherman and fish-stage owner, make oath and say:

1. That I have been engaged in fishing or carrying on the fishing business for twenty odd years, and I am carrying the business at a stage on the north side of this part of this island at the present time. I have fished in both boats and schooners, but chiefly in schooners, both American and island. I have fished all in this gulf, except some deep-sea cod-fishing on the George's Banks, and I am acquainted with the fishing-grounds of the gulf very well.

2. That there are about forty boats engaged in fishing between the East Point and my stage, a distance of about fifteen miles. In that distance there are no harbors, and the boats have to be beached. The number of boats has increased a good deal since last year. The reason for the increase in the boat-fishing is that the men from here, who used to fish on the American shore, found that it did not pay, and they came home to fish on the island shores.

3. That these boats take crews of from two to four men each, and average about three men each. That is clear of the men employed on shore to carry on the business.

4. That the boats get as many herring in the spring as they want for mackerel-bait during the summer, and if the people choose to go into the business, they could get a great many. Last year my boats and dories averaged fifty quintals of cod and hake. The boats also get on an average, on that side, about fifty barrels of mackerel in the season. These fish are all caught within three miles of the shore, that being the good fishing ground.

5. That I was out fishing in several island schooners, in the *Jane*, *Margaret*, in one Nova Scotian vessel, the *Tyro*, and some other island vessels. In the *Jane* we got about two hundred and twenty barrels of mackerel. Most of these were taken in on the shore, very few of them were taken in deep water. In the *Margaret* we were cod-fishing right off this shore; the fish taken in her were caught within three miles of the shore. In the *Tyro*, a small, little vessel, we took about two hundred and twenty barrels of mackerel, all of which were caught near the shore, round the coast.

6. That I fished for two years in the bay in American vessels, one year in the *Two-forty* and one year in the *G. G. Kidder*. In the *Two-forty* we took nine hundred and ninety barrels of mackerel. She was a schooner of sixty seven tons burden, and carried 15 hands. Of these fish about one hundred and fifty barrels were caught in deep water, more than three miles from the shore; the rest were taken close to shore, within three miles of this island—the New Brunswick, Nova Scotian, and Magdalen Islands shores.

7. That in the *G. G. Kidder*, a schooner of about the same size as the other, we took three hundred and sixty-six or seventy barrels of mackerel; most of these fish were taken close in round the shores. We took very few in deep water.

8. That I had been cod-fishing in deep water off the American shore. There are over a thousand American vessels engaged in this fishery. They get the main part of the bait they use at Newfoundland, round the Nova Scotia shore, and at the Magdalen Islands. The cod-fishery there is dependent on these herring fisheries, and would be a failure if these herring could not be taken. They also get supplies of ice on our shores.

9. That for the last ten years there has been an American fleet of fishing-schooners, on an average, of over five hundred sail in this gulf fishing. Some years there are more and some years less. Last year there were not a great many; the number varies. There are a lot of Americans coming down here this year; this season there are a number of seiners down here, and they do a lot of harm.

10. That the American fishermen clean the fish on the grounds, and throw the dirt and offal overboard. This does a lot of harm to the fishing. The fish eat up this dirt or gurry, and this sickens them, and I believe kills the fish. When this is thrown overboard the fish stop biting and cannot be caught. I have always seen them stop biting when we threw the offal overboard. This hurts the boat-fishing, as they have to stop on the ground; the schooners can leave and go to other places. We fishermen look upon this as a very serious injury to us.

11. That the schooners also do a great deal of injury to the boat-fishing by lee-bowing the boats. They come up around the boats, throw a lot of bait and drift off, drawing the fish after them. They do this purposely. It was done in the American vessels in which I fished myself.

12. That the right to land here, transship their fish, and refit, is a very great boon to the Americans. The schooners save, I should say, about twenty days by being able to land their fish here instead of going home. They take a good while to go home, whereas they can land in our ports with very little loss of time. They can also fit out in our ports cheaper than they can at home.

13. That the Americans are now beginning to seine here, and that ought to be stopped; it is a very great injury to the fishing. I believe it has spoiled the fishing on the American shore. Seining hurts the fishing, as it breaks up the schools, scares them off the shore, and large quantities of fish are killed. They take all sorts of fish, and they throw away everything except the mackerel. They also take small mackerel, and these are killed in the seines and thrown away.

JOHN J. MCPHEE.

Sworn to at Black Bush, in King's County, Prince Edward Island, this 26th day of July, A. D. 1877, before me.

JAMES MACDONALD.

Justice of the Peace for King's County.

No. 40. .

I, JAMES MCDONALD, of Chepstow, in township number forty-five, in King's County, Prince Edward Island, farmer and fisherman, make oath and say :

1. That I have been engaged, as boy and man, in fishing for forty years past, in both boats and schooners, the schooners being both American and island vessels. I fished four years in island schooners and three years in American. I have fished all round this island, down at the Magdalens, up west, in the Bay Chaleur, and herring-fishing in the winter at Newfoundland.

2. That, including boats and dories, there are engaged in the fishery from Murray Harbor to East Point, on the south side of this island, from three hundred to three hundred and fifty boats. The number is increasing fast every year; they have doubled in number in the last three years, and are now increasing fast.

3. That the boats increase because there is a demand for fish, and fishing pays better than any other work that I know. Fish are ready-money articles, and we can get cash for them any day, and we cannot get it for anything else. The fishing puts a lot of money in circulation in the country, which in itself is a great advantage.

4. That the boats, including dories, take, on an average, two to three men each, the dories generally taking two.

5. That the boats get as many herring in the spring as they want for bait. The boats use from ten to twenty barrels each during the season for mackerel and cod fish bait. The boats catch some two and three hundred quintals of cod-fish and hake during the season, and some less. The average would be about two hundred quintals, which produce a large quantity of sounds and oil. The sounds of the hake are worth nearly twice as much as the fish themselves without the sounds. Some of the boats get, on this side, forty barrels of mackerel and more. The average catch would be thirty-five barrels to a boat. We go in principally for cod-fishing here.

6. That nearly all the herring caught are taken close inshore. About half the codfish are taken near the shore—that is, within three miles. There might be one quarter of the mackerel taken by boats here caught

more than three miles from shore; the rest are taken within that distance.

7. That I was out eight weeks one season in the *Spray*, belonging to Charlottetown, carrying eighteen hands; in that time we took over one hundred quintals of codfish and over two hundred and fifty barrels of mackerel, but that was not half the season.

8. That I was out in another Charlottetown vessel, carrying twelve hands, for five weeks, and in that time we caught two hundred barrels of mackerel.

9. That I was out one season in the American schooner *Mary S. Wanson*, of Booth Bay, and we caught six hundred and fifty barrels of mackerel; she was about eighty tons burden and carried seventeen hands; we made two trips and part of another in her.

10. That I was out part of one season in the *Burnside*; we were out about two months, and caught five hundred barrels of mackerel. She carried sixteen or seventeen hands.

11. That I was out in the *Fox* a long time ago; she was a small vessel; I was not in her the whole season. She only took two hundred barrels while I was in her.

12. That we fished in these vessels all around the north and part of the south side of this island, catching most of the fish in the bight of this island. We got the fish all close inshore; none of the fish were caught more than two or three miles off, and most of them right in among the boats on the shore. Most of the American vessels fished in the same places. Wherever the Americans saw the boats taking fish, they came right in there.

13. That the American fishermen do a great deal of harm to the boats by coming in and lee-bowing, and taking the fish away. They come in close to shore, throw bait and drift off, taking the fish with them. They sometimes drift down on the boats themselves, and the latter have to get out of the way to avoid being swamped. I have often had to do so myself. The fishermen are sure, when the Americans come round, that the boats are going to lose the fish. The vessels are the ruin of the boat-fishing. They heave so much bait that they glut and sink the mackerel. They also throw overboard the dirt and offal of the fish they clean, and the fish get sickened by it and won't bite; in fact, that offal poisons the fish.

14. When the cutters were about, they used to keep the Americans from fishing near the shore to a great extent. I have seen the schooners, when the boats were getting plenty of fish in sight, not daring to heave a line for fear of the cutters. Had there been half a dozen cutters, the Americans would not have been able to fish inshore at all.

15. That the right to transship their fish is a great advantage to the Americans, as they can thereby save more than a fortnight each trip, which, in the course of a summer, would amount to another trip.

16. That I was down at the Magdalen Islands herring-fishing one season, and there were then fifty or sixty sail of Americans fishing herring there. The herring are seined there, and a few are netted; they are caught right inshore, in Pleasant Bay.

17. That one winter I was herring-fishing at Newfoundland; then there were about thirty-five sail of Americans seining herring in Fortune Bay. These herring they freeze for the *George's* fleet and for markets.

18. That there are large fleets of American fishing-schooners in this gulf every year. There are three, four, and five hundred sail at a time. There are a great many of them coming down now; they are arriving fast.

19. That the Americans are now seining down here, and thereby doing a great deal of harm. They take so many more fish than they can save in the seines, that large quantities of fish are smothered and are thrown overboard. They take large quantities of herring in these seines, which they throw away and the fish are destroyed. One seiner last week here seined a trip of about a thousand barrels which he had to throw away, as his vessel was loaded. Several of the American vessels have already taken their loads and gone. The fish which are thrown overboard by the seiners rot at the bottom and drive the other fish away.

his
JAMES + McDONALD.
mark.

Sworn to at Souris, in King's County, Prince Edward Island, this 24th day of July, A. D. 1877, before me, the words opposite my initials having been first interlined, he fully understanding the same, and knowing the contents.

JAMES R. MACLEAN,
Justice of the Peace for King's County.

No. 41.

I, JAMES NOWLAN, of Souris, in King's County, in Prin Edward Island, fisherman, make oath and say:

1. That I have been engaged in fishing for about thirty-six years, part of that time in boats and in schooners. I fished for eight summers in American schooners, and I know the fishing grounds all around the north side of this island, the Cape Breton coast, the Magdalen Islands, and up the Bay Chaleur.

2. That there are about one hundred and fifty boats fishing out of the New London Harbor, where I am now fishing, and along the beach, and the number is increasing fast—has doubled at least within the last six years—and the boats themselves are now very much better than they were then; the boats are better built, better modeled, and are smarter boats than they were; they are worth much more. There is very much more money now invested in boats than there was a few years ago. People find that the fishing pays, and they are going in for it more and more. The boat-fishing affords employment to a lot of men who otherwise would not be at work.

3. The average crews of the boats are from four to five men to each boat, besides the men employed on shore, who are a good number.

4. That the average catch of mackerel for each boat off here is about one hundred barrels. Some years they catch more and some years less.

5. That the greater part of the mackerel caught by the boats is caught near the shore. More than three-quarters of the whole catch are caught within three miles from the shore.

6. That I was on board a small island schooner called the Mountie R., of about sixteen tons burden, and carrying seven hands. I was out in her for about one month two years ago, and we caught seventy-five barrels of mackerel; all we caught were caught within three miles of the land.

7. That I fished one year for mackerel on board the Nova Scotia schooner Let-her-Rip, of about twenty-seven tons burden, and carrying eight hands. I was in her only two months and thirteen days, and caught one hundred and fifty barrels of mackerel.

8. That I fished in American schooners eight summers, the last time being in the summer of 1874, on board the schooner Uncle Joe, of Southport, Maine. She was of about sixty tons burden, and carried

sixteen hands. We caught six hundred and eighty barrels of mackerel that summer on board of her. These mackerel were mostly caught along the island shore and up towards Port Hood. Of these we caught one hundred and seventy barrels in Rustico Cove, about a quarter to a half a mile from shore. More than three-quarters of the whole catch were caught within three miles of the shore.

9. That the American vessels in which I sailed would average about four hundred barrels of mackerel the season.

10. That the American fishermen hurt our fishing, as they throw so much bait that they sink the fish. They also clean their fish and throw the offal overboard, and that does harm to the fishing. This offal sickens and kills the fish. The Americans interfere with the boat-fishing by lee-bowing them, and draw off the fish. They come up ahead of the boats and throw bait and drift off, taking the fish with them. They break up the schools of mackerel where the boats are. The fishermen look upon the coming of the Americans as the end of the good fishing for the season. The boats do better before the Americans come than afterwards.

11. That the right to transship and refit on our shores is a very great advantage to the Americans. By having this right, they are able to save the time which it would take them to go home. This would be a save of at least a fortnight each trip, which would amount to a full trip saved for the season. They can also send away their mackerel in time to catch the market, which is a very changeable one. That in itself is a great advantage.

12. That I have often been herring-fishing at the Magdalen Islands, at Labrador, and on the Newfoundland coast. I was at the Magdalen Islands this summer two years, and there were a number of Americans fishing down there. The herring there are caught right in the harbor. The Americans catch large loads of herring at the Magdalen Islands, some of which I believe they send down to the West Indies. The herring there are caught altogether by seines. The American herring fishing there is a big trade.

13. The greater part of the codfish and hake are caught about two miles off the shore from this island. Three-quarters of the cod and hake are caught within three miles of the shore. The fishing within that distance is much better than farther off.

14. The fish, I believe in the spring, come down through the Gut of Canso, and then go to the Magdalen Islands, and from there they strike down towards the North Cape of this island. The American and any skilled fishermen know of this habit of the fish and know where to get them. The fishermen know just where to get the fish, and they make down from the States in the spring to the places to get them.

15. The year the cutters were about the Americans were afraid of them, but still they used to dodge in and fish. I believe that six or eight small cutters well fitted out would keep the American fishing schooners clear of the coast.

his
JAMES + NOWLAN.
mark.

Sworn to at French River, New London, Queen's County, Prince Edward Island, this 12th day of July, A. D. 1877, before me, having been first read over and explained, the said James Nowlan signing by his mark. Before me.

JOHN SHARPE,
Justice of the Peace.

No. 42.

I, JOHN G. MCNEILL, of North Rustico, in Queen's County, in Prince Edward Island, farmer and fisherman, make oath and say:

1. That I have been engaged in fishing for eighteen years, and that my experience has been in boat-fishing, and I am acquainted with the fishing off this part of the island.

2. That there are about eighty boats fishing out of North Rustico, without taking into consideration the other parts of Rustico. The number of boats has more than doubled in the last ten years, and is still on the increase. The boats take on an average crews of five men each, beside what men they employ on shore as stage-men.

3. That the boats on an average catch about one hundred barrels of mackerel each for the season, and about twenty quintals of codfish and hake each.

4. That the fish are nearly all caught close to the shore, the best fishing ground being about one and one-half miles from the shore; in October the boats sometimes go off more than three miles from land. Fully two-thirds of the mackerel are caught within three miles from the shore, and all are caught within what is known as the three-mile limit, that is, within a line drawn between two points taken three miles off the North Cape and East Point of this island.

5. The reasons for the increase in the number of boats is that people find that the fishing pays, and therefore they go in for it.

6. Some years there have been five hundred sail of American schooners fishing off this coast. I think the reason the schooners have not been as numerous around this shore within the last few years as they were before is, that they were scared away by the cutters some years ago, and they have been compelled to stop fishing. I believe, from what I know of the American vessels, that they catch on an average about five hundred barrels of mackerel each.

7. That the right of transshipment is valuable to the Americans, because they thereby save about three weeks each trip right in the heart of the fishing season, which, taking the two trips into consideration, would amount to a trip saved in the season. They can refit here more cheaply, I believe, than they can in the United States. They are also thereby enabled to take advantage of the markets; they can come on shore, find out how the markets are in Boston and other places, and ship away at once in time to catch good markets. That is a great advantage for them.

8. The cod-fishing begins here about the tenth of June, and the mackerel about the beginning of July, and the cod-fishing lasts till about the tenth of November, and the mackerel-fishing till about the twentieth of October, although we have taken mackerel later than that date.

9. There is pretty much a separate class here going in for fishing. The people now pay more attention to the fishing than formerly; the boats are better in every way than they used to be.

10. The coming of the Americans is a great injury to the fishing. They come down and lee-bow the boats, taking the fish away. They sometimes drift down on the boats and break the masts out of the boats, doing great injury. The Americans put an end to our good fishing when they come around. I believe one reason for this is the amount of offal which the Americans throw overboard. The blood and offal hurt the fish and sink them to the bottom. Their habit of throwing the offal overboard is very injurious to the fishing.

11. The Americans for the past two years have not been so numerous

here as before, because, owing to the large quantities of fish caught two years ago, the price of mackerel is not now as high as formerly. Two years ago, with three boats, I shipped one thousand barrels of mackerel.

JOHN G. McNEILL.

Sworn to at North Rustico, in Queen's County, in Prince Edward Island, this 10th day of July, A. D. 1877, before me.

WM. S. McNEIL,
J. P. Queen's County.

No. 43.

I, GEORGE MCKENZIE, of French River, in New London, in Queen's County, Prince Edward Island, master mariner, make oath and say :

1. That I have been engaged in fishing for about forty years, in schooners nearly altogether; I have fished at the Labrador for codfish and herring, and in the gulf cod and mackerel fishing, and I am well acquainted with all the fishing grounds from Sandwich Bay, in Labrador, all up the gulf to Anticosti. I have fished two years in Anticosti.

2. That there is a very large number of boats fishing off this harbor and the coast in this locality, and their number is increasing very fast; in this harbor they have doubled in number during the last year, and the boats are a hundred per cent. better now than they were; they are better rigged, better shaped, of better material, larger, and better in every respect than they were. The reasons for the increase in the boat fishing now is that people, finding it pays, are going more and more into it, and young men are now going in for fishing instead of leaving the island; young men do not care about going to sea as much as for fishing, as they can get money easier in the latter way. There is also a considerable surplus population springing up now, which find employment in fishing, which they could not get in any other way; men see there is an opening here for them in the fishing business, and they would sooner go into it than go away.

3. The boats take, on an average, crews of four men each, besides the men employed about the stages, who would be at the rate of about four men to six boats; this is besides the men who make the barrels, and others to whom employment is given preparing outfit and material for the boats; during the fishing season it would take twenty men, clear of the stages and the crews, to keep six boats going. Last year I paid one thousand and sixty dollars for the barrels used by me for my six boats, and which barrels were all made and supplied by men having nothing to do with the boats or stages.

4. That the average catch of mackerel for the boats, taking one with another, is not less than one hundred barrels. This I know from the number of barrels caught by the different boats here, as shown by the actual figures taken as the boats landed the fish.

5. That all these mackerel are caught right along the shore; none farther out than three miles from shore, and the greater part within one mile of the line of the shore.

6. That the boat fishing here puts a great deal of money in circulation in the country, as the moment the fish are shipped the fishermen or shippers can draw for the money, and the banks cash their drafts. This keeps up a good circulation of cash in the country, and does a lot of good in that way.

7. Until the last two years there have been fleets of 500 sail of American fishermen fishing in the gulf. The reason they have not been so

numerous the last two years is that they have had good fishing on their own shore, a thing which very seldom happens. It is only very seldom that they have good fishing on their own coasts.

8. That fully two-thirds of the fish caught by the Americans are caught near the shore, within three miles of it. I know this, because I have fished among them year after year, and I never saw twenty of them at a time fishing more than three miles off, while from 150 to 200 sail of them would be fishing close to the shore. They and the island schooners always fish about the same grounds. The inshore fishing has always been the best for mackerel at all seasons of the year.

9. That my average catch of mackerel while fishing in island schooners was about 500 barrels of mackerel each year, but we were not so well fitted out as the Americans, they having more men, better fit-outs, and more experienced fishermen than we had. The average catch of the Americans was consequently much larger than ours. They would average a thousand barrels each until the last two years, when they have been fishing on their own coast. During the last two years they would not average more than 400 barrels down here, because they did not come in time, and the fish were close inshore, and there were not so many fish here as before.

10. That the Americans catch codfish near the Labrador, close into the rocks. There used to be about two hundred sail of American cod-fishermen at the Labrador and along the gulf shores.

11. That the American schooners used to do great injury to the boat-fishing. When the American fleet was down here, it used to knock up the boat-fishing. They used to hurt the boats, and in fact their schooners did not care what they did to the boats. When they saw the boats raising fish they would come right up and drift down upon the boats when the boats had to get out of the way. Their schooners, when the boats were getting fish, come up and lee-low the boats and take the fish away from them. They used to break up the schools by running down among them and throwing bait. When the Americans clean their fish, they throw the offal overboard and that is a great injury to the fishing, as it drives the mackerel from the ground, and I believe it kills them.

12. That the Americans fish large quantities of herring at the Magdalen Islands; they often have one hundred and fifty sail of vessels there fishing herring there. I have seen the number as low as sixty sail, but very seldom. They average about one thousand barrels of herring to each vessel. These are all caught inside of Pleasant Bay, and they are all caught by seines. These herring are partly smoked and are sent to different parts of the United States, and to the West Indies, and Sweden, and in fact to wherever there is a market. The herring fishery at the Magdalen Islands is a very valuable one for the Americans, as they are put to little expense about it and get large returns.

13. The Americans always come down after the Fourth of July, I have seen a hundred sail of them go into Halifax in one day to fit out for the gulf-fishing. They stop here till late in November, generally making two or three trips in the season. I have seen thirty sail of American schooners come out of Malpeque Harbor, and to my certain knowledge, they each wanted from one hundred to one hundred and fifty barrels of being loaded, and they dropped down and fished between New London Head and Rustico Head, not two miles from shore, and before sun-down they had all completed their cargoes and sailed for home.

14. Our regular mackerel season begins here about the first of July: The mackerel strike in here about that time. At the North Cape of this island they strike earlier than they do here. The mackerel season lasts

till about the last of September, although they are often caught as late as December. The mackerel stop here till December, but the weather gets too blustery to go off for them.

15. That in the spring the mackerel are first caught at the Magdalen Islands, where they are caught in nets by the Nova Scotians and Americans. The mackerel strike the Magdalen Islands about the first of June, right after the herring leave. I think they always come to the Magdalens round Cape North. The mackerel don't stop there long, but strike for the North Cape of this island, and from there they make over for the New Brunswick coast, and about the month of August they work back southward again. This general habit of the mackerel is well known to fishermen, and the American fishermen know the habit first rate. When the mackerel strike off for this island the American schooners never wait along the bight of this island but press up toward the North Cape, and Miscou, and Mira, and generally along the west coast of New Brunswick, and up as far as Seven Islands above Anticosti, as their experience has taught them that that is the quarter where the fish are to be found first. Later on in August and September they come back into the bight of this island, and that is the time they interfere with the boats. Nearly all the fish caught during these times are caught near the shores of the British possessions, although there are some American vessels which fished entirely in deep water away from the land, but these are comparatively few. Some of the Americans used to be afraid to fish near the shore through fear of the cutters.

16. That it would not be worth while for the American fishing-schooners to fit out for fishing in the gulf, if they were not allowed to fish near the shores. They might as well stop at home.

17. That at the present time about four hundred sail of American cod-fishing vessels fit out on the British coasts from Cape Sable in the southern part of Nova Scotia, round to Cape North. They take in bait and ice for the trawl or set-line fishing on the Banks off the Nova Scotia and Newfoundland coasts. They could not carry on this cod fishery unless they could get their ice and bait on British territory. They could not bring the bait from home with them, as the distance is too great and they could not get fresh herring at home. They also get their ice cheaper and better on our shores than they can buy it in Boston.

18. That the right of transshipment is a very great privilege to the Americans. By it they are enabled to make a trip more in the season than they could if they had to take their fish home in their own vessels; they save a fortnight each trip by having this right. They can also fit out here cheaper than they can at home, which in itself is a great advantage to them. They can also put their fish into the markets without delay, when they are able to transship them in our ports, and thus take advantage of high prices in the fish-market, which is about the most fluctuating market in the world. The vessels can land even partial cargoes, and ship them on to the United States and sell them "to arrive," which is a very great thing for the fishermen. The fish also get worse the longer they are kept on board the vessels; they fail—that is, they get light, and are apt to rust owing to the barrels leaking the pickle; in fact they get to look worse, and are worse, and command a lower price the longer they are kept on board the vessel. They also get knocked about by the tossing of the vessels.

19. That there is a great deal of herring-fishing done by the Americans in the winter at Boone Bay, Bay Fortune, and at other places on the coast of Newfoundland. These herring are caught for pickling and for bait, and quantities are frozen to send down to Boston and other

places in the States for home consumption. There would be fifty sail of American down there at a time, and they are coming and going the whole time.

GEORGE MCKENZIE.

Sworn to, at French River, in New London, in Prince Edward Island, this 12th day of July, A. D. 1877, before me.

JOHN SHARPE,
Justice of the Peace.

No. 44.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PETER PAINT, Sr., of Port Hawkesbury, in the county of Inverness, and Province of Nova Scotia, merchant, make oath and say as follows :

1. I have been for the past forty-five years dealing in fish and fishing-supplies, and I am acquainted with the fisheries in the Gulf of Saint Lawrence, but principally with those on the Nova Scotia shores, bordering on that gulf. I deal in all kinds of dry and pickled fish to the extent of \$20,000 per annum.

2. I estimate that since I have been doing business as aforesaid, the American fishing-fleet in the Gulf of St. Lawrence has ranged from 400 to 800 sail each year. I have understood that there have been some years as high as 1,000 sail of mackerelers and cod fishermen. I have known of 150 cod-fishing vessels and 600 sail of mackerel-catchers in a single season in the gulf.

3. The catch of mackerel per vessel is between four hundred and five hundred barrels each season, worth about \$12 per barrel. The cod fishermen average about one thousand quintals per vessel each season, worth \$5 per quintal.

4. The codfish are caught with hooks, and the mackerel principally with hooks.

5. I believe that the Americans injure our fishing grounds by throwing overboard offal and garbage and that the fish are driven away by this practice.

6. The Americans have always fished as near the shore, as they could, whether it was lawful for them to do so or not. The cutters kept them off to some extent between 1866 and 1871.

7. The inshore mackerel fishery is, in my opinion, more valuable than that outside. The herring fishery is carried on inshore altogether. I am of opinion that more than half the mackerel are caught inshore.

8. The American fishermen of late years are attempting to use seines in catching the mackerel in the Gulf of St. Lawrence. I consider this practice very injurious to the mackerel fishery, as it tends to break up the schools and drive away the fish.

9. I am not aware that the fish frequenting Canadian waters have increased or decreased to any great extent since the Treaty of Washington. The mackerel were somewhat scarce in 1875 and 1876, but I have known them to be just as scarce several times since I have been doing business here, and they always came in plenty again in a year or two. The mackerel are coming in in large numbers this year, and there is every prospect of a good catch, I believe.

10. I believe that the Americans handle and dress their mackerel better than our fishermen do, and for that reason they sometimes obtain a higher price for them in the American market.

11. It is certainly a very great advantage to the Americans to be allowed to land and transship their cargoes, as it enables them to make more trips and consequently catch more fish than they otherwise could. By means of this privilege they save about a fortnight each trip. I think it adds fifty per cent. to their catch when the fish are plenty.

12. It is much cheaper for the American cod-fishermen to buy their bait on our shores than to spend the time in catching it themselves. They consequently purchase almost all their bait from our merchants and fishermen. It would be utterly impossible for the Americans to carry on the cod and other deep-sea fisheries profitably without resorting to our shores and harbors for bait; nor could they carry on these fisheries profitably without obtaining ice to preserve their fresh bait, and other supplies on our shores.

13. The privilege of fishing in American waters I consider to be of no practical advantage to Canadians, and I never heard of Canadians availing themselves of this privilege.

PETER PAINT, SR.

The said Peter Paint was sworn to the truth of this affidavit at Port Hawkesbury, in the county of Inverness, this 25th day of July, A. D. 1877, before me.

MALCOLM McDONALD.

Justice of the Peace.

No. 45.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEORGE C. LAWRENCE, of Port Hastings, in the county of Inverness, merchant, make oath and say as follows:

1. I have been engaged here and at Port Hood for the past fourteen year in a general fish trade, and have dealt in cod-fish, mackerel, and herring. I am carrying on a large fishing-business here now, and during the period named I have had good opportunities of watching the fishing business of the Gulf of Saint Lawrence and becoming familiar with it.

2. During the Reciprocity Treaty there were each year in the gulf about five hundred American vessels. These would average from sixty to seventy tons each, and their crews would number about fifteen men. They were engaged chiefly in taking mackerel, and cod-fish, and herring from the Magdalen Islands and Bay Chaleurs. The mackerel vessels in the gulf during the Reciprocity Treaty in the most favorable years would average about five hundred barrels of mackerel per season.

3. After the termination of the Reciprocity Treaty, the number of American vessels decreased on this coast, and, so far as I am able to give an opinion, their profits diminished after that time. During the last two or three years since the Washington Treaty the American mackerel fleet in the gulf has been somewhat smaller than in former years under the Reciprocity Treaty. The catch of mackerel has been smaller. I do not regard this as due to any permanent falling off in our mackerel fisheries, but merely accidental and temporary. I have reason to believe that the catch will be larger this year than for some years past, and I know no reason why our mackerel ground should not be as productive during the next eight years as heretofore.

4. The privilege of transshipping cargoes in our ports is a great advantage to American fishermen. I have known it to be done since the

Washington Treaty. It enables the American vessels to make more trips, catch more fish, and increases the paying capacity of the enterprise.

5. It is a great advantage to American fishermen to be allowed to procure bait in our waters and ports, and from our fishermen. They could not carry on their cod-fishing successfully without it. The very fact that Americans in many cases buy the bait instead of catching it themselves is evidence that they find it more profitable to do so.

6. It is also an advantage to American fishermen to be allowed to resort to Canadian inshores for ice to preserve their bait and to supply themselves with other articles for outfit required in the business.

7. The privilege of fishing in American waters has so far, at least, not proved of any advantage to Canadian fishermen so far as I know.

8. Not nearly all the American fishing-vessels passing through the Straits of Canso are noted or reported. A great number pass through every year that have never been noted or reported at all.

9. The Newfoundland herring fleet from American ports go thither along the eastern side of Cape Breton instead of passing through the straits, and toward the latter part of the season large quantities of the most valuable mackerel are taken by Americans on the eastern shore of Cape Breton between Cape North and Louisburg, and thereabouts.

10. I do not consider the privileges derived by Canadians of sending fish into American markets free of duty as at all equivalent to the advantages which the Americans obtain under the Treaty of Washington of catching fish, getting bait, and transshipping in our waters and ports.

GEO. C. LAWRENCE.

Sworn to before me at Port Hastings, in the county of Inverness, this 25th day of July, 1877, before me.

W. M. CLOUGH, J. P.

No. 46.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES B. HADLEY, of Port Mulgrave, in the county of Guysborough and Province of Nova Scotia, notary public, make oath and say as follows:

1. I have resided at the Strait of Canso since the year 1837. From that time until the year 1841 I was engaged in general trade and fishing business. After that I was collector of light duties and preventive and excise officer until the year 1848, after which year and until the year 1856 I was engaged in mercantile and fishing business. Since the year 1856 I have done business as a public notary. During the whole period since the year 1837 I have had a very extensive and complete knowledge, both personally and otherwise, of the fishing business as carried on by the Americans in the waters on the coasts of Nova Scotia, the Eastern or Gulf coasts of New Brunswick and Quebec, at the Magdalen Islands and Anticosti.

2. That I am well acquainted with the different voyages that the Americans undertake in our waters for fishing purposes. From about the 20th of April to the 10th of May, the Americans pass through the Strait of Canso to the herring fishery at the Magdalen Islands. The next fishery, in point of time, was in former years the Labrador cod fishery; now, however, trawling for codfish comes next, upon which

they enter, as soon as they can procure bait, which, with other supplies, they obtain on our coasts, especially at the Strait of Canso. From the 25th of June until the last of October they enter our waters to prosecute the mackerel fishery chiefly in the Gulf of Saint Lawrence. The number of American vessels fishing in our waters for mackerel has ranged in different years from one hundred and fifty to six hundred sail, the number of men in each vessel ranging from ten to eighteen. The principal places where the Americans fish for mackerel in the summer months are all over the Gulf of Saint Lawrence, off Pomquet Island, Port Hood, Prince Edward Island, in the Northumberland Straits, off Point Miscou, as far up as the Magdalen River, across to the Seven Islands, off and around Magdalen Islands, and in the fall from East Point and the Magdalen Islands and Island Brion, thence to Cape Saint Lawrence and Port Hood, and around the eastern shore of Cape Breton to Sydney Harbor. The trawling for codfish is done all around our shores from the first of May till the fall. They also carry on the herring fishery and cod and halibut fishery from Anticosti, as far north as Greenland and Labrador, on both shores; also at Bay of Islands, Bay Saint George, and Fortune Bay, the latter place being visited in the winter season. The number of vessels in the herring fishery at the Magdalen Islands alone, ranges from ten to seventy-five sail of American vessels.

3. The mackerel fleet take from four hundred to eight hundred barrels per vessel each season. The herring fleet would formerly take from six hundred to a thousand barrels in bulk each season, per vessel; latterly larger vessels are used in this fishery and a larger quantity taken.

4. The American fishermen carry on their fishery in our waters by the means of seining, trawling, and books.

5. Wherever trawling is prosecuted it is very destructive to the boat fishery. The Americans also injure our boat fishery or shore fishery by throwing over great quantities of bait. The fishes are also in some cases driven away by the quantity of garbage and offal thrown overboard by American vessels. Great destruction is also done to our fisheries by the Americans by the practice of seining.

6. In the prosecution of the mackerel fishery by far the greater portion is taken within three miles of the shore, and the mackerel fishing outside the three miles is of little or no value. The herrings are all taken within the harbors and bays of our coasts, and the trawling for codfish is also done within three miles of the shore. The privilege of coming within the three miles of the shore is of vital importance to the Americans, as all the best mackerel are taken close inshore to the very rocks. The outside fisheries would be of little importance or value to the Americans if they were kept outside the three-mile limit. It is for this reason that they have exposed themselves to so great risks in order to fish within the three miles, as they obtain so large a price for the mackerel caught inside in the fall of the year between Port Hood and Margaree, which used to bring from twenty to thirty dollars per barrel.

7. The Americans do great injury to our boat fishery by running in and "lee-bowing" the boats and taking away the fish from them into deep water by throwing bait. Their system of trawling for codfish tends to destroy the mother fish which are lying on the bottom in a kind of stupid state just before they spawn.

8. The privilege of landing and drying their seines and nets and curing their fish is of great importance to the American fishermen.

9. It is also a valuable privilege to the Americans to be allowed to land and transship, or store their cargoes, by which means they are enabled to make three or four trips to the Gulf of St. Lawrence if the fish

are plenty, whereas they could otherwise make only one or two trips by taking the fish home in their own bottoms each time.

10. The trawlers for codfish could not prosecute their calling without obtaining bait and other supplies on our shores ; at least not at all in a profitable manner. I have known them to be compelled to abandon their voyage in consequence of not being able to procure bait on our shores. The obtaining of ice and other supplies on our coasts is also a very great advantage to the American fishing-vessels on our coasts.

11. The privilege of fishing in American waters is, in my opinion, of no practical advantage whatever to Canadians, and I never heard of any Canadian using those waters for fishing purposes.

12. In my opinion it would be better for Canadians to exclude the Americans from the fisheries within the three-mile limit, and keep them for our own people, even if the American Government put a duty of \$2 per barrel, or any other amount of duty, on our fish.

And I say that the above statements, to the best of my knowledge and belief, are true in substance and in fact.

JAMES B. HADLEY.

The said James B. Hadley was sworn to the truth of the above affidavit, at Port Mulgrave, in the county of Guysborough, this 24th day of July, A. D. 1877, before me.

GEO. B. HADLEY,
A Justice of the Peace.

No. 47.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MICHAEL CRISPO, of Harbor Au Bouche, in the county of Antigonish and Province of Nova Scotia, merchant, make oath and say as follows :

1. I have been acquainted with the fisheries on our coasts for the past thirty years, during ten years of which time I was personally engaged as a practical fisherman, and during the remainder of said time I have dealt in various kinds of fish to the extent of about \$20,000 or \$25,000 yearly. Up to the year 1874, I estimate that there were, on an average, about four hundred sail of American vessels engaged in the mackerel fishery on our coasts and in our waters each year, and that the yearly catch up to that date would average about six hundred barrels to each vessel. During the past three years the number of American vessels in the mackerel fishery on our coasts has been smaller, as the mackerel have been less plenty. This year, however, there appear to be plenty of mackerel in Antigonish Bay, and there is a good prospect of a fair catch there. I have not heard how the fishery this year is succeeding on the other parts of our coast. It is my opinion that the scarcity of mackerel in our waters is not permanent, and that they will come in again as plenty as ever, unless destroyed by the purse-seines which the Americans are beginning to introduce in our waters.

2. Formerly about one-half of the mackerel were caught within three miles of the shore. Of late years, however, two-thirds of them are caught within that distance, in my opinion ; and I consider the inshore mackerel fishery of much greater value than that outside. The herring fishery is almost altogether inshore, and is carried on principally at the Magdalens and on the shores of Newfoundland and Labrador, and is probably as good at the present time as ever it has been. The cod

fishery is principally on the Banks, as the inshore fishery has been greatly injured by the practice of trawling followed by the American fishermen. The mackerel are caught all around the shores of the Gulf of St. Lawrence.

3. I consider the practice of seining, which is beginning to be employed of late years by the Americans in the mackerel fishery, is very injurious. By means of this they have ruined the mackerel fishery on their own coasts, and will doubtless injure ours very greatly in the same way. The seines to which I refer are called "purse seines," because they draw up at the bottom like a purse. They destroy a great many fish uselessly, and tend to break up the schools of mackerel.

4. I do not think that the Americans could profitably carry on the cod fishery without procuring bait on our shores. They purchase a large quantity of bait from our fishermen and merchants. They also procure on our coasts a good deal of ice, which enables them to preserve their bait much longer than they otherwise could. I refer to the cod fishery in the Gulf of St. Lawrence. The vessels engaged in this take about four hundred barrels per vessel each season, worth about \$1,600.

5. The inshore boat fishery of Canadians is injured by the Americans coming in among them and baiting the mackerel and enticing them away; and I consider that it would be a valuable advantage to British fishermen to carry on this inshore fishery without being subjected to local competition by United States citizens.

6. The privilege of landing and transshipping cargoes is of great advantage to the Americans engaged in the mackerel fishery on our coasts, as they are thereby enabled to make more trips and catch more fish than they otherwise could. They save about a fortnight by this means on each trip they make.

7. I consider that the fact of American mackerel bringing a higher price than Canadian is largely owing to the former being placed in the market sooner after being caught than are the Canadian mackerel. On this account they look better and fresher when sold, and consequently bring a higher price. Our mackerel are worth about \$12 per barrel.

8. The privilege of fishing in American waters I consider of no advantage to Canadians, and I never heard of Canadians availing themselves of such privilege. To the best of my knowledge and belief these statements I have made in this affidavit are correct.

MICHAEL CRISPO.

The said Michael Crispo was sworn to the truth of this affidavit at Harbor Au Bouche, in the county of Antigonish, this 1st day of August, A. D. 1877, before me.

EDWARD CORBET,
A Justice of the Peace.

No. 48.

ROBERT STEWART MUNN, age 47 years, merchant, and one of the partners in the firm of John Munn & Co., doing business at Harbor Grace, Newfoundland, maketh oath and saith:

Deponent has been for upwards of twenty-five years engaged in the trade and fisheries of Newfoundland, and is well acquainted therewith in all their details.

Deponent is aware that a large number of United States vessels prosecuting the Bank fishery are supplied with fresh bait and ice in the harbors along our coasts.

Deponent further states, that the Newfoundland cod fishery is an inshore fishery, as is the bait fishery, being prosecuted within three miles of the shore. The supply of bait to United States fishermen along our shores acts injuriously on local fishermen, for although it is true that there is an abundant supply of such bait, yet the very large quantities required by United States fishermen and their extensive operations in procuring such frequently drives bait from coves and inlets where the local fishermen were accustomed to get their supply, and where their facilities enabled them to obtain what bait they needed, whereas they have not the conveniences of following the bait from harbor to harbor; and, further, the bait being thus driven from these localities, codfish also disappear, as they follow the bait; the result being that the local catch has become precarious, and a marked reduction is evident since United States fishermen began the bait trade in these waters.

Deponent is well informed in affirming that one million dollars is a moderate valuation of the fish consumed for food, bait, and agricultural purposes by the inhabitants of Newfoundland, and that an average estimate of the profit on the yield of the inshore fisheries of Newfoundland would and does exceed twenty per cent., as is shown by the annexed statements marked A and B, which were carefully compiled from the books of the firm of whose business this deponent is managing partner.

The traffic in bait by United States fishermen is an absolute injury to the people of this country and represents no actual money profit to our fishermen.

Commercially the Treaty of Washington has not benefited Newfoundland by creating an extra demand or outlet for any of the produce of this country, nor can such be expected, inasmuch as United States fishermen, enjoying equal rights with Newfoundland fishermen, will fully supply their own markets with fish, and the exports of oils have not increased since the Treaty of Washington came into operation.

In explanation, I wish to state that the reason why I say that the bait traffic is of no money profit to our fishermen is, first, the amount paid for bait is small and no compensation for the labor of procuring the same, and secondly the fishermen could be more profitably employed in catching codfish, which would yield them a much larger profit, and as a fact, fishermen engage in this bait traffic for the purpose of obtaining a little ready cash, the greater part of which they waste in dissipation.

ROBERT S. MUNN.

Sworn before me, at Harbor Grace, Newfoundland, this 27th July, 1877.

J. O. FRASER,
Commissioner of Affidavits.

A.

Fishing-voyage statement.

We take the average of 4 years' catch—1873, 1874, 1875, and 1876—of one of our fishing jacks, with two men, and find it 80 quintals, which, at the value of \$5 per quintal, is.....	\$400 00
And 2 barrels herring at \$2	4 00
	<hr/> \$404 00

EXPENSES, &C.

Now if these men hired their boat, they would have to pay only \$14; but we charge her as a new boat, costing, with all her outfit, \$90.00. She should, at least, run 7 years—making a yearly hire equal to	\$12 86	
Add yearly expenses fitting out.....	7 14	
	<hr/>	20 00
A herring net and moorings cost \$24—for four years, or yearly	6 00	
1 cast net, \$3—for three years, or yearly	1 00	
1 dozen lines, \$4, and 6 dozen hooks, 60 cents.....	4 60	
Twines used and lead	1 40	
	<hr/>	13 00
Extra allowed—cordage, &c., that may be required		10 00

No. 52.

NEWFOUNDLAND,
St. John's, to wit:

I, Joseph P. Deneff, at present in St. John's aforesaid, and a native of the said island, do declare that I have been for the past six years, last preceding the date hereof, engaged in prosecuting the fisheries out of the ports of Salem and Gloucester, in the United States, on the coasts of Newfoundland, of the Dominion of Canada, and on the Banks in the deep sea; that I am of opinion that it will be of the greatest importance to American fishermen to be enabled to get the bait necessary for the Bank fisheries in Newfoundland; that this benefit can hardly be overestimated; that there will be, during the current season, upwards of two hundred American vessels in Fortune Bay for bait, and that there will be upwards of three hundred vessels which are engaged in the Grand Bank fisheries belonging to the United States, to which it will be of the greatest advantage to run into Newfoundland for bait of different kinds, and they would probably make about four trips during the season; that caplin is among the best bait which can be used for this fishery, and vessels would probably be enabled to make two trips during the caplin season; that this declarant is of opinion, from his experience, that the Bank fisheries are capable of immense expansion and development, and that the privilege of getting bait on the Newfoundland coast is indispensable to accomplish this object; that a vessel of from seventy to ninety tons would take about one hundred barrels of caplin each trip.

JOSEPH P. DENEFF,
Master of the schr. John Smith, of Gloucester, Mass., U. S.

* See Annex D, attached to British case.

Declared before me this 23d day of May, A. D. 1876, at St. John's aforesaid.

W. O. WHITEWAY,
Notary Public.

No. 53.

WILLIAM H. MULLOY, master-mariner, aged 27 years, presently residing at Gloucester, U. S. A., and now at St. John's, N. F., maketh oath and saith:

I have prosecuted the Bank cod-fishery six years as master, and two years as a hand; during all this time I sailed from Gloucester, U. S. A. The size of the United States vessels prosecuting the Bank fishery ranges from sixty-five to ninety tons, carrying crews of from twelve to fourteen men all told.

The cost of outfit for a new banker of about seventy tons will be about three thousand dollars over and above the price of the vessel.

In the opinion of this deponent it is of the greatest importance for American vessels prosecuting the Bank fishery from the United States to be enabled to procure bait and refit their vessels in the harbors of Newfoundland, it will enable them to increase the number of trips, and the consequent lucrative results of the operation, especially if transshipments be resorted to in Newfoundland harbors. The advantage of baiting on the coast of Newfoundland, as compared with baiting on the coast of Nova Scotia, or any other part of the Dominion of Canada, is very considerable, inasmuch as from Newfoundland Harbors a vessel baiting there can generally be upon the fishing grounds on the Banks from twelve to twenty hours after leaving port, whereas from the coasts of Nova Scotia, the distance being much greater and a greater prevalence of easterly winds, bait is liable to and does frequently become deteriorated before reaching the fishing grounds.

From my experience and observation I am of the opinion that the Bank fishery off the coast of Newfoundland is capable of vast expansion and development, towards which the privilege of baiting and refitting in the harbors of Newfoundland is indispensable. If United States vessels were prevented from procuring bait on the coasts of Newfoundland and the Dominion, they would be dependent alone upon salt bait and such casual refuse bait, such as hagdown halibut, small codfish, cod-roe, and such like, as could be got upon the Banks, and therefore could not make more than one trip of codfish during the season; in fact, the Bank fishery under such circumstances could not be carried on from the United States with profitable results, and as a matter of fact, prior to 1874, United States banking vessels have generally resorted to ports on the Newfoundland coast for bait where they could evade custom officers and procure bait in contravention of the law.

Prior to 1874 United States bankers threw away all fish less than twenty-two inches or twenty-eight inches as caught; now the small fish is brought into Newfoundland ports and there sold, slightly salted, to advantage. I last year sold one hundred and fifty quintals of such fish at nine shillings and sixpence per quintal. The privilege of selling oil in Newfoundland ports is of importance—also as providing necessary funds for the purchase of bait and for refitting.

The quantity of small codfish caught by each banker during the season will be fully two hundred and fifty quintals upon an average of every two loads of codfish caught upon the Banks. The number of United States vessels prosecuting the cod-fishery on the Banks off Newfoundland each season from the port of Gloucester is about three hun-

dred; there are vessels fitted out from other ports in the United States besides Gloucester, but not to so large an extent. The average catch per vessel on the Banks will be two thousand five hundred quintals codfish, the value of which will be about twelve thousand dollars to the owner.

The result of my last year's operations is as follows:

Total catch, thirty-seven hundred quintals for the season—three banking trips; value thereof, about seventeen thousand dollars; expenses of wages, crew's share of voyage, outfit, and provisions was about twelve thousand dollars; leaving a clear profit to the owner of about five thousand dollars. The owner derives a considerable profit also from the difference between the prices he allows the crews for their share of fish and what it is worth to him in the market, by which he would gain on the quantity above stated about eighteen hundred dollars. The owner, in my case above cited, settled with the crew at two dollars and seventy-five cents per quintal as weighed out of the vessel, the market value of which fish when cured was four dollars eighty cents per quintal—the loss in weight, which is very trifling, and labor in curing would not cost more than one dollar per quintal. Each United States fishing-vessel will make from three to five trips to the Newfoundland coast for bait during the season. Each vessel takes from sixty to eighty barrels of the bait in season per bait trip. At the time when caplin first strike the shores of Newfoundland there is no bait equal to it in the quantity of fish taken by it, and this bait is peculiar to Newfoundland. Caplin keep longer fresh in ice than any other bait we know of.

During the last three years there has been a marked scarcity of squid on the Great Banks, where formerly an ample supply of squid was procured for baiting purposes, but latterly has been found wholly insufficient, and consequently the importance of having Newfoundland as a basis for bait supply is materially enhanced.

In illustration of the result of a season's Bank-fishery operations in two vessels similarly outfitted and alike in all respects, both fitting out from Gloucester, one having the privileges conferred by the Washington Treaty, the other without these privileges, I am of opinion that the latter would only accomplish one voyage or trip during the season, whilst the former would accomplish three voyages or trips. I am generally well acquainted with the bait supply along the Newfoundland coasts, and know that there has always been procured a sufficiency for the purposes of United States fishing vessels, and ice can always be obtained along the coast.

I know of two United States vessels that fished for codfish inside the Keys, St. Mary's, that is on the inshore ground. I fished there myself.

WM. H. MOLLOY.

Sworn before me, at St. John's, N. F., this 24th of May, 1877.

J. O. FRASER,

Commissioner of Affidavits.

No. 54.

GEORGE ROSE, aged 54 years, maketh oath and saith, that he resides at Little Bay, in Fortune Bay, fisherman. I have become acquainted with the Newfoundland fisheries by following the same for forty years.

I have observed United States fishing vessels in this neighborhood; about twenty this year. Among these I can name W. J. Sawyer, John Archard, master, of Southport, U. S. A.; another commanded by Captain McDonald; another, the Gettysburg, Robert Grant, master; the

City of Gloster, Stephen Mitchell, master, of Cape Ann; the Pettingale, Hector McKenzie or McKeen, master, of Gloucester, Cape Ann. The vessels I saw in this neighborhood came to purchase bait, which they procured.

I have sold bait to United States fishing-vessels; I have baited six of such vessels, supplying each vessel with fifty barrels herrings, for which I was paid from twenty to twenty-five dollars each vessel.

Newfoundland fishermen fish within three miles of the shore. The Newfoundland fishery is an inshore fishery.

The caplin, herring, and squid fishery is inshore. Squid, at certain times, are taken a mile from the land, but generally are taken in the coves of the different bays.

I never heard tell of a Newfoundland vessel fishing on the United States coast. About thirty American vessels frequent Fortune Bay for the purchase of frozen herring in winter, which they purchase because they can purchase cheaper than they can catch. American fishermen do refit their vessels as required on their visits to these parts.

I do think that the supply of fresh bait to the Americans, who fish in large numbers on the Banks off our coast, helps greatly to shorten the catch of our local fishermen, and that the short catch on our southwestern shores this summer has been caused by the extra number of Americans thus engaged. My opinion is that the Americans do more harm to us in this way than the French. We can see the difference marked by the facts of this year and last.

I estimate that there are about 200,000 barrels of herrings annually supplied the French at St. Pierre from this bay; the value of this bait would be 1,600,000 francs. In addition to this they take caplin and squids, the value of which I am unacquainted with.

There are several ice-houses in this neighborhood. American fishing-vessels, I know, avail of these for the preservation of bait, but I cannot say to what extent. I am informed that a larger number of American vessels will next year visit these parts for bait and ice, for which, I understand, arrangements have been made between American captains and residents on these shores.

GEORGE ROSE.

Sworn to before me, at Jersey Harbor, Fortune Bay, this 4th November, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 55.

JOHN EVANS, aged 43 years, fisherman, residing at English Harbor, Fortune Bay, N. F., maketh oath and saith that—

I know the fisheries of Newfoundland by following the same for thirty years. I have seen United States fishing-vessels in this neighborhood. A large fleet of such vessels frequent these parts for bait. I should say not less than one hundred sail. These vessels run from about 60 to 100 tons; they came here to purchase bait and did purchase bait. I have sold bait to United States fishing vessels, and have baited altogether some seven or eight vessels, the price being about twenty-five dollars per vessel for each vessel for from 30 to 70 barrels of herring. Newfoundland fishermen catch fish within three miles of the shore. The Newfoundland fishery is an inshore fishery. The caplin, herring, and squid fisheries are inshore fisheries, being taken in the coves and harbors of the coasts. I do not know of a Newfoundland fishing-vessel having

been on a fishing-voyage on the United States coasts. I don't know whether United States fishermen have sold any small fish or other fishery produce in this neighborhood.

About thirty American vessels frequent Fortune Bay in winter for herrings; they purchase these herrings from the residents, and never catch them for themselves. The halibut-fishery followed by the United States fishing-vessels about Pass Island has been abandoned during late years. I have not heard of American fishing-vessels trying to catch fish on the Newfoundland inshore-fishery. American fishing-vessels do refit in this neighborhood when required. I consider that the system followed of barring large quantities of herrings for sale to the Americans does interfere injuriously with the supply of bait for our local fishermen; the spawning of the herring is thus affected, which cannot act otherwise than hurtful to the supply for local purposes. I am of opinion that the supply of fresh bait to the United States fishermen who line the Banks off our coasts therewith, prevents the fish passing into our fishing-grounds, and thus injuriously affects the catch of our people.

I am of opinion that the short catch of codfish on our southwestern coasts this summer has been caused by the United States fishing-vessels fishing on the outer Banks. I can attribute the short catch to no other cause. I know the fish is not on the shores, else it would be caught, as there are all sorts of contrivances for catching fish.

There are conveniences for the supply of ice for preserving bait in this bay; I know of six ice-houses. The United States fishermen avail of such ice for preservation of their fresh bait, but to what extent I cannot say.

The American fishing-vessels bait in this bay four and five times every summer—about a fortnight between each baiting.

his
JOHN + EVANS.
mark.

Sworn before me, at English Harbor W, Newfoundland, November 8, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 56.

JOHN ROSE, aged forty-four years, fisherman, residing at Belloram, Fortune Bay, Newfoundland, maketh oath and saith:

I am acquainted with the fisheries of Newfoundland, having prosecuted the same for upward of twenty years. American fishing-vessels have been observed by me in this neighborhood. About forty American fishing-vessels have been baited hereabouts the past season by our fishermen. Over a dozen American vessels were loaded with salt herrings, and over thirty were loaded with frozen herrings. I did not see one-half the American fishing-vessels that I am well informed visited this bay for bait. Among the vessels seen by me I can name the following: W. P. Whitman, W. E. McDonald, Grace L. Fears, Moro Castle, Magic, Eben Parsons, Eptstar (Grant), schooner over 100 tons (Hodgeson, master), Moses Adams, Reporter, schooner (Wm. Collins, master), Ruth Grove, Frank Butler, M. L. Wetherall, Mary Carlisle, Bellerophon, and Carry S. Doyle, of Gloucester; Thomas Rye, about Provincetown; Serene, about Provincetown; schooner (Isaac, master). I have sold bait to several of these American fishing-vessels, but cannot say how much; the price paid for herrings generally is one dollar per barrel.

Newfoundland fishermen catch codfish in this bay within three miles

of the shore; the Newfoundland fisheries are all inshore except the seal fishery. Caplin, herrings, and squids are taken in the coves close to the shore. No Newfoundland vessels that I have heard tell of or know anything about, go fishing on any of the coasts of the United States of America inshore. American fishermen have this year sold what they call small codfish to our people, who did not consider such fish small. I am not informed as to what quantity was sold and purchased, nor what prices were paid.

American fishing-vessels are accustomed to refit in this neighborhood when necessary. There are between 250 and 300 schooners catching bait in this bay to supply French bankers at St. Pierre; the average quantity of bait supplied by each schooner would be about one hundred barrels herrings; they frequently have 400 and 500, and they make each from two to four trips. The quantity of caplin supplied to the French by the schooners referred to by me would be about two hundred hhd. for each schooner. The price paid for herrings thus supplied the French varies from two to thirty francs per barrel, ten francs being a fair average; for caplin, the average would be about ten francs per hhd. There are in this neighborhood great conveniences for preserving ice, which abounds on the ponds close to the salt water; five such ice-houses are erected in this bay which are used to preserve ice for sale to American fishermen, who largely avail of the same for the preservation of fresh bait purchased from our fishermen. The number of American fishermen frequenting these quarters we expect will be largely increased.

JOHN ROSE.

Sworn before me, at Belloram, this sixth day of November, A. D. 1876.

J. O. FRASER,

Commissioner of Affidavits.

No. 57.

PHILIP HUBERT, aged 40 years, subcollector H. M. customs, residing at Harbor Breton, Newfoundland, maketh oath and saith: That I have become acquainted with the Newfoundland fisheries by a residence in the country for twenty-three years and an immediate connection with the fisheries of Newfoundland during all that time.

I have observed United States fishing-vessels in this neighborhood. Last December the following vessels entered at the customs to enable them to sell part cargo, they being engaged on a voyage for the purchase of frozen herrings in Fortune Bay, viz:

S. R. Lane, 72 tons, S. Jacobs, master, Gloucester; General Grant, 86 tons, James Bowel, master, Gloucester; Landseer, 99 tons, P. Malady, master, Gloucester; Mary M., 101 tons, M. B. Murray, master, Gloucester; Crown Point, 103 tons, W. H. Burne, master, Newburyport. I believe there have been fully one hundred and fifty United States fishing-vessels in this bay during the past summer.

In the fall of 1874 and beginning of 1875, I find that twelve United States vessels entered at this port, being engaged on a voyage for the purchase of frozen herrings.

The United States vessels referred to by me as in this bay the present summer came to purchase bait. Not one of these vessels entered at the customs at Harbor Breton. I am of opinion that two-thirds of these vessels have not entered at any customs office in Newfoundland, nor paid light-dues. These vessels came into this bay to purchase bait. One vessel had a seine intending to haul bait, but found it less trouble to purchase.

United States fishing-vessels have fished about Pass Island, and for-

merly made good catches there. Captain Jacobs, of schooner —, is said to have been offered nine thousand dollars for his load taken about Pass Island. American fishing-vessels fishing off and about Pass Island fished for halibut and codfish, but chiefly for halibut. My estimate of the value of their catch is at least equal to ten thousand dollars per annum, and such fishery was conducted exclusively within three miles of our shores. Newfoundland fishermen catch their "voyage" within three miles of our shores, generally about one or two miles from the shore.

The Newfoundland fisheries are peculiarly inshore fisheries.

Caplin, herrings, and squid used for bait are always taken inshore, generally in the coves and harbors along our coasts.

I never heard tell of a Newfoundland fishing-vessel that prosecuted the fishery on the coasts of the United States of America.

American fishermen have sold small codfish in this bay; some vessels sold one hundred quintals, the price ranging from seven to ten shillings per cwt., green.

From thirty to forty American vessels frequent Fortune Bay in winter for the purchase of frozen herrings; they always purchase. The average quantity of frozen herrings taken by each vessel will be from five to eight hundred barrels.

American fishermen do not now fish for halibut about Pass Island as they formerly did, because I believe that that fishery has been exhausted by the Americans. I know of no United States fishing-vessels fishing within three miles of the shore except at and about Pass Island, as already stated.

American fishing-vessels do avail of the privilege to refit their vessels in this bay when they come from the Banks.

I have not heard of American fishing-vessels transshipping cargo in a Newfoundland port.

The supply of bait to United States fishermen has decreased the supply of bait to our local fishermen. There is not the least doubt but that the presence of so large a number of American vessels fishing on the Banks off our coasts, well supplied with fresh bait, largely interferes with and reduces the catch of our local fishermen, and I am of opinion that the scarcity of fish along our southwest coast this summer has been mainly caused by the United States fishing-vessels fishing on the outer Banks. The quantity of bait annually sent to St. Peters from Fortune Bay I estimate as follows:

About thirty thousand barrels herrings and about ten thousand hog-heads caplin. The quantity of squid supplied the French I cannot state.

The value would be about sixteen thousand pounds, annually, for bait supplied the French.

There are five or six ice-houses in this neighborhood where ice is stored for sale to the Americans to preserve fresh bait.

American fishing-vessels each make two and three trips to the Banks, and take each trip from forty to sixty barrels fresh herrings per vessel, for which they pay from fifty to one hundred cents per barrel. These American fishing-vessels take each from three to five tons ice per trip for preservation of their bait, for which they pay three and one-half dollars per ton.

PHILIP HUBERT,

Subcollector.

Sworn before me at Harbor Breton, Newfoundland, this fourteenth day of November, 1876.

J. O. FRASER,

Commissioner of Affidavits.

No. 58.

GEORGE T. R. SNELLGROVE, aged 52 years, subcollector, residing at St. Jacques, in Fortune Bay, Newfoundland, maketh oath and saith: That the statement attached, marked A, contains the names of American vessels loaded in 1876 with frozen herrings and salted herrings at Fortune Bay, Newfoundland, as far as I am personally aware of; that the statement attached marked B contains the names of American fishing-vessels visited by him in 1876, and known by him to have called at this neighborhood for the purpose of procuring bait.

I am aware that a large number of American schooners in addition to those named by me have called at the various ports of this bay during the past year for bait; I think quite as many as I have named. Bait was purchased by these American fishermen from Newfoundland fishermen. I have to complain that American vessels frequenting these parts studiously try to evade payment of light-dues during the fishing season, comparatively few of them having paid, I being without means to enforce payment.

GEO. T. R. SNELLGROVE, *Sub-Collector*.

Sworn before me at St. Jacques, Newfoundland, this sixth day of November, A. D. 1876.

J. O. FRASER, *Commissioner of Affidavits*.

GEO. T. R. SNELLGROVE,
Subcollector.

Sworn before me at St. Jacques, Fortune Bay, N. F., this sixth day of November, 1876.

J. O. FRASER,
Commissioner Affidavits.

No. 59.

Personally appeared before me, Philip Hubert, esq., Stipendiary Magistrate at Harbor Breton, Fortune Bay, this twenty-third day of May, one thousand eight hundred and seventy-seven, Mr. HENRY GIOVANNINNI, of Rencontre, Fortune Bay, merchant, who upon oath voluntarily saith :

I have been carrying on trade in Newfoundland over twenty years. My business calls me to many harbors along the coast, principally from Cape La Hune to Cape Chapeau Rouge. I have occasion to transact some business with United States vessels very often. I can affirm that at least twenty-five United States vessels shipped herrings, mostly in a frozen state, from first of January to last of February of present year (some of them made two trips during that time), from Fortune Bay for ports in United States ; they each carry from 400 to 600 barrels of herring when frozen, and from 800 to 1,200 barrels when salted. Since last of April to present date at least thirty United States fishing-vessels have arrived in Fortune Bay for bait (herring) and ice for their own use. Some have already made two trips to the Banks, and are making five trips ; each vessel takes from 30 to 50 barrels bait each trip, and from three to five tons of ice. I can affirm that our (English) fishermen suffer and lose much for the want of bait in the summer season, the cause of which they attribute to the large numbers of seines which are continually employed hauling for those vessels. One United States vessel, now at St. Jacques, Fortune Bay, is shipping herring for United States ; she will carry 6,500 barrels when loaded. I am able to state that it is the general opinion in Fortune Bay that if the usual numbers of United States vessels continue to draw on Fortune Bay for their bait, that in a very few years there will be none, either for our fishermen or them.

HENRY GIOVANNINNI.

Sworn before me, at Harbor Breton, Fortune Bay, Newfoundland, this 23d of May, 1877.

PHILIP HUBERT,
Stipendiary Magistrate.

No. 60.

JAMES PHILIP SNOOK, aged 29 years, preventive officer, residing at Fortune, in the district of Burin, Newfoundland, maketh oath and saith that—

I have observed a number of United States fishing vessels in this neighborhood and its proximities, probably from sixty to seventy, during the past summer. I can only name a few of these vessels. (See paper marked Fortune A.) The vessels named in paper marked Fortune A, with P before their names, denotes that these vessels paid light dues ; those marked G denotes that these vessels paid light dues elsewhere ; those marked O denotes that these vessels did not pay light dues, they refusing to do so ; the master of Gertie F. Foster—Campbell by name—especially, was very abusive and violent, he not only refusing to pay his light money, but also counseling the master of the schooner Victor and David M. Hilton not to pay their light dues.

These vessels all came into this bay to purchase fresh bait, and they did procure such bait. My visit to some of these United States vessels was on the occasion of their second trip from the Banks, they not having come on this side of the bay on their first trip.

United States fishing vessels have fished on the inshore fishing-

grounds, but I cannot give particulars further than that I have seen them so fishing off Danzig Cove, near South Point of Fortune Bay.

I estimate the bait annually sold at St. Pierre, by fishermen of this harbor, to be as follows: 5,000 barrels herrings, valued at 40,000 francs; 10,000 hogsheads caplin, valued at 60,000 francs. Besides this there is an average destruction of herrings—thrown overboard—annually, of about ten thousand barrels herrings, being found unsalable at St. Pierre.

JAMES P. SNOOK,
Preventive Officer, Fortune, Newfoundland.

Sworn before me, at Fortune, Newfoundland, this 27th November, 1876.

J. O. FRASER,
Commissioner of Affidavits.

Sworn before me, at Fortune, Newfoundland, this 27th November, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 61.

WILLIAM GEORGE BENNETT, fisherman, aged 26 years, residing at Fortune, Newfoundland, maketh oath and saith that—

I have become acquainted with the fisheries of Newfoundland by being actively engaged in their prosecution since I was sixteen years of age. I have seen United States fishing-vessels passing this neighborhood, going up Fortune Bay and elsewhere. The number seen by me the past summer was over thirty, but I do not know their names. These vessels came into the bay to purchase fresh herrings for bait, which they procured. Our crew baited one of these vessels this summer; last summer we baited three. Each vessel took twenty-five and thirty barrels herrings, for which they paid about twenty dollars each. The Newfoundland fishery is an inshore fishery, being generally prosecuted close along shores.

The caplin, herring, and squid fisheries used for bait are inshore fisheries. I never knew of a Newfoundland vessel having engaged on a fishing voyage on any of the coasts of the United States of America. There are from forty to fifty American vessels frequenting Fortune Bay in winter, for the purchase of fresh herring to freeze, and when frozen

to be freighted by these American vessels to the United States. Americans purchase these herrings from our people. I believe the supply of bait to United States vessels decreases the supply of bait to our local fishermen. I believe that if the practice now being pursued of "bar-ring" large quantities of herrings to be sold as bait to United States is suffered to be continued that the supply of bait to fishermen in this bay will speedily be destroyed.

I do not doubt but that the large number of United States vessels fishing on the Banks, with fresh bait, tends greatly to reduce the catch of our people along shore, and if continued, as at present, will starve local fishermen. I believe that the short catch by our people the past summer along our southwest coasts is chiefly caused by Americans fishing on the outer Banks as aforesaid.

Signed by his mark, he having sore thumb.

WM. GEORGE ^{his} + BENNETT.
mark.

Sworn before me, at Fortune, this 27th day of November, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 62.

SAMUEL GEORGE HICKMAN, aged 36 years, planter, residing at Grand Bank, Newfoundland, maketh oath and saith that—

I am acquainted with the fisheries of Newfoundland by being a fisherman myself the past twenty-five years. I have annually observed United States fishing-vessels in this bay, but especially last year, when there were about three hundred of such vessels in the bay; I name among these, Lizzie V. Knight, William Morrissey, master; Proctor Bros., Edward Trevo, master, and a large number of others too numerous to delay naming, my time being fully occupied.

These vessels came into this bay to purchase fresh herrings for bait, which they purchased from our fishermen. I have sold United States vessels fresh bait; I have, with others under me, supplied over a hundred United States vessels with bait from first to last; each vessel would take about 40 to 60 barrels, for which they would pay from \$20 to \$30.

I have seen our shore surrounded by American fishermen fishing for halibut and codfish, but cannot say that all these vessels were inside three miles of a line from headland to headland. I have frequently seen United States vessels fishing between Pass Island and Brunette Island; in some instances these vessels have been fishing up the bay among the cliffs. I cannot speak of the quantity or value of their catches, but I do know that they destroyed the halibut fishery about Pass Island, and largely damaged the cod-fishery of Fortune Bay. One of their captains told me "it was no use for our fishermen to go fishing after United States fishermen."

Newfoundland fishermen catch codfish generally within two miles of the shore, there being exceptional places and instances where they go from six to nine miles off the coast. The caplin, herring, and squid—used for bait—are inshore fisheries, being taken in coves and harbors along the coasts, and for such purposes are never prosecuted outside three miles.

I never knew of a United States vessel prosecuting a fishing voyage on any of their coasts. I believe United States fishermen do sell codfish

in this neighborhood to our people, sometimes at St. Pierre, and sometimes in the harbors of the bay.

From forty to fifty United States vessels regularly visit Fortune Bay in winter to purchase herrings for freezing ; they have always purchased their load of herrings except when prevented by ice in the bay ; their load runs from six hundred to seven hundred barrels each, for which they pay our fishermen nominally one dollar, but allowing for measure exacted, seventy-five cents per barrel will be a fair average of the price paid. These Americans have not *caught* any herrings as yet, because the people of the bay would thereby be annoyed, and because Americans can purchase cheaper than cost of catching by themselves. I do not know of Americans fishing for turbot in this neighborhood. I am certain that the supply of bait to United States fishermen has decreased the supply of bait to our local fishermen. I estimate there are eighty herring seines belonging to this bay engaged in hauling bait for the Americans, and that fully eighty seines belonging elsewhere are also engaged in the same service. Bait for Americans commences to be hauled about 1st to 10th of May, and ends in August. American vessels come in from the Banks once every fortnight or three weeks, and take fresh bait, averaging from forty to sixty barrels herrings. During the baiting season as aforesaid it very generally happens that many seines will have large quantities of herrings inclosed—say from five hundred to fifteen hundred barrels, and retained as long as two months, sometimes herrings rotting where inclosed, and where washed on shore impregnating the air through all the stages of putrefaction. These large seines “bar” herrings wherever they meet them—in coves, creeks, and along shore ; and, during such inclosures, it stands to reason that so great a number of *captives* lessens the numbers *free*, and injures net owners ; it is a fact that, during this barring, herrings do not mesh in nets as at other times.

I am of opinion that the presence of the large number of United States vessels, fishing on the Banks off our coasts, supplied with bait, interferes with and is the main cause in reducing the local catch ; and that the scarcity of fish along our southwest coast this year has been caused by the Americans fishing on the outer Banks.

The average catch of fishermen of this harbor, this year, will be about fifteen quintals per man. The catch in previous years was from fifty to seventy quintals per man, but more generally seventy would be nearer correctly stated. The price of fish this year, averaging all round, would be about five dollars and twenty cents per quintal.

The bait sold at St. Pierre, by the people of this harbor, will be about 5,000 or 6,000 barrels herring, value, 45,000 francs ; 10,000 hogsheads caplin, value, 60,000 francs ; and about ten thousand barrels herrings thrown away being unsalable ; also from five to six hundred hogsheads caplin.

SAMUEL G. HICKMAN.

Sworn before, at Grand Banks, this 24th November, 1876.

J. O. FRASER,

Commissioner of Affidavits.

No. 63.

HENRY BENNING, aged 37 years, subcollector Her Majesty's customs, residing at Lamalin, Newfoundland, maketh oath and saith :

That I have become acquainted with the Newfoundland fisheries by connection therewith as supplier and otherwise during eight years.

I have observed United States fishing-vessels in this neighborhood, but can only name two, namely, in the year 1874: D. E. Woodbury, D. E. Collins, 65 tons, Gloucester; G. P. Whitman, J. McDonald, 94 tons, Gloucester.

These vessels came here to purchase fresh bait, which they procured, and then sailed away for the Grand Banks. No American vessels have fished in this immediate neighborhood, that I am aware of.

The Newfoundland fishery is an inshore fishery. The caplin, herring, and squid fisheries, used for bait, are all inshore fisheries. The caplin is taken in the landwash, herrings frequently so, and squid from half to quarter of a mile from the shore, but generally in the coves and harbors. I never heard of a Newfoundland vessel prosecuting or attempting to prosecute any fishery on any of the coasts of the United States of America.

American fishermen have not sold any small codfish in this neighborhood. From thirty to fifty American vessels frequent Fortune Bay in winter for the purchase of fresh herrings, to be frozen and conveyed to the United States, viz, Boston, New York, Philadelphia, and Baltimore. Their cargoes consist of from six hundred to one thousand barrels. The price paid, is about a dollar per barrel, and when very scarce, one and one-half dollars per barrel.

I am positive that the presence of the large number of United States vessels fishing on the Banks off our coast, using fresh bait, greatly reduces the catch of our local fishermen, and that the short catch of our people last summer is owing to this cause.

The bait sold at St. Pierre by schooners belonging to this harbor, I estimate as follows, per annum:

Herrings taken at Fortune Bay, viz, 3,400 barrels herrings, value, 23,800 francs; 7,000 hogsheads caplin, taken at Lamaline, 70,000 francs.

The average catch of codfish per man, previous to the last two years, has been from sixty to eighty quintals; last year it was about twenty quintals; and the present year it has been fifteen quintals per man.

HENRY BENNING,
Subcollector.

Sworn before me, at Lamaline, this 1st day of December, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 64.

JAMES REEVES, aged 68 years, planter, residing at St. Lawrence, Newfoundland, maketh oath and saith—

That I have become acquainted with the Newfoundland fisheries by prosecuting the same during the past forty-eight years. I have seen a large number of United States fishing vessels in Fortune Bay and elsewhere, but cannot name any, my desire was to keep clear of them and they to keep clear of us. These American vessels visit those quarters for bait, which they generally purchase from our fishermen, which they generally procure. I have baited two United States vessels with fresh herrings; can't remember their names. Newfoundland fishermen generally fish within two mile of the shores. The caplin, herring, and squid fisheries used for bait by Newfoundland fishermen are inshore fisheries, being followed in the coves and harbors along the coast. I never heard of a Newfoundland vessel prosecuting any fishing voyage on any of the coasts of the United States of America, and don't believe our vessels ever go on such a voyage.

From forty to fifty American vessels frequent Fortune Bay in winter for herrings to freeze, and freight to Gloucester, New York, and Boston; these herrings they always purchase from our people. Americans do not fish off Pass Island, they having exhausted that fishery. American fishing vessels have been seen fishing off Cape St. Mary's; I have not seen any fishing in this neighborhood.

The supply of bait to United States fishermen shortens the supply of bait to our local fishermen. I am of decided opinion that the large number of United States vessels fishing on the Banks off our coasts shortens the catch of our local fishermen, as these Americans are well supplied with fresh bait which attracts the fish to the ground where United States fishermen fish. It has been remarked that when the great body of American vessels leave the Banks in the fall of the year then the fish becomes more abundant than before.

I am of opinion that the scarcity of fish the past summer along our southwest coasts is owing to United States fishermen fishing on the Banks of our coasts.

JAMES REEVES.

Sworn before me at St. Lawrence this fifth day of December, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 65.

HUGH VAVASSEUR, aged 60 years, preventive officer, residing at St. Lawrence, Newfoundland, maketh oath and saith that—

I have resided at St. Lawrence during the past thirty-six years, during all which time and for ten years previously at Gaultois and Harbor Breton. I was closely connected with the fisheries of this country. I have seen a number of United States fishing-vessels in this neighborhood. I can only give particulars of the following, viz:

Name.	Master.	Tonnage.	Where belonging.
1876.			
Ernest F. Norwood	Natl. Greenlief	74	Gloucester.
Gertie Lewis	Joseph W. Prout	72	Do.
Carrie S. Dagle	J. F. Coombes	74	Do.
1875.			
Tragabigzanda	William Mulloy	68	Do.
Lizzie B. Knight	William Morrissey	67	Do.
John Dodge	Silvan Frost	83	Do.

These vessels, among the many that call at this harbor, were the only vessels that paid light-money. The above-named vessels, with the other United States fishing-vessels that called at this harbor, came to procure bait, which they procured principally by purchasing from our people; but in several instances they jigged squids for themselves on the jigging-grounds used by our people, their operations being very hurtful to local fishermen from the noise and turmoil of their dories and crews, which drive the squids from the ground.

Newfoundland fishermen catch codfish generally within 2 miles of the shores, the only exceptions being on the west coast, where fishermen sometimes fish off from 6 to 9 miles from the shores. The caplin, herrings, and squid fisheries, for the purposes of bait, are all inshore fisheries, and are never prosecuted farther than a half a mile from the shores,

being invariably prosecuted in the coves and small harbors along the coasts.

I never heard of a Newfoundland vessel prosecuting any fishery on any of the coasts of the United States of America. American fishermen have not sold any small codfish or other fishery produce in this neighborhood.

American vessels avail of the privilege to refit in our harbors, and have done so in this harbor. I remember that the Tragabigzanda did so refit his vessel at this port. It is quite certain that the supply of bait to United States fishermen decreases the supply of bait to our local fishermen. I am well aware that the presence of the large number of United States fishermen fishing on the outer banks off our coasts well supplied with fresh bait greatly interferes with and reduces the catch of our local fishermen. Codfish strike our shores in quest of bait; and if they meet fresh bait on the banks they will not pass it, but will remain there as long as fresh bait is to be had. I do think that the scarcity of codfish along our south and southwest coasts the past summer has been caused by Americans fishing on the outer Banks. Previous to the last three years the average catch of codfish in this harbor was eighty qtls per man; during the last two years it has not exceeded twenty qtls. per man. The quantity of bait annually exported by craft belonging to St. Lawrence and Lawn will average three thousand hhd., for which the average price would be twenty-four thousand francs; and herrings taken in Fortune Bay by these same craft will average three thousand barrels herrings, realizing eighteen thousand francs. There are no ice-houses at this harbor for the preservation of fish-bait.

HUGH VAVASSEUR,
Preventive Officer.

Sworn before me, at St. Lawrence, this fifth day Dec., 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 66.

THOMAS WINTER, aged 61 years, subcollector H. M. customs, residing at Burin, Newfoundland, maketh oath and saith:

I am acquainted with the fisheries of Newfoundland, by observation, during a residence in this district for upward of twelve years.

I have observed a large number of United States fishermen in this neighborhood, about sixty in 1875 and twelve or thirteen the past summer. Of those in this neighborhood in 1876 I can name the following, viz:

Name.	Master.	Tonnage.	Where belonging.
Gleaner.....	Lyons	63	East Gloucester.
Eptstarr.....	R. C. Grand.....	70	Gloucester.
David W. Hilton	Pinkham	59	Do.
Massasoit.....	Gorman	73	Do.
Mary Carlyle	Greenleaf	66	Do.
Viking	E. Stapleton	73	Do.
Addison Center.....	James Jamieson	74	Do.
Mist	McCarty	Do.	Do.
Morro Castle		89	Do.

These vessels came here for ice and bait.

Every United States vessel calling in this neighborhood systematically arranged to avoid the customs authorities, and their captains and

crews are generally most insulting and offensive to the officers who visit them, the captains outrageously so. Without sufficient force it is wholly impossible to enforce an observance of the customs laws by United States fishing-vessels frequenting these coasts.

The light-dues paid here by United States vessels is generally paid by orders. In one instance they have sold fishery produce for cash, which they said they required to purchase bait.

T. WINTER,
Subcollector.

Sworn before me at Burin, N. F., this 8th day of December, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 67.

PHILIP PINE, aged 35 years, planter, residing at Burin Bay, Newfoundland, maketh oath and saith:

I am acquainted with the fisheries of Newfoundland by following the same and supplying therefor since I was seventeen years of age.

I have observed a great number of United States fishing-vessels in this neighborhood, there being as many as forty sail here at one time. These vessels came here for bait and for ice, which they procured by purchasing from our people, it being stated that in some instances their crews mixed with our people in hauling bait. These United States fishermen sometimes jig squids for themselves; I have seen them doing so at jigging-coves in this neighborhood.

The past year I supplied ice to about forty United States vessels, the quantity being from two tons to five; in all, I supplied over one hundred tons. The year previous, the number of United States vessels in this neighborhood was larger than the year past, and the quantity of ice taken was greater. I can only name the following captains and vessels among those here last year:

	Master.
White Fawn.....	Nickleson.
Vessel forgotten.....	Lowe.
Vessel forgotten.....	Campbell.
Flying Scud.....	_____
Fair Sailer.....	_____
Vessel not named.....	Hennessey.
Vessel not named.....	Hall.
Vessel not named.....	O'Brien.
C. F. Butler.....	_____
P. L. Whitten.....	_____
G. J. Tar.....	_____

In 1876 I suppld ice to the following United States vessels, among others:

Schooner Haywood.....	Captain Greenleaf.
Schooner Glina.....	Captain Lyons.
Schooner _____	Captain Noss.
Schooner _____	Captain Gorman.
Schooner _____	Captain Grant.
Schooner _____	Captain Thompson.
Schooner _____	Captain Pinkam.
Schooner _____	Captain Kelly.
Schooner _____	Captain Trevoy.
Schooner _____	Captain Garden.
Schooner _____	Captain Lennox.
Schooner J. Jamison, or.....	Captain J. Jamison.
Schooner E. R. Nickleson.....	_____

These particulars are merely memorandums from my note-book, made when the captains of these United States vessels ordered ice or were supplied therewith; I kept no particular register.

Newfoundland fishermen generally catch codfish within two miles of the shore; the Newfoundland fishery is an inshore fishery.

The caplin, herring, and squids, used for bait, are taken along shores only, and are never taken at a distance of three miles off, except in isolated instances, when fishermen belonging to this neighborhood have taken squids on Burin Bank.

I never heard of a Newfoundland vessel having engaged in prosecuting a fishing-voyage on any of the coasts of the United States of America.

I believe United States fishermen have sold small fish in this neighborhood, but I cannot state as to quantity.

United States vessels do refit in this neighborhood. I have had a draft for cost of outfit to them by myself.

The supply of bait to United States fishermen by our people tends to decrease the supply of bait to our own people; an instance occurred last season at Corbin Island Cove in the last of the caplin, when a joint crew of Americans and our people "thrashed" the cove for the Americans, leaving our own people without bait and idle in consequence, which resulted in great loss to them. I believe that the presence of the large number of United States fishermen fishing on the Banks off our coasts, and well supplied as they are with fresh bait, greatly reduces the catch of our local fishermen, and am of opinion that the short catch of codfish the past summer along our south and west coasts has been caused by the "bleeding process" of the Americans on the Banks off our coasts.

PHILIP PINE.

Sworn before me at Burin Bay this eighth day of December, 1876.

J. O. FRASER,

Commissioner of Affidavits.

No. 68.

WILLIAM COLLINS, aged forty-two years, planter, residing at Burin, Newfoundland, maketh oath and saith that—

I have become acquainted with the fisheries of Newfoundland by being engaged in their prosecution since I was fourteen years of age.

I have observed a number of United States vessels in this neighborhood; there were upwards of twenty this year; last year there were upwards of 40; the difference between the two years, I believe, is owing to the fact that this year a larger number of these vessels went into harbors along the southern coast for bait.

This year, at Cape St. Mary's, two or three American fishing-vessels came in and took fresh caplin for bait, which they purchased. I have not seen them otherwise fishing.

Newfoundland fishermen generally catch codfish within one and two miles from the shore. The Newfoundland fishery is an inshore fishery. The caplin, herring, and squid used for bait are all inshore fisheries, taken in coves close to land. I never heard of a Newfoundland vessel or crew engaging in a fishing voyage on any of the coasts of the United States of America.

American fishermen do sometimes fish on the inshore fishing-ground off Cape St. Mary's. I have seen as many as three of these vessels fishing there.

I do consider that the supply of bait to United States fishermen de-

creases the supply of bait to our local fishermen. They engage our people, who sweep the coves, and frequently leave nothing behind them.

I believe that the presence of the large number of United States vessels fishing on the Banks off our coasts, and supplied with fresh bait, greatly interferes with and reduces the catch of our local fishermen; and that the short catch of codfish the past summer along our south and west coast is owing chiefly to their operations. The quantity of bait sent to St. Pierre from this harbor is small, but there are thirty craft engaged in supplying bait to the French—chiefly from Fortune Bay, from where some 15,000 barrels herrings are taken to St. Pierre by vessels of this harbor; the value of this bait would be about thirty thousand francs; a third of the above quantity annually is thrown overboard, being unsalable at St. Pierre in seasons of abundance. There is one ice-house at this harbor where ice is kept principally, and almost exclusively, for sale to United States vessels for the preservation of fresh bait. A number of United States vessels did purchase ice at this harbor the past season, but I cannot give particulars.

WILLIAM COLLINS.

Sworn before me at Burin this sixth day of December, A. D., 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 69.

OWEN PINE, aged 67 years, planter, residing at Burin Bay or Inlet, Newfoundland, maket oath and saith that—

I have become acquainted with the fisheries of Newfoundland by following the same in all its branches, since I was fourteen years of age.

I have seen from ten to fifteen United States fishing-vessels at a time in this neighborhood. They came for bait and ice, which they purchase in general. I have seen them catch bait for themselves in our harbors. I believe the supply of bait to United States fishermen decreases the supply to our local fishermen.

I am clearly of opinion that United States fishermen on the Banks off our coasts, supplied with fresh bait, greatly reduces the catch of codfish by our local fishermen, and believe that the short catch the past summer along our south and west coasts is mainly owing to their presence on the outer Banks off our coasts. We know that they line the Banks facing these shores, with fresh bait, and that while confish can get such bait on the Banks they will not pass toward our shores in quest of what they can get on the Banks. The increase of American fishermen on the Banks has been remarkable by a decrease of codfish along our shores.

OWEN PINE.

Sworn before me at Burin Bay, N. F., the 8th December, 1876.

Commissioner of Affidavits.

No. 70.

RICHARD PAUL, aged 40 years, fisherman, residing at Burin Bay, Newfoundland, making oath and saith:

I know the fisheries of Newfoundland by having prosecuted the same for over 25 years. I have observed a number of United States fishing-vessels in this neighborhood; they are all the time passing backward

and forward; over seventy sail of these vessels passed this neighborhood the past seasons. Not being particularly connected with these vessels, I took no note of their names. I know they came to purchase ice and bait and jig-squids, when they could. I have seen them many times taking squids in the coves close to shore, within one-eighth mile of the shore. These vessels were supplied with ice and with bait when to be had. Excepting squid bait, they purchase other bait from our people, and in part, also, they purchase squid bait when they cannot catch enough for themselves.

Newfoundland fishermen generally catch codfish within two miles of the shores, beyond which distances catches are exceptional.

The caplin, herring, and squid used for bait are all inshore fisheries, taken almost solely in the coves close to shore. I never heard of a Newfoundland vessel engaged on a fishing voyage on any of the coasts (inshore or within three miles) of the United States of America.

American fishermen have sold fish and oil in this neighborhood. I only know of their selling thirty-seven quintals at 7s. per quintal, and seventy gallons cod oil at half a dollar. I understand from their statements the past season, that hereafter they intend to sell to our people all the codfish they catch under twenty-two inches in length.

I am of opinion that the supply of bait to United States fishermen decreases the supply of bait to our local fishermen. I am of decided opinion that the presence of the large number of United States fishing-vessels, well supplied as they are with fresh bait, fishing on the Banks off our coasts, interferes with and tends greatly to reduce the catch of our local fishermen.

Americans on the Banks are known to fish generally on the eastern part of the Great Bank, from whence the fish works westerly towards our shore. When we hear of fish plenty to the eastward of us, we always reckon on a good spurt, as fish work westerly this side of the island. Such has been the experience of our fishermen until United States vessels began prosecuting the fishery on the Banks, the result of which has been to keep the fish from coming in towards our shores. We used formerly to get French hooks in the mouths of the fish occasionally; but now we frequently get American hooks instead and rarely a French hook—not one in ten we used to get.

I am of decided opinion that the short catch the past summer along our southwest coast has been caused principally by United States fishermen on the outer Banks as aforesaid. The catch of codfish by fishermen in this neighborhood, previous to the last three years, would average fifty quintals per man; the average in 1876 will not reach thirty quintals per man. The falling off we can attribute to no other cause than American operations in fishing on the Banks.

The supply of squids sold at Saint Pierre by fishermen from this neighborhood will be about five hundred thousand; the average price per thousand will be twenty francs. This supply to the French does little injury to the codfishing compared to the supply of bait to the Americans, who use fresh bait, whereas the French salt bait. The French generally work more within a circle; the United States vessels move about following the fish. They have vessels acting as scouts from our shores to the Banks, with information as to where ice and fresh bait can be had.

RICHARD PAUL.

Sworn before me at Burin Bay, the fifteenth day of December, 1876.

J. O. FRASER,

Commissioner of Affidavits.

No. 71.

FRANCIS BERTEAU, aged 53 years, merchant, residing at Burin, Newfoundland, maketh oath and saith that—

I have become acquainted with the fisheries of Newfoundland by carrying on the trade of the country for thirty years.

I have observed from forty to sixty United States fishing vessels in this neighborhood each year during the past three years. Having had no immediate connection with them I cannot name any of these vessels. I have not sold any bait to them, having nothing to do with the bait trade. United States fishing vessels have fished for codfish off Cape St. Mary's within three miles of the shore, where, on one occasion, one of our fishing crafts was fouled near the Bull and Calf by a United States fishing vessel.

Newfoundland fishermen catch codfish generally within two miles of the shores. The caplin, herrings, and squid fisheries used for bait are all inshore, being taken in the coves along the coasts and harbors, and is never taken more than three miles off.

I never heard of a Newfoundland vessel engaging on a fishing voyage on any of the coasts of the United States of America.

American fishermen have sold small codfish in this neighborhood, but I can't speak as to quantity.

I once bought from United States fishermen three or four barrels cod roes; this was two years ago. Occasionally United States fishing vessels refit in this neighborhood. I have sold them provisions and wood. I do not know of their having transshipped cargo in a Newfoundland port.

The supply of bait to United States fishermen greatly decreases the supply of bait to our own fishermen. Last summer there were about twenty United States fishing craft in Ship Cove, and they employed several Burin fishermen to haul caplin for them in Grip Cove, near Port au Bras, which they did, loading seven or eight dories and two skiff loads, after which no caplin was to be found in the cove, thus compelling over a dozen of our fishing craft to remain idle for a fortnight until the squids came in, thereby losing four or five hundred quintals of codfish.

In June, 1875, there were about one hundred fishing punts in Burin Bay depending upon a supply of caplin for bait, which was prevented by the operations of a seine sent from St. Pierre and worked by a Burin man to supply fresh caplin to the American fishing schooners, the said seine having hauled continuously until the caplin were exhausted in one of the principal baiting coves; thereby the punt fishermen aforesaid lost their caplin school—the harvest of their fishery.

I am of decided opinion that the presence of the large number of United States fishing vessels on the Banks off our coasts, largely supplied with fresh bait, greatly reduces the catch of our local fishermen; and that the short catch of codfish the past two summers along our south and west coasts is attributable to this cause.

It is remarkable that this year, when the supply of fresh bait to United States vessels by our people had ceased, then a moderate share of fish struck in upon our shores, enabling the fishermen of Great Burin to catch during October and November from eight to ten quintals for a man and a boy.

The general average of fish caught this year by fishermen of this neighborhood, has been eight quintals per man in punts and fifteen quintals

per man in boats going to Cape St. Mary's; Great Burin being an exception would give twenty quintals a punt for man and boy.

Previous to the last three years the average catch of codfish per man in this neighborhood has been forty quintals.

The supply of fresh bait to the French at St. Pierre by fishermen from St. Laurence to the Flat Islands will exceed ten thousand pounds annually, the above section of coast including Burin Proper, St. Laurence, Mortier Bay, Tites Cove, Rock Harbor, Bean Bois, and other harbors.

FRANCIS BERTEAN.

Sworn before me, at Burin, this seventh day of December, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 72.

RICHARD McGRATH, aged fifty years, subcollector H. M. customs, residing at Oderin, Newfoundland, maketh oath and saith:

I am acquainted with the Newfoundland fisheries by having prosecuted the same for fifteen years.

I have seen United States vessels in this neighborhood. In 1874 four or five of these vessels called in at the back of Oderin Island, having procured ice at Burin, and twelve miles from here hauled caplin for bait. They also purchased a few barrels; but principally they hauled their supply; whether this was done exclusively by themselves, or with the aid of local fishermen, I cannot say.

Newfoundland fishermen generally catch codfish within two miles of the shores. The caplin, herring, and squid fisheries for bait are inshore fisheries, squid being exceptionally taken several miles from the shore. I never heard of a Newfoundland vessel fishing on any of the coasts of the United States of America.

I am of opinion that the presence of the large number of United States vessels fishing on the Banks off our coasts with fresh bait interferes with and tends to reduce the catch of our local fishermen. The effect of baiting the Banks with fresh bait I conceive can have no other result than to attract codfish and prevent it passing in toward our shores, and am of opinion that the supply of fresh bait to United States vessels by our fishermen should be put a stop to as far as practicable.

RICHARD McGRATH,
Subcollector.

J. O. FRASER,
Commissioner of Affidavits.

No. 73.

HENRY PENNELL, aged 52 years, fisherman, residing at Trepany, Newfoundland, maketh oath and saith:

I am acquainted with the fisheries of Newfoundland by having prosecuted the same for twenty-five years.

I have observed a number of United States fishing vessels in the neighborhood of Trepassay, St. Mary's Bay, during the last two years; the number so seen by me would be about forty. These vessels came to the harbor for fresh bait and ice. The chief fishermen of the place decided, last year, that to supply American fishermen with fresh bait would be injurious to the local fishery, and having met in a body, it was

resolved not to haul bait for American fishermen, or otherwise supply them with bait. Only one or two persons in the place broke through the rule, and they, to a limited extent only, supplied bait to American fishermen. Were it not for the determination of the people not to catch or haul bait for United States fishermen, it was known that a large number of their schooners would call in at Trepany from the Banks for fresh bait, and that their traffic would be hurtful to our bait supply.

Among the captains of the United States vessels at Trepany, I remember only a few—Captain Rositer, Captain Kane, were two, but without time to think I cannot recollect many. The bait in season when these United States vessels were at Trepany was caplin; the quantity they required was from forty barrels to one hundred barrels each. They would contract for forty barrels and would take one hundred barrels, if they could procure this quantity.

The great bulk of codfish caught by Newfoundland fishermen is taken within two miles of the shore, but a number of our boats go well off shore in the spring, and after the cod seine fishery, which ends on our shores about Trepany about the 10th of August.

The Newfoundland fishery is an inshore fishery. I never heard of a Newfoundland vessel engaging on any fishing voyage on any of the shores or coasts of the United States of America.

United States vessels have sold fish and oil at Trepany last year. Know their captains have done so, but I cannot say to what extent. Their vessels have been refitted at Trepany, where they also get wood and water.

I think the supply of bait by our people to the United States fishermen decreases the supply for local purposes.

I am also of firm belief that the presence of the large number of United States fishing-vessels, well supplied with fresh bait, fishing on the Banks, largely and injuriously affects our local catch of codfish, and that the short catch last year along our south and west coasts was mainly attributable to their operations. Their captains last year told me that our bait supply was of the greatest service to them; that their vessels using fresh bait from our shores get a load in a comparatively short time, whereas vessels alongside of them, using clams for bait, hardly get a fish. It must be, therefore, that the fresh bait supplied by us, and used by United States fishermen on the Banks, tends to retain the fish on the Banks, preventing its passing in for our shores, and thus operating against our fishermen, as does the supply of bait, which has, in some instances that I have seen, left local fishermen without bait to follow up their fishery.

The catch of codfish by fishermen in the neighborhood of Trepany last year was under two-thirds of former catches, and the catch by the Trepany fishermen was greater than any other part of the southern shore. United States fishing-vessels sometimes come in among our boats to fish. The quickest trip I have known any of them make was a trip taken on Cape Ballard Bank, when, in two offers of about three weeks each, this vessel completed her trip, with which she left for the United States. Her captain told me it was the quickest trip of codfish he had ever made.

There is an ice-house at Placentia where ice is stored for sale to United States fishermen. I have heard that there is also an ice-house at Salmonier, St. Mary's Bay, where ice is stored for like purposes. American vessels sometimes tow icebergs along with them to preserve their fresh bait.

HENRY PENNELL.

J. O. FRASER,
Commissioner of Affidavits.

No. 74.

PATRICK LEARY, aged 72 years, planter and fisherman, residing at Renews, Newfoundland, maketh oath and saith :

I have become acquainted with the fisheries of Newfoundland by following the same since I was fourteen years of age, and have had charge of a public bait-skiff, of a schooner to the Banks, and for many years was master of a western boat, and in every town am well acquainted with all the fisheries of this country except whaling.

I have observed several United States fishing-vessels in this neighborhood. Last year eight or ten of these vessels were here for bait, which some of them got, and others went on to Cape Broyle and Bay Bulls for bait. The vessels referred to as being in this harbor came here for bait and to purchase ice. The ice purchased by them they pay \$3 per ton for. For squids they pay about ten shillings per barrel for what they purchase in this harbor. Each United States vessel takes forty barrels caplin per trip, and when squids are in season take forty barrels squids per trip. I hauled bait for one of their schooners; this was caplin that I supplied to Capt. James Dunphy. I supplied him with bait in 1876 and 1875. I gave him forty barrels caplin each year. He found the crew and I found the seine and gear. He paid me \$8 each year for my services. The Newfoundland fishery is an inshore fishery. The bait-fishery—caplin, herrings, and squid—is an inshore fishery, this bait being caught almost wholly in the harbors and coves of our bays. I never heard of a Newfoundland vessel engaging in the prosecution of any fishery on any of the coasts of the United States of America.

The supply of bait to United States fishermen has decreased the supply to our local fishermen. This is particularly true as regards squids, which were driven from our shores last fall, or else were all caught in supplying Americans.

I have no doubt whatever but that the presence of the large number of United States vessels fishing on the Banks off our coasts well supplied with fresh bait, acts ruinously upon our local fishery and reduces the catch of our fishermen. I think their operations last year was the cause, chiefly, of the short catch along the southwest coast by our fishermen. It is a common practice for certain of these United States vessels to supply themselves with large quantities of bait for the purpose of selling the same to vessels of their country on the Banks at large prices, thus serving as bait-skiffs and saving time. This supply of fresh bait to United States vessels prevents codfish from working in upon our shores as they would otherwise do. Each United States fishing-vessel has five or six doreys, and each dorey has over one thousand hooks, all used as bultows along the Banks, thus forming a fence, and, as I believe, a double fence along the whole part of our shores. The results must be ruinous to our fishery. The facilities afforded them of procuring fresh bait in our harbors and bays, arms them doubly against our fishing interest, by destroying, or at all events rendering scarce, a prime necessity to the prosecution of the fishery by our fishermen, and by keeping codfish from striking our shores. The average catch of fishermen in this neighborhood in 1875 and 1876 was about fifteen quin-

tals; previous to 1874 the average would be about thirty-five quintals per hand.

his
PATRICK + LEARY.
mark.

No. 76.

JOHN WHITE, aged 64 years, planter, residing at Ferryland, Newfoundland, maketh oath and saith:

I have become acquainted with the fisheries by following the same since I was sixteen years of age, and by having charge of a cod-seine forty-five years. I understand all about the fisheries and their prosecution.

I have seen a number of United States fishing-vessels in our bays and offings some days. I have seen fifteen in the harbors in this neighborhood. I think there were two hundred of these vessels frequenting harbors and coves on the southern shore the past year to procure fresh bait. I have heard the names of quite a number of these vessels, and have conversed with many of their crews, but have not particularly noted the names of their vessels.

Each vessel takes about forty barrels caplin per trip, and the same quantity of herrings when in season per trip, and also about forty barrels squids per vessel each trip. This I know and have been so told by Captain Ryan, who was master of one of these United States vessels.

The Newfoundland fishery is an inshore fishery; the bait fishery—caplin, herring, and squid—is inshore fishery. I never heard of a Newfoundland fishing vessel prosecuting any fishery on any of the coasts of the United States of America. These United States vessels do sell small codfish and cod oil along the southern shore, and I know they refit their vessels in our harbors from having sold them cordage and other articles to refit. The supply of bait to United States fishermen has in some instances “swept the ground,” leaving not a herring or a squid for our local fishermen. In one harbor, close to us on the southern shore, upwards of four thousand barrels squids have been taken by United States fishing vessels. I think it very injurious to our people that so large a quantity of bait is thus supplied to the United States fishing vessels. While our people are engaged catching bait for United States fishing vessels they would catch double the value of what they receive for bait if they followed up the cod fishery instead of giving it up for a pursuit that is fickle and directly opposed to their interest, inasmuch as the fresh bait thus supplied United States vessels is used on the Banks to keep the fish from coming in upon our shores. Every season and almost every day an occasional fish is caught having an American hook in its mouth, which proves that the fish striking our shores encounter United States fishermen’s hooks—the more attractive we may help to make these hooks the more it will damage ourselves.

I do fully believe that the United States fishing vessels fishing on the Banks off our coast well supplied with fresh bait has reduced the catch of local fishermen, and that the short catch the past season was attributable to their operations on the Banks fishing and in our harbors for bait.

The effect of their operations must certainly be—as I heard more than one of their captains declare—that they would not leave a fish to be caught in a short time.

The average catch of codfish by our fishermen per man, since 1874, was under twenty quintals; previous to 1874 the catch per man would average fifty quintals.

The effect of United States fishermen’s operations in our waters is absolutely ruinous to a degree that money cannot pay; they will destroy “the goose that lays the golden egg.” Our fisheries are sacrificed by the concessions of the Treaty of Washington.

JOHN WHITE.

Sworn before me, at Ferryland, this 10th day of April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 77.

ROBERT MORRY, aged 46 years, supplying merchant and planter, residing at Caplin Bay, Newfoundland, maketh oath and saith: I have become acquainted with the fisheries of Newfoundland from being connected therewith since I was boy. I have, during the last two years, seen a number of United States fishing vessels in this neighborhood. Last season, I can safely say, I saw upwards of a hundred of such vessels either in this harbor or passing close by; there were five or six of these vessels in this harbor of last year; they came for bait—for caplin during the “caplin school,” and squids afterward. This bait they hauled themselves in part, and jigged squids. I saw six dories belonging to one of their vessels on the “jigging ground” busily employed jigging for

squids. They also purchase bait from our people, being always in a hurry to get their bait as quickly as possible to proceed again to the Banks. Caplin they regularly haul for themselves when caplin is abundant, which it always is until the season advances. Each vessel takes about eighty barrels fresh caplin, which they preserve in ice purchased from our people. The bait hauled and jigged by these United States fishermen was taken in the harbor close to shore.

Newfoundland fishermen generally catch codfish within one and a half miles of the shore. The Newfoundland fishery is an inshore fishery; exceptionally, in the fall, boats do go off to Banks called Fermeuse and Renewes, Bantams and Cape Ballard Bank. The caplin, herring, and squid used for bait are inshore fisheries, and are prosecuted close to shore.

I never heard of a Newfoundland fishing vessel prosecuting any fishery on any of the coasts of the United States of America. The supply of bait to United States vessels decreases the supply of bait to our local fishermen. I feel certain that the supply of bait to these United States vessels has had the effect of reducing the catch of our local fishermen, and can attribute the short catch of codfish in 1876 along these shores to no other cause than the operations of United States fishing vessels fishing on the outer Banks. I consider that the evil resulting from the use being made by the United States fishermen is the right to take bait in our waters, will every year become more hurtful to our people, and that it of already serious magnitude. There were no ice-houses at this harbor for the supply of bait to the United States fishermen, who purchased what they required at Cape Broyle and elsewhere.

ROBT. MORRY.

Sworn before me, at Caplin Bay, this 10th day of April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 78.

PETER WINSER, aged 54 years, planter, residing at Aquaforte, Newfoundland, maketh oath and saith:

I have been connected with the fisheries of Newfoundland, by either prosecuting the same or supplying therefor, since I was fourteen years of age.

I have seen United States fishing-vessels in this harbor the past season as well as the year previous, getting bait; they jigged squids themselves in part, and what they were short of catching they purchased from our fishermen. Caplin they hauled themselves, using a seine belonging to a person residing in this harbor, which was worked by American fishermen, except one young man, the son of the seine owner. Four of these vessels have been in this harbor at one time catching bait; as many as fifteen have been at one time in Cape Broyle; I saw ten there one day, whose crews were all engaged catching squids. In this immediate vicinity there were last summer not fewer than seventy of these United States vessels in our harbors during the caplin school; and I am well informed that between St. Johns and Trepany not fewer than two hundred have frequented the harbors for the supply of fresh bait, which they procured partly by catching for themselves and partly by purchasing. I am led to believe that it is the intention of United States vessels to come in upon our shores and into our harbors to catch bait to convey to their schooners on the Banks, so that

they may prosecute the cod fishery uninterruptedly. The supply of bait by each United States vessel per trip is about as follows: 40 barrels caplin during the caplin school; and as I was told by one of the captains, 50 barrels squids. United States vessels make two and three trips for bait.

United States fishermen do not fish on these shores, but I learn that they do fish within three miles of the shores about Cape St. Marys.

The Newfoundland cod fishery is an inshore fishery; and the bait fishery—caplin, herrings, and squid—is an inshore fishery, generally taken in the harbors close to shore.

I never heard of a Newfoundland vessel prosecuting any fishery on any coasts of the United States of America. United States fishermen have sold small codfish and cod-oil in this neighborhood. I purchased ten quintals from them myself, and 4 barrels of cod-roes—this was last season. The price given by me was 10s per cwt., green, for fish, and 10s. per barrel for cod-roes.

I verily believe the supply of bait to United States fishermen decreases the supply to our local fishermen—particularly in squids. My chief reason for thinking so is that last year when one of their vessels anchored in this harbor and jigged and purchased fifty barrels squids we could not afterward catch half bait for our own wants. I never knew so sudden a change before—from abundance to next to none. The price paid for squids, purchased by these Americans, to our people, was about six shillings per barrel. Quite a number of our own people gave up the cod fishery during the presence of United States vessels in order to catch squids to sell to United States vessels, by which they lost more than twice what they gained, and ultimately lost a great deal more inasmuch as the fifty barrels of squids taken by the one vessel was a permanent loss to our people, which could not afterward be recovered, and without bait there can be no fish.

It is my belief that the short fishery the past season along these south and west shores was owing, in a great measure, to the fishing operations of United States fishing vessels in our harbor for bait and fishing on the Banks off our shores.

The average catch of codfish previous to 1874 would not be under fifty quintals; since 1874 it has not exceeded from fifteen to twenty. There are ice houses in this neighborhood and I learn a large ice house has been built at Cape Broyle to preserve ice for sale to United States fishermen this year—this ice they use to preserve bait fresh, which they use on the Banks to attract the fish. They do so successfully and keep codfish from striking our shores as they formerly did.

PETER WINSER.

Sworn before me at Aquaforte, N. F., this tenth day April, A. D. 1877.

J. O. FRASER.

Commissioner of Affidavits.

RICHARD CASHIN, aged 62 years, planter, residing at Cape Broyle, Newfoundland, maketh oath and saith:

I have been connected with the fisheries of Newfoundland as supplier and fisherman for fifty years, during nearly the whole of which time I have followed the fishery myself as a catcher of codfish, and understand it well in all its branches. I have observed a number of United States fishing-vessels in this neighborhood. Last summer, for three months after first of July, there was hardly a day passed that I did not see from

one to fifteen of these vessels in this neighborhood. I did not take any particular account of vessels, but can name the following as among them :

Vessel's name.	Captain's name.	Where belonging.
Pedro Venale.....	McCabe.....	Gloucester, U. S. A.
.....	Sylva.....	Providence, U. S. A.
.....	McInnis.....	Gloucester.
.....	McGrath.....	Do.
.....	Lohem.....	Cape Ann.
.....	Hogg.....	Gloucester.
.....	James McArthur.....	Do.
Winefred J. King.....	F. King.....	Do.
Grace C. Hadley.....	Edward Hall.....	Do.
Flying Scud.....	Hiltz.....	Do.
.....	Mulloy.....	

I cannot give particulars as to tonnage of these vessels, which would vary from sixty to one hundred tons. The United States vessels I refer to as frequenting this neighborhood came here to purchase and haul bait, which they did. For the purpose of hauling bait they hired seines belonging to the fishermen of the place. Except the last trip, made about end of October and first of November, these vessels procured full allowances of fresh bait, and purchased salted squids and herrings as their chief supply for the last trip. I have sold bait to United States fishing vessels. I, with others in this harbor, supplied bait last year to about one hundred and fifty United States fishing vessels. Each vessel would take forty barrels of squids—one vessel taking eighty barrels squids. The squids sold these United States fishing vessels would be supplied in August and September, which they preserved fresh in ice, when ice was procurable, and in October salted squids were sold to them for bait, when fresh was not to be had.

During the caplin season United States fishing vessels regularly frequent this neighborhood as they do for squids, and about in equal numbers. In the spring they prefer herrings to caplin, but failing to get herrings they take caplin, which they preserve in ice. American fishing vessels (I mean United States vessels) make from one to three trips for bait and ice. The prices paid for bait by United States fishing vessels in this neighborhood has been for caplin one dollar per barrel; for herrings, from five to ten shillings per barrel, and for squids, from ten shillings to twelve shillings and sixpence per barrel for fresh squids. Sometimes when squids are scarce, they give three shillings per hundred squids.

The squid for bait has been represented by the captains of these United States vessels as invaluable. One captain refused a brother captain on the Banks to give him a barrel of squids for sixteen dollars. Newfoundland fishermen generally fish within two miles of our shores. The Newfoundland cod-fishery is an inshore fishery. The caplin, herring, and squid for bait are all inshore fisheries, and except in rare instances, when squids are caught some distance off, are never taken at a distance of more than three miles from the shore, but are generally caught in the harbors and coves along our shores.

I never heard of a Newfoundland vessel prosecuting any fishery on any of the coasts of the United States of America.

United States fishermen have sold small codfish and cod-oil in this neighborhood. I have purchased codfish and oil from them. The prices paid have been eight and nine shillings per cwt. for green codfish, and

two shillings and sixpence per gallon for cod-oil. Eighty quintals fish and two and one-half tons oil is what I purchased.

United States vessels regularly refit in this neighborhood, and have purchased provisions, wood, and water. I have furnished them with provisions and other supplies, taking their orders in payment thereof. These orders generally have been paid, but in one instance the captain's order on the American consul, St. John's, in my favor, was refused, and I have never since been paid.

The supply of bait to United States fishing-vessels acts ruinously upon our local fishermen, and greatly shortens their supply of bait; this is true as regards herrings and squids, and results in shortening the catch of local fishermen. I do believe that the operations of United States fishermen on the Banks, well supplied with fresh bait, interferes with and reduces the catch of our local fishermen, and am of opinion that the short catch of codfish the past summer has been caused by the United States fishermen fishing on the outer Banks.

The average catch of codfish here the last two years will not exceed twenty quintals per man; the average catch previous to 1874 would be fully fifty quintals per man.

There are ice-houses in this locality where ice is preserved for sale to United States fishermen. The price paid for ice supplied in this harbor has been \$4 per ton.

RICHARD CASHIN.

Sworn before me at Cape Broyle, this ninth day of April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 80.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, THOMAS C. ROBERTS, of Cape Canso, in the county of Guysborough, and Province of Nova Scotia, but at present of the city and county of Halifax, in said province, master mariner, make oath and say as follows:

1. I have been a practical fisherman for fifteen years of my life up to the year 1873, during five years of which time I was in command of a fishing-vessel. I have fished for codfish and mackerel and herring in the Gulf of Saint Lawrence and on the south shore of Nova Scotia, and during one season on the United States coast.

2. During the years that I was employed in fishing, the number of American vessels fishing for mackerel and codfish in the Gulf of Saint Lawrence and on the coast of Nova Scotia would, to the best of my knowledge, range from six hundred to seven hundred each year. The average number of men to each vessel would be about fifteen.

3. The average catch of American vessels while I was in the fishery was about five hundred barrels per vessel each year.

4. The practice of using purse seines, which has been followed by the Americans during the past few years, is, in my opinion, very injurious to the mackerel fishery, as it tends to break up the schools of mackerel and drive them away; but perhaps the greatest injury resulting from this practice is the destruction of immense quantities of young mackerel, which are caught in seines and thrown away as worthless. In the cod fishery the practice of trawling is very destructive, as it destroys

the mother or spawn-fish which would be caught only in very small quantities by the hook and line.

5. The greater part of the mackerel caught by American fishermen on our coasts are, in my opinion, caught inshore. As far as my own observation goes, where there is one mackerel caught outside of three miles from shore, there are fifty mackerel caught within that distance. Almost all the mackerel caught in vessels in which I was employed were caught within three miles of the shore. The herring fishery is altogether an inshore fishery.

6. The American fishermen catch a considerable amount of bait, especially squid for the cod fishery, in our harbors and bays, but they also buy a very large quantity from our fishermen. The American cod-fishermen cannot carry on the fishery successfully without procuring bait on our shores, or on the shores of Newfoundland.

7. The privilege of transshipping cargoes on our shores is of vast advantage to American fishermen, that is the mackerel fishermen. By means of this they save from a fortnight to three weeks on each trip they make to the fishing grounds; and that generally in the best part of the fishing season. I have known an American mackereler to get a good trip in the time that another vessel was going home and returning.

8. During my experience of fifteen years I found that the mackerel are variable, and that they are sometimes scarce for a time, and then come in again as plenty as ever. I do not think that their scarcity in 1875 and 1876 is permanent, but I believe that unless the fishery is destroyed by the use of purse seines, the mackerel will again be as plenty as ever. I have understood that this year the mackerel are very plenty in the Gulf of Saint Lawrence, and I myself have seen the mackerel along the coast from Halifax to Canso in large numbers in the month of June last.

9. I am of opinion that the privilege of fishing in American waters is of no value whatever to Canadians.

10. According to the best of my belief, at least two hundred and fifty American cod-fishing vessels touch at the shores of Guysborough County each year for bait and supplies. They purchase large quantities of ice at Canso, which is, of course, a valuable privilege to them.

THOMAS C. ROBERTS.

The said Thomas C. Roberts was sworn to the truth of this affidavit, at Halifax, in the county of Halifax, on the 18th day of August, A. D. 1877, before me.

WILLIAM WILSON,
A Justice of the Peace.

No. 81.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES SIMON RICHARD, of Getson's Cove, in the county of Lunenburg, master mariner, make oath and say as follows:

1. I have been engaged in the fisheries for twenty-five years, down to August, A. D. 1876. For fifteen years I have fished as master. I fished around the coast of Cape Breton, on the eastern side of New Brunswick, around Prince Edward Island, the Magdalenes, and on the Canadian coast of Labrador, along the southern coast of Nova Scotia, and am well acquainted with the inshore fisheries in Lunenburg County. I have taken all the kinds of fish found on the above-mentioned coasts.

2. When in the North Bay, about nine years ago, I have seen from eighty to ninety American vessels at one time together taking mackerel. The mackerel were taken mostly all inshore, within three miles of the shore, nor would it pay to go to the North Bay to take mackerel unless we could take them well in three miles of the shore.

3. The American mackerel-vessels carried from fourteen to eighteen men each. Their vessels now carry more men because they are larger. These vessels took from three to four hundred barrels on each trip. They made from two to three trips. They ran into the Strait of Canso and landed their cargoes, which were often sent away in steamers and fishing-vessels. On the third trip they usually filled up full with from five to six hundred barrels and went home.

4. The Americans took in the bay also large quantities of codfish, and I would say that there were as many Americans in the North Bay taking codfish as there were Nova Scotian vessels year after year down till last year included. This has been my experience there for fifteen years. These codfish-vessels average about fourteen men; they carry each from twelve to sixteen men; they take from a thousand to twelve hundred quintals to each vessel, and generally make two trips.

5. I have seen at the Magdalenes over sixty American vessels engaged in taking herring, and there were, I think, many more which I did not see. In the spring of seventy-six I saw around the Magdalenes many American herring vessels. These herring-vessels carry from ten to twelve hands, and take from a thousand to three thousand barrels to each vessel. These herring were all taken inshore by seining on the shore.

6. In my experience the mackerel-fishing has varied, being some years good and others poor. In seventy-two the catch was very plentiful. The herring fishery, in my experience, has remained about the same. Codfish vary to some extent; if bait is plenty codfish are plenty, and, in my experience, I could always catch codfish if I had plenty of bait.

7. Mackerel used to be taken by the Americans usually with hook and line, they are now taken also by the Americans with purse seines. The Americans formerly took codfish with hook and line, now they take them mostly by trawling in the North Bay. The most of the Canadian vessels in the North Bay take codfish with hook and line. Trawling I consider very bad for the fishery, as the mother fish are taken and great quantities of spawn destroyed. By hand-lining few mother fish are taken. The Americans take all their fish on the Banks by trawling and have done so since I can recollect. Canadians had commenced to take by trawling within the last four or five years. It is three years since I commenced. Canadians have been compelled to trawl in order to compete with the Americans.

8. The throwing overboard of gurry I consider injurious to the fishing ground, as it gluts and drives away the fish and destroys the eggs and young fish.

9. The Americans always fished inshore whatever the treaty was. When a cutter came in sight they moved off and came inshore when she disappeared. Since the Treaty of Washington the Americans have fished inshore more freely than when they had not the right to our inshore fisheries.

10. The inshore fisheries in Canadian waters are of much greater value than the off-shore fisheries. I would say more than double the value.

11. I have seen the Americans use purse seines to a large extent in the North Bay. These purse seines I consider very injurious to the fish-

ery, as they mash a large quantity of the fish, catch both large and small mackerel, and all kinds of fish; the fish are spoiled if they are allowed to remain twenty-four hours in the seine. The seine is tripped and the fish which fall out are bad for the grounds. The schools of mackerel are also broken up by purse seining and the fish frightened away. I have never seen nor heard of any Canadian vessel using purse seines.

12. The Americans catch squid for bait, herring and mackerel they catch, but principally buy for bait because it saves time and expense. This bait they get in this harbor and in the bays and harbors along the Canadian coast from Cape Sable to Labrador.

13. I have seen the Americans seining codfish on the Canadian coast of Labrador. Large quantities of these fish are taken inshore by Canadian fishermen, and thousands of Canadians depend upon these fish for a livelihood.

14. The mackerel make inshore to feed; their food is found inshore. They spawn inshore. They are taken principally inshore, and I consider them to be an inshore fish.

15. The Americans save time and expense by transshipping cargo, and catch more fish. I think each vessel saves upwards of \$2,000 by this privilege.

16. It is of great value to the Americans to procure bait in Canadian bays, harbors, and creeks inshore, nor could they prosecute the fisheries in Canadian water, either inshore or off shore or on the banks, without this bait. They get bait and ice all along our coast, and without ice they could not keep their bait fresh, and without fresh bait they could not profitably catch fish.

17. The Americans hinder Canadian fishermen to a large extent by carrying off so many fish, by taking fish by improper methods, by making bait scarce for Canadian vessels, of which there are about a hundred owned in this place and around the La Have.

18. I have never known nor heard of any Canadian vessel fishing in American waters.

19. I would consider it a great benefit to Canadian fishermen if Americans were excluded from our inshore waters, and I know of no benefits that we derive from American fishermen.

JAMES S. RICHARD.

Sworn to at Getson's Cove, in the county of Lunenburg, this 9th day of August, A. D. 1877, before me.

BENJ. RYNARD, J. P.

No. 82.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JACOB GROSER, of Lower La Have, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have been about forty years engaged in the fisheries. I have fished along the southern coast of Nova Scotia, around the Island of Cape Breton, on the eastern coast of New Brunswick, around Prince Edward Island, the Magdalen Islands, and the Lower St. Lawrence, and am well acquainted with the inshore fishery in Lunenburg County.

2. Four years ago I was in the Bay of Chaleur, and for many years constantly before that time year after year. Five years ago I have seen in the Bay of Chaleur from two to three hundred American vessels in

one fleet. The most of these vessels took mackerel and they took the most of their mackerel inshore, and very seldom caught much mackerel beyond three miles from the shore. I have fished codfish inshore around Prince Edward Island and Cape Breton within three miles of the shore, and the vessel in which I was took from four to five hundred quintals, the most of which was taken inshore; and I have seen many Americans fishing codfish inshore where we fished. The Americans fished inshore for mackerel, and wherever they could get them.

3. The American mackerel-men carry from fifteen to twenty men each. They take from four hundred to five hundred barrels to each vessel. They make from two to three trips. The American cod-fishermen carry about fifteen men each in the North Bay, and they take from eight hundred to a thousand quintals of fish each, and generally make two trips. The vessels on the Banks engaged in cod-fishing take about the same.

4. In my experience mackerel-fishing has varied, being good for some years and poor again for a number of years. This has been my experience for forty years. Codfish has always been plenty if we had plenty of fresh bait.

5. The Americans take mackerel mostly with hook and line. They take codfish with hook and line, but mostly by trawling, and I have seen them trawl inshore for codfish around Prince Edward Island. The taking of fish with trawls I consider very injurious, as the mother fish are taken, and I have seen a cargo of 800 quintals the greater part of which were mother fish. In trawling the bait lies on the bottom and the mother fish are taken, in land-lining few mother fish are taken.

The Americans trawled since I can remember, upwards of forty years ago; our vessels, of which there are about from sixty to a hundred fishing out of the La Have, never used trawls, but within the last six years our fishermen trawl in order to compete with the Americans.

6. The Americans, in my experience, fished inshore whenever they could, whether they had the right to do so or not. They moved out when a cutter hove in sight and returned when she disappeared.

7 The inshore fishery is more than double the value of the outside fishery.

8. The Americans made a common practice of lee-bowing us, and I have often seen them throw overboard bait to draw off the fish, and I have suffered in this way from them. I have also often seen them running into Nova Scotian vessels, and the large number of them made it dangerous for Nova Scotian fishermen. Since the Americans have the right of fishing inshore they do not practice throwing over bait to draw off the fish.

9. Since 1871 there has been more codfish taken than formerly. This summer mackerel has struck in very plentiful around this harbor in immense schools.

10. The herring fishery is all inshore, and the Americans buy them for bait in this harbor and all along the coast wherever they can get them.

11. The mackerel make inshore to feed, and are inshore fish, where they are mostly all taken.

12. I have seen Americans land in Prince Edward Island and dry their nets on the shore, and this privilege is of value to them.

13. I have seen the Americans land at the Strait of Canso and transship their cargo; by doing this they save time, expense, and catch more fish.

14. The Americans get bait all along the coast, and without this bait, and ice in which to preserve it, they could not carry on the Bank fishery.

They get ice and bait in this harbor. Trawling must be carried on with fresh bait.

15. The Americans come here to buy bait before herring and mackerel set in, and make it scarce for our vessels, which is a great injury to our bankers, and without this bait they could not profitably carry on the deep-sea fisheries.

16. I have never known nor heard of any Canadian vessel fishing in American waters, and I consider this right of no value to Canadian fishermen.

17. I would consider it to be of great value to Canadian fishermen if the Americans were excluded from our waters, and I know of no benefit that we derive from American fishermen.

JACOB GROSER.

Sworn to at Lower La Have, in the county of Lunenburg, this 7th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, *J. P.*

No. 83.

In the matter of the Fisheries Commission, at Halifax, under the Treaty of Washington.

I, NATHANIEL JOST, of Lunenburg Town, in the county of Lunenburg, master mariner, make oath and say, as follows:

1. I have been engaged in the fisheries for twenty-one years. I fished along the southern coast of Nova Scotia, northern side of Cape Breton, around Prince Edward Island, in the Bay of Chaleur, on the eastern coast of New Brunswick, and the Magdalen Islands. I fished mackerel, codfish, and herring. I am acquainted with many American fishermen, Nova Scotian fishermen, and also with the inshore fisheries in the county of Lunenburg. I was master of a vessel for two years, with a crew of seventeen hands, all told.

2. I have seen, about nine years ago, two hundred sail of fishing vessels, mostly American, together in one fleet, near Port Hood Harbor; many of these were engaged in taking mackerel within three miles of the shore. I have also seen many American mackerel men engaged in taking mackerel around the coasts of Cape Breton, Prince Edward Island, and eastern side of New Brunswick, and many of these fished inshore. I would say that there were at least four hundred American vessels around the before-mentioned coasts taking mackerel. During the past two years I have seen, at one time, in sight, five American vessels engaged in taking codfish on the southern coast of Nova Scotia, and a great many in sailing along; and, at Sable Island this spring I have seen from fifteen to twenty in sight at one time engaged in taking codfish.

3. The Americans, when I fished in the Bay of Chaleur, averaged about six hundred barrels of mackerel to each vessel during the season. The past two or three years cod-fishing vessels averaged from fifteen hundred to two thousand quintals to each vessel during the season.

4. In my experience mackerel fishing has varied, being some years good and others poor; in '72 and '73 fair voyages were made. Ever since 1869 the codfishing has been good, and when bait and ice could be obtained plenty of fish could be had. On our coasts herring fishing has not been very extensively prosecuted, but when it has herring has always been obtained; I saw this spring an American vessel fitted out

for catching herring around the Magdalenes, and they expected to take three thousand barrels, and last spring large catches were made around the Magdalenes, which were shipped to the Baltic and Black seas.

5. Some years ago the Americans took mackerel with hook and line; now I am informed they use purse seines and hook and line. Codfish are taken chiefly by trawling and handlining; the herring are taken around the Magdalen Islands with seines.

6. The offal is thrown overboard by the Americans, which is very injurious to the fishing grounds, glutting the fish and driving them away. I have caught fish with sound bones in them in a sickly state.

7. I am acquainted with a great number of Nova Scotian vessels, and I have never seen nor heard of any of them using purse seines, and I consider the use of these purse seines by the Americans as very injurious to fishing.

8. The Americans buy bait all along the coast, and ice in which to pack it, wherever they can get it, and they buy it because they save time and the expense of netting.

9. When I was engaged in mackerel fishing it was a common practice among the Americans to lee-bow us. They made bait much more expensive to Canadian fishing vessels by coming into our harbors and purchasing it when bait is scarce; the time they come for bait, herring and mackerel are only beginning to set in.

10. Herring fishery is all inshore, and the Americans purchase herring for bait as already stated.

11. Taken on an average, Canadian mackerel are better than American.

12. Mackerel in my experience make inshore, and I consider them to be an inshore fish.

13. At the Strait of Canso I have often seen the Americans transshipping their cargoes, and by this plan they save time and catch more fish.

14. It is of great advantage to the Americans to be able to procure bait from our inshore fishermen, and ice in which to pack it, and without this privilege they could not carry on the deep-sea fishery profitably. Last summer I took fresh bait from Canso, and with it fished on the Grand Banks, Newfoundland, and took one hundred quintals a day for six days, then tried salt bait and only took from eight to ten, and while using fresh bait both American and Nova Scotian vessels using salt bait around me, could catch no fish, and hove up and went away.

15. Without ice it would be impossible for the Americans to keep their bait fresh. The Americans bring their supplies from home, except ice and bait, and when they run short, purchase to a small extent in our ports.

16. To my knowledge no Canadian vessels ever go to American waters to fish, and I consider the right of fishing in American waters of no benefit to Canadians.

17. If the Americans were excluded from getting bait and ice, and from taking fish inshore, it would be of very great value to Canadian fishermen.

NATHANIEL JOST.

Sworn to at Lunenburg, in the county of Lunenburg, this 7th day of August, A. D. 1877, before me.

JOSEPH W. LOCKHART, J. P.

No. 84.

In the matter of the Fisheries Commission, at Halifax, under the Treaty of Washington.

I, CHARLES SMITH, of Lunenburg Town, in the county of Lunenburg, master mariner, make oath and say as follows :

1. I have been engaged in the fisheries for fifteen years. I have fished along the southern coast of Nova Scotia, around Cape Breton, Prince Edward Island, on the eastern side of New Brunswick, around the Magdalenes, on the Labrador coast, and am well acquainted with the inshore fisheries in Lunenburg County. I have taken all the kinds of fish found on the above-mentioned coasts. I have also been engaged in Bank fishing.

2. I have seen at Port Hood, in the Island of Cape Breton, about seven years ago, over three hundred sail of American mackerel vessels at one time. The last year I was in the North Bay I fished in an American vessel, Alice M. Lewis, of Gloucester. We took the most of the mackerel inshore—within three miles of the shore. We had on board the said vessel a crew of fifteen hands, and took four hundred and twenty-five barrels of mackerel in one trip, nearly all within three miles of the shore. I have often seen, year after year, upward of one hundred American vessels, at one time in sight, engaged in taking mackerel. By the North Bay I mean the water around Prince Edward Island, eastern side of New Brunswick, northwestern side of Cape Breton, and the Magdalenes. These vessels took the most of their mackerel inshore, within three miles of the shore. I do not think it would pay Americans to go to the North Bay to fish mackerel, unless they could catch them within three miles of the shore.

3. The Americans get bait and ice in large quantities at Northwest Bay on the Aspotogon Peninsula, in Lunenburg County. They get the ice in which to pack their bait upon the mountains. This ice they get free. Nearly the whole fleet of Lunenburg Bankers get their fresh bait at the said Northwest Bay. So many Americans getting bait and ice at this place interferes with our vessels. They make the bait scarce and dearer. Without this bait, and ice in which to pack it, the Americans could not carry on successfully the deep-sea fishery.

4. The Canadian vessels in which I fished in the North Bay took codfish with hand-lines. The Americans all trawled, at least all I saw, and I saw many in the said bay.

5. When on the Labrador coast, in 1871-'2-'3, I saw American vessels engaged in seining codfish on the shore. These vessels were on the Canadian coast of Labrador, and took two thousand quintals of codfish to each schooner. These schooners carried from twenty to twenty-two men each.

6. When in the American schooner we always fished inshore when we could. We moved away when a cutter appeared, and returned inshore when she disappeared.

CHARLES SMITH.

Sworn to at Lunenburg, in the County of Lunenburg, this 13th day of August, A. D. 1877, before me.

JOSEPH W. LOCKHART, J. P.

No. 85.

In the matter of the Fisheries Commission, at Halifax, under the Treaty of Washington.

I, BENJAMIN WENTZLER, of Lower La Have, in the county of Lunenburg, fisherman, make oath and say as follows :

1. I have been engaged in the fisheries for twenty-seven years up to eighteen hundred and seventy-five, inclusive, and fished every year in the North Bay, around Cape Breton, Prince Edward's Island, eastern side of New Brunswick, and around the Magdalenes. I have taken all the fish found in the waters on the above-mentioned coast. I am also well acquainted with the inshore fisheries in Lunenburg County. I have seen often more than a hundred American vessels fishing on the above-named coasts in one fleet together, and I have seen these vessels make off from the shore when a steamer appeared to protect the fishery ; when the smoke of the steamer could not be seen they came in again to the shore. Such large numbers of them made it dangerous for Nova Scotian fishermen, and I have lost many a night's sleep by them in order to protect our vessel. I have seen in Port Hood Harbor about three hundred sail of American vessels at one time, and it is seldom, if ever, that a third of them are in any harbor at one time ; and I have been run into by an American schooner in Port Hood Harbor. From 1871 to 1875, inclusive, I have seen the Americans in large numbers around Prince Edward Island, eastern side of New Brunswick, and around Cape Breton. I have seen many American vessels on the above-mentioned coasts engaged in taking codfish. They took fish inshore by trawling—offshore and wherever they could catch them. Some parts of the season the codfish is better inshore than off, and in my experience I have caught in our vessels more codfish inshore than off shore.

2. The Americans took in their schooners from three to four hundred barrels of mackerel to each vessel, and they made three such trips. The Americans fish on Sunday which our vessels do not do. The American mackerel-men carry from fourteen to twenty men. The American cod-fishermen have about fifteen or sixteen men on board, and take from six hundred to a thousand quintals.

3. The Americans take codfish by trawling, and did so as long as I can remember. About five years ago our vessels commenced trawling, in order to compete with the Americans. This trawling I consider very injurious to the fishery.

4. The Americans get bait all along the coast and in this harbor. Without this bait and ice they could not carry on the deep-sea fishery.

5. It would, in my opinion, be of great value to us fishermen if the Americans were excluded, and I know of no benefit to us in allowing the Americans to come into our inshore waters.

BENJAMIN WENTZLER.

Sworn to at Lower La Have, in the county of Lunenburg, this 8th day of August, A. D. 1877.

JAMES H. WENTZEL, *J. P.*

No. 86.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEORGE CONRAD, of South Village, in the county of Lunenburg, master-mariner, make oath and say as follows :

1. I have been engaged in the fisheries for forty years, and have fished mackerel, herring, codfish, halibut, haddock, pollock, and hake along the southern coast of Nova Scotia, eastern side of Cape Breton, in the Bay of Chaleur, around Prince Edward Island, and the Magdalen Islands for twelve years. I have fished as master of a vessel.

2. About twelve years ago, I have seen in Port Hood, in the island of Cape Breton, over three hundred sail at one time—about fifty or sixty were Nova Scotian, the remainder Americans. About eight years ago I have seen upwards of one hundred at one time on the coast of Prince Edward Island, fishing mackerel. These vessels fished inshore for mackerel, and were American vessels. I, along with other Nova Scotian captains, have made calculations when fishing in the Bay of Chaleur, and we concluded that there were upwards of four hundred American vessels at the time fishing mackerel in the bay. Mackerel must be fished inshore, as they are an inshore fish. The American vessels carry from twelve to eighteen men each. Around Bay of Chaleur and the Banks there would not be less than three or four hundred vessels engaged in taking codfish. Codfish vessels carry from twelve to eighteen men. Some American vessels are fitted out for halibut alone, but take large codfish, throwing away the small codfish. The Americans trawl for halibut and codfish.

3. The American vessels take two to four hundred barrels of mackerel each, and some of them make three trips. American codfishmen take from one thousand to eighteen hundred quintals of codfish each, and make three trips.

4. While in the Bay of Chaleur this summer, I have seen the Americans with purse seines, and told me that they used them; and these purse seines, in my opinion, spoil the fishery. I have never seen any Canadian vessels with purse seines. I am acquainted with thirty or forty vessels which run out of Lunenburg every year, and none of these carry purse seines.

5. The throwing overboard of gurry which is practiced on the grounds is very injurious to the fishing-grounds.

6. Unless the Americans got bait and ice they could not carry on the fishery of cod and halibut.

GEORGE CONRAD.

Sworn to at Lunenburg, in the county of Lunenburg, this 4th day of August, before me.

JOSEPH W. LOCKHART, J. P.

No. 87.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEOFFREY COOK, of Rose Bay, in the county of Lunenburg fisherman, make oath and say as follows:

1. I have been sixteen years constantly engaged in the fishery. I have for two years fished as skipper. I have fished around Cape Breton, Prince Edward Island, on the eastern side of New Brunswick, on the Labrador coast, and along the southern coast of Nova Scotia. I have caught mackerel for bait, and have been mostly engaged in taking codfish, and am at present well acquainted with the inshore fishery in Lunenburg County.

2. While in the Bay of Chaleur, the summer before last, I saw many American vessels there engaged in fishing, and have also seen many of

them there fishing since 1871. I have counted the summer before last fifty American vessels within three-fourths of a mile from each other. The most of the American vessels which I saw fished inshore around the above-mentioned coasts. I saw them take both codfish and mackerel inshore, within three miles of the shore. Mackerel are taken mostly all inshore, and I would not fit out a vessel to take mackerel unless she fished inshore.

3. Including the codfishermen on the Banks and those in the bay, there are as many of them as of mackerelmen. I mean the Banks around our coasts. So many Americans take away the fish from us; they lee-bow us. I have often seen them run into Nova Scotian vessels, and so many of them make it dangerous for our fishermen.

4. The American mackerel men take about four hundred barrels of mackerel to each vessel, and generally make three trips. The mackerel men carry from seventeen to twenty-one of a crew, and take the most of their mackerel inshore, within three miles of the shore. The codfish vessels carry from twelve to fourteen men, and take about a thousand quintals, and make from two to three trips. They take this codfish inshore when they can get it, and wherever they can. I have seen as many as eighty American vessels at one time taking mackerel within two and three miles of the shore at once. This I have seen during the past four years.

5. The throwing overboard of offal is injurious to the fishery, as it gluts the fish and drives them away, and the sound-bone, which is thrown overboard, is injurious to the fish.

6. The Americans in my experience always fished inshore when they could, whatever the treaty was. They made off when a cutter appeared, and returned when she went away.

7. The inshore fishery, in my opinion, is of the greatest value. On the Labrador coast we always catch the codfish inshore, often with seines on the shore; and I have seen, during the past sixteen years, large numbers of Americans seining codfish on the Labrador coast, and I have seen them do this every year for the past sixteen, and also last year.

8. I have seen the Americans catching bait within three miles of the shore, around Prince Edward Island. This bait was used for taking codfish. They catch and buy bait all along the coasts and wherever they can get it. They make the bait scarce for our bankers by gobbling it up before herring and mackerel are plenty.

9. Fish have not increased since 1871, particularly mackerel. This I consider is owing to overfishing, and the bad methods employed by the Americans in taking fish.

10. The herring fishery is all inshore, and the Americans take them in large quantities on the Labrador coast, mostly by seining from the shore.

11. Without bait, and ice in which to preserve it, the Americans could not carry on the deep-sea fishery, as fresh bait is necessary. This bait the Americans get all around our coasts, and buy it often, because it saves time and expense.

12. I have never known nor heard of any of our fishermen going to fish in American waters, and I consider this right of no value.

13. The Americans hinder our fishermen by taking away the fish, as already stated, and I consider that it would be a great benefit to us if the Americans were excluded from our inshore fisheries, and I know of no benefit that we derive from American fishermen.

JEFFREY COOK.

Sworn to at Rose Bay, in the county of Lunenburg, this 8th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, *J. P.*

No. 88.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, DANIEL GETSON, of Getson's Cove, in the county of Lunenburg, master mariner, make oath and say as follows:

1. I have been engaged in fisheries for sixteen years. I have fished along the southern coast of Nova Scotia, around Cape Breton, on the eastern coast of New Brunswick, around Prince Edward's Island, the Magdalenes, and on the Canadian coast of Labrador, and I have also been personally engaged in Bank fishing and am well acquainted with the inshore fishing in Lunenburg County. I have taken mackerel, herring, and codfish, and all the kinds of fish found on the above-mentioned coasts.

2. I have seen at one time in the North Bay five hundred American mackerelmen at least. I have made calculations along with Nova Scotian and American skippers, and one fall we concluded there were 700 sail in the said bay. This calculation was made about five years ago. During the last five years I have seen the Americans in the North Bay in very large numbers.

3. Mostly all the mackerel are taken inshore, and it would not pay us to go there unless we could take them within three miles of the shore, nor would I go, as I intend to do in a week's time, unless I could catch them within three miles of the shore. The Americans often lee-bow us, and I have been run into by American vessel, and have suffered from five to six hundred dollars loss.

4. The Americans get bait from Cape Sable to Labrador, all round the Canadian coast, and without this bait it would be impossible for them to catch fish upon the Banks.

5. The Americans take codfish principally by trawling, and very seldom use hand-lining. Trawling I consider bad for the fishery, as it destroys the mother fish.

6. I have seen the Americans use purse-seines inshore and off shore, and this purse-seining I consider very injurious to the fishery, as they take the small fish, and many fish are destroyed. I have never seen a Canadian vessel use a purse seine.

DANIEL GETSON.

Sworn to at Getson's Cove, in the county of Lunenburg, this 8th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, *J. P.*

No. 89.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, DAN RISSER, of Rose Bay, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have been engaged in fishing for twenty-five years. I have fished in the Bay of Chaleur, around Cape Breton, eastern side of New Bruns-

wick, around Prince Edward Island, the Magdalenes, and on the Labrador coast, and am well acquainted with the inshore fishery in Lunenburg County.

2. I have fished mackerel and codfish. In fishing mackerel we took them mostly inshore, and it would not have paid us to have gone unless we could take them inshore.

3. I have fished for twenty-five years in succession on the Labrador coast, and got codfish close inshore. We got all our codfish close inshore within three miles. I have during the said time seen a number of American vessels taking codfish inshore on the Labrador coast, and this I have seen every year for the past twenty-five years. I have also, during the said time, seen many Americans catching herring inshore on the Labrador coast. So many Americans diminish the catch for Canadian vessels.

4. The Americans get bait, and ice in which to preserve it, all along our coast; and, in my experience, codfish cannot be taken without fresh bait.

5. In my opinion, it would be a great benefit to Canadian fishermen if Americans were excluded from our inshore fisheries.

DAN RISSER.

Sworn to at Rose Bay, in the county of Lunenburg, this 8th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, *J. P.*

No. 90.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, JAMES W. SPEARWATER, of New Dublin, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for the past two years, and have fished on the eastern and northeastern side of Cape Breton, on the Western Banks, and on Bank Quaero, on the southern side of Cape Breton. I fished codfish.

2. I left here this year on the tenth of April, and last year about the same time. The vessel in which I went last year carried sixteen hands, and was fitted out to take fourteen hundred quintals. The vessel in which I sailed this year was fitted out to take eighteen hundred quintals. We took six hundred quintals, and were out about four months.

3. I have often seen many American vessels there engaged in taking codfish. The American vessels on the Banks take the greater part of their fish by trawling. Trawling is carried on to the bottom, and mother fish are taken.

4. This year the vessel in which I was, and which is owned here, procured her bait at Eastern Passage, in Halifax County; at Cape George, in the county of Halifax; at Cape George in the county of Antigonish; at St. Ann's and Aspy Bay in Cape Breton. While at these places I saw American vessels getting bait and ice the same as our own vessels; herring and mackerel we bought; squid we mostly jigged. Without this bait and ice it would be impossible for the Americans or for us to carry on the Bank fishing. The Americans also got ice at these places to preserve their bait. The Americans get bait when it is scarce, and their getting bait interferes with our baiting.

JAMES W. SPEARWATER.

Sworn to at New Dublin, in the county of Lunenburg, this 9th day of August, A. D. 1877, before me.

BENJ. RYNARD, *J. P.*

No. 91.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, WILLIAM N. ZWICKER, of Lunenburg Town, in the County of Lunenburg, merchant, make oath and say as follows:

1. I have been engaged in the buying and selling of fish for about twenty-five years, and have had a number of vessels engaged in the taking of fish for the said time. Those vessels were engaged in taking mackerel, codfish, and herring around Cape Breton, Prince Edward Island, east side of New Brunswick, and the Magdalenes, and am acquainted with the inshore fishery in the county of Lunenburg.

2. The fitting out of vessels for the mackerel fishing has been almost discontinued in the county of Lunenburg. Mackerel is taken to some extent along the shore of this county in nets, and are taken inshore. There is a larger trade done in herring in Lunenburg during the past six years than any time previous. On the Banks during the past four years the catch of codfish has been good.

3. The Americans carry on the cod-fishery principally by trawling, and in my opinion this is a very injurious method of taking fish, and will eventually destroy the fishing grounds. When our men first went out fishing they caught fish with hook and line; now they practice trawling on the Banks in order to compete successfully with the Americans. The throwing over of offal on the grounds I also consider injurious to the fishery.

4. The Americans have fished inshore treaty or no treaty, and when the fishery was protected our mackerel men made better fares. Since the Treaty of Washington the Americans have fished inshore so extensively that they have driven our mackerel men out of the business.

5. In my opinion the inshore fishery are two-thirds the value of the entire fishery.

6. Among the masters of my vessels it was a common complaint that the Americans lee-bowed them and drew away the fish off shore by throwing overboard bait.

7. In my opinion the plan of taking mackerel with purse-seines is improper and injurious to the fishery.

8. The Americans purchase bait all around our coast in the county of Lunenburg, and wherever they can get this privilege of getting bait inshore, is a great injury to the Canadian fishery, as the price of bait is thus made much greater for Canadian vessels, and also more difficult to get. The Americans get this bait and ice in which to pack it, before the mackerel and herring set in, in large quantities. By buying bait the Americans save time and expense.

9. The herring fishery on this coast is all inshore, and our vessels also catch herring inshore on the coasts of Labrador and Newfoundland. The Americans purchase the inshore herring and mackerel for bait.

10. I have purchased American mackerel and found them inferior in quality to Canadian mackerel.

11. Unless the Americans were able to purchase bait or catch it, and ice in which to pack it, it would be impossible for them to carry on the

deep-sea fishery. Without ice the Americans could not preserve their bait.

12. No vessels have ever gone out of Lunenburg County to fish in American waters, because our own grounds are better and nearer.

13. So many American fishing-vessels hinder Canadians by carrying off the fish by lee-bowing them, enticing away the fish, and taking fish by improper means.

14. I have often heard from those engaged in the fisheries around our coast, that they obtained goods from the Americans in exchange for fish, thereby injuring the honest dealer, and defrauding the revenue.

15. Our fisheries are of the greatest value to us, and I know of no equivalent which the Americans can give us; and if they were excluded it would be of great value to us.

W. N. ZWICKER.

Sworn to at Lunenburg, in the county of Lunenburg, this 6th day of August, A. D. 1877, before me.

HENRY S. JOST, *J. P.*

No. 92.

In the matter of the Fisheries Commission, at Halifax, under the Treaty of Washington.

I, ISAAC LOHNES, of Middle La Have, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for twenty-eight years past every year down to the present time. I have fished all along the southern coast of Nova Scotia, around Prince Edward Island, on the eastern coast of New Brunswick, around the Magdalenes, and on the Canadian coast of Labrador, and am well acquainted with the inshore fishery in Lunenburg County. I have taken all the kinds of fish found upon the above-mentioned coasts.

2. I left the North Bay a week ago where I was engaged in cod-fishing and saw from day to day about ten American vessels engaged in taking mackerel with purse seines. About five years ago I along with Canadian and American skippers have made calculations as to the number of American mackerel men in the North Bay and we concluded there were seven hundred sail.

3. Mackerel in my experience are taken mostly all inshore, and it would not pay to fit out a vessel to take mackerel unless they can be taken inshore within three miles. The American mackerel men carry from seventeen to twenty-four men. They take from two to three hundred barrels to each vessel, on each trip, and generally make three trips each year.

4. The American vessels carry from twelve to fifteen men and take about a thousand quintals to each vessel. They make three such trips including a trip to the Banks. At present I would say that there are upwards of fifty codfish vessels in the North Bay, which are American.

5. Mackerel in my experience has varied, being some years good and others poor. In 1872 the catch of mackerel was good and they were plentiful in the North Bay when I left. From 1871 to 1876 the cod-fishing has been as good as I ever saw it any time previous. During the past two years it has not been quite so good. Herring has always been plenty except this summer when it has not been so good.

6. The Americans within the last three years have taken mackerel

mostly by seining; previous to that time they took them mostly with hook and line. The Americans take all their codfish by trawling. They take herring in seines.

7. In my experience the Americans fished inshore when they could. When they saw the smoke of the steamer or saw a cutter they made off and returned whenever they got out of sight.

8. The inshore fisheries are more than twice the value of the off shore fisheries.

9. The purse seines used by the Americans are very injurious, as they take all kinds of fish in them, herring, squid, &c. All except the good-sized mackerel are thrown away. I never saw a Canadian vessel use or have a purse seine.

10. The Americans from Cape Sable, in Nova Scotia, to Labrador, catch and buy bait and ice in which to preserve it in the bays and harbors of the Dominion of Canada. By buying, they save time and expense, as it would require considerable to fit them out with gear to catch bait.

11. The Americans catch codfish and haddock inshore in Canadian waters. The haddock they catch they throw away; they also catch halibut inshore. The livelihood of thousands of our people depend upon these inshore fish.

12. Since 1871, in my opinion, there has been an increase in the inshore fish.

13. The Americans, since 1871, have injured the Canadian fisheries by carrying off large quantities of fish by trawling and seining.

14. Herring are taken all inshore, and are not caught out beyond 3 miles. The Americans take them in large quantities around the Magdalenes and on the Labrador coast, by seining on the shore, and make them scarce there for our men.

15. The mackerel make inshore to feed, they spawn inshore, and are taken inshore. Their principal places for spawning and breeding is around Prince Edward Island, the Magdalenes, and eastern side of Cape Breton.

16. I have often seen the Americans transshipping their cargoes at the Strait of Canso; by so doing they save time and take more fish.

17. If the Americans could not get bait in Canadian waters they could not carry on the Bank fishing. They come round the coast here when bait is not plentiful, and make it scarce for over a hundred vessels which require bait out of the River La Have every year.

18. Without ice the Americans could not preserve their bait, and they must have bait fresh.

19. I have never known nor heard of any Canadian vessels fishing in American waters, nor do I consider this right of any value to Canadian fishermen that I know of.

20. The Americans injure Canadian fishing by taking such large quantities of fish by employing improper methods in taking fish by leebowing and running into our vessels.

ISAAC LOHNES.

Sworn to at Middle La Have, in the county of Lunenburg, this 8th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, *J. P.*

No. 93.

LAWRENCE FORTUNE, aged 57 years, fisherman, residing at Toad's Cove, Newfoundland, maketh oath and saith:

I have been practically acquainted with the Newfoundland fisheries for forty-two years, and know all about them. I have seen many United States vessels in this neighborhood. Five or six of them anchored here twice a week and sometimes three times a week last year; large numbers of them were constantly coming and going. They come for herrings, caplins, and squids for bait, and ice to preserve such bait fresh. I did not note the names of these vessels, but am satisfied they belonged to the United States of America. Our people left their own fisheries to supply them with bait. I have seen them using our people's seines hauling herrings in August, and among our fishermen jigging squids after fifteenth or twentieth of August. Newfoundland fishermen catch codfish generally within one mile of the shore. The caplin, herrings, and squids caught for bait are all taken inshore, in the coves and harbors of our bays. I never heard of a Newfoundland vessel engaging on a fishing voyage on any of the coasts or shores of the United States of America. United States fishermen have sold nets, Bank lines, ropes, and other fishing-gear in this neighborhood, and they have also sold on our shores codfish and oil, particulars of which I cannot give.

The supply of bait to the United States fishermen has certainly very much injured the supply to our local fishermen by decreasing the same.

In my opinion it is as true as that the sun is shining, that the operations of United States vessels fishing on the outer Banks off our shores, well supplied with fresh bait, tend very much to reduce the catch of codfish by our local fishermen, and that the short catch of codfish along our south and west coasts the past year was, in a great measure, caused by their fishing operations as aforesaid.

The average catch per hand for 1874, '75, and '76, in this neighborhood, has not been more than fifteen quintals; previous to these years the average has been fifty-five to sixty-five quintals per hand. This reduction of catch I attribute to United States fishermen, in their operations along our shores for bait, and on the Banks off our shores, lining the ground with fresh bait which codfish will not pass.

In conversations with captains of some of these United States fishing-vessels, I learned from them that they consider the fresh bait procured on our shores was the means of greatly advancing their interests, by enabling them to catch much larger voyages.

Generally, there are icebergs in this neighborhood, close to shore, which United States vessels use to preserve bait, and they have said it is all-important to their fishery; that they are enabled to run into our harbors—as one of their captains told me—in fifteen hours from the Banks, procure bait to be used fresh on the Banks in from eight to twelve hours after being put on board. This is what was stated to me by a captain of one of their vessels—his name was O'Donnell or McDonnell.

My opinion is that the operations of Americans baiting on our shores and fishing on the Banks with fresh bait supplied by our fishermen, is ruinous to our fisheries, and will tend every year more and more to operate against us. The value of what they pay for bait purchased from our people is not a "drop in the bucket" to the permanent benefits which would result from a steady prosecution of the cod-fishery.

LAWRENCE FORTUNE.

Sworn before me at Toad's Cove, this 13th day April, 1877.

J. O. FRASER,

Commissioner of Affidavits.

No. 94.

THOMAS CAREW; 67 years; planter; residing at Shores Cove, Cape Broyle, Newfoundland, maketh oath and saith :

I have been intimately acquainted with the fisheries of Newfoundland since I was fifteen years of age, as a fisherman. I have observed a large number of United States fishing-vessels in this neighborhood. Last year there were upwards of forty of these vessels in this locality, there being twenty-one anchored together within sight of my windows, all after fresh bait, which they procured in one, two, and three days. They came solely for bait and ice or to refit. When they came for caplin, they bargained with our seine owners who furnished seines and gear and part crew; each seine being worked in part by two, three, and four United States fishermen, who take the bait from the seines and carry it on board their vessels. Usually, in such cases, they pay the owner of the seine twenty dollars for whatever bait they procure. Generally, they take from thirty to forty barrels caplin. For squid bait they catch and purchase as they can get them, but are getting into the way of bargaining with our people to catch squids in advance of their arrival so that they may have no delay. They each take from thirty to forty barrels squids per trip. They bought ice from Mr. Cashen, Cape Broyle, until they cleared him out. First part of season they got a supply of ice from bergs that drifted into our coves. When they can't get ice American captains salt their bait, but they say salt bait is not nearly so good.

There were over two hundred United States fishing-schooners frequenting our harbors and coves last season between St. John's and P'passy, all after bait. Newfoundland fishermen, in general, fish for cod within a mile of our shores. The caplin, herrings, and squids used for bait are caught in coves along our coasts close to shore, and never at a distance of three miles from our coast.

I never heard of a Newfoundland vessel engaging in any fishing voyage on any of the shores or coasts of the United States of America.

United States fishermen last year sold codfish and oil in this locality. The Cashens purchased about six tons oil besides codfish. They also sold fishery produce at Bay Bulls, but as to quantity I can say nothing. They sold fish and oil wherever they anchored, to purchase bait, ice, and refittings for their vessels, except in cases where they gave orders on the United States consul, which they did in rare instances only. The captains also gave orders in several instances on their owners for light dues.

I am of very strong opinion that the supply of bait to United States fishermen decreases the supply to local fishermen. Last year Americans swept the ground of squids in this locality, leaving our fishermen without bait for six weeks. There is a great difference between the workings of United States fishermen for caplin for bait, and of our own people. They do more damage in a week than we could in a year; their vessels each take more caplin for a trip than our whole fishing population, Cape Broyle included, would require for a season. I therefore am of opinion that United States fishermen in their operations for bait will greatly injure and probably destroy the caplin fishery, as they certainly will the squid fishery.

I cannot believe otherwise than that the presence of the large number of United States vessels known to be on the Banks each season fishing for codfish, and well supplied with fresh bait, interferes with and tends greatly to reduce the local catch of fish along our shores, and feel certain, in my own mind, that their operations were the cause, to

great extent, of the short catch of codfish last year on these south and western shores. The average catch of codfish per hand for the years 1874, 1875, and 1876 would not be more than twenty quintals, which is a large estimate. Previous to 1874 the average catch per hand has been from forty to fifty quintals. I cannot understand what affects the fishery or causes this reduction except the operations of United States fishermen on our shores and on the outer Banks facing our shores. I am now old and have not much interest in the fisheries, except for the rising generation, but I feel certain that these American fishermen will ruin our fishery, and our bait supply. I have had sufficient experience during my life following the fisheries to convince me that their mode of operations from first to last, on our shores and on the Banks, is the very worst for our country and the surest means of destroying our fisheries.

THOMAS CAREW.

Sworn before me at Shores Cove, Cape Broyle, this 13th April, 1877.

J. O. FRASER,

Commissioner of Affidavits.

No. 95.

CHARLES JAMES BARNES, aged 33 years, occupation, fish-curer, residing at St. John's, Newfoundland, makes oath and saith :

Deponent has had practical acquaintance with the fisheries of Newfoundland for upwards of fifteen years.

Deponent saw a number of United States fishing-vessels in this harbor last year ; these vessels came here for bait and ice, and to replenish their ships' stores and refit their vessels for fishing on the Banks.

Deponent sold bait and ice and stores to a number of United States fishing-vessels last year.

Deponent bought small codfish and cod-oil from United States fishermen last year in payment of bait, ice, and cost of refitting their vessels ; in some instances deponent purchased small codfish for which he paid in cash. The total quantity of small codfish purchased by deponent last year from United States fishermen was upwards of three hundred quintals, for which he paid prices ranging from eight shillings to eleven shillings per quintal of 112 lbs. green fish.

Deponent also purchased a considerable quantity of cod-oil from United States fishermen, particulars of which he has not at hand. He further states he is prepared to purchase any reasonable quantity of small fish and oil from United States fishermen. The United States fishing-vessels at this port last year came in for fresh bait and ice, which they purchased from our people. In one instance, one of these vessels sailed with a full supply of bait in sixteen hours after arrival, and generally they baited in from three to six days, the price paid for bait averaging about one dollar per barrel. There are to-day two United States fishing schooners in this harbor for bait and to repair damages. Their names are the Speedwell, Henry A. Cobb, master, and the Peter D. Smith, Brown, master. In conversation with Captain H. A. Cobb aforesaid, and his mate, Jonathan Sparrow, of Provincetown, Mass., they acknowledged to me that it was of very great advantage to United States fishermen that they were privileged to frequent Newfoundland harbors for fresh bait and ice. The persons named aforesaid stated that the only bait obtainable on the Banks is squids and hagdown, the latter late in the season in limited quantities and being inferior bait. Squids are only

obtainable in certain localities along the Banks, and very uncertain; not obtainable more than once in three years in sufficient supply for baiting purposes. The difference between the time occupied in baiting in Newfoundland ports, and as United States vessels were accustomed to bait formerly, was stated by Sparrow aforesaid, who last year went in his vessel from the Banks to Cape Canso, where he spent three days and a half, and was the same time in reaching that place. Not finding bait there, he proceeded to St. Pierre, which took him one and a half days. He remained there five days, but not getting bait he proceeded to Conception Bay, N. F., where he got his bait in two and a half days going there, he thus being 18 days in procuring his fare of bait; and he further said that if he had come direct to Newfoundland for bait, he would not have occupied one-third the time in obtaining his bait; that he had prosecuted the Bank fishery for fifteen years, and knew that the general average of the time taken by vessels to procure their bait elsewhere than on the Newfoundland shore has been twenty days.

CHARLES JAMES BARNES.

Sworn before me, at St. John's, Newfoundland, this 5th day of June, A. D. 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 96.

PHILIP GROUCHY, aged 62 years, planter, residing at Pouch Cove, Newfoundland, maketh oath and saith:

I have become acquainted with the fisheries of Newfoundland since I was 14 years of age, and know them in all their branches. I have seen many United States fishing schooners on these shores; one only of these schooners visited this harbor; the master's name was Mulloy, but I did not hear the name of his vessel. He came here for fresh bait and got fifty barrels caplin, which he got by hiring my seine and two men, completing the crew from among his own men. For the use of the seine and my man this Captain Mulloy paid four dollars, and one dollar to the second shoreman working the seine. There was no ice-house here last year, but there were plenty icebergs here about when Captain Mulloy visited this harbor last year, and he said he expected to get what he wanted from that source. I have heard that ice-houses are being put up at Torbay for selling ice to United States fishermen.

Newfoundland fishermen catch fish within three miles of the shore. The Newfoundland cod-fishery is an inshore fishery. The caplin, herring, and squid for bait are all caught inshore, taken in the coves and creeks along shore.

I never heard of a Newfoundland vessel engaging on a fishing voyage on any of the coasts of the United States of America.

United States fishermen regularly sell small codfish and cod-oil in our harbors; they did so in Torbay and St. John's.

I am very certain that the supply of fresh bait to United States fishing vessels will decrease the supply to local fishermen. Last year a very heavy supply of herring bait in Conception Bay to United States fishermen must have caused the scarcity we all suffered from, for we depend upon Conception Bay for bait after the caplin, and we found herrings and squids more scarce than formerly. We fishermen judge that this scarcity of bait is owing to the operations of United States fishermen in our bays and harbors.

I think it evident that the large number of United States fishing vessels fishing on the Banks, well supplied with fresh bait, tends to retain fish on the Banks and prevent their passing in toward our shores.

United States fishing vessels baiting on our shores, having no delay, go out upon the Banks in twelve or fifteen hours from time of leaving our harbors. This facility enables them to keep the ground on the Banks constantly baited with fresh bait. The average catch of codfish per hand for fishermen in this neighborhood, last year and year previous, has been fifteen quintals; previous to these years the average catch per hand each year was forty quintals.

We constantly get American hooks in fish taken along this shore, proving that United States fishermen are at work opposite to us. We have large experience that whatever piece of ground is used by our own people with bultows, that there the fish is kept from passing toward the shore, and as long as we keep fresh bait on such bultows codfish are kept in the neighborhood of these bultows.

PHILIP GROUCHY.

Sworn before me, at Pouch Cove, this 17th April, 1877.

J. O. FRASER.

Commissioner of Affidavits.

ALBERT GROUCHY, aged 35 years, planter, residing at Pouch Cove, Newfoundland, maketh oath and saith:

I have followed the fishery in this country since I was fourteen years of age. I was present when Philip Grouchy made the above statement, which I know to be true in every particular.

ALBERT GROUCHY.

Sworn before me, at Pouch Cove, this 17th April, 1877.

I, William Tulk, preventive officer at Portugal Cove, Newfoundland, hereby declare that I boarded each of the vessels above enumerated; that these vessels belonged to the United States of America, except five said to belong to Nova Scotia, and came into ports and harbors in the vicinity of Portugal Cove aforesaid, Portugal Cove included, for fresh bait; and that in addition to these vessels there were about fifty United

States fishing vessels off and in Broad Cove, Torbay, and Portugal Cove aforesaid, the particulars of name and tonnage of which I did not take a note of, but I know these vessels also belonged to the United States, and came for fresh bait, which they, with the vessels first referred to, procured, catching in part and buying in part from local fishermen. The price paid for the first squids was ten cents, afterward it was raised to fifteen cents, and then to twenty cents per hundred squids.

WILLIAM TULK.

Sworn before me, at St. John's, this 30th July, A. D. 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 98.

JAMES PICOT, aged 78 years, residing at Portugal Cove, Newfoundland, maketh oath and saith: I have followed the fishery of Newfoundland when my mother was obliged to dress me; that is, for over sixty-five years. I know all about the fisheries.

I saw a great many United States fishing vessels in this neighborhood last year, off and on, between first August and end of October. There were eight here at one time, but also a large number coming and going. These eight hit it very nicely; they came about noon, with wind N. E. That evening and next morning they got their bait, all over fifty barrels and some one hundred barrels, and in the evening about two o'clock they all left for the Banks with a fair breeze from the westward, which increased to a fine sailing breeze or as much as they could fly away with, and we all said they were very fortunate, as they would be on the Banks in about forty-eight hours from the time of starting therefrom. They purchase from our people principally, but they do put out their dories and go upon the jigging ground themselves.

Newfoundland fishermen generally catch fish within a mile of our shores; hereabouts we fish within a half a mile. The caplin and herrings for bait are taken in shoal water close to shore; squids are taken in up to twenty-five fathoms of water.

I never heard of a Newfoundland fishing vessel prosecuting any fishery on any of the shores or coasts of the United States of America. United States fishing vessels have sold cod-oil in this neighborhood last year, and provided themselves with water. When bait happened to be scarce their crews used to come on shore and go scampering over the hills for "harts." They made repeated raids for harts, which freshened them up and took the stiff out of their joints.

I think the supply of bait to United States fishermen, last year, very much shortened the supply to our own people. I do believe the traffic by them with herrings has something to do with the non-appearance of herrings this spring in this locality, which I never knew to be so scarce before with such fine open weather. We have had nets out since Saint Patrick's day and have not caught five dozen herrings.

I do believe that the United States fishermen on the Banks off our coasts, well supplied with fresh bait, tends greatly to reduce the catch of codfish by local fishermen, and that the short catch along the south-west coast last year was mainly attributable to their operations. The average of the catch of codfish per hand in this harbor for 1875 and 1876 would not exceed forty quintals. Previously, the catch would run from eighty to one hundred quintals per hand.

There is an ice-house here for keeping ice for sale to United States vessels.

The general belief among fishermen is that the traffic of these United States fishermen in our waters will ruin our fishery.

his
JAS. + PICOT.
mark.

Sworn before me, at Portugal Cove, this nineteenth April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

MARK PICOT, aged 37 years, fisherman, residing at Portugal Cove, Newfoundland, maketh oath and saith :

I was present when the above statement was made by James Picot, and excepting as relates to his age and the time he followed the fishery, I know the said statement to be true in every particular.

MARK PICOT.

Sworn before me, at Portugal Cove, this nineteenth April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 99.

DANIEL TUCKER, aged 34 years, fisherman, residing at Broad Cove, Newfoundland, maketh oath and saith :

I have followed the fisheries of Newfoundland since I was ten years of age. I have seen eight United States fishing schooners in this cove at one time, and as many as twenty off and on. The Mary Carlyle was one of these vessels ; Jo. F. Allan another ; Henry Wilson another. Captains McDonald, Greenlief, and Hines were among their captains.

The note I show you is from Captain John Campbell, of the schooner Joseph F. Allan, and it says, "Catch all the squid you can, and I will pay for them, and take them sure." United States fishermen caught what bait they could while they were here, but they could not supply themselves quick enough, and so they engaged our people to catch for them, whom they paid from ninepence to two shillings per hundred squids. Each United States vessel would take about forty barrels squids, some as high as fifty, and others twenty-five, but averaging forty when they could get them. They got their bait without delay. Captain Campbell was only a few hours ; the last men, when bait was scarce, were longer. Some of these vessels had pilots from the shore, Squires, of this cove, being pilot on board one of them. These American schooners took from eight hundred to nine hundred barrels squid. The people here very generally gave up cod-fishing to catch squids for these United States vessels, and this greatly to the injury of our people, who would have been better off, however scarce fish might have been, had they stuck to the cod fishery.

Newfoundland fishermen catch codfish generally within a mile of the shore. The caplin, herring, and squid, caught for bait, is taken close to our shores.

I never heard of a Newfoundland vessel prosecuting any fishing-voyage on the coast or shores of the United States of America.

United States fishermen sold codfish and oil in this cove last year ; they sold, to my knowledge, one lot of eighteen hundredweight codfish,

at seven shillings per hundredweight, and for the five casks oil sold by them they were paid two shillings and sixpence per gallon.

The large supply of bait to United States fishermen decreases the supply to our local fishermen. The herring was never known to be so scarce as this spring. The cod fishery along shore is injuriously affected by the large supply of fresh bait on the Banks to United States fishermen, which prevented codfish passing toward the shore; and I believe the short catch along our southwest shores last year was on account of their fishing operations in bait and on the Banks.

The catch last year was not more than one-half what it was before 1874; to say a fourth would be nearer the correct thing. We believe they wont leave a fish for us to catch. One of the captains told me that this year we would not see the light through the tackle, they would be so numerous, and we fully expect them.

DANIEL TUCKER.

Sworn before me, at Broad Cove, Cramp Bay, Newfoundland, this 19th April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

JOSEPH TUCKER, aged 47 years, fisherman, residing at Broad Cove, Cramp Bay, Newfoundland, makes oath and saith:

I was present when Daniel Tucker made the above statement, and know that it is true in every particular, having had practical experience in the fisheries since I was ten years of age.

JOSEPH TUCKER.

Sworn before me, at Broad Cove, Conception Bay, Newfoundland, this nineteenth day of April, 1877.

J. O. FRASER,
Commissioner of Affidavits

No. 100.

PHILIP LEWIS, aged 44 years, fisherman, residing at Holyrood, Conception Bay, Newfoundland, maketh oath and saith:

I have prosecuted the fisheries of Newfoundland for 23 years and upwards. I saw a great many United States vessels in this neighborhood. Last spring there were a large number here—throughout the season there were upwards of twenty of these vessels here; among these I can only name a few of the captains in charge—Captains Morrissey, Keehan, Kane or King, Greenwood, Gray, Collinwood.

A St. John's man in charge of an American fishing schooner, who was among those who caught squids on Sunday. Deneif, whose vessel was at Harbor Main; Ryan, the latter was among those jigging squids on Sunday. There was so many, and most of them strange names to me I cannot recollect many of them.

These vessels came here to procure fresh bait. They did procure their bait here, purchasing the principal part and jigging a part for themselves. Their vessels anchored within a quarter of a mile from the shore. Each vessel took about twenty-five barrels and upwards from this place; some more. Their full supply of bait would be fifty barrels, but most of them had a part of what they required, which they procured in other harbors. They paid from sixpence to two shillings per hundred squids. There was no ice here for sale to them—they supplied themselves with ice elsewhere—and when their stock was out they salted their squids. The total

quantity of squids taken by them from this place last year would be over 500 barrels.

Newfoundland fishermen catch codfish generally within two and three miles of the shore. The herrings, caplin, and squids, caught for bait, are each taken close to shore.

I never heard of a Newfoundland vessel having prosecuted any fishery on any of the coasts or shores of the United States of America.

I have heard that United States fishing crews have sold small fish and cod-oil in this neighborhood, and that they did sell such produce here and at Harbor Maine. I purchased oil myself from them in payment of squids. The price of oil as paid by me was two shillings and fourpence per gallon.

The large supply of fresh bait used by United States fishermen on the Banks I fully believe tends to keep codfish from striking towards our shores, and thus affects the catch of local fishermen injuriously.

The punt fishery in this neighborhood has been much reduced the last two years. American captains told me that they did not know anything about Conception Bay for baiting purposes until last year, but that they found it the most convenient place to procure bait of any other they knew, and that they intended in future largely to avail of it for the purpose of procuring bait. Conception Bay is freer from dangers in approaching it than most bays, and has comparatively little fog, of which American captains spoke approvingly.

PHILIP LEWIS.

Sworn before me, at Holyrood, Newfoundland, this 24th April, 1877.

J. O. FRASER,

Commissioner of Affidavits.

JOHN VEITCH, aged 39 years, telegraph operator, residing at Holyrood, Nfld., maketh oath and saith :

I was present when Philip Lewis made the above statement, and excepting the part referring to the *number* of vessels at this harbor last year, I know the statement to be true in every particular. I saw five or six United States fishing-vessels here, but heard of a large number that I did not see. United States vessels regularly refit in this neighborhood. I sold one of these vessels flour that they were short of.

JOHN VEITCH.

Sworn before me, at Holyrood, Nfld., this 24th April, 1877.

J. O. FRASER,

Commissioner of Affidavits.

No. 101.

EDWARD O'BRIEN, aged 49 years, constable, residing at Cats Cove Newfoundland, maketh oath and saith :

I know the fisheries of Newfoundland from following the same since I was a boy, until ten years ago.

I have observed a number of United States fishing-vessels in this neighborhood last year, and the year previous there were five or six in Salmon Cove.

I saw a large number of these vessels at Holyrood, Belle Isle, Northern Gut, and in the offing in this bay. The vessels referred to came here for fresh bait, which they purchased and caught as best they could. The supply of bait to United States schooners decreases the supply to our local fishermen. I am of decided opinion that the presence of the

large number of United States vessels on the Banks, well supplied with fresh bait, tends to keep fish from passing toward our shores and largely decreases the catch of codfish by local fishermen, and that the short fishery last year was mainly attributable to their operations.

The vessels that called here last year for bait were supplied with ice before coming here; they procured their ice on other parts of the shore. There is no ice-house in this harbor. American vessels refit in this neighborhood, and have sold small fish and oil in Harbor Main, Holyrood, and elsewhere in this bay. All fishermen of this country believe that the traffic, as carried on by United States fishermen in our harbors, for fresh bait, and on the Banks off our coasts, is hurtful to our fisheries, and has already resulted in great damage to our bait fishery.

ED. O'BRIEN.

J. O. FRASER,
Commissioner of Affidavits.

No. 103.

GEORGE BUTLER, aged 55 years, farmer, residing at Northern Gut, Conception Bay, Newfoundland, maketh oath and saith:

I have followed the cod fishery in Newfoundland for about fifteen years; but during late years I have followed farming.

I saw a number of United States fishing-schooners in this neighborhood the last two years; the number seen by me was from eight to ten. These vessels came here for fresh bait. I saw them jigging squids, and

know that they also purchased squids from local fishermen. One of these United States fishing-vessels had a caplin-seine hung up drying, for which he asked me £17, it being a large seine. Several of the vessels referred to above fitted out at my place with wood and water. I sold them wood, for which they paid in money.

I consider the traffic of these United States fishermen in bait injures this fishery, and must decrease the supply for local purposes. Fishermen cannot have too much bait, and more care is being observed every year to protect this fishery, to secure fishermen in a necessary supply, but the prospects under the treaty, giving Americans the privilege to fish in our waters, are not improved.

GEORGE BUTLER.

Sworn before me at Northern Gut, Conception Bay, this 30th April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

N^o. 104.

STEPHEN PARSONS, aged 57 years, planter and fisherman, residing at Bay Roberts, Conception Bay, Newfoundland, maketh oath and saith:

I have followed the fisheries of Newfoundland for forty-five years, and have a practical knowledge of the same in all their branches. I saw five United States fishing-vessels in this neighborhood last year. There were three of these vessels anchored on the squid-jigging ground one day last fall. They were off and on throughout the season in this and neighboring harbors. Men and masters of these vessels told me they came for fresh bait, and had been in Bay Bulls and other southern harbors, following the bait wherever it was to be found. It was squid-bait they were after here; but they also came upon our shores for caplin and herrings for bait. One of the vessels that called here had made two trips to the United States, one with halibut and another with codfish, and this vessel was on her third trip when she called here. The captain of this vessel told me that he did better than formerly, and was much aided by the facility of procuring bait on our shores to the great saving of time, as they were seldom twenty-four hours in making the Banks and beginning fishing after leaving our shores. Newfoundland fishermen generally catch codfish within one or two miles of our shores. The Newfoundland fishery (cod) is an inshore fishery. The bait fishery, caplin, herring, and squid is an inshore fishery, and is never taken two miles from the shore, except in rare instances, when squids are caught by craft-fishing on Cape Ballard Bank and such places. I never knew or heard of a Newfoundland fishing-vessel prosecuting any voyage on any of the shores or coasts of the United States of America. The supply of bait to United States fishing-vessels has injuriously affected the supply to local fishermen. It has done so in a year when bait was considered *plentiful*; in a year of scarcity it would be ruinous. I am certainly of opinion that the operations of United States fishermen on the Banks off our coasts, well supplied with fresh bait, interferes with and tends greatly to reduce the catch of local fishermen, and that their whole traffic in connection with the fisheries and bait supply on our shores must result in permanent injury to our fisheries and in great loss to our people. United States vessels do refit in this neighborhood when required.

his
STEPHEN + PARSONS.
mark

Sworn before me at Bay Roberts, Conception Bay, Newfoundland, this 26th April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 105.

JOHN BARRET, aged 60 years, planter, resident at Spaniard's Bay, Newfoundland, maketh oath and saith:

I know the fisheries of this country by having followed the same for forty-five years.

I saw three United States fishing-schooners in this harbor last year, and there were a large number in other parts of the bay.

These vessels came here for fresh herrings and squids for bait. This bait they procured partly by catching for themselves and partly by purchasing from our people. The quantity taken by each vessel was forty barrels for each trip. These vessels came here from the Banks for bait, and left again for the Banks when they had procured their bait. The price paid for bait by United States fishermen was from one shilling to fifteen pence per hundred for squids.

Newfoundland fishermen generally catch codfish within two miles of the shore. The Newfoundland fishery is an inshore fishery. The caplin, herring, and squid, caught for bait, are all inshore fisheries, taken generally within stone's throw of the shore.

I never heard of a Newfoundland vessel engaging in any fishing voyage on any of the shores or coasts of the United States of America. United States fishermen do sell small codfish, oil, and fishery produce in this neighborhood, as I believe they do in most places along our shores where they call. I purchased fifteen cwt. codfish and thirty gallons cod-oil from them last year. For the codfish I gave ten shillings per cwt., and for the oil two shillings and sixpence per gallon.

The supply of bait to United States fishermen tends to decrease the supply to local fishermen, and I believe such has already been the result of their bait traffic in this bay.

I am of decided opinion that the presence of the large number of United States fishing-vessels on the Banks well supplied with fresh bait interferes with and tends greatly to reduce the catch of local fishermen, and firmly believe that the short catch last year was attributable to the operations of United States fishermen as aforesaid. The fishery in this bay and along these shores last year and year previous was not more than half the average of former years.

There is an ice-house at Harbor Grace and Mosquito where ice is stored. Americans here last year got their ice at Mosquito.

JOHN BARRETT.

Sworn before me at Spaniard's Bay, this 27th April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

ARCHIBALD HUTCHINGS, aged 56 years, fisherman, residing at Spaniard's Bay, Newfoundland, maketh oath and saith:

I followed the fisheries of this country for forty years. I was present when John Barrett made the above statement, and, excepting as relates to the age of said John Barrett and his transactions in fish and oil with

United States fishermen, I believe the said statement to be true in all particulars.

Sworn before me at Spaniard's Bay, Newfoundland, this 27th April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 106.

ALFRED HOPKINS, aged 52 years, planter, residing at Heart's Content, Trinity Bay, Newfoundland, maketh oath and saith :

I have become acquainted with the Newfoundland fisheries by prosecuting the same in their various branches for upwards of thirty-five years. I have seen United States fishing-schooners in this neighborhood ; there were four or five in this harbor last year at one time, and as many as twelve in this harbor throughout the summer.

These vessels came here for fresh bait, which they purchased in part, and caught in part themselves. Squids was the bait they were in quest of. These vessels came in from the Banks off our coast for bait, which they procured as aforesaid.

Newfoundland fishermen generally catch codfish within two miles of the shore ; the Newfoundland cod fishery is an inshore fishery. The caplin, herring, and squid fisheries for bait are all inshore fisheries, and are prosecuted close to the shore.

I never heard of a Newfoundland vessel having prosecuted any fishery on any of the coasts or shores of the United States of America.

The supply of bait to United States fishermen, although only commenced, has decreased the supply for local fishermen, and when the former become better acquainted with our harbors and the facilities for procuring the bait they require, it cannot be doubted but that great injury will result to the interests of local fishermen in decreasing their supply of bait. The bait-fisheries above others should be protected by all possible means. The operations of United States fishermen in supplying themselves with bait on our shores and in our harbors tends to injure this fishery much more than as prosecuted by Newfoundland fishermen, who only require a comparatively small supply, and this is taken each day in limited quantities, or, when taken for a catch off shore, is still in moderate quantity compared with the supply required by United States fishermen, and the procuring of the lesser quantity is not attended by the noise and bustle attending the larger supply taken by United States fishing-craft. I do not think the caplin, the herring, or the squid fisheries would or could hold out many years if subjected to the operations of any considerable number of United States fishermen, judging from what I have seen of them and their traffic for bait last year.

There is no doubt on my mind as to certain effects resulting from the fishing operations of United States fishermen on the Banks off our coasts well supplied with fresh bait, and that one effect of their fishing operations as aforesaid has been and must continue to be the attraction of codfish to the Banks and to the bait there supplied, preventing fish passing in toward our shores, as would otherwise be the case. The shore fishery along our coasts is injuriously affected by United States fishermen on the Banks, and in my opinion the short catch last year along our south and west coasts was greatly owing to the presence of the large

number of United States fishermen on the Banks off our coasts well supplied with fresh bait. The average catch of codfish per man in this neighborhood the last two years has not been more than one-half what the average has been in previous years.

There is an ice-house in this harbor where one hundred and fifty tons of ice is secured for sale to United States fishermen this year, a large number of their vessels being expected at this harbor this year for bait and ice.

his

J. O. FRASER,
Commissioner of Affidavits.

No. 107.

THOMAS L. NEWHOOK, planter, residing at New Harbor, Newfoundland, maketh oath and saith :

I am forty-four years of age. My knowledge of the fisheries of this country is derived from practical connection with the same for thirty years. I saw four United States fishing-vessels in this harbor last year; there were a number of them also in other near harbors that I did not see, but believe they were—as reported—in other harbors looking for fresh bait. I don't recollect the names of these vessels, but know they hailed from Gloucester, U. S. A. These vessels came here for fresh bait, which they purchased from our people, except what they jigged themselves. Each vessel took from thirty-five to forty barrels squids for a trip to the Banks, and the price paid for said bait was from one shilling to eighteen pence per 100.

Newfoundland fishermen catch codfish generally within a mile of the shore. The Newfoundland cod fishery is an inshore fishery. The bait fishery—caplin, squids, and herrings—is an inshore fishery. I never heard of a Newfoundland vessel fishing on any of the coasts or shores of the United States of America.

The supply of fresh bait to United States fishermen cannot fail to reduce the supply for local purposes.

The large quantity of fresh bait used on the Banks off our coasts by United States fishermen certainly tends to attract codfish and prevent

their passing in towards our shores. Last year's catch of codfish along these shores was not nearly an average catch.

THOMAS L. NEWHOOK.

J. O. FRASER,
Commissioner of Affidavits.

No. 108.

EDWARD MORSE, aged 52 years, planter and fisherman, residing at Dildo, in Trinity Bay, Newfoundland, maketh oath and saith :

I saw nine or ten United States fishing-schooners in this harbor last year; they came in from the Banks for fresh bait and ice. Captain Newhook was master of one of these schooners; they all hailed from Gloucester, United States of America; their tonnage ran from sixty to seventy-five tons. I boarded two of them to see how they were fitted out. One of these schooners was at Renteen, in this bay, for caplin; the others seen by me came for squids, which they jigged in part, and in part purchased from local fishermen. The price given for squids, for what they purchased, was from one shilling to two shillings per hundred. They thought to haul squids with seines, but our people would not allow that, because such a plan would destroy the fishery for local fishermen. Seining would inclose all the squids in the harbor, as both on entering and leaving the harbor squids strike into the North or the South Cove, where one seine would inclose the whole school, and then local fishermen who only need from fifty to one hundred squids each per day could not be supplied. Should United States fishermen begin seining squids, as they wished to do last year, and as they have threatened to do, it will destroy the squid-bait fishery, as far as local fishermen are concerned.

My sons sold about one hundred squids to the United States fishermen referred to. Newfoundland fishermen catch codfish generally within two miles of the shore. The codfishery is an inshore fishery. The bait fishery—including squids, herrings, and caplin—is an inshore fishery. The supply of bait to United States fishermen decreases the supply for our local fishermen.

I am of very strong opinion that the presence of the large number of United States vessels, fishing on the Banks with fresh bait, and constantly supplied with such bait, must injuriously affect our shore fishery, and to this cause I attribute the short catch last year along our south and west coasts. The catch hereabouts last year was not over half a fair average of years previous to 1874.

American captains told me that it was a great advantage to them to

call in to our harbors and get bait; they wanted to engage with me to build an ice-house, promising that a large number would buy bait and ice from me. They told me they bought their ice for half a dollar per ton, and I thought that would not leave me much profit and so did not trouble with it. There is an ice-house at Heart's Content where a large quantity of ice has been preserved this winter for sale to United States vessels, who have engaged to buy the same, and a large number are expected there this year for bait and ice. Some of these schooners had spirits on board, which they sold to our people without paying duty.

No. 109.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, ALEXANDER MCKAY, of North Sydney, in the county of Cape Breton, in the Province of Nova Scotia, formerly of Cape North, in the county of Victoria, in the said province, make oath and say as follows:

1. I was engaged at Cape North, in said county, from eighteen hundred and forty-six till eighteen hundred and sixty-four, in the buying and selling of fish, and was and still am well acquainted with many Canadian and American fishermen, also with the kinds and habits of fish taken in British waters.

2. During the period in which I was engaged in the fish business, I had excellent means of knowing the amount of fish taken by individual vessels, and say that if the fishing is fair, mackerelmen average six hundred barrels on a trip, and American fishermen generally made three such trips each year. Codfishmen made two trips, and fish from April to the last of October, along from Scaterie to the Magdalene Islands, and take on an average about five hundred quintals; some get as many as a thousand quintals.

3. From letters which I have in my possession, and statements which I have from people at Cape North and around Aspy Bay, the cod-fishing has not been so good for twenty years as this season up to this date. At present mackerel are taken in large quantities at Ingouish.

4. Within my knowledge and experience the mackerel-fishing has always fluctuated, being good for a number of years and poor again for some time.

5. During the eighteen years in which I was engaged in the fishing business, caplin only set in three years and fish always came with them and always do; this year caplin have set in in abundance, as also squid, and the mackerel are quite abundant.

6. To my knowledge, during the time engaged in the fish trade, American fishermen always trawled deeper than Canadian fishermen, thus catching the larger fish, which are the mother fish, and thus destroy millions of spawn. When the Americans came and trawled outside, I always found the fish less plentiful afterwards; this I attributed to their destruction of spawn, and the Americans themselves tell me they do so to the present day.

7. The American fishermen are always in the habit of throwing overboard the offals of the fish, and the sound bone which is thrown overboard destroys great numbers of large fish; this our fishermen never practice. The offal frightens away the fish and destroys the fishing grounds for some time.

8. Before and up to 1854 the American fishermen always fished inshore for mackerel because the mackerel come inshore to feed, and inshore is the best place to catch them. The mackerel are on their way south, and when on our coast from August till the last of November are at their best, and the Americans have always taken them inshore, treaty or no treaty. They stopped fishing when a cutter hove in sight and returned when she disappeared.

9. The inshore fisheries are of much greater value than the outside fishery for mackerel, and scarcely any mackerel are taken outside.

10. From the month of August till November, which is the best time for mackerel fishing, the American fishermen every year, until they had the right of fishing inshore, practiced throwing bait overboard to draw the fish outshore, and this is a very effective plan for drawing out the fish.

11. During the years in which I was engaged in the fish business, no American fishermen took fish with seines. They now use purse seines for taking mackerel in deep water, which destroys the schools of mackerel and frightens them away.

12. The Americans take within three miles of the shore in our bays, harbors, creeks, and rivers, herring, mackerel, squid, and caplin for bait; this they do in every bay and harbor on the coast.

13. The herring fishery is inshore and they catch them for bait all around our coast.

14. I know that Canadian mackerel are better than American, having gone into the American market with our mackerel, and I found that I could get double the price, and while carrying on the fish business at Cape North I lived for some time in Boston and sold our mackerel in the American market, and have compared mackerel taken in American waters with ours, and always found ours much superior, being worth more than twice that of the American.

15. Mackerel come inshore to feed on shrimps, which is an inshore fish, and for a kind of grub found inshore, of which they are fond and can be found in the mackerel after they have come inshore. The principal breeding place of the mackerel is at the Magdalen Islands.

16. Fresh squid and fresh mackerel being the best bait for codfish, if the Americans were deprived of the privilege of getting this bait, that fishery would be valueless to them, nor could they profitably carry on

the cod and other deep-sea fisheries without this privilege of getting bait, and ice in which to pack it.

17. The ice they bring from home is melted by the time they arrive here, and without ice they could not preserve their bait. Their outfits they are furnished with before they leave home.

18. None of our fishermen fish in American waters because our own grounds are so much better, and this fact I have had corroborated by American fishermen. And if the Americans were excluded from our grounds fish would be more plenty and more regular on the inshore grounds.

19. American fishermen smuggle goods, and I have been informed of seizures being made for this practice.

20. I have known fifty or sixty sail of American fishermen at one time fishing off Sydney Harbor, all of whom anchored in the harbor at night and ran out in the morning, catching mackerel, within the last five years; and it is my opinion that if the American fishermen were excluded from our fishing grounds that our own people would go into the fishing much more, and more profitably.

21. None of the codfish vessels, to my knowledge, go through the Strait of Canso. They come around the southern and eastern coasts of Cape Breton, and many mackerelmen do the same. Mackerelmen fish around by Scaterie, and it is therefore shorter for them to come round by the southern and eastern sides of the island of Cape Breton.

A. MCKAY.

Sworn to at North Sydney, in the County of Cape Breton, this 19th day of July, A. D. 1877, before me.

JOHN FORBES,

Justice Peace in and for the County of Cape Breton.

No. 110.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES MCLEOD, formerly of Gabarus, in the county of Cape Breton, province of Nova Scotia, for the last five years now past, of North Sydney, in the said county and province, master mariner, make oath and say as follows:

1. I have been master mariner for about six years, and am well acquainted with the fisheries on the coasts of Cape Breton, Prince Edward Island, the Magdalen Islands, the eastern coast of New Brunswick, Newfoundland, and Labrador.

2. I was personally engaged in the fisheries for about eight years. I fished on the shores of Cape Breton, particularly on the eastern side; on the eastern more than on the other sides. Around the Magdalen Islands, Prince Edward Island, and on the eastern coast of New Brunswick, I have also been engaged in Bank fishing.

3. During this time I fished in company with American fishing-vessels. Around the Magdalen Islands they were almost all American fishermen—also on the eastern coast of New Brunswick—and I have seen great numbers of American fishing-vessels in these two last-mentioned localities. Last summer I fished from Cape North to Scaterie, during the cod season, and saw at that season great numbers of American fishermen there, engaged in fishing. Within the last two years I have seen many American fishermen, from Cape North to Scaterie, en-

gaged in mackerel fishing, and have seen at one time between twenty and thirty American fishermen so engaged within sight, and think that there would be in that vicinity, at one time, about one hundred.

4. The presence of so many American fishermen lessens the catch of fish.

5. When fishing around the Magdalen Islands, Prince Edward Island, and eastern coast of New Brunswick, about eight or nine years ago, the Americans took mackerel with hook and line; since that time American fishermen have used purse-seines, and last summer an American skipper told me that he had caught mackerel in this way during the said summer. These purse-seines are bad for the fisheries. They kill a great many of the fish, mashing them up, and when the seine is tripped these mashed fish sink and frighten away the live fish, and injure the fishing-grounds.

7. I have never seen nor heard of Canadian fishermen using purse-seines.

8. I think that more than half the mackerel are taken inshore within the three-mile limit, and the inshore fishing is far the most valuable, because the mackerel strike in toward the shore, and the American vessels follow them in to the shore; and I do not believe it would pay the Americans to come here to fish, unless they followed the fish inshore within three miles. And when in the Island of Cape Breton, during the mackerel season, I have seen many of them fishing within three miles of the shore.

9. It would be impossible for the Americans to successfully carry on the cod and halibut fishing without getting bait from us and ice in which to pack it, and the only place in which they can get this bait is in our bays, creeks, and harbors; also up our rivers, and always within three miles of the shore.

10. All the American fishermen engaged in the cod and halibut fishery come round the southern and eastern coasts of Cape Breton, and many American mackerel fishermen do the same.

11. American fishermen throw overboard fish under a certain number of inches; and in halibut fishing throw away all the codfish, of which they take large numbers, except the very large ones, thus wasting fish and injuring the grounds. This practice our Canadian fishermen never participate in.

12. It is my opinion, it would be much better for our fishermen if the Americans were kept off the inshore grounds and away from the fisheries, as the fish would be much more plenty for our men.

13. I do not think that the American fishermen are a benefit in any way to our fishermen, but a great injury, lessening the catch and injuring the fishing-grounds, by leaving dead fish and "gurry" on the grounds.

14. I have seen, this present summer, American fishermen within a mile of the shore fishing, and engaged in the taking of cod, halibut, hake, and pollock, which must be of great value to them.

15. The Americans come here in the early spring; fish along from Cape North in Cape Breton, north of Bird Rock, St. Paul's Island, and Magdalenes, and cut off many fish from going up the St. Lawrence to our fishermen.

JAMES MCLEOD.

Sworn to at North Sydney, in the county of Cape Breton, this 19th day of July, A. D. 1877, before me,

JOHN VOGHT,

J. P., for and in the County of Cape Breton.

No. 111.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM NEARING, of Main-a-Dieu, in the county of Cape Breton, fisherman, make oath and say as follows:

1. I have been upwards of forty years engaged in the inshore fisheries, and have taken mackerel, herring, codfish, and halibut, all the kinds of fish found around here. I fished in a whaleboat and schooner around Cow Bay, Scaterie, Miri Bay, Main-a-Dieu, and Lorraines, and have also gone out fishing from this port with two American fishing schooners.

2. During the number of years mentioned I have seen many American vessels engaged in fishing in the places in which I fished, and during the past five or six years, up to this date, I have seen them fishing in and off shore in this vicinity. I have seen over a hundred American fishing schooners at one time inside and outside of Scaterie Island at one time. All the codfish and halibut fishermen come round the southern and eastern coasts of Cape Breton, and do not run through the Strait of Canso. During the past five or six years I have seen, on an average, upwards of one hundred American fishing-vessels each year around in this vicinity.

3. The Americans take about here mackerel, codfish, and halibut. About eight years ago I was in an American halibut vessel, and in twenty-four hours we took one hundred and sixty halibut north-north-east, and near Scaterie light, inside of the three-mile limit. These halibut would weigh from forty to three hundred pounds each. Since the Americans resorted here halibut have become very scarce; previous to that time we could catch as many as we wanted.

4. The Americans trawled here last spring twelve months for halibut within the three-mile limit. They trawl off on the banks, and their plan of trawling injures the inshore fishery; they trawl on the bottom and take the mother fish; they throw over the gurry, which is very injurious to the fishery; I have myself often caught codfish with sound bones in them.

5. The Americans have fished all around here inshore for mackerel, and the large quantities taken by them injured the inshore fisheries.

6. The Americans fish mackerel for bait, and buy mackerel and herring for the same purpose whenever they can get it.

7. In my opinion it would be much better for us if the Americans were kept away from our shores.

his
WILLIAM + NEARING.
mark.

Sworn to before me at Main-a-Dieu, Cape Breton, the 27th day of July, 1877.

GEO. RIGBY, J. P.

No. 112.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, THOMAS LAHEY, of Main-a-Dieu, in the county of Cape Breton, fisherman, make oath and say as follows:

1. I have been engaged in the inshore fisheries for the last fifty years,

and have taken mackerel, herring, codfish, halibut, and all the kinds of fish found in this vicinity. I fished in a whale-boat around Cow Bay, Scaterie, Miri Bay, Main-a-Dieu, and Lorraine, and have taken on an average about \$600 worth of fish for the last fifty years each year.

2. During the before-mentioned period I have seen many American vessels engaged in fishing in the places aforesaid. I have seen in one day from fifty to sixty of these American vessels. These American vessels came round the southern coast of Cape Breton, and did not run through the Strait of Canso. During the past five or six years I have seen on an average, during the fishing season, over a hundred American fishing-vessels in and near the waters where I fished, and I have often found it difficult to keep out of their way. Those American vessels take all kinds of fish—mackerel, codfish, and halibut. On board these vessels there are from sixteen down to ten men on each.

3. The Americans take fish around where I fish—mackerel by jigging, and codfish with trawls. The Americans take all the large fish by trawling, and throw away any small fish taken, which poisons the rest of the fish in the water.

4. The Americans, in my experience, always come in close for mackerel, and set their trawls inside of Scaterie Island for halibut and codfish.

5. The Americans injure the inshore fishery, upon which I and hundreds more around here depend. The Americans about five or six years ago used to throw overboard bait and draw off the mackerel. This they made a general practice of, and I have often, along with other boats, been injured in this way.

6. I have seen Americans take large quantities of bait inshore within three miles of the shore. This bait they took with hook and line between Flint Island and Scaterie, also haddock for halibut bait.

7. The mackerel, codfish, and halibut have, in my experience, decreased somewhat. This is owing to the American fishermen and their plans of taking fish.

his
THOMAS + LAHEY.

Sworn to before me at Main-a-Dieu, in the county of Cape Breton, the 27th day of July, 1877.

GEO. RIGBY, *J. P.*

No. 113.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DANIEL GOODWIN, of Cape Canso, in the county of Guysborough, fisherman, make oath and say as follows:

1. I have been engaged in the fishery business for twenty-one years. Ten of these I was with the Americans cod-fishing. About eight hundred American sail fish for cod each season. We used to fish on Grand Bank, Western Bank, and La Have Bank. One year we fished off Cape North, Island of Cape Breton. The average tonnage of each vessel would be 65 tons at least, and the crews of each from ten to twelve men. At first we used to fish with salt bait and what we could get on the Banks. During the last five or six years we got our bait in the British provinces. By using the fresh bait we could catch fish much better. In fact, little or no fishing can be done with salt bait. It is no use to

use salt bait when fresh bait is being used. If I could not get fresh bait I would not attempt to fish on the Banks with salt bait. If the Americans had to go home after their bait, it would spoil before they reached the fishing grounds. Besides this, it would be a great loss of time to them and prevent them from catching the fish in such quantities as they now can. By having the privileges granted by the Treaty of Washington, they can carry on the fishing; without them they cannot prosecute them and make them pay.

2. Each vessel makes from two to three trips each season, and catch each on an average one hundred thousand pounds of green fish. This would make seven hundred quintals of dry fish. I mean they average that much each trip. This I consider a fair statement.

3. All fish under twenty-one inches when the head is cut off is thrown away by the Americans. This I consider very destructive to the fisheries. Those small fish are similar to those caught inshore by Canadian fishermen.

4. Before I was fishing with the Americans I was engaged in the mackerel-fishing. The Americans used to fish inshore with the Canadian fishermen at that time. I have seen as many as five hundred sail engaged in the mackerel fishery during one season. They fished everywhere like the Canadian fishermen. This was during the Reciprocity Treaty.

5. The Americans buy ice and bait because it pays them best. They save a third in quantity of the ice used. Each vessel would average twenty-five tons per season.

6. I never heard or saw any Canadian vessel fishing in American waters. The right to fish in American waters is worth nothing.

DANIEL GOODWIN.

Sworn to at Canso, in the county of Guysborough, this 25th day of July, A. D. 1877, before me.

JAMES A. TORY,

Justice of Peace for the County of Guysborough.

No. 114.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM KELLY, of Lingan, in the county of Cape Breton, fisherman, make oath and say as follows:

1. I have been engaged in fishing for more than fifty years, mostly in the inshore fishery for fourteen of those years. I owned a fishing-vessel and fished all along the coast from Cape North to Scaterie. In this vessel there were five hands besides myself.

2. In this vessel I have taken all kinds of fish—mackerel, codfish, halibut, herring, and dogfish.

3. The mackerel were taken all inshore by me, and during the last twenty years I have seen as many as from twenty to thirty American fishing-vessels engaged in fishing mackerel at one time within three miles of the coast. There were many vessels around which I hadn't sight of.

4. About nine years ago I used to take large quantities of codfish and halibut. In one week I have taken from thirty to forty quintals of codfish and two hundred halibut. The halibut measured from three to seven and a half feet in length. Herring I always took inshore, and

never knew them to be taken beyond three miles from the shore. During the past nine years I have not taken so many fish. The reason for the decrease I think is the throwing over of gurry and the large number of vessels engaged in fishing with trawls.

5. The mackerel in my experience have been some years plenty and some scarce, and this fall may be very plenty.

6. In my experience the Americans take mackerel inshore, and I think if they were not allowed to take them inshore it would not be worth their while to come here to fish mackerel.

his
WILLIAM + KELLY.

Sworn to at Lingan, in the county of Cape Breton, this 23d day of July, A. D. 1877, before me.

WALTER YOUNG, J. P.

No. 115.

In the matter of the Fisheries Commission at Halifax, under the treaty of Washington.

I, ISAAC ARCHIBALD, of Cow Bay, in the county of Cape Breton, merchant, make oath and say as follows :

1. I have been engaged in the buying and selling of fish and of fishermen's supplies during the past twelve years. I have bought and sold mackerel, codfish, and herring, and am well acquainted with the fishing business as carried on here.

2. American fishing-vessels have resorted to this harbor for bait and ice, and have to some extent purchased provisions. The bait and ice, they stated, was indispensable to their voyage, for without it they could catch no fish. They also purchased herring for bait from our inshore fishermen in order to save time, as it was more convenient to do so than to remain and catch it, time being thus saved, and they have also purchased mackerel for bait.

3. Some years during the past twelve and down as late as eighteen hundred and seventy-three and four, as many as ten American fishing-vessels have been supplied each season with ice; each vessel took from five to ten tons.

4. Our fishermen have and still complain to me that the Americans trawl so deep that they catch the mother fish which are full of spawn, and clean their fish on the fishing ground and thus injure the ground.

5. The Americans before and during the Reciprocity Treaty of eighteen hundred and fifty-four, always fished inshore unless when a cutter was in sight. When the cutter disappeared they returned to fish. This plan they always adopted within my recollection.

6. I would say that here at least three-fourths of all kinds of fish are taken inshore—all our mackerel, herring, large quantities of codfish and halibut. The halibut are mostly taken in the spring of the year. Considerable quantities of haddock are also taken here in the spring of the year, and are all taken inshore.

7. The Americans in this bay have often practiced throwing bait overboard, and thus enticing the mackerel off shore. This they do because the mackerel are found inshore, and this practice has been followed by them except when they had the right of fishing inshore.

8. American fishermen catch bait within three miles of the shore in this bay, mostly herring and mackerel. The herring they take in nets,

the mackerel by both nets and hook and line. This they do all round the coast here with which I am acquainted.

9. Since eighteen hundred and seventy-one there has been a decrease in the amount of codfish taken by our inshore fishermen. The mackerel in my experience have varied, being some years good and others poor. The causes of this are, as already stated, deep trawling, throwing offal overboard, and over-fishing.

10. All our herring are taken inshore, and in this bay there are about four hundred barrels taken yearly. The Americans catch and buy them for bait all around the coast.

11. The Canadian mackerel I know are better than those taken in American waters, because in the summer of eighteen hundred and seventy-one I went into the American markets and made it my business to make inquiries, and found American fish-dealers very eager to get our mackerel.

12. The Americans, in my opinion, would be unable to carry on the cod and halibut fishing successfully unless they were allowed to frequent our bays, harbors, and creeks for bait, and ice in which to pack it, and without it would be unable to secure a cargo.

13. The American fishermen buy but very few articles, being supplied before leaving home, and only buy articles when they run short, and their trade in this respect I consider only an accommodation to themselves.

14. As far as I know, the privilege of fishing in American waters is of no benefit to Canadians, nor have I ever heard of any benefit being derived by Canadians from this privilege.

15. I have heard of a considerable amount of smuggling being done by American vessels in kerosene oil.

16. The Americans, to my knowledge, get a large number of their fishermen from Cape Breton, who go into American vessels and thus build up the American fishing establishment at the expense of our own; and I believe that it would be much better for us if the Americans were totally excluded and our markets left to ourselves.

ISAAC ARCHIBALD.

Sworn to at Cow Bay, in the county of Cape Breton, this 24th day of July, A. D. 1877, before me.

JOSEPH McPHERSON, J. P.

No. 116.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOSEPH DOBSON, of South Sydney, in the county of Cape Breton, miller and millowner, make oath and say as follows:

1. Within the last three years I have supplied American fishing schooners with ice in which to pack their bait, from two and one-half to three tons each vessel, and I have supplied as many as eight during the past three years, and within the last fortnight I have thus supplied two American fishing-vessels.

2. Within the last fortnight there have been at least a dozen American fishing-vessels around here close to the shore fishing for bait—squid, perch, smelts, and all kinds of small fish suitable for bait. This bait they pack in ice to keep fresh. They are supplied with ice by other dealers besides me in this harbor. The Americans told me the bait was

plentiful and good, and that it would be impossible for them to do without ice.

3. Bait has been more plentiful in this harbor during this month than I have known it to be within the last twenty years, and I consider it of great value to the Americans to get this bait and ice, for when the Americans secure ice and bait they say they have every chance for a successful voyage, and they always tell me, no bait no fish.

JOSEPH DOBSON.

Sworn to at Sydney, in the county of Cape Breton, this 23d day of July, A. D. 1877, before me.

C. H. HARRINGTON,
Justice of the Peace.

No. 117.

In the matter of the Fisheries Commission at Halifax, under the treaty of Washington.

I, JOHN PEACH, of Cow Bay, in the county of Cape Breton, fisherman, make oath and say as follows:

1. I have been engaged in the taking of fish for twenty-eight years, all in the inshore fishery. I have caught mackerel, herring, codfish, and halibut from Cape North to Scaterie, and in and around Cow Bay, in the county aforesaid.

2. I have caught mackerel with hook and net, and always inshore. I never went beyond three miles from the shores for mackerel, because we could catch no mackerel beyond three miles.

3. About fifteen years ago I used to take large quantities of mackerel inshore with nets. I have taken myself in one morning as many as ten barrels in one haul. Since that time I have not taken so many mackerel in nets. The reason of my not taking so many mackerel now with nets is because the Americans have broken and destroyed the schools, so many of them fishing on the coast.

4. The Americans fish from three miles off shore close up to the land for mackerel, and come in among us inshore fishermen and take the fish away from us. They come in and throw their pogie bait overboard, and draw the fish away from us.

5. Last summer I have seen as many as ten at least at one time amongst us, around where we fished, and they took large quantities of mackerel. These mackerel we consider taken away from us.

6. The Americans have such large quantities of bait that they spoil our catch.

7. These American mackerel men take from five to six hundred barrels apiece, and in the fall season I have known them often to make two such trips. These American vessels have on board from twelve to fourteen men each.

8. The American cod-fishermen go into the bays and harbors and get bait and ice, and when a storm comes, they run into our bays and harbors. Without bait, and ice in which to keep it, they could catch no fish.

9. The American cod-fishermen take from ten to fifteen hundred quintals of codfish each trip. In taking codfish the Americans trawl on the bottom and injure the fishing by taking the mother fish in which there are great numbers of spawn.

10. The Americans throw overboard the offal and sound bone, which

is of great hurt to the fishing ground ; this our inshore fishermen never make a practice of.

11. In Cow Bay, last season, the amount of codfish taken, to the best of my knowledge, would amount to a thousand quintals. I have known a great many more some seasons. Some seasons it is better, some worse. The amount of herring taken last spring in this bay was about six hundred barrels. The amount of mackerel taken last summer was from three to four hundred barrels. These numbers vary, being some years much better.

12. Herring are taken all inshore, and also mackerel.

13. Off this bay I have known a boat's crew of three men to catch from fifty to sixty halibut in one day, about fifteen years ago. These halibut measured from three to seven feet each. At the present time this fishery has almost failed, and this I attribute solely to American trawlers, and I believe if the Americans were stopped from trawling we would have the halibut as plenty again.

14. If the Americans were shut off our coast from our fisheries, I believe they would in the course of time be as good as ever.

JOHN PEACH.

Sworn to at Cow Bay, in the county of Cape Breton, this 24th day of July, A. D. 1877, before me.

JOSEPH MCPHERSON,

J. P. for and in the County of Cape Breton.

118.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, JAMES FRASER, of South Bar, in the county of Cape Breton, in the Province of Nova Scotia, master mariner, make oath and say as follows:

1. I have been master mariner for twenty-eight years, and am well acquainted with the coasts of Nova Scotia, Prince Edward Island, eastern side of New Brunswick, Lower St. Lawrence, and Newfoundland, and am well acquainted with all the bays and harbors on those coasts, and was acquainted during that period with the fishing on those coasts, and saw large numbers of American fishing-vessels engaged in fishing inshore and offshore, and laying at anchor in our bays and harbors. During the last twelve years I have been engaged in the inshore fisheries, and as a trader, and have frequently supplied American fishing-vessels with ice and bait.

2. I have seen in one summer upwards of two thousand American fishing-vessels on the coasts of Nova Scotia, Prince Edward Island, the eastern coast of New Brunswick, and the coast of Newfoundland, engaged in taking the various kinds of fish found in the waters around those coasts. This number varied, being some years greater and some less. This I have seen year after year down till 1865, when I discontinued the coasting trade.

3. During the past twelve years I have supplied frequently American fishing-vessels with ice and bait.

4. During the past six years I think on an average fifty sail have been supplied with ice and bait in Sydney Harbor, and I do not think the trawl-fishing could be carried on without ice and fresh bait profitably.

5. The inshore fishery is of more value in my opinion than the out-

shore fishery, and the Americans injure the inshore fishery by drawing off the fish outshore.

6. The Americans, as I am informed, use purse seines, and I have seen those seines on board their vessels.

7. During the past ten years I have seen one hundred and sixty American vessels fish in Sydney Harbor for mackerel in one day, and large fleets of American fishing-vessels visit our harbor daily for the purpose of catching mackerel during the mackerel season year after year.

8. The mackerel come inshore to feed and are taken by our fishermen close inshore, and also by the Americans.

9. Large numbers of our population go on board American fishing-vessels and are engaged in carrying on the American fishing trade, which ought to be encouraged at home.

JAMES FRASER.

Sworn to at South Bar, in the county of Cape Breton, this 21st day of July, A. D. 1877, before me.

PATRICK MULLINS,

Justice of the Peace in and for the County of Cape Breton.

No. 119.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, JOHN FERGUSON, of Cow Bay, in the county of Cape Breton, in the Province of Nova Scotia, fisherman, make oath and say as follows :

1. I have been engaged in fishing during the past thirty-five years, most of that time out of Cow Bay. For two summers I fished out of Chatham, in the State of Massachusetts, in American vessels engaged in mackerel fishing in American waters.

2. The mackerel taken in American waters were far inferior to those taken in our waters. In fact we would not have fished in American waters at all if the Americans had not been afraid of coming into British waters to fish. This was in the year 1853.

3. In this bay I have fished for twenty summers, and have taken mackerel, herring, codfish, haddock, and halibut.

4. The mackerel are taken inshore, and the best grounds for fishing mackerel are inside the heads in this bay. In my experience, I never saw mackerel taken off shore out beyond three miles. The Americans come here summer after summer in large numbers; and last summer they came among us, commenced taking mackerel, throwing over bait, and drew the mackerel away from our boats.

5. I have seen in Cow Bay, about twelve years ago, over one hundred American vessels taking mackerel. They fished in close to the shore and up to our wharves, and it would not be of any use for the Americans to come here to fish unless they were allowed to come in close to the shore.

6. In my experience mackerel have varied, being sometimes for a number of years good and for another number of years poor. This is more or less the case with all our fish.

7. I have fished around Scatarie Island, Main-a-Dieu, and out of Mira Bay, about sixteen years ago, and I there at that time saw many American fishing vessels engaged in fishing codfish and halibut. I fished around the last-mentioned places for about five years, and none of the American vessels which I saw there went through the Strait of Canso,

and I have seen from forty to fifty American vessels pass through the "Kittle" between Scatarie and Main-a-Dieu in one day.

8. On board these American vessels there are from about twelve to fourteen men, and I have been on board one on which there was eighteen hands.

9. The American mackerelmen come around this coast and fish from about the first of August till late in the fall, and take from about six hundred to a thousand barrels to each vessel. The American cod fishermen average about one thousand quintals to each vessel and make about two trips each summer. They commence fishing at Scatarie and fish all around here, all along the shore in and out up to Cape North, and last summer I have seen as many as from eight to ten American vessels fishing at one time in sight.

10. The American plan of trawling I consider hurtful to the fishing ground, and the Americans take away a great many fish from our fishermen.

11. The inshore fishery includes every kind of fish except codfish, and many of these are taken inshore, and I consider the inshore fishery of far the greatest value.

JOHN FERGUSON.

Sworn to at Cow Bay, in the county of Cape Breton, this 25th day of July, A. D. 1877, before me.

JOSEPH MCPHERSON,
J. P. for and in the County of Cape Breton.

No. 120.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, JOHN MURPHY, of Lingan, in the county of Cape Breton, fisherman, make oath and say as follows:

1. I have been engaged twenty years in the taking of fish, part of the time inshore and part of the time outshore, and have caught mackerel, herring, codfish, and halibut.

2. The mackerel we always took inshore within three miles. During the past five or six years I have caught mackerel inshore around Lingan Harbor, and last year I have seen from ten to fifteen sail of American vessels engaged in taking mackerel. These I have seen at one time together, and many around which I did not see. These American vessels were inshore within two miles of the shore in Lingan Harbor. So many mackerelmen diminish the catch of fish for our fishermen, and are injurious to the mackerel, for they keep them flying about on the top of the water, and thus have no time to spawn. During the past five or six years I have seen as many American mackerelmen fishing here.

3. These American mackerelmen take from five to six hundred barrels apiece, and in the fall season, from September along till and in October, I have known many of them to make two such cargoes.

4. The American mackerelmen who fish around here come around the southern and eastern coasts of Cape Breton, and all the codfish and halibut fishermen come around the same way.

5. On board the American mackerelmen there are about from twelve to fourteen men on each vessel, and on board the codfish and halibut vessels there are the same number.

6. The American codfishermen come into our bays and harbors and get bait and ice without which they could not fish; then go out and trawl to the bottom. This deep trawling is very bad, as they catch the mother fish which are full of spawn. In deep trawling only the large fish bite.

7. Herring are taken all inshore; also mackerel, and great quantities of codfish and halibut.

8. The Americans heave their "gurry" overboard. This I have frequently seen them do, and I consider this bad for the fishing-grounds.

9. Around the southern and eastern coasts of Cape Breton there are as many American vessels engaged in taking codfish and halibut as in the taking of mackerel, and they take from eight to ten hundred quintals of codfish each.

10. The halibut they pack in ice which they can get in Sydney and Louisburg, and ice which they to some extent bring with them.

11. Squids and caplin have set in very plentifully this year, and the fish always follow them; and mackerel are expected to be very plenty this fall.

12. I was at St. Ann's, in the county of Victoria, a week ago, and saw many mackerel schools and herring schools, and the people all said it was a very plentiful year for mackerel.

his
JOHN + MURPHY.

Sworn to at Lingan, in the county of Cape Breton, this 24th day of July, A. D. 1877, before me.

WALTER YOUNG, J. P.

No. 121.

In the matter of the Fisheries Commission at Halifax under the Treaty of Washington.

I, ANGUS MATHESON, of South Sydney, in the county of Cape Breton, Province of Nova Scotia, fisherman, make oath and say as follows:

1. About twelve years ago I fished for two seasons in company and in American fishing-vessels. These vessels came from Gloucester, and were engaged in mackerel-fishing. I fished around the eastern coast of Cape Breton, and eastern part of Prince Edward Island, and the Magdalen Islands. Since then I have been engaged more or less in the inshore fisheries this summer, from the twenty-sixth of April till the middle of July. I hove off Low Point light-house, in the county of Cape Breton, in boats, fished codfish, haddock, halibut, and herring.

2. During the past twelve years I have seen many American fishing-vessels fishing mackerel near shore. They fished inshore sometimes close to the shore, because the mackerel come inshore, and I have fished hundreds of barrels of mackerel, and have never yet taken them more than three-quarters of a mile from the shore; and I have caught them in Sydney Harbor until the bottom of the boat touched the ground. The Americans always come inshore for the mackerel, and when they did not fish them inshore they baited them off to beyond the three miles, and most any kind of fish can be baited off in this way.

3. I have seen within the past twelve years over two hundred fishing near Low Point. Each season, from Seatarie all round the shore up to Cape North, there are hundreds of these American fishing-vessels, and they fish here from year to year, and at the present time.

4. I have never known codfish and halibut vessels to go through the Gut of Canso, and I have known of many American mackerel-fishing vessels go around the southern and eastern coasts of Cape Breton and fish along those coasts.

5. These Americans catch immense quantities of mackerel—from one hundred to a thousand barrels—and I can safely say, average from five hundred to six hundred barrels each vessel on each trip. These vessels take from two to three cargoes each year.

6. The mackerel during the past six years have been an average catch; and this year, and during the present summer, bait has struck in more plentiful than I have ever known, and fish always follow the bait. The mackerel are at present striking inshore plentifully, and I believe will be as good as ever they have been.

7. The Americans, to my knowledge, trawl much deeper than our fishermen. They catch the mother fish by thus trawling so deep, and destroy great quantities of spawn. They throw overboard the offal from the fish, which is very injurious to the fishing ground, especially the heads and maw bones. I have myself, this summer, caught codfish with the heads of fish in their maws; these heads must have been thrown from vessels offshore, because we take our fish inshore to dress, and the farmers come and take all the offal away to their farms, which they say is the very best manure they can find. These heads and sound-bones which are thrown over kill the fish.

8. During the twelve years of my experience the Americans always fished within shore, and wherever they could get fish, and the inshore fishery is of much the greatest value. The Americans diminish the quantities of fish, especially when they employ improper means for taking them. By improper means I refer to deep trawling. The quantities of offal thrown overboard sicken and destroy the fish, and thus injure the inshore catch. During this summer, I, for a short time, and for the first time tried two jigs; I only caught two codfish with them, and am sure that I destroyed more than one hundred, and whoever employs this method of taking fish must destroy vast numbers.

9. The herring is taken inshore by Nova Scotia fishermen, and the Americans buy them fresh for bait when they can get them. They also buy ice all around the coast wherever they can get it, in which to pack their bait. This privilege is of great importance to them, for without bait, and ice in which to keep it, they could catch no fish.

10. It is my opinion that unless Americans are excluded that the fishing will be much lessened. These fisheries I consider to be of untold wealth, both to the Americans and to our own people, and would be of very much more value to our Nova Scotia people if the Americans were excluded.

ANGUS MATHESON.

Sworn to at South Sydney, in the county of Cape Breton, this 23rd day of July, A. D. 1877, before me.

A. HARRY BOURINOT,

Justice of the Peace in and for the County of Cape Breton.

No. 122.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM H. SWEET, of Fall River, in the State of Massachusetts

United States of America, but now of Port Hood, in the county of Inverness, fisherman, make oath and say as follows :

1. I have been engaged in the fishing vessels fitted out by the Americans for the past five years, and have been engaged during that time in fishing in all parts of the gulf, on the coast of Nova Scotia, Cape Breton and P. E. Island and on the shores of the Magdalen Island.

2. A large number of American vessels have been engaged in fishing in these waters for some years past, taking chiefly mackerel and codfish. The average cargo of an American vessel is about 450 barrels of mackerel during one trip, though I have known some vessels to take a much larger number. The average cargo of codfish is from 600 to 1,000 quintals per trip. On an average these vessels make two or three trips per season.

3. The American fishermen are in the habit of throwing offal overboard while they are fishing on the coast, and this practice has been injurious to the fishing grounds, and glutted the fish in the neighborhood, and it is found necessary to move away after a while from the places where the offal has been thrown.

4. American fishing vessels are sometimes accustomed to use the purse seines in fishing for mackerel, and the effect of this I consider very injurious to the fishing grounds. I have known our fishermen to take as many as a thousand barrels of mackerel in one haul, and they cannot cure all these, and consequently have to let a good portion of them go adrift, and many of the fish are killed. This practice must do serious damage.

5. Mackerel chiefly feed and breed inshore. They have to go inshore for food, because the smaller fish on which they feed live wholly or chiefly in shoal water.

6. Very large quantities of mackerel are taken by our fishermen inshore on Canadian fishing grounds, but I cannot say what proportion of the whole catch. In September and October a large part of the mackerel fishing is done inshore.

7. The present system of trawling practiced by the American fishermen in cod-fishing is most dangerous to Canadian fishing grounds. It destroys the mother-fish, and being followed up the whole season it takes fish during the spawning season. Being anxious to get cargoes of large fish the Americans throw the small fish overboard. I believe if this trawling system is pursued much longer, it will very greatly damage the Canadian fishing grounds, if not ruin them.

8. It is a very great advantage to American fishermen to be able to procure bait and ice in Canadian ports along the coast, and to catch it near the shore. It is considered by the Americans more advantageous to buy the bait for the cod-fishery than to catch it themselves. If the American fishing vessels could not procure bait on the Canadian shores, they would almost have to abandon the cod-fishery. Bait will only last about three weeks in ice, and if the Americans could not get the ice here we could only preserve our bait by salting it, which injures it. It would be impossible for us to carry on the cod-fishery profitably if we had to return to American waters and ports to procure all our bait.

WM. H. SWEET.

Sworn to at Port Hood, in the county of Inverness, this 20th day of July, A. D. 1877, before me.

D. CAMPBELL, J. P.

No. 123.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES ARCHIBALD, of Boston, in the State of Massachusetts, United States of America, at present of Port Hood, in the county of Inverness, fisherman, make oath and say as follows :

1. I have been engaged in the fishing business for twenty years past, and during seven years past I have been fishing in American vessels, in American and Canadian waters. I have been engaged in various kinds of fishing on the coasts of Nova Scotia and Cape Breton, in the gulf, and about the Magdalen Islands, and P. E. Island. I came into this port in an American fishing vessel, and have been engaged in fishing here during the present season.

2. Since I have been fishing in these parts, I have known of a large number of American fishing vessels frequenting these coasts, chiefly engaged in taking codfish and mackerel. Each vessel carries about 450 barrels of mackerel at a cargo, and makes two or three trips during the season. The average cargo of codfish is from 600 to 1,000 quintals each vessel. The vessels average about 60 or 70 tons, and I have known some vessels to take larger cargoes.

3. I know that our fishermen are in the habit of throwing offal overboard after catching the fish, and I think this must be injurious to the fishing-ground, and the vessels have to move away from the places where they throw over the offal every little while.

4. I have known American fishing vessels to use the purse-seines in fishing mackerel quite often, and I know it must do great injury to the fishing-grounds. They make such large hauls in these seines that they cannot cure all the fish unless they have other vessels near, and so they have to send many fish adrift, and some are killed in the operation. This practice will do great harm to the grounds.

5. Very large quantities of mackerel are taken by our fishermen now inshore, but I would not like to say what proportion of the whole mackerel catch. Late in the autumn a great deal of the fishing is done inshore. According to the best of my knowledge and experience mackerel breed and feed for the most part inshore. They feed on smaller fish which are found almost entirely in shoal water.

6. The system of trawling for codfish is practiced now quite largely by American fishermen in these parts, and I believe it will be very injurious to the fishing-grounds. It destroys the mother fish, and as the fish are taken all through the season they must be caught while spawning. American fishermen for the sake of getting large cod throw the small fish overboard, which tends to damage the grounds very seriously.

7. It is considered by American fishermen a very great advantage to be able to procure bait and ice in the Canadian ports adjacent to the grounds, either by buying it or catching it near the shore. It is more profitable to our fishermen to buy it than to catch it, as a rule. If the Americans could not procure bait on the Canadian shores I do not see how they could carry on the cod-fishery. Bait only lasts about three weeks in ice, and if we could not get ice here we could only preserve our bait by salting, which is always considered an injury to bait. We could not carry on codfishing with any profit on these shores if we had to return to American waters and ports to get bait all the season.

his
JAMES + ARCHIBALD.
mark.

Sworn to at Port Hood, in the county of Inverness, this 20th day of July, A. D. 1877 (being first read and explained).

D. CAMPBELL, *J. P.*

No. 124.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, RICHARD THOMAS, of Booth Bay, in the State of Maine, United States of America, at present of Port Hood, in the county of Inverness, fisherman, make oath and say as follows :

1. I have been engaged on board of American fishing-vessels for the past twenty-four years, and have been engaged in fishing on all parts of the coasts of Nova Scotia, Cape Breton, Prince Edward Island, and the Magdalen Islands; and am familiar with the whole fishing business in these parts. I entered this port only a few days ago in an American fishing-vessel, and have been fishing in these waters during the present season.

2. I have read over the affidavit of James Archibald, of Boston, made herein on this date, the 20th of July, A. D. 1877, and I say that the statements contained in said affidavit in reference to the fishing business on this coast are, to the best of my knowledge, information, and belief, correct and true in every particular.

RICHARD THOMAS.

Sworn at Port Hood, in the county of Inverness, this 20th day of July, A. D. 1877, before me.

D. CAMPBELL, *J. P.*

No. 125.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN R. HAMILTON, of New Carlisle, county of Bonaventure, Province of Quebec, make oath and say as follows :

1. Have been engaged in the fisheries for the last seventeen years, having had establishments on the north shore of the Gulf of St. Lawrence, at Seven Islands, on the Bull Island, River Moisie, St. John's River, and Long Point near Mingan.

2. I consider that the fishery by the Americans in Canadian waters has been very extensive between 1854 and 1866; I have seen as many as 100 schooners in Paspebiac Harbor, and as many at Seven Islands. At least 200 schooners have visited our shores for mackerel during part of the Reciprocity Treaty that I have mentioned, yearly. The average tonnage of these vessels is 80 tons, each vessel having from 12 to 15 men for a crew.

3. The principal places where I have seen them fish for mackerel were Bay Chaleurs and Seven Islands on the north shore.

4. During the Reciprocity Treaty the American schooners generally made good voyages and sometimes two, averaging 400 barrels each voyage.

5. I have seen American schooners frequently fishing for cod and halibut, at Seven Islands, inshore.

6. The cod-fishery fluctuates, but the fishery now is equal to, if no

superior to, that of fifteen years ago. The herring about the same. Mackerel are not as plenty here as they were twenty years ago, but it might be accidental.

7. The Americans take mackerel with hand-lines, purse and hauling-seines.

8. The Americans mostly fish inshore at Seven Islands, and half of the time at Bay Chaleurs.

9. I have seen American vessels leave Seven Islands loaded with mackerel caught inshore. I have also seen them hauling the seines ashore, I should say with over a hundred barrels of mackerel.

10. The inshore fishery is of greater value than the outside. All the herring, caplin, launce, two-thirds of the codfish, and most of the halibut are taken inshore.

11. I have seen the Americans throw bait and entice the mackerel to their vessels, and the boats belonging to our coast could not take many.

12. A good part of the mackerel are taken by the Americans with seines. Most of those that I have seen seining were fishing inshore.

13. The bait the Americans take on these shores for the cod and halibut fisheries is taken inshore. I have seen them several times taking bait with nets and seines.

14. I think the codfishing has not changed since 1871.

15. The Americans take all the herring inshore; they take them for bait.

16. Mackerel feed along the shores of the Bay Chaleur, Seven Islands, Moisie and Mingan, and in fact all the places that I have visited. In the Gulf of St. Lawrence and on the North Shore and Bay Chaleur they feed inshore on small fish, &c.

17. I consider it a great advantage to the Americans to be able to land, dry their nets, and cure their fish.

18. I consider it a great advantage to Americans to be able to transship their cargoes because it enables them to continue fishing, instead of going to the United States or elsewhere with their cargoes.

19. It is an advantage to the American fishermen to be able to procure bait in our waters, either to buy or catch it. If they buy it, it is because they find it more profitable than to catch it themselves in order to save time.

20. It would be impossible for the Americans to carry on the cod and halibut fishery without being able to procure bait in our inshore, that is to say profitably.

21. It is of no advantage to us to be able to fish in American waters.

22. The privilege of transshipping cargoes is worth a load; and the privilege of getting bait in our inshores for cod and halibut is equal to their fishery.

23. I believe that the privilege of fishing by the Americans in our waters injures the fishery very materially.

JOHN R. HAMILTON.

Sworn, to the best of his knowledge, information, and belief, at New Carlisle, county of Bonaventure, Province of Quebec, Dominion of Canada, this 24th day of July, A. D. 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 126.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington:

I, BAPTISTE COUTURE, of Grand River, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

1. I have been engaged in all the fisheries on this coast for forty years.

2. The fishing by the American fishermen was very extensive on this shore between Newport and Cape Despair, a distance of 27 miles, from 1854 to 1866. On this shore during the Reciprocity Treaty, from 1854 to 1866, fully sixty schooners have been engaged in the mackerel fishery yearly, each of these vessels being about 70 tons, having a crew of fifteen men.

3. On an average these schooners have made good voyages of 400 barrels each.

4. The cod-fishery seems to be on the increase, and considerably. Herring are about the same, and mackerel seem to be in as great abundance on our shores here as in former years. Our Canadian fishermen take them as plentifully now as in the best years.

5. The Americans take mackerel with hand lines and seines.

6. During the Reciprocity Treaty, between 1854 and 1866, the American fishermen that have resorted to these shores for mackerel have caught the most of them inshore, and sometimes very close to the shore. I have seen them fish with hand lines only, and they have got their load in a few days. Every year I have been alongside of them and have seen them fishing.

7. Our inshore fisheries are of much greater value than the outside. Herring, caplin, lance are caught inshore, and two-thirds of the mackerel also.

8. It is the common practice of the Americans to come in among the boats and, by throwing bait, entice the mackerel away with them. They have done the same to me many times. And if a school of mackerel were to come into any of our coves, and the Americans to come in after them, they would catch them all before we could get one.

9. I have seen the Americans several times come into our inshores and catch caplin with seines, and herring with nets, for bait.

10. Since 1871 all the fisheries—that is to say, mackerel, herring, and codfish—have increased, and there is as much bait as ever; and I am sure this increase is due to the withdrawing of American fishermen from our waters.

11. Mackerel feed inshore; their food is lance and other small fish which live inshore.

12. It is a great advantage to the Americans to be allowed to transship their cargoes in our inshores; it enables them to keep on the fishing-grounds and to double their fares.

13. It is a great advantage to the Americans to be able to catch bait in our inshores, or to buy it. If they buy it, it is because they find it more profitable.

14. The Americans could not carry on the cod and halibut fishery profitably if they could not procure bait in our inshores.

15. It is of no advantage to Canadians to be able to fish in American waters, and I never knew of any vessel from here going there to do so.

16. The privilege of transshipping cargoes enjoyed by the Americans

is worth a load, and the privilege of getting bait in our inshores for cod and halibut is worth these fisheries.

17. The privilege enjoyed by the Americans to fish in our waters injures our Canadian fishermen a great deal. Their vessels and gear are so much better we cannot compete with them at all, and our fishing-grounds cannot stand the heavy drafts. Our past experience is there to prove the fact.

BAPTISTE COUTURE.

Sworn to the best of his knowledge, information, and belief, at Grand River, county of Gaspé, Province of Quebec, Dominion of Canada, this 25th day of July, A. D. 1877, before me.

N. LAVOIE,

Justice of Peace, Province of Quebec.

No. 127.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, EDWARD G. HALL, of New Carlisle, county of Bonaventure, Province of Quebec, farmer and fisherman, make oath and say as follows:

1. Have been engaged in the fisheries off and on for about 30 years. Have fished with the Americans.

2. Between 1854 and 1866 the mackerel-fishing by the Americans was very extensive. The average number of vessels visiting these shores have been about 150 yearly. The average tonnage of these vessels being about 70 tons, having from 12 to 15 men for a crew. I have seen vessels fishing in Bay Chaleur for mackerel, and I have fished myself with them, and inshore for a season, between 1854 and 1866.

3. The American vessels that have visited our shores have always done well during the period mentioned. Each voyage amounting yearly to 350 barrels each. And the captain of the American vessel in which I was engaged told me that several of these schooners make two or three trips yearly.

4. In the Bay Chaleur the cod-fishery is better now than formerly. Herring about the same. Mackerel as plenty as ever on the south shore of the Bay Chaleur. I have seen large schools not later than last Saturday off my place, and very close to the shore.

5. The Americans catch mackerel with hand-lines and seines. I have seen the seines in their boats, and I saw about 40 barrels of mackerel that they had taken with the seines in one hour.

6. In Bay Chaleur American fishermen fish inshore with hand-lines two-thirds of the time, and all the hauling of the seines are inshore.

7. The inshore fishery on this shore is of greater value than the outside.

8. All the herring, caplin, and lance are taken inshore, and all the codfish also. Two-thirds of the mackerel are also taken inshore.

9. The use of the seines by the Americans is injurious to the fishery, because it takes every kind of fish, a part of which is lost, because they don't want it, and they throw them away.

10. The Americans take bait in our inshores.

11. Since 1871 the fishery has not changed in the Bay Chaleur, except for mackerel, but there is a great increase this year.

12. The Americans catch herring in our inshores for bait only.

13. I have seen in the Bay Chaleur mackerel not longer than 3 or 4 inches, and I take it from that that they breed here.

14. Mackerel feed on lance and shrimps.

15. I consider it of great advantage to Americans to be able to land, dry their nets, and cure their fish.

16. It is a great advantage to Americans to be able to transship cargoes, because it enables them to keep the fishing grounds, and to make extra trips.

17. I consider it a great advantage to the Americans to be able to procure bait in our inshores.

18. I consider that the Americans could not carry on the cod and halibut fishery profitably without being able to procure bait in our inshores.

19. I consider it a great advantage to Americans to be able to procure ice in our inshores to preserve their bait.

20. It is of no advantage to Canadian fishermen to be able to fish in American waters, and I don't know of any vessel from here ever going there to fish.

21. The privilege granted to Americans to transship cargoes is worth a load, and the privilege of procuring bait in our inshores for fishing cod and halibut is equal to these fisheries.

22. I consider that fishing by Americans in our waters injures us greatly, because they take our fish and impoverish our coast.

EDWARD G. HALL.

Sworn to the best of his knowledge, information, and belief, at New Carlisle, county of Bonaventure, Province of Quebec, Dominion of Canada, this 24th day of July, A. D. 1877, before me.

N. LAVOIE,

Justice of Peace Province of Quebec.

No. 128.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM EDWARD GARDNER, of Louisburg, in the county of Cape Breton and Province of Nova Scotia, merchant, make oath and say as follows:

1. For the twelve years last past, I have been engaged in the buying and selling of fish and for two years previous engaged in fishing in the inshore boat fishing, and am well acquainted with the inshore fishing in and around Louisburg Harbor and with many Canadian and American fishermen.

2. I have seen in this harbor within the last six years from twelve to sixteen American fishing vessels at one time, and think that about seventy-five have come in here yearly during the past six years. The American vessels which come here do not pass through the Strait of Canso. These American vessels are mostly engaged in trawl fishing, and fish wherever they can get fish.

3. On board these American vessels there are from ten to fifteen men. They take on an average from ten to twelve hundred quintals of codfish to each vessel, and make yearly from two to three trips. These codfish are of the best kind, for many of them throw overboard the small fish. American skippers have themselves informed me of this. Thus large quantities of small fish are wasted, for the fish are dead when taken off the trawl, or at least before culled.

4. Around and in Louisburg Harbor during the past six years there has on an average been from eight hundred to a thousand barrels of mackerel taken each year. In Louisburg Harbor there are about one hundred boats engaged in the inshore fishery, and these boats take from one hundred to one hundred and fifty quintals of codfish each, yearly. During the past six years there has been taken yearly on an average about three thousand barrels of herring. About ten years ago larger quantities of mackerel were taken.

6. The Americans take fish by trawling, and trawl so deep that they take the large fish, which are the mother fish, and thus large quantities of spawn are destroyed. The Americans take mackerel with hook and line, they jig them, and they have told us last summer that they had purse seines on board.

7. The inshore fisheries are of very great value to our people, and it is of great importance that they should be protected and fostered, and all the inhabitants here depend upon the fishing.

8. American fishing-vessels purchase bait here in large quantities, mostly herring and mackerel, because it saves time, and without bait the Americans can catch no fish. From twenty to thirty American vessels purchase bait in this harbor yearly. These American vessels all purchase ice in which to pack their bait, from three to ten tons each, and when ice and bait run out they return for more. This ice is indispensable for their bait, for they tell me they cannot profitably catch fish without fresh bait.

9. I am not aware of any Canadian vessel fishing in American waters, nor have I ever heard of any. The privilege of fishing in American waters I consider of no value, while the Americans take vast quantities of fish out of our waters.

10. The amount of ice and bait taken by American fishing-vessels is worth in cash from seventy-five to one hundred and twenty dollars. Their supplies are brought from home with them, and they only purchase from us when they run short, and the amount purchased, except ice and bait, is very small.

11. In my opinion, if American fishermen were excluded from Canadian waters and our markets left to ourselves, it would be much better for our fishermen.

J. E. GARDNER.

Sworn to at Louisburg, this 27th day of July, A. D. 1877, in the county of Cape Breton, before me.

PATRICK O'TOOLE,
J. P. for the County of Cape Breton.

No. 129.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PHILIP LEMONTAIS, of Arichat, in the county of Richmond and Province of Nova Scotia, agent for the firm of Robin & Company, make oath and say as follows:

1. I have had a good knowledge of our fisheries on the coasts of Canada during the past twenty-five years, for twenty years of which I have been agent of the firm of Robin & Company, who do an extensive fishing business in various parts of the world, the principal house being

situated in Jersey, one of the Channel Islands, with branches at various points, and among others at Arichat, Cheticamp, Passepebiac, Perce, Caraquet, Grand River, and other places in Canada.

2. I am quite confident that the number of American fishing-vessels in the Gulf of St. Lawrence ranges from six hundred to eight hundred vessels yearly. I am perfectly confident that is below the mark, and I have good means of knowing it, as I have been agent of Robin & Company at Cheticamp, on the northwestern shore of Cape Breton, for the greater part of twenty years. The harbor of Cheticamp is much frequented by American fishing-vessels, and I have seen at one time along the shore between six hundred and eight hundred fishing-vessels, most of which were American. These vessels were fishing for mackerel along the shore of Cape Breton.

3. I consider that five hundred barrels of mackerel per vessel each season is about the average catch of the American mackerelers in the Gulf of St. Lawrence. These mackerel are worth, on an average, ten dollars per barrel.

4. The mackerel fishery is variable, being occasionally poor for a year or two, and afterwards becoming excellent again. The mackerel fishery was very good from 1871 to 1874, but poor in 1875 and 1876. I have known these fish to be scarce for a year or two, as they were in 1875 and 1876, and afterwards come in plenty again; and I believe, and my experience teaches me, that the mackerel will be again abundant on our coasts.

5. The Americans catch the mackerel with hook and line, and within the last two or three years they are using purse seines, which, in my opinion, are very injurious to the mackerel fishery. The codfish are caught by the Americans with trawls, which are also very destructive to the fishery.

6. Since the year 1871 the Americans have fished almost altogether within three miles of the shore for mackerel. I believe that the outside fisheries are not to be compared in value to the inshore fisheries on our coasts. The Americans must catch at least one-half the mackerel they get within three miles of the shore.

7. There is no doubt whatever that our inshore boat-fishery is greatly injured by the Americans fishing in our waters, as the latter come in and throw bait and draw away the mackerel from the boat-fishermen.

8. Since 1871 the Americans have been injuring our fisheries very much more than formerly, as they have been allowed to come inshore among our own fishermen.

9. The herring fishery on our coast is altogether an inshore fishery.

10. The food of mackerel is found chiefly inshore, and it is probably close to the shore where they spawn and breed.

11. It is a very great advantage to American fishermen to be allowed to transship their cargoes on our shores. This privilege saves them about two or three weeks on each trip they make to the Gulf of St. Lawrence for mackerel, and this in the best part of the fishing season.

12. The privilege of procuring bait in Canadian waters is, of course, a very great advantage to American cod-fishermen. The greater part of their bait is purchased from our fishermen, and it is cheaper for them to obtain it in that way than to spend the time in catching it themselves. I don't believe that the Americans can profitably carry on the cod fishery of the deep sea without resorting to the shores of Canada or Newfoundland for bait. It is also a great advantage to the American cod-fishermen to be allowed to procure ice on our shores to keep their bait fresh while on their way to the fishing grounds.

13. The privilege of fishing in American waters is, in my opinion, utterly valueless to Canadians; and I have never, in my experience of a quarter of a century, heard of any Canadian vessel fishing in the waters of the United States.

14. I consider that the privilege of transshipping cargoes is worth to American fishermen about 50 per cent. of their catch. The privilege of baiting is also worth a large proportion, probably more than 50 per cent. of the whole catch, to the American cod-fishermen.

PHILIP LEMONTAIS.

The said Philip LeMontais was sworn to the truth of this affidavit at Arichat, in the county of Richmond, on the 3d day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 130.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, CHRISTOPHER SMYTH, of Port Hood, in the county of Inverness, merchant, make oath and say as follows:

1. I have been for the past twenty years engaged in the supplying business, as a clerk in a supplying establishment, and latterly as a merchant, and have had pretty good opportunities of becoming familiar with the general trade of this coast. I have dealt in all kinds of pickled and dry fish to the extent of five thousand dollars annually.

2. During the Reciprocity Treaty I have known over four hundred American vessels fishing in the waters of this coast annually, and no doubt many more fished on other parts of the British American coast that I did not know of. The vessels engaged in the fishing business are of about 60 tons, and the crew numbers about fifteen men. The chief fish taken by the American fishermen are mackerel and codfish.

3. The American vessels usually make about two or three trips during the season, and the cargo of each of these would average something less than three hundred barrels per trip, so far as I am aware. The price of mackerel during and after the Reciprocity Treaty was about \$15.00 per barrel American currency.

4. I have seen American fishermen fishing within three miles of the shore during the Reciprocity Treaty and during the Washington Treaty, but I would not like to state what proportion was caught during the treaty inshore, as I have no accurate means of knowing.

5. American fishing-vessels usually begin to arrive here about May and procure bait for the cod-fishing. In July they come here to begin the mackerel fisheries, and continue until November each year.

6. Port Hood, during the Reciprocity Treaty, was a favorite or general place of resort for American fishing-vessels. They came here for bait, supplies, outfits, and men. I have seen two hundred sail in this port at one time.

7. The catch of mackerel has fallen off somewhat during the past two or three years in this part of the coast, but this has not been owing to any diminution in the number of mackerel actually frequenting our shores; I don't believe there has been any falling off in the quantity of mackerel on our shores; and I believe, according to the best of my

judgment, that there will be as productive yield of mackerel during the coming eight years as for eight years past.

8. It is a great advantage to American fishermen coming to Canadian waters to be allowed to land and dry their nets and cure their fish; and if they had not this privilege, it would largely diminish the profits of their business.

9. I consider the opportunity given to the American fishermen of transshipping cargoes by the Treaty of Washington a great advantage to them. This is not done to any extent at Port Hood, but I am informed that it is done at the Strait of Canso, and I believe that this privilege may become before long a source of great profit to American fishermen, as the fish can be preserved in ice, and forwarded direct to American markets fresh.

10. The American fishermen procure bait for their fisheries in Canadian ports. Latterly, they purchase this, rather than catch it, but the only reason they have for doing this is because it is more convenient and profitable for them to do so. There is nothing to hinder them from taking herring and squid from our inshores if they prefer to do so.

11. In my opinion the Americans could not carry on the cod and other deep-sea fisheries profitably around our coasts if they had not the privilege of procuring bait at our ports. It would put them to great inconvenience, and lessen the number of their trips each year.

12. I would not undertake to estimate the cash value to each American fishing-vessel to enjoy the privilege of our inshore fisheries, and of procuring bait and supplies and transshipping cargoes, but it is very great. And if all these privileges were taken away, I cannot see how American fishermen could continue to prosecute the fisheries around this coast.

13. The privilege of fishing in American waters is of no value whatever to Canadian fishermen. I never heard of any Canadian availing himself of this privilege, nor is there any prospect of such a thing.

CHRISTOPHER SMYTH.

Sworn to at Port Hood, in the county of Inverness, this 20th day of July, A. D. 1877, before me.

D. CAMPBELL, J. P.

No. 131.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN INGHAM BRAND, of Pubnico, in the county of Yarmouth, esquire, make oath and say as follows:

1. I have been engaged in the fisheries twenty-two years; several years on board of American vessels in Canadian waters.

2. About six hundred American vessels, from all ports, are engaged in fishing in Canadian waters; the average number of men is about fourteen. This is within my knowledge the past fifteen years. They fish for mackerel, codfish, and halibut, from Bay de Chaleur to Cape Forchu.

3. As I never was master of a fishing-vessel, I cannot give the average quantity taken by American vessels in Canadian waters.

4. The mackerel on our Nova Scotia shores are improving; herring not so good as in the past. The cod fishing is improved on account of the facilities for bait and ice to keep it fresh.

5. Codfish and halibut are chiefly taken by the Americans with trawls; mackerel by hook and line.

6. The practice of throwing fish offals by American fishermen is general, and the practice is very injurious to our fishery grounds, by bringing in a large quantity of useless fish, such as sharks, dog-fish, &c., and destroys the bait or young fish on which the codfish feed.

7. American vessels have fished close to the shore, before and during the Treaty of Washington, for mackerel, halibut, and codfish.

8. The inshore fisheries are much more valuable than the outside, on account of the privilege of bait.

9. Cannot give any estimate of inshore and outside catch.

10. Know that American fishermen throw large quantities of clams and pogies, ground, to entice the mackerel about their vessels; have assisted myself in doing it. Cannot say how much injury this may do the fishery.

11. Do not know of the American fishermen using seines in Canadian waters.

12. Not in my knowledge that the American fishermen use purse seines in Canadian waters.

13. American fishermen catch bait in nets within three miles of our shores and bays.

14. Halibut and codfish are caught by American fishermen in the inshore waters of Canada. Halibut, codfish, haddock, hake, and pollack are caught inshore by Canadian fishermen.

15. There is a large increase in the quantity of fish taken since 1871, owing to the protection to the river fishery, which causes large quantities of small fish for bait, which brings them to the inshores.

16. Americans having free access to our fisheries, will cause the fish taken by our fishermen to bring a much less price than if they, the Americans, were not allowed the privilege of our shores.

17. The herring fishery in Canadian waters is greater inshore than outside. American fishermen catch herring for bait only; they purchase them for sale most at Newfoundland, a few in Nova Scotia.

18. They Bay de Chaleur mackerel are better than those caught in American waters, and will always command a higher price in the American markets.

19. The food of mackerel is mostly inshore, and is a small species of shrimp called brit, and their principal feeding and breeding places are inshore.

20. It is a great advantage for Americans to land their mackerel, which enables them to make two fares; do not know of any use made of our shores to land and dry nets.

21. It is a great advantage to the Americans to have the privilege of transshipping cargoes of fish in Canadian waters, and enables them to make more trips and catch more fish during the fishing season.

22. It is certainly a great advantage to American fishermen to be able to procure bait in the Canadian inshores; they prefer to buy it when they can, and only fish for it when they cannot buy it.

23. The American fishermen could not carry on their fishery with any profit without having the privilege of Canadian inshores to procure bait.

24. It is a great advantage to the Americans to resort to Canadian inshores for ice to preserve bait and other supplies for their vessels.

25. The privilege of fishing in American waters is of no practical value or advantage to Canadian fishermen.

26. American fishermen could not prosecute their fishery to any advantage without the privilege of procuring bait in Canadian inshore

waters; the value for this privilege would be at least one thousand dollars for each vessel yearly.

27. Do not know that fishing by American vessels hinders the fishing operations of Canadian fishermen.

28. The United States fishermen employ a large number of our men for their crews; the supplies for these men's families are brought by the American vessels and landed at their homes on our shores, on which there is no duty paid.

JOHN INGHAM BRAND.

The foregoing statement is correct, to the best of my knowledge and belief. Sworn before me at Pubnico the second day of August, A. D. 1877.

ENOS GARDNER,
J. P. for County of Yarmouth.

No. 132.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, EDWARD HURTLE, of Lunenburg Town, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for thirty-five years, every year up to the present. I have fished all along the southern coast of Nova Scotia, around Cape Breton, on the eastern side of New Brunswick, around Prince Edward's Island, around the Magdalenes, and on the Labrador coast. I have been personally engaged in the Bank fishery. I am also well acquainted with the inshore fishery in Lunenburg County. I have taken all the kinds of fish found on the above-mentioned coasts.

2. When in the North Bay I have seen many American vessels there engaged in taking mackerel. There were there from four to five hundred, at least, every year. These American vessels carried from twelve to eighteen men. They took, on an average, during each trip, three hundred barrels of mackerel, at least. They made from two to three trips. The most of the mackerel were taken inshore, and, in my opinion, it would not pay to go for mackerel unless they can be taken within three miles of the shore.

3. When in the North Bay, I have seen often from fifteen to twenty American vessels at one time engaged in taking codfish. These vessels carry from ten to thirteen men, and take, on an average, one thousand quintals in a season. The American vessels in the bay take most of their fish with trawls, and I have seen them taking fish around Seaterie by trawling within two miles of the shore.

4. I have seen the Americans, year after year, on the Labrador coast, engaged in taking herring. I have there seen at one time from six to eight American vessels. These vessels take about twenty-four men each, and average at least twenty men. They take both herring and codfish by seining on the shore. These vessels average about two thousand quintals to a vessel.

5. In my experience the mackerel always varied, being some years good and others poor. I have heard that they are very plentiful in the bay this year. The herring fishery has always been good. Three years ago I was half-owner of a schooner which fished out of this port. Three years ago she took twenty-one hundred quintals, the year before last

twenty-two hundred and fifty, last year a thousand. This vessel was out each year about five months and a half, and carried twelve hands each year.

6. About nine years ago the Americans took mackerel mostly with hook and line. They also took some with purse seines. The Americans, ever since I have known them, took codfish with trawls, except on the Labrador coast, and I have known the way in which they carried on the cod fishery for thirty-five years. I have often on the Banks, in a clear day, counted from twenty-five to thirty vessels, most of whom were Americans, engaged trawling. These vessels carried from six to seven thousand hooks each, and threw the gurry of their fish overboard, which is very injurious to the grounds. They also, by trawling, take the mother fish, which is not done to any great extent in hand-lining. It is only within four years that our vessels commenced trawling. They have done so in order to compete with the Americans, and know it is injurious to the fishery. There are at least from thirty to forty vessels engaged in trawling out of Lunenburg County. The Americans take herring inshore with seines.

7. In my experience the Americans took fish wherever they could catch them, whatever the terms of the treaty were. They made off from the shore when a cutter was in sight and returned when she disappeared. I was in the North Bay when the fisheries were protected by a Captain Campbell, in the Devastation, and we then took better fares.

8. In my opinion, the inshore catch of fish is of much greater value than that of those taken outside.

9. I have seen the Americans when they had not the right of fishing inshore throw bait overboard to entice away the fish; when they got the fish outside they commenced taking them.

10. I have seen the Americans catch squid at Canso, Crow Harbor, Cheticamp, and other places within three miles of the shore, for codfish bait. They take this bait in the bays and harbors all along the Canadian coast. The Americans buy herring and mackerel for bait from the Magdalenes to Cape Sable in the bays and harbors of Canada. They buy this bait because it saves time, trouble, and expense. This privilege of getting bait interferes with Canadian bankers.

11. There are large quantities of codfish, halibut, haddock, hake, and pollock taken within three miles of the shore by Canadian fishermen, and thousands of our people depend upon these fish for a livelihood in Canada.

12. The herring fishery in Canadian waters is all inshore. The Americans purchase them early in the season for bait, as already stated.

13. When in the American markets, about twenty years ago, I found that Canadian fall mackerel were much superior to American.

14. The privilege of transshipping cargo is of great advantage to Americans, as by this plan they save time and catch more fish. It is worth at least two thousand dollars to each vessel which does so.

15. The Americans get bait in Canadian waters inshore, and without this bait and ice, which they also get from Canadians, they could not carry on the deep-sea fishery around our coast. The bait must be fresh, and ice is necessary to keep it thus.

16. I have never known nor heard of any Canadian vessels fishing in American waters, and I consider this right of no value.

17. I consider that it would be a great benefit to Canadian fishermen if the Americans were excluded from our inshore waters, and I know of no benefit whatever that we derive from American fishermen.

EDWARD HIRTLE.

Sworn to at Lunenburg, in the county of Lunenburg, this 10th day of August, A. D. 1877, before me.

J. W. LOCKHART,
Justice of the Peace.

No. 133.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, RUFUS RISER, of Rose Bay, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have fished for sixteen years, and have fished around Cape Breton, eastern side of New Brunswick, around Prince Edward's Island, the Magdalenes, and on the coast of Labrador. I have fished mackerel, and took them principally inshore, within three miles of the shore, and it would not have paid us to fish mackerel unless we could get them within three miles of the shore.

2. I have fished codfish on the Labrador coast for the last sixteen years with the exception of a few years. We took the codfish inshore, within three miles of the shore, mostly with hook and line. I have during this time seen American vessels every year on the said coast taking codfish inshore. The Americans take the codfish on the Labrador coast by seining, and throw away the small ones. They take the codfish with seines from the shore, and close up on the shore. I have seen during the past sixteen years, every year that I was on the Labrador coast, of which I was there twelve years, and also this year, and every year for the last six, except last year, the Americans in large numbers taking herring. They take the herring with seines from the shore, and the Americans might as well stay at home if they were not allowed to take the fish inshore.

3. The Americans get bait all along the coast of Nova Scotia in our bays and harbors, and on the Labrador coast; without this bait they could not carry on the deep-sea fishery.

4. The Americans have introduced trawling, and we were compelled to adopt this plan of fishing in order to compete with the Americans. Trawling I consider a great injury to the fishery, as it destroys the mother fish.

5. It would, in my opinion, be a great benefit to Canadian fishermen if the Americans were excluded from our inshore fisheries.

RUFUS RISER.

Sworn to at Rose Bay, in the county of Lunenburg, this 8th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, *J. P.*

No. 134.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington:

I, JOHN MORIEN, of Port Medway, in the county of Queen's, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for the past forty years, down to the present time. I have fished along the southern coast of Nova

Scotia around Cape Breton, on the eastern side of New Brunswick, around Prince Edward Island, around the Magdalenes, on the Canadian coast of Labrador, and am well acquainted with the inshore fisheries along the southern coast of Nova Scotia.

2. When in the North Bay, about eight or nine years ago, I saw large numbers of American mackerelmen. From calculations then made by Nova Scotia fishermen, we concluded that there were upwards of three hundred American vessels in the North Bay. I was in the North Bay the fall in of 1872, and the mackerel were very plentiful. I was about a fortnight ago engaged in fishing on the eastern side of Cape Breton. I was at Gabarus, Louisburg, St. Ann's Ingonish, Bras D'Or, and Smoky Cape, and around Cape North, and I found the fish there very plentiful—the mackerel more plentiful than the oldest inhabitant has any recollection of. The mackerel are of most excellent quality, being very large. Those mackerel are found inshore, within three miles of the shore, and it would not pay any vessel to go to the North Bay unless they could catch mackerel within three miles of the shore.

3. The American vessels make, on an average, two trips when engaged in taking mackerel. The Americans in a good season take, on an average, about three hundred barrels of mackerel to each vessel on each trip. These mackerel vessels carry from ten to twenty hands to each vessel. The American vessels which run into the North Bay take from five hundred to a thousand quintals to each vessel. When on the Cape Breton coast last year I saw an American vessel which took from six to seven hundred quintals of codfish seven miles from Sydney Light, and only changed her ground three times, as I was informed by the American skipper. The Americans take the most of the codfish in the North Bay by trawling. This trawling I consider injurious to the fishery, as it takes all the mother fish. In hand-lining very few mother fish are taken. When on the Canadian coast of Labrador, I saw the Americans take large quantities of codfish inshore, within three miles of the shore.

4. In my experience, the mackerel fishery has always varied, being good for a number of years and again poor. In the falls of seventy-one, seventy-two, and seventy-three, the mackerel were very plentiful. The cod-fishery has generally been good, except when bait is scarce.

5. The Americans formerly carried on the mackerel fishery with hook and line. They now use purse-seines, which I consider very injurious to the mackerel fishery. I saw, four years ago, two large American schooners engaged in taking mackerel at Cape Canso with purse-seines, within a half a mile of the shore. These vessels carried about eight hundred barrels of mackerel each. The Americans now take all their codfish by trawling. The Americans around the Magdalenes and on the Labrador coasts take herring by seining on the shore.

6. The throwing overboard of offal, in my opinion, is injurious to the fishery, as it pollutes the water, gluts the fish, and drives them away.

7. In my experience, the Americans fished inshore whenever they could. They made off shore when a cutter appeared and returned when she disappeared. They lee-bowed us Nova Scotian vessels, weather-bowed us, ran into us, and did nearly what they pleased, and have almost entirely, since 1871, driven our vessels out of the mackerel fishing. When the fishery was protected, and the Americans had not the right of fishing into the shore, our vessels made better fares.

8. In my opinion, the inshore fish are double the value of the off shore catch in Canadian waters.

9. The Americans get bait and ice all along our coast in the bays and harbors. They jig squid in any harbor, cove, and creek, and wherever

they can find them. They buy herring and mackerel. They do so because it saves time and the expense of fitting out their vessels with net. The Americans being allowed to get bait, interfere with our vessels, as they come at a time when herring and mackerel are scarce. Last year an American vessel loaded with halibut inside of the Kettle, between Scaterie and the main-land, and trawl around there for halibut.

10. Since seventy-three the mackerel fell off until this year, when they are very plenty again. On the banks the codfish during the past six years have fallen off to some extent. This the fishermen attribute to too much trawling.

11. The herring fishery is all inshore in Canadian waters, and the Americans catch them for bait, as already stated.

12. I have often heard the Americans say that our fall mackerel is much superior to theirs.

13. The mackerel make inshore to feed. They trim the shore, are taken inshore, and I consider them an inshore fish.

14. I have often seen the Americans transship their cargoes at the Strait of Canso, and in a good season they would save from two to three thousand dollars to each vessel by so doing. By this privilege they save time, expense, and catch more fish. They are enabled to refit and remain constantly on the ground.

15. The Americans get bait and ice in this county in large quantities, and without this bait and ice in which to keep it fresh it would be impossible for the Americans to carry on the deep-sea fishery. When the Americans come on to our coast they make every effort to get bait, and ice in which to keep it fresh, because they say that without this bait and ice they could catch no fish.

16. I have never known nor heard of any Canadian vessel fishing in American waters, and I consider this right to be of no value to Canadian fishermen.

17. Such large numbers of Americans carry off great quantities of fish and make them scarce for our fishermen. They injure our grounds by throwing overboard large quantities of offal, and by trawling. They interfere with our supply of ice and bait.

18. It would be a great benefit, in my opinion, if the Americans were excluded from our fishing grounds, particularly our inshore fisheries.

JOHN MORIEN.

Sworn to at Port Medway, in the county of Queen's, this 14th day of August, A. D. 1877, before me.

E. C. SEELY, J. P.

No. 135.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN SMELTZER, of Lunenburg Town, in the county of Lunenburg, master mariner, make oath and say as follows:

1. I have been engaged in the fisheries for about thirty-five years; for twenty-seven years I have fished as master in a vessel of my own with eleven hands. I have fished along the coast of Nova Scotia, eastern side of Cape Breton, around Prince Edward Island, and in the Bay of Chaleurs, on the east coast of New Brunswick, and have been Bank fishing, and am at present well acquainted with the inshore fishery in Lunenburg County. I have fished mackerel, herring, codfish, halibut, hake, haddock, and pollock.

2. About eleven years ago, when in the Bay of Chaleurs, I saw in Malpeque Harbor, Prince Edward Island, about seventy sail at one time, all American fishing vessels. Last fall I saw around Port Hood about seventy sail of American vessels at one time. American mackerelmen average about fifteen men. I have seen as many as thirty men in one American mackerelman. American codfishmen carry from twelve to twenty men. Mostly all the mackerel is taken inshore, and I would not give a pin for all taken outside of three miles.

3. The Americans averaged about from five to six hundred barrels of mackerel in the season to each vessel. American cod-fishermen take from one to three thousand quintals to each vessel. American mackerelmen make about three trips, cod-fishermen the same.

4. Mackerel, in my experience, have often varied. About fifteen years ago they were very scarce; since that time they have often been plenty. Some years they strike in very plenty; other years they are scarce, and this is my experience for forty years. Herring fishery remains about the same. Codfish can always be had if bait is plenty.

5. Americans take mackerel inshore mostly with hook and line; and I have seen Americans within three miles of the shore at Cascumpec, Prince Edward Island, use purse seines, about eleven years ago. The Americans carry on cod and halibut fishing mostly by trawling, some with hook and line.

6. The Americans throw overboard the offal of the fish when codfishing, and particularly the sound bone, which is very injurious to the fish and fishing-ground, and I have myself caught large codfish with the sound bone in them, and they were reduced to mere skeletons.

7. The Americans, in my experience, always fished inshore when they could for mackerel. I have seen them fish in so close to the shore that their vessels grounded. When a cutter hove in sight they got away as quickly as they could, and came inshore again whenever the cutter was out of sight. Out of Lunenburg County, about fifteen years ago, there were from thirty to forty vessels engaged in mackerel-fishing, and when this fishery was protected by cutters our vessels made good fares. Since the Americans have been admitted to the inshore fishery our vessels have done very poorly.

8. The inshore fisheries are of much greater value than the outside fisheries. The inshore fisheries are worth four times that of the outside fisheries.

9. About fifteen years ago I have seen American vessels fishing for mackerel in the back harbor of Lunenburg, and I have baited an American vessel in this harbor about five years ago. Other parties have often baited American vessels in the harbor. The Americans mostly purchase the bait they get, in order to save time.

10. In the North Bay I have seen Americans catch codfish inshore, and large quantities of codfish are taken inshore by Canadian fishermen, and also halibut.

11. Since 1871 fish have fallen off somewhat. This, I think, is owing to the large number of Americans who visit our shores to take fish.

12. The herring fishery is all inshore, and the Americans buy them from our fishermen in order to save time, as also do the vessels which we fit out ourselves in order to save time.

13. The run of mackerel is sometimes of better quality than at others. When our run of mackerel is good it cannot be beaten, and three falls ago I was in Boston market with our mackerel, and it was much superior to any mackerel which I there saw.

14. Mackerel follow the shrimp inshore, and spawn inshore in the bays and harbors around our coasts.

15. About Canso I have often seen Americans land and dry their nets. This privilege I consider of great value to them, as it enables them to carry on the inshore net fishery.

16. I have seen Americans transship their cargo at Canso, and by so doing they save a great deal of time, and catch more fish. They save from two to three weeks in the best of the season.

17. If the Americans could not procure bait inshore from Canadian fishermen, and ice in which to pack it, they could not carry on, in my opinion, the Bank fishing with success, and they buy bait, as already stated, in order to save time. They could not preserve their bait without ice, and they get ice along the coast near where they get bait.

18. I do not know nor have I ever heard of any Canadian vessels fishing in American waters, and I consider this privilege of no value.

19. In fitting out vessels, which I have often done, the Americans make bait and ice scarce because of the larger quantities of herring and mackerel they take away before these fish become plenty, and thus hinder our fishing-vessels. They make the fish scarce for our inshore fishermen.

20. In my opinion our fisheries would be more than double their present value to us if the Americans were excluded.

JOHN SMELTZER.

Sworn to at Lunenburg, in the county of Lunenburg, this 4th day of August, A. D. 1877, before me.

JOSEPH W. LOCKHART, *J. P.*

No. 136.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ELIAS RICHARDS, of Getson's Cove, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have been fishing for the last thirty years continuously. I have fished along the southern coast of Nova Scotia, around Prince Edward Island, around the Magdelenes, and along the Canadian coast of Labrador. I have taken all the kinds of fish found on the above-mentioned coasts. I am also well acquainted with the inshore fishery in Lunenburg County. I have also been engaged in banking fishing to a large extent.

2. For twenty-four falls I fished in the North Bay successively, except one or two falls, down to the fall of seventy-five, inclusive, for mackerel. I have seen in the North Bay, at one time together, over four hundred American mackerel-vessels in Malpeque, and in Port Hood; in Malpeque there were so many that I could not anchor, and ran ashore. During the past five or six years I was in the North Bay I have seen from 200 to 300 American mackerelmen, and every fall I was there it was quite common to count from one hundred to one hundred and fifty American vessels from the deck of our schooner. There were many there which I did not see. These vessels took the most of their mackerel within three miles of the shore, sometimes close into the shore, and it would not pay vessels to go into the North Bay to fish mackerel unless they could take them within three miles of the shore.

3. These American mackerelmen carry from twelve to twenty-two

hands to each vessel. In a good season one of the larger vessels usually takes from five to six hundred barrels. These vessels make from two to three trips.

4. Every year down to seventy-seven I have seen many American codfish-vessels in the North Bay taking codfish. They have increased every year, and this year I have seen more than ever before. These codfish-vessels carry from ten to fourteen men. These vessels take from five to six hundred quintals of fish to each vessel, and make about two trips. These American vessels fished in among the boats and wherever they could catch fish.

5. On the Labrador coast I have seen Americans seine codfish close in on the shore, and have seen engaged there four at one time.

6. Around the Magdalenes I have seen the Americans take herring all inshore. I have seen there at one time from sixty to seventy vessels at one time. These vessels carry from eight to ten men each, and take from nine hundred to ten hundred barrels each.

7. In my experience, mackerel have varied, being some years plenty and others scarce. The herring fishery seldom varies, being mostly always good. The codfish has fallen off some.

8. In former years the Americans took mackerel with hook and line; they now take large quantities with purse seines. They take nearly all the codfish by trawling. Most of the American codfish-vessels carry seven thousand hooks each.

9. The Americans throw overboard the "gurry," which is an injury to the fishery, as it gluts the fish and drives them away. Trawling I consider injurious to the fishery, as it takes the mother fish, which are full of spawn. In hand-lining few mother fish are taken. The Americans have made a habit of throwing overboard the small fish, and an American skipper told me last summer that of forty-five quintals or upwards, which he took upon his trawls, he only saved from fifteen to eighteen quintals; the remainder he threw away.

10. In my experience the Americans fished inshore whenever they could, whatever the conditions of the treaty were. They made off when a cutter appeared and returned when she disappeared.

11. The value of the inshore catch in Canadian waters is more, in my opinion, than double the offshore catch, in value.

12. Nearly all the Americans carry purse seines, which I consider a very bad way of taking mackerel. I have never seen nor heard of any Canadian vessel using a purse seine.

13. I have seen the Americans catch squid for bait in the Canadian bays and harbors, within three miles of the shore. I have seen them catch these squid at the Strait of Canso, and at Crow Harbor, and other places. The Americans buy herring and mackerel all along our coast from Cape Sable to Labrador, wherever they can get it, and ice in which to keep it fresh. This privilege of getting ice and bait accorded to the Americans interferes with Canadian bankers, making bait and ice dearer and scarcer.

14. The Americans buy bait in order to save time and expense, and without this bait, and ice in which to keep it fresh, they could not carry on the deep-sea fishery.

15. The Americans, since 1871, have injured the Canadian fisheries by taking great quantities of fish, by improper methods of fishing, and by interfering with the supply of ice and bait.

16. The mackerel feed, to a considerable extent, on shrimps found inshore, they spawn inshore, and are an inshore fish.

17. The privilege accorded to the Americans of taking fish and trans

shipping them, saves them time and expense, and enables them to take more fish.

18. I have never known nor heard of any Canadian vessel fishing in American waters, and I consider this right of no value.

19. I consider that it would be a great benefit to Canadian fishermen if the Americans were excluded from our inshore fisheries, and I know of no benefit which we derive from the American fishermen.

ELIAS RICHARDS.

Sworn to at Getson's Cove, in the county of Lunenburg, this 11th day of August, A. D. 1877, before me.

JOSEPH W. LOCKHART, *J. P.*

No. 137.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES GETSON, of Getson's Cove, in the county of Lunenburg, fisherman, make oath and say as follows :

1. I have fished from twelve to fourteen years along the southern coast of Nova Scotia, around Cape Breton, eastern side of New Brunswick, around Prince Edward Island, around the Magdalenes, on the Canadian coast of Labrador, and on the Banks, and am well acquainted with the inshore fisheries in Lunenburg County. I have taken all the kinds of fish found on the above-mentioned coasts.

2. I have fished this summer and last around Prince Edward Island and the Magdalenes, and on Bank Bradley; and I saw there many American vessels, some engaged in taking mackerel, and others engaged in taking codfish. Last summer I saw as many as fifteen at one time fishing together day after day. I saw during last summer as many as two hundred. These I saw before the middle of August. These American mackerelmen carry from fourteen to twenty men to each vessel. Four years ago, when fishing in the North Bay, I have seen over four hundred American mackerel-vessels in a fortnight; and I have, along with other fishermen, put the number of American vessels down at from five to six hundred. These vessels catch the most of their mackerel inshore, within three miles of the shore; and in my opinion it would not pay to fish mackerel unless they were taken within three miles of the shore.

3. Last summer and this summer I saw large numbers of American codfish vessels around Prince Edward Island and the Magdalenes. I saw last summer often from twenty to twenty-five in a day engaged in taking codfish. The Americans take all their fish in the North Bay by trawling. Very few Canadian vessels take fish in the North Bay by trawling; they use mostly hook and line. I consider trawling a very injurious method of taking fish, as it destroys the mother fish. The Americans carry from eight to ten thousand hooks on their trawls to each vessel. By trawling the bait lies on the bottom, and the big fish take it; this is not the case in hand-lining.

4. The American codfish vessels carry about fourteen men on each vessel, and take about six hundred quintals on each trip. They make three trips.

5. I fished in the North Bay for mackerel when the fisheries were protected, and our vessels did better than when they were not protected, and took more fish. The Americans fished inshore at that time to a

large extent, they made off when a cutter appeared, and returned when she disappeared. I saw several American vessels seized when I was there during the protection time. The Americans made a practice of running into us, and their vessels were stronger and more numerous than ours, being built of oak.

6. The Americans get bait and ice along the coast from Cape Sable to Labrador, and without this they could not carry on successfully the Bank fishery.

JAMES GETSON.

Sworn to at Getson's Cove, in the county of Lunenburg, this 9th day of August, A. D. 1877, before me.

JOSEPH W. LOCKHART, *J. P.*

No. 138.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES PUBLICOVER, of New Dublin, in the county of Lunenburg, fisherman, make oath and say as follows :

1. I have been engaged in the fishing for thirty-five years down to 1871 inclusive. I have fished all along the southern side of Nova Scotia, around Cape Breton, on the eastern side of New Brunswick, around Prince Edward Island, around the Magdalenes, and on the Labrador coast. I have taken all the fish found on the above-mentioned coasts.

2. Between eight and ten years ago I have seen in Port Hood Harbor, at one time, eight hundred sail, of which number over seven hundred were Americans. I would be safe in saying that there were over a thousand sail engaged in taking mackerel in one season in the North Bay. Some years I have seen more and some less. These vessels took mostly all the mackerel inshore.

3. These American vessels carry from twelve to twenty-two hands. They took from four to five hundred barrels of mackerel to each vessel, on each trip. Ran into the Strait of Canso, landed their fish, refitted and went out again. They came in again and took a full cargo for home, often fifteen hundred barrels. They generally made two trips, sometimes three. When in the cod fishery in the North Bay, I have seen many Americans also taking codfish. These codfish vessels carried from ten to twelve men, and took from six to eight hundred quintals.

4. When in the North Bay the fisheries were protected by cutters for some time. The Americans fished inshore when the cutters were out of sight, and made off when a cutter appeared. This was always my experience. I have seen two American vessels made prizes of by a cutter.

5. The inshore fisheries in Canadian waters, within three miles of the shore, are of more value than the off-shore fishery. I would say more than double.

6. Our Canadian fishermen catch codfish in large quantities around the coast within three miles, also halibut. I have seen many American vessels take codfish on the Labrador coast within three miles of the shore by seining.

7. For twelve to fifteen years I have taken mackerel in the North Bay, and in my experience they varied in quantity and quality, being some years good and others poor. Mackerel schools have struck into this harbor this year pretty plentifully.

8. The herring fishery in Canadian waters is all inshore, and they are

taken all inshore. The Americans buy these herring for bait all along the coast; by buying they save time and expense.

9. I have never known or heard of any Canadian vessels going into American waters to take fish, nor do I know of any benefit to Canadians from this right.

10. I have seen Americans running into harbors in Cape Breton and Prince Edward Island to cure fish. When a gale of wind comes on they do this.

11. I have often seen the Americans transshipping their cargoes at the Strait of Canso; by so doing they save time and expense and take more fish.

12. It is a great advantage to the Americans to get bait and ice along the Canadian coast, and this they do from Cape Sable to Labrador and wherever they can. Without this bait, and ice in which to preserve it, they could catch no fish.

13. When in the North Bay I have often been lee-bowed by American vessels, and I have seen them running into Nova Scotian vessels.

14. If the Americans were shut out from our inshore fisheries it would be of great benefit to Canadian fishermen, and I know of no benefit that we derive from American fishermen.

JAMES PUBLICOVER.

Sworn to at New Dublin, in the county of Lunenburg, this 9th day of August, A. D. 1877, before me.

BENJ. RYNARD, *J. P.*

No. 139.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DONALD MCDUGALL, of Main-a-Dieu, in the county of Cape Breton, merchant, make oath and say as follows:

1. I have been engaged in the buying and selling of fish for twenty-five years, and am well acquainted with the fisheries as carried on here, and am well acquainted with the fishermen from Big Lorraine to Miri Bay, and have done business with American fishermen.

2. The fish taken in this vicinity during the past twenty-five years has been codfish, mackerel, herring, halibut, and salmon. Formerly halibut was very plentiful, so much so that our inshore fishermen could always catch a fare, but since the Americans came here trawling for them they have almost disappeared. The best halibut grounds are within three miles of the shore, and on these grounds the Americans trawled. Our fishermen never trawled for halibut.

3. In this vicinity there are taken annually from five to six hundred barrels of mackerel, and are not quite so plentiful as they have been ten or fifteen years ago. There are taken in this vicinity about a thousand barrels of herring. On average there is taken about from seven to eight thousand quintals of codfish. The most of the people in this vicinity depend upon the fishing, which they carry on in small boats inshore.

4. The Americans have always been on this coast, year after year, fishing mackerel. The Americans come inshore and fish mackerel, and diminish the catch for our inshore fishermen. The Americans purchase herring for bait very generally, and then go out on the banks to fish codfish. The Americans around here have fished inshore for codfish and halibut.

5. The Americans trawl on Scaterie Bank for codfish. They trawl to the bottom and catch the mother fish, which are full of spawn. They dress their fish on the fishing grounds, throwing overboard the offal, which is very injurious to the fish, the sound bone killing many large fish.

6. The practices of the Americans tend to injure the inshore fishery very much.

7. Mackerel run inshore to feed and spawn, and our fishermen take them inshore. Americans have taken mackerel all round our coast, and have at one time transshipped mackerel in this port. This privilege saves fish and enables them to make a larger catch.

8. The Americans get ice and bait in harbors round our shores, and without ice and bait they would be unable to make successful voyages.

9. I have never known nor heard of any Canadian vessels fishing in American waters, and know of no benefit they can derive from so doing.

10. The large number of American vessels fishing in Canadian waters must diminish the catch.

11. If Americans were excluded from our waters, I have no doubt but it would be a general benefit to Canadian fishermen.

DONALD McDOUGALL.

Sworn to at Main-a-Dieu, in the county of Cape Breton, this 28th day of July, before me.

GEO. RIGBY, J. P.

No. 140.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN BAGNALL, of Gabarus, in the county of Cape Breton, at present of Louisburg, in the county aforesaid, fisherman, make oath and say as follows:

1. I have been engaged for about fifty years in the inshore fisheries, in and around Gabarus Bay, in the county aforesaid, and have taken mackerel, codfish, herring, and halibut, and am well acquainted with the manner in which the inshore fishery is there conducted.

2. About six or seven years ago there were some American fishing-vessels in Gabarus Bay. During the past five or six years they have purchased bait in small quantities in Gabarus Bay.

3. Mackerel and halibut are taken in Gabarus Bay. Codfish and herring are taken in large quantities. Three years ago about three hundred barrels of mackerel were taken in this bay, and there are about one hundred boats fishing around the bay, and this summer these boats have taken from eight to sixty barrels in each boat. In Gabarus Bay there are from six to seven thousand quintals of codfish taken yearly. All this fish is taken in boats. To the people around Gabarus Bay these fisheries are of great value.

4. The mackerel and herring are inshore fish, and are mostly all taken inshore. Three-fourths of the mackerel and herring is inshore.

I am to-day at Louisburg, but reside and fish at Gabarus.

JOHN BAGNALL.

Sworn to at Louisburg this 26th day of July, in the county of Cape Breton, before me,

PATRICK O'TOOLE

J. P. for and in the County of Cape Breton.

No. 141.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PETER BOSDET, of West Arichat, in the county of Richmond and province of Nova Scotia, merchant, make oath and say as follows :

1. During the past thirty-two years I have been engaged in the fishing trade, and my acquaintance with the fisheries on our coasts extends over that period.

2. The herring fishery is about the same as it has been in the past. The mackerel vary from year to year. From 1871 to 1874 the mackerel were plenty, but they were scarce in 1875 and 1876. I believe that the scarcity of 1875 and 1876 will not, however, be permanent.

3. The use of trawls and the throwing overboard of offal are both very injurious to the cod fishery. Both these practices tend to drive away the fish from their usual haunts.

4. The herring fishery is altogether inshore, that is, within three miles of the shore, and the greater part of the mackerel are caught within the same distance. I consider that the inshore fisheries are of much greater value than those outside.

5. I am strongly of opinion that the inshore boat fishery on our coasts has been greatly injured by the Americans baiting the fish and drawing them away from the boats. I refer only to the mackerel in making this statement in this paragraph.

6. I consider that it is a great benefit to the Americans to be allowed to land and dry their nets and cure their fish on our coasts. The privilege of transshipping cargoes is also a great advantage to American mackerelers, and they can of course make more trips and catch more fish than they otherwise could, and by this means, I believe, that they can make three trips to the fishing-grounds in the same time in which they could otherwise make two. The privilege of getting bait on our shores is also a vast advantage to American codfishermen who indeed could not profitably carry on the codfishery without this privilege. The procuring of ice on our shores is also essential to the codfishermen, as without this they cannot keep their bait fresh.

7. The privilege of fishing in American waters is of no practical advantage whatever to Canadians, and I never heard of Canadians availing themselves at any time of such privilege.

8. I consider that the Canadian boat fishermen could carry on their fishery more profitably and successfully if the Americans were excluded from within the three-mile limit.

P. BOSDET.

The said Peter Bosdet was sworn to the truth of this affidavit, at West Arichat, in the county of Richmond, this 2d day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 142.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, FRANCIS MARNEAN, of Arichat, in the county of Richmond and province of Nova Scotia, merchant, make oath and say as follows :

1. I have resided here for about sixty years, and have a good knowledge of the fishing-business, and of the fisheries on this coast.

2. The American cod-fishermen, in my opinion, cannot profitably carry on the cod fishery without procuring bait on the shores of Canada or Newfoundland, and I believe that the privilege of procuring ice on our shores is also an advantage to the American cod-fishermen.

3. I do not think that the privilege of fishing in United States waters is of any advantage to Canadians, and I never heard of Canadians fishing in American waters.

4. I believe that our fishermen could carry on the inshore fishery on our coasts, especially the mackerel fishery, very much more successfully if the Americans were excluded from our inshore waters.

F. MARMEAN.

The said Francis Marmean was sworn to the truth of this affidavit at Arichat, in the county of Richmond, on the 4th day of August, A. D. 1877, before me.

ISIDORE LEBLANC,
A Justice of the Peace.

No. 143.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DAVID GROUCHY, of Descousse, in the County of Richmond, and Province of Nova Scotia, merchant, make oath and say as follows:

1. I have been engaged in the fish trade during the past thirty-three years, and have dealt in codfish, haddock, mackerel, and herrings.

2. I consider the inshore mackerel and herring fisheries to be of very much greater value than those outside. The herring fishery is almost altogether inshore, and I believe that the greater portion of the mackerel are caught within three miles of the shore.

3. From my experience in the fishing business I have no hesitation whatever in saying that it would be far better for Canadians to have their inshore fisheries kept to themselves. Even if the American Government should put heavy duties on our fish, I do not believe that the Americans can give us any adequate compensation for our fisheries, and I believe that it is almost impossible to estimate too highly the value of Canadian fisheries.

4. The mackerel caught in the Gulf of St. Lawrence, are, in my opinion, equal to any in the world. I believe that the reason why American mackerel bring better prices is that they are better handled and put up.

5. Around this coast the food of the mackerel is principally inshore.

6. The privilege of transshipping cargoes is of great advantage to the American fishermen as they are thereby enabled to make more trips and consequently catch more fish than they otherwise could.

7. The privilege of procuring bait on our shores is of great value to the American cod-fishermen, who could not profitably carry on the cod-fishery of the deep sea without this privilege. They also procure ice on our shores to preserve their bait fresh, and without this means of preserving the bait it could not be kept fresh for more than two or three days.

8. It is of no value whatever to Canadians to be allowed to fish in American waters. I have never heard of Canadians availing themselves of the privilege of so doing.

9. I consider the privilege of transshipping cargoes and procuring bait on our shores is worth at least 50 per cent. of their catch to American fishermen.

D. GROUCHY.

The said David Grouchy was sworn to the truth of this affidavit at Descousse, in the county of Richmond, on the 1st day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 144.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ISIDORE LEBLANC, of Arichat, in the county of Richmond and province of Nova Scotia, merchant, make oath and say as follows:

1. During the past two years I have been engaged in the fish-trade, and for twenty years previous thereto I was a master-mariner, and I have a good knowledge of the fisheries around the coast of Canada.

2. Formerly the mackerel were caught altogether with hook and line, but of late years the Americans are using purse-seines in this fishery. The codfish are principally caught with trawls, and the herring with nets and seines. I believe that the cod fishery is being injured by the use of trawls and by the throwing overboard of offal.

3. The American fishermen have fished inside of the three-mile limit whenever they could get the chance. I myself have seen the Americans fishing inside of the three-mile limit after the Reciprocity Treaty, and whenever the government cutters were not in sight.

4. The inshore mackerel and herring fisheries are worth more than the outside fisheries, in my opinion. The greater portion of the mackerel is caught within three miles of the shore, and almost all the herring within that distance. The inshore mackerel fishery is greatly injured by the Americans coming in and throwing bait, and enticing the fish away from the shore fishermen.

5. Both Canadian and American fishermen catch codfish, haddock, hake, and halibut to some extent on our shores.

6. I believe that the mackerel caught in Canadian waters are better than those caught in United States waters.

7. It is a great advantage to the Americans to be allowed to land and dry their nets and cure their fish on our shores. The privilege of transshipping cargoes is also of very great value to the American fishermen, as it enables them to catch more fish by making more trips than they otherwise could. When the mackerel are plenty the Americans can, by means of transshipping cargoes, make two trips to the Gulf of St. Lawrence in the time it would otherwise take them to make one.

8. The American cod fishermen cannot profitably carry on the deep-sea cod fishery without procuring bait on the shores of Canada or Newfoundland.

9. The privilege of fishing in American waters is, in my opinion, of no value whatever to Canadians, and I never heard of any Canadian vessel making a voyage for fishing purposes to American waters.

10. The fishing operations of Canadians are considerably hindered by the Americans fishing in our inshore waters, as they entice away the fish and lessen the inshore catch of our fishermen.

11. The greater part of the bait that the Americans procure on our shores they purchase from our fishermen, but they catch part of it in our inshore waters. This summer I saw an American vessel setting nets for herring in Arichat Harbor.

ISIDORE LEBLANC.

The said Isidore Le Blanc was sworn to the truth of this affidavit at Arichat, in the county of Richmond, on the fourth day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 145.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, BRYAN MURPHY, of Port Hood, in the county of Inverness, fisherman and trader, make oath and say as follows:

1. For thirty-five years past I have been actively engaged in the fishing business as a practical fisherman, and during that time I have made trips on board American fishing-vessels, and I have generally been familiar with the fishing business on this coast for all that time.

2. I have known some years as many as seven hundred American vessels fishing in the gulf and the shores around Nova Scotia, Cape Breton, and the Magdalene Islands. I have seen during the Reciprocity Treaty as many as four or five hundred American fishing-vessels in the harbor of Port Hood at one time.

3. The American fishermen catch codfish and mackerel principally in great numbers, and herring, haddock, hake, and halibut in smaller quantities. The American fleet begins to arrive on our grounds about the first of May for the cod-fishing. Then in July they begin the mackerel fishing, and they keep up their fishing operations till into November. They averaged three trips a season under the Reciprocity Treaty, and each vessel took on an average three hundred barrels mackerel, worth \$15 per barrel. The average cargo of codfish was about one thousand quintals, although I have been engaged on board of an American vessel which took fifteen hundred quintals for a cargo. The cargo was worth from \$4 to \$5 per quintal.

4. After the Reciprocity Treaty the American fishing-fleet fell off very much, and the catch was less and the trips fewer for the season, and the profits were very much less. Since the Washington Treaty the American vessels and fishermen are beginning to come back here, and I believe if the Americans do not ruin the grounds and destroy the fisheries that there will soon be as many of them here as during the Reciprocity Treaty. I know of as many as seventy or eighty American vessels that have baited here this season already.

5. During the Reciprocity Treaty I believe that at least two thirds of all the fish taken by the Americans on the coast of British North America were taken inshore. The inshore grounds are always considered the most valuable for fishing in, and often enough have I heard the American fishermen say so. Since the Treaty of Washington and now the Americans catch two-thirds of their fish within three miles of the shore. All bait is got inshore, and in autumn particularly the mackerel cluster near the shore, and it is there they are chiefly caught.

6. I am aware of American fishermen using purse-seines in the mackerel fishery, and there is no doubt it is very destructive to our grounds

Great hauls are made, more than can be saved, and they are killed and allowed to run out. I have seen acres of the grounds filled with dead fish, which, being small, the Americans throw overboard. And it is to this practice of the Americans that I attribute the falling off during the past year or two of the mackerel catch. There are as many fish as ever, but they are glutted, and will not bite as formerly they did.

7. I do not know as I could fix the value of the advantage derived by each American fishing-vessel in being allowed to fish inshore, and get bait and supplies from our ports, but I do not believe they could carry on fishing at all with any kind of profit without these privileges. If they could not bait in Canadian waters it would be impossible for them to carry on cod-fishing on this coast.

8. I know of no advantage which Canadian fishermen derive from the privilege of fishing in American waters. The privilege is absolutely worthless. No Canadian fisherman avails himself of the privilege. I never heard of such a thing. Our fisheries are much richer and more productive than the American grounds, and the Americans are always saying so.

9. If our fishermen had exclusive use of our own grounds, and were not interfered with by American fishermen, we could double of catch every year, and make much greater profits out of our efforts. We should also be able to preserve our grounds, which are being injured every year by American fishermen, not by destroying the fish, which are as abundant as ever, but by preventing the catch by their system of baiting and throwing offal overboard.

his
BRYAN + MURPHY.
mark.

Sworn to at Port Hood, in the county of Inverness, this 23d day of July, A. D. 1877, before me, having first read and explained.

A. MACDONALD, J. P.

No. 146.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, SIMON FERRIS, of West Arichat, in the county of Richmond, and Province of Nova Scotia, merchant, make oath and say as follows :

1. I have been a practical fisherman for nine years of my life and during the past three years I have been engaged in the fish trade, so that my experience of the fishery extends over a period of twelve years.

2. I estimate that about one hundred and fifty American vessels yearly touch at the island of Madame for bait and other supplies.

3. I believe that the American fishermen have injured our fishery since 1871 by the use of purse seines, which, in my opinion, are very injurious to the fishery, as they tend to break up the schools and drive the fish away.

4. The herring are all caught within three miles of the shore, and on this coast all the mackerel are caught within the same distance from the shore.

5. The best mackerel in the market are caught in Canadian waters in the Gulf of St. Lawrence. All the best of the mackerel called "American mackerel" are, in reality, caught in Canadian waters.

6. The privilege of landing and drying nets and curing fish on our

shores is, in my opinion, a great advantage to the American fishermen, as is also the privilege of transshipping cargoes of mackerel.

7. The American cod-fishermen cannot possibly carry on the cod fishery successfully or profitably without procuring bait on Canadian or Newfoundland shores. It is also essential to their fishery for them to procure ice on our shores.

8. The privilege of fishing in American waters is, in my opinion, worth not a cent to Canadians, and I never heard of Canadian vessels fishing in American waters.

9. The American cod-fishermen call about twice each season on our shores for bait, and each trip they take about twenty-five barrels of bait by purchase from our fishermen. They find it cheaper to buy it than to catch it themselves.

SIMON FERRIS.

The said Simon Ferris was sworn to the truth of this affidavit, at West Arichat, in the county of Richmond, this 2d day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 147.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM CRICHTON, of West Arichat, in the county of Richmond, and Province of Nova Scotia, gentleman, make oath and say as follows:

1. I have been engaged in the fishery business for about fifty years up to about 1870, and I have a good acquaintance with the fisheries on our coast up to the present time.

2. I am of opinion that the inshore fisheries are of much greater value than those outside. The herring fishery on our coasts is altogether an inshore fishery. I believe that on our coasts the greater portion of the mackerel are taken inshore.

3. I believe that our inshore boat-fishery is greatly injured by the Americans coming in and baiting the mackerel, and drawing them off shore. I am of opinion, also, that the mackerel fishery will be seriously injured by the practice of seining followed by Americans, if this practice is allowed to be carried on.

4. I am of opinion that the mackerel caught in Canadian waters are, at least, as good as those caught in United States waters, and that any difference of price in favor of American mackerel is owing to the American mackerel being better handled and put up than Canadian mackerel, and put into the market fresher.

5. I consider it a very great advantage to American fishermen to be allowed to land and dry their nets and cure their fish. The transshipment of cargoes is also a great advantage to the American mackerelers, who are by this means enabled to make more trips and catch more fish than they could otherwise do.

6. It is my belief that the American cod-fishermen cannot profitably carry on the cod-fishery without the privilege of procuring bait on the shores of Canada and Newfoundland. It is also a great advantage to them to be allowed to procure ice on our shores to keep their bait fresh. They purchase the greater part of their bait from our fishermen as it is

very much cheaper for them to do so than to spend the time in catching it themselves.

7. The privilege of fishing in American waters is of no practical advantage whatever to Canadians, and I never heard of Canadian vessels fishing in American waters.

8. The catch of our inshore boat fishermen is no doubt much lessened by the Americans fishing within our waters, and I believe that our shore fishermen could carry on their fishery much more successfully if the Americans were excluded from our waters. I believe that it would be better for our fishermen to have the Americans excluded from the three-mile limit even if the American Government should put a duty on our fish.

WILLIAM CRICHTON.

The said William Crichton was sworn to the truth of this affidavit at West Arichat, in the county of Richmond, this — day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 148.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ISAAC LEVESCONTE, of Arichat, in the county of Richmond and Province of Nova Scotia, merchant, make oath and say as follows :

1. I have dealt more or less in fish for thirty-five years of my life, up to about the year 1869.

2. Our herring and mackerel fisheries are mostly carried on inshore, and the inshore fishery of herring and mackerel on our coasts is of far greater value than those fisheries outside the three miles from the shore. The herring fishery is almost altogether inshore, and I believe that the greater portion of the mackerel is caught inshore.

3. The opportunity of transshipping cargoes enjoyed by American fishermen, is of course a great advantage to them. It enables them to make at least one extra trip each season, and by means of this privilege they can of course make a greater number of trips and catch more fish than they could otherwise do.

4. The privilege of procuring bait on the shores of Canada and Newfoundland is very valuable to the American cod-fishermen, and I do not know how they could profitably carry on the deep-sea cod-fishery without this privilege. It is also a great advantage to their cod-fishermen to procure ice on our coasts for the purposes of keeping their bait fresh.

5. I do not believe that the privilege of fishing in American waters is of any value whatever to Canadian fishermen, nor have I ever heard of Canadian vessels fishing in United States waters.

6. There is no doubt whatever that Canadian fishermen would be very much more successful if the Americans were excluded effectually from our inshore waters. I remember that shortly before the Reciprocity Treaty our fishery was pretty effectually protected for one year by British and Provincial Government vessels, and our inshore fishermen did better that year than they had done for some time before, and better than they have ever done since.

ISAAC LEVESCONTE.

The said Isaac Levesconte was sworn to the truth of this affidavit at Arichat, in the county of Richmond, this 4th day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 149.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM WENTZEL, of Moose Harbor, in the county of Queen's, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for about forty years. For the last ten years solely in the inshore fisheries in Queen's County.

2. In my experience, large numbers of American vessels run into this harbor for bait—about two hundred a year; and have done so for about ten years each year. They get ice in this harbor in which to preserve this bait. The Americans say it is a great benefit to them to get this bait and ice, and they could not carry on successfully the Bank fishing without it.

3. ———, of ———, McIntosh, skipper, came in here and baited, and in one fortnight got his trip of halibut, landed the same in Boston, and was back here for his second baiting all in one fortnight, and left here last night on another trip, which is his third trip this season.

WILLIAM WENTZEL.

Sworn to at Moose Harbor, in the county of Queen's, this 16th day of August, A. D. 1877, before me.

S. T. N. SELLOX,
Justice of the Peace.

No. 150.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PARDON GARDNER, of Port Mouton, in the county of Queen's, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for thirty-six years, all in the inshore fisheries, and am well acquainted with the inshore fisheries in Queen's County for the said time.

2. During the past twelve years many American vessels have been here for bait and they have got ice here in which to preserve it. During the last six years as many as between twenty to thirty vessels ran here for bait yearly. They run here from March till November. The Americans say it is of great benefit to them to be able to procure bait; without this bait it would be impossible for them to catch fish. These vessels take from eighteen to twenty-five barrels of bait each. The Americans buy this bait in order to save time and expense.

3. The codfish vessels run out and come in again about every two or three weeks, and this they do about three times until they get a full fare on the banks off this coast from fifteen to twenty miles. The Americans take the codfish principally by trawling.

PARDON GARDNER.

Sworn to at Port Mouton, in the county of Queen's, this 17th day of August, A. D. 1877, before me.

S. T. N. SELLON, *J. P.*

No. 151.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEORGE MCLEOD, of Brooklyn, in the county of Queen's, master mariner, make oath and say as follows :

1. I have been engaged and connected with the fisheries for the past fifty years, and have a vessel now engaged in fishing on the Labrador coast of seventy-two tons register, and manned by seventeen hands.

2. Eight years ago I was on the Labrador coast with two of my own vessels, each of them was eighty-four tons, and carried seventeen hands each, and in three months we brought home sixteen hundred quintals of codfish. We considered that year a very poor one ; before that they had brought home eleven hundred apiece. We caught most of these fish on the Canadian coast of the Labrador. We took these fish within three miles of the shore. When there I saw several American vessels taking fish and bait, the same as we were. They fished inshore within three miles, in not more than six fathoms of water.

3. About twenty years ago, when fishing on the Labrador coast, I saw upwards of forty American vessels of a large class on the Canadian part of Labrador, at Old Fort Islands, Dog Islands, Bon Experience, Five League ; at these places the Americans took codfish with hook and line, all inshore, within a mile of the shore. At Salmon River I have seen five American sail taking codfish by seining on the shore.

4. The Americans get bait and ice in this harbor, and there are five American vessels here to-day for bait and ice, and it has been the practice of the Americans for the past thirty years to come here for bait, and this I know well, for I have often supplied them with bait. I have seen an American vessel six years ago throw her seine in this harbor on a Sunday for mackerel, and every year for the past thirty they set their nets in this harbor for bait when they had the right to do so, and when they had not the right. When they had not the right, the Americans were more sly, and often set their nets about dark, and took them up early in the morning. Since 1871 they have set them more freely, and with less trouble.

5. The Americans must get their bait on this coast, and they can get this bait nowhere else but on the Nova Scotian and other parts of the Canadian coast. This the Americans themselves say is so, and without this bait and ice they cannot carry on the Bank fishing. They get a supply of ice and bait, and go out and fish, then return for a fresh supply.

6. So many vessels running here for bait and ice interferes with the supply for our bankers.

7. When the Americans get bait and ice in this harbor, they run out about nine miles and fish from nine to twenty miles off this harbor, and fish from Seal Island to the Western Bank ; and this year the coast along has been lined with them.

8. They carry on the cod-fishery on the inside Bank, along the coast of Nova Scotia, by trawling, which I consider a most injurious method of taking fish, as the mother fish are destroyed, and unless stopped will

ruin the fishery; and unless the Americans got their bait inshore they could not carry on this trawling on the Banks along our shore.

GEORGE MCLEOD.

Sworn to at Brooklyn, in the county of Queen's, this 16th day of August, A. D. 1877, before me.

S. T. N. SELLON, *J. P.*

No. 152.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN LLOYD, of Port Mouton, in the county of Queen's, master mariner, make oath and say as follows:

1. I have been engaged in the fisheries as master for twenty-seven years. I have fished from Cape Sable, along the southern coast of Nova Scotia, around Cape Breton, on the eastern side of New Brunswick, around Prince Edward Island, around the Magdalenes, and on the Labrador coast as far as the north side of Gross Water Bay. I have been engaged a trip every year on the Banks.

2. In my experience the Americans always enjoyed the same privileges as I did myself. In the North Bay the Americans always fished inshore for mackerel, and close into the shore, and it would not pay to go into the North Bay to fish unless they could fish inshore.

3. I have been on the southern coast of Nova Scotia, from Halifax to Cape Negro, for fifteen years now past, and have often told the Americans where they could procure ice and bait. In the harbors along from Halifax to Cape Negro the Americans procure ice and bait wherever they can get it. Without this bait and ice it would be impossible for the Americans to carry on the Bank fishing, and this they have often themselves told me. I to-day told an American schooner that he could get bait in this harbor, and he is anchored here now.

JOHN LLOYD.

Sworn to at Port Mouton, in the county of Queen's, this 17th day of August, A. D. 1877, before me.

S. T. N. SELLON, *J. P.*

No. 153.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ROBERT J. McDONALD, of Port Jollie, in the county of Queen's, fisherman, maketh oath and say as follows:

1. I have been engaged in the fisheries for twenty years. I have fished along the American coast from near Philadelphia to Gross Water Bay, on the Labrador coast, and am well acquainted with the inshore fisheries in Queen's County.

2. Some years, while fishing in the North Bay, I found the Canadian mackerel was better than American, and some years the American was better.

3. Many Canadian vessels get clams in this harbor for bait, from forty to fifty vessels every year. I always found the clams obtained in this harbor as good as American clams. We used the clams here for taking codfish with hand lines, and still use them for this purpose. We also

use the clams for taking mackerel. In trawling very few clams are used. These vessels take from thirty to fifty barrels of clams to each vessel.

R. J. McDONALD.

Sworn to at Port Jollie, in the county of Queen's, this 18th day of August, A. D. 1877, before me.

S. T. N. SELLON,
Justice of the Peace.

No. 154.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM FREHIL, of Arichat, in the county of Richmond, and Province of Nova Scotia, merchant, make oath and say as follows:

1. I was a practical fisherman for about five years, between 1840 and 1850, and since that period I have been in the fish trade, and have dealt in codfish, herring, and mackerel.

2. In my opinion, the Americans cannot profitably carry on the cod and other deep-sea fisheries without resorting to the shores of Canada or Newfoundland to procure bait. They visit our shores every year for bait, which they purchase from our fishermen. It is a great advantage also to the cod-fishermen to be enabled to procure ice on our shores, as without it they could not keep their bait fresh for more than two or three days; and fresh bait is essential to a profitable prosecution of the cod fishery.

3. I consider the privilege of fishing in American waters to be of no practical advantage whatever to Canadians, and I am not aware that Canadians have ever availed themselves of such privilege.

WILLIAM FREHIL.

The said William Frehil was sworn to the truth of this affidavit at Arichat, in the county of Richmond, this 31st day of July, A. D. 1877, before me.

JOHN FREHIL,
A Justice of the Peace.

No. 155.

In the matter of the Fisheries Commission, at Halifax, under the Treaty of Washington.

I, PHILIP DIGGDON, of Port Medway, in the county of Queen's, and Province of Nova Scotia, but at present of Port Mulgrave, in the county of Guysborough, in said province, master mariner, make oath and say as follows:

1. I have been engaged during the past fifteen years in fishing, principally on the shores of Canada. During ten years of that time I have been fishing in the Gulf of St. Lawrence, during two of which years I fished in American vessels. I have fished for both mackerel and cod.

2. I have been fishing for codfish on the northeast coast of Prince Edward Island this season. The mackerel have come in quite plenty on the shores of Prince Edward Island this year, and close inshore, and I saw several American mackerelers catching them with seines. Some of them seemed to be getting good catches.

3. I am very well acquainted with the cod fishery, and I am of opinion that the Americans could not carry on the cod fishery profitably without resorting to our shores for bait.

4. The system of trawling followed by the American cod fishermen is most destructive to the fishery. A great many fish are uselessly destroyed by this system of fishing.

5. The mackerel fishery on our shores is likely to be greatly injured by the practice of seining used by the United States fishermen. Quantities of small mackerel and herring are destroyed in this way.

6. In 1873 I fished for mackerel in the Gulf of St. Lawrence in an American vessel, from the 20th of July to the 20th of October. We got 500 barrels.

PHILIP DIGGDON.

The said Philip Diggdon was sworn to the truth of this affidavit at Port Mulgrave, in the county of Guysborough, this 30th day of July, A. D. 1877, before me.

JAMES PURCELL,
A Justice of the Peace.

No. 156.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MICHAEL McDONALD, of Whitehaven, in the county of Guysborough, fisherman, make oath and say as follows :

1. I have been engaged in fishing for thirty years, and during three of these years I fished with the American fishermen in American vessels.

2. We never carried any fresh bait from the United States, but always bought it in the British Provinces. Even if we took it from the United States it would not be fit to use when we got to the fishing grounds.

3. The American fishermen with whom I was engaged fished for mackerel and cod. Trawls were used for the cod-fishing.

4. I have seen as many as three hundred American mackerel-fishing vessels in North Bay in the one season. Each vessel would average fourteen men. They would make from two to four trips per season. They were able to make this number of trips by having the privilege of landing their fares of fish and getting refitted. Without this privilege they could not make more than from one to two trips per season ; oftener one than two. I have known one vessel to catch two thousand barrels of mackerel per season. It would be considered a very poor season if each vessel did not get 700 or 800 barrels.

5. I never knew of any American vessels landing for the benefit of the inhabitants. They always do it for their own advantage, and not that of the people with whom they deal. They buy and trade because they save time ; buy cheaper than they can in their own markets, and be thus able to fish longer and watch the best chances. The American vessels by buying ice in Canada save one-fifth in quantity, and get the ice from one to two dollars cheaper per ton than they can in the United States. The way the one-fifth in quantity is saved is, that if the ice is got in the United States, one-fifth of it would melt during the passage down.

6. If the Americans could not land, &c., and enjoy the privileges

granted by the Washington Treaty, they could not get one-fourth of the fish they now do. In fact I do not think they would fish at all in our waters without these rights.

his
MICHAEL + McDONALD.
mark.

Sworn to at Whitehaven, in the county of Guysborough, this 24th day of July, A. D. 1877, before me, first having been read and explained.

JAMES A. TORY,

J. P. for the County of Guysborough.

No. 157.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEORGE MURPHY, of Port Hood, in the county of Inverness, fisherman, make oath and say as follows:

1. I have been engaged in the occupation of fishing in these parts for fifteen years past, and have taken some trips in American fishing-vessels on this coast, and have fished in a fleet of American vessels numbering between 100 and 200 sail in the gulf and around the coast of Nova Scotia and Cape Breton, Sydney, Louisburg, and the Magdalen Islands, and have had large opportunities of judging of the general character of the fishing business on this coast.

2. I have seen as high as five hundred American vessels in this harbor of Port Hood, and have known as many as seven hundred American vessels fishing in the gulf in one season. These vessels average about 60 or 70 tons burden, and have a crew of about fifteen men; but I have known many American vessels of larger tonnage, and sometimes with a crew of twenty men. The average cargo of mackerel was three hundred barrels each vessel, and of codfish generally about five or six hundred quintals. They average about three trips per season. Mackerel brought about \$15 per barrel, and codfish from \$4 to \$5 per quintal. This was when I was working with the American fleet. I cannot speak positively as to numbers for the last year or two.

3. The cod fishery about here is about as good as usual now; not aware of any falling off in the quantity or catch. The mackerel fishery has fallen off somewhat during the past two or three years, but this has only been in bite, not in numbers. There are as many mackerel in our waters now as ever there were. The only reason I know of for the falling off in the catch of mackerel lately is the use of the seines by the American fishermen, and the practice of throwing bait overboard, which has made the mackerel less sharp to bite. If our grounds are properly taken care of I know no reason why our mackerel grounds should not be as productive during the next ten years as ever before.

4. I have seen American fishermen within the last three years catching mackerel in these waters with purse seines, and they would sometimes take as many as one thousand barrels at one haul. They could only save half of these, and had to let the rest go, some being killed in the operation. This kind of fishing is very destructive to our fishing grounds. I never knew a Canadian fisherman to use purse seines, and most of the mackerel caught by them are taken in boats.

5. I have seen American fishermen since the Washington Treaty catching fish in this harbor within one mile of the shore, and less. During the past two or three years the best fishing has been within three miles of the shore, and most fish are taken within that limit. When on

board American fishing-vessels we took nearly all the cargo of mackerel inshore.

6. The Americans catch bait within three miles of the shore—both herring and squid. All bait is caught inshore. They chiefly buy now, and their reason for this is, because it pays them better than catching it. Our fishermen catch bait better than the Americans. To my knowledge, as many as fifty or sixty American vessels have baited here this season, in this vicinity.

7. Our herring fisheries are very valuable to Canadian fishermen. It is the most profitable business we have now. I have known our own fishermen to take from 150 to 200 barrels of herring in two days, in one boat. If the American fishermen should take hold of this herring-fishing and begin to seine herring, it would be a great injury to us and a loss to our business.

8. The main body of the mackerel feed around our shores in the shoal water. Their food is small fish, which only frequent the inshores. In the autumn season the mackerel particularly keep close inshore.

9. It is a great advantage for American fishermen to be allowed to be allowed to land and dry their nets and cure their fish; and also to transship their cargoes. They are in the habit of doing this constantly since the Treaty of Washington, and their fishermen always consider it an advantage to them as enabling them to refit for a new voyage without going back to their home ports. They can thus catch more fish and make more trips during the season.

10. The privilege of being able to catch or procure bait in our waters and ports is one of the most important advantages which the Americans derive from the Treaty of Washington. This is so great an advantage that if the Americans were not allowed to procure bait from Canadians, or catch it in Canadian waters, I believe they would have to abandon their cod-fishing in the gulf and around our coast altogether. The bait which they use will only last about three weeks when preserved on ice, and it would be impossible for Americans to carry on the cod-fishing business to any profitable extent if they had to be dependent on American ports and waters for all the bait they used.

11. The American fishermen also find it a great advantage to them to procure ice from our ports. It is in this way they are able to preserve their bait, otherwise they would have to salt it, which is considered a great injury to the bait.

12. I know of no advantage whatever which Canadian fishermen derive from the privilege of fishing in American waters. Americans say that our fishing-grounds are their best and most valuable. I never heard of any Canadian vessels going into American waters to fish, and see no likelihood of any doing so.

13. I could not undertake to name any certain money value to each American vessel of the privileges which they now have of fishing and getting supplies in our waters; but I don't see how they could carry on their fisheries in these parts with any kind of profit or success if they did not enjoy them. They would not be able to take as many trips, nor could they get on with the same ease, and their cod-fishing would be next thing to ruined if they could not get bait here.

14. I believe if there were no American fishermen in our waters, and our own fishermen had exclusive use of British-American waters, that we would be able to catch more fish and derive greater profits, and that our fishing grounds would be better preserved. Canadian fishermen carry on their business with greater care than Americans, and instead of throwing the offal overboard to glut the fish, they carry it to the shore.

GEORGE MURPHY.

Sworn to at Port Hood, in the county of Inverness, this 20th day of July, A. D. 1877, before me.

JOHN McKAY, J. P.

No. 158.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES PHELAN, of Arichat, in the county of Richmond, and Province of Nova Scotia, merchant, make oath and say as follows:

1. During the past twelve years I have been employed or engaged in the fish-trade in this place, and I have a good general knowledge of the fisheries on our coasts.

2. I believe that our inshore fisheries within three miles of the shore are of much greater value than those outside that distance, and almost all the herring and a greater part of the mackerel are caught within that distance.

3. The opportunity of transshipping cargoes enjoyed by American fishermen since the Treaty of Washington of 1871 is a great advantage to them, as by means of this they save about fifteen days on every trip to the fishing grounds. When mackerel are plenty, a vessel could get a fare of them in little more than the time it would take to go to her home port in the United States and return. This privilege of course enables them to make more trips and catch more fish than they otherwise could.

4. I believe that it would be impossible for the American cod-fishermen to prosecute their calling successfully or profitably without obtaining bait on the shores of Canada or Newfoundland, and to keep this bait fresh it is necessary for them also to procure ice on our coasts. Every season American cod-fishing vessels visit this island (Isle Madame) for bait and ice in great numbers. The Americans purchase most of the bait they obtain from our fishermen, as it is cheaper for them to do so than to consume part of the fishing-season in catching it themselves.

5. The privilege of fishing in American waters is of no advantage whatever to Canadians, and no Canadian vessel has, to my knowledge, availed itself of such privilege.

6. I believe that the practice of trawling followed by the American cod-fishermen is injurious to the fishery, and that our fishermen could carry on the fishery around our coast more successfully if the Americans were excluded from our waters.

JAMES PHELAN.

The said James Phelan was sworn to the truth of this affidavit at Arichat, in the county of Richmond, on the 3d day of August, A. D. 1877, before me.

E. P. FLYNN,
A Justice of the Peace.

No. 159.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, H. ROBERTSON, of Griffin's Cove, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

Am acquainted with all the fisheries carried on on the coast of Gaspé for 30 years past.

1. During the Reciprocity Treaty, and before, that is from 1845 to 1866, the Americans have made an extensive fishery of mackerel at Griffin's and neighboring coves. About 100 American vessels have visited our shores for mackerel yearly. I have seen the American fishermen from the shore fishing. I have been on board their vessels whilst they were catching mackerel with hand-lines, and always inshore.

2. These vessels average 65 tons, having about 15 men for a crew, and they have always made good voyages, getting all their load inshore, amounting to 400 barrels.

3. The Americans catch mackerel with hand lines and seines, principally with the former.

4. The Americans have always fished for mackerel inshore on this coast, and very close to the shore.

5. The inshore fishery is of much greater value than the outside. All the fish are taken inshore here.

6. The Americans have often come amongst our boats whilst we were fishing for mackerel, and by throwing bait draw the fish outside, thereby causing us great damage. They have done that to me nearly every year during the period mentioned above. They often threatened to stone us if we went near their vessels to fish.

7. Since 1871 the codfish have increased considerably, owing to the retirement of Americans from our waters.

8. The principal food of mackerel is lance and sea-fleas. This is what keeps the mackerel inshore on our coast.

9. Fishing by Americans in our waters hinders the fishing operations of our Canadian fishermen to a great extent, because we cannot compete with them.

his
HILAIRE + ROBERTSON.
mark.

Witness:

A. D. JOHNSTONE.

Sworn to the best of his knowledge, information, and belief, at Griffin's Cove, county of Gaspé, Province of Quebec, Dominion of Canada, this 28th day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 160.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DONALD WEST, of Grand Greve, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

Am acquainted with the fisheries on the coast of the Gulf of St. Lawrence, having practiced them for forty years.

1. In the Bay of Gaspé and neighboring shores mackerel-fishing by the Americans has been practiced on an extensive scale, especially during the period extending from 1845 to 1866.

2. During the period just mentioned over 100 American schooners have visited the Bay of Gaspé yearly for mackerel-fishing. The mackerel at that time were very abundant in our waters, and each of the vessels that have been here during that time for mackerel fishing have made good voyages yearly. I have seen them loading, and have heard the Americans say so themselves, and I have heard them also say that

most of these schooners were making two trips yearly of 400 barrels of mackerel. These schooners were about 60 tons each on an average, with a crew of 16 men. I have seen them fishing and catching mackerel. I have seen them also at Cape Rozier fishing mackerel inshore and very near the rocks. I have seen them also seining many times in the Bay of Gaspé, at Sandy Beach. The seines were drawn from the shore; in fact all the mackerel that have been caught by the American schooners that I have seen have been taken inshore.

3. The cod fishery is about the same now as it was formerly.

4. The mackerel are taken by means of hand-lines and seines by the Americans. I have seen them fishing with hand-lines inshore, and I have seen them seining with hauling-seines from the shore, and with purse seines in deep water, but inside three miles.

5. The practice of throwing fish-offal overboard by the Americans is a great injury to the fisheries, because it poisons the water, drives away the large fish, and kills the eggs.

6. The inshore fishery is of much greater value than the outside. All the fish are caught inshore.

7. It is the common practice of the Americans to come in among the boats and by throwing bait entice the mackerel away with them, so that we could not take mackerel without going alongside of their vessels, which they did not like at all.

8. Seining, as practiced by the Americans, is injurious to the fisheries, because it takes large and small fish; all the small fish are thrown away and left to perish on the strand.

9. During the last years of the Reciprocity Treaty nearly all the Americans were supplied with both the purse and hauling seines.

10. The fisheries have increased greatly since 1871, that is the cod fishery, and up to date the mackerel-fishing is better than last year, and the increase in the cod fishery is due, in my opinion, to the fact that the Americans have retired.

11. Mackerel feed inshore on lance, shrimp, and other small fish.

12. It is a great advantage to the Americans to be able to transship cargoes, because it enables them to keep on the fishing-grounds and to double their fares.

13. The Americans could not profitably carry on the cod and halibut fisheries if they were not allowed to come in our inshores either to catch or buy bait.

14. The privilege of transshipping cargoes to the Americans is worth a load, and the privilege of getting bait in our inshores for their cod and halibut fishery is worth these fisheries.

15. Fishing by Americans in our waters hinders the fishing operations of our fishermen to a great extent, because we cannot compete with them, and they take all our fish.

DONALD WEST.

Sworn to the best of his knowledge, information, and belief, at Grand Greve, county of Gaspé, Province of Quebec, Dominion of Canada, this 28th day of July, A. D. 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 161.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MICHAEL MCINNIS, of Port Daniel, county of Bonaventure, Province of Quebec, farmer and fisherman and merchant, make oath and say as follows:

1. Am acquainted with all the fisheries from Point Macquereau to Paspebiac; I have followed these fisheries for 15 years.

2. Am thirty-one years of age, and since I can remember, the mackerel-fishing by Americans has been carried on on an extensive scale on this shore.

3. To the best of my knowledge, 100 schooners have visited these shores (I always speak of between Point Macquereau and Paspebiac) yearly. The average tonnage of these vessels is about 70 tons, each vessel having from 10 to 15 men for a crew. I am acquainted with the mackerel fishery only.

4. I don't remember of any of these vessels ever missing their voyage.

5. I have been many times on board of American fishing-vessels fishing on this shore, and have heard them say many times that most of the schooners have made two trips in a season.

6. The herring fishery is the same as it has been for the past 15 years, and codfish also.

7. Mackerel are taken by the Americans with hand-lines and seines.

8. The practice of throwing fish-offals is injurious to the fisheries, because it gluts the large fish, and kills the small ones.

9. Every year since I can remember, till 1870, I have seen the Americans fishing inshore often at our net moorings and catching mackerel as hard as they could with hand-lines.

10. The inshore fishery is of much greater value than the outside.

11. All the bait, herring, smelt, caplin, and lance are caught inshore. Two-thirds of the codfish and two-thirds of the mackerel have been caught inshore.

12. I have seen the Americans many times come among our boats, and entice the mackerel away by throwing bait. They have done the same to me many times, thereby causing me great damage, because there were no more fish left to get. They do this whenever they get the chance.

13. I have seen the Americans from my boat and from the shore many times, going around looking for a place to throw their seines.

14. I have seen many times the American trawlers come in Port Daniel for bait.

15. About 20 different trawlers come here every season for their bait. I heard the Americans say often that they require 60 barrels of bait (herring) to make their voyage.

16. The fishery has not diminished since 1871.

17. The Americans take herring here for bait only.

18. On questioning the Americans on board their own vessels, they frequently told me that our mackerel was of greater value than their own.

19. Mackerel breed and feed inshore. Our inshores are one of their breeding-grounds.

20. I have seen the Americans frequently ever since I can remember land to dry and repair their nets, and it is a great advantage to them.

21. I consider it a great advantage to Americans to be able to trans-

ship their cargoes, because it enables them to keep on the fishing-grounds, and to make an extra voyage.

22. It is also a great advantage to them to be able to procure bait in our inshores.

23. The Americans could not carry on the cod and halibut fisheries without the privilege of resorting to our inshores to procure bait.

24. It is a great advantage to the American fishermen to be able to land to procure ice and snow to preserve their bait.

25. It is of no advantage to us to be able to fish in American waters. I never knew of any of our vessels ever going there to fish.

26. The privilege of transshipping cargoes is of great advantage to the Americans, because they can double their fares; in fact, it is worth a load to them. And the privilege to trawlers to get bait in our inshores is worth their fisheries.

27. The privilege granted to Americans to fish in our waters injures us to a great extent by bringing us in competition with men who are a great deal better equipped to take fish than we are, and because this extra number of men destroys fish. I have often heard the Americans say that they couldn't carry on the fisheries in our waters without catching bait here.

MICHAEL McINNIS.

Sworn to the best of his knowledge, information, and belief, at Port Daniel, in the county of Bonaventure, Province of Quebec, this the 23d day of July, A. D. 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 162.

NEWFOUNDLAND, *to wit*:

The honorable JAMES JOHNSTONE ROGERSON, of St. John's, receiver-general and collector of customs for the Island of Newfoundland, maketh oath and saith that the annexed statement, marked A, is a correct and true statement of the matter and things to which it refers, the same having been compiled from the customs returns and other authentic records of the said Island of Newfoundland.

JAMES J. ROGERSON,

Receiver-General and Customs Collector.

Sworn before me, at Saint John's, aforesaid, this eighth day of June, A. D. 1877.

J. O. FRASER,

Commissioner of Affidavits.

STATEMENT A. (Referred to in annexed affidavit.)

Statement of the Quantities and Values of the undermentioned articles the produce of the Fisheries, exported from the Colony of Newfoundland to the United States of America, during the three years ending 31st December, 1876, showing the average Quantities and Values Exported during that period, and the Rates and Amounts of Duties by the United States Tariff, and which are now exempt from the duties by the Washington Treaty.

No. 163.

ISAAC MERCER, aged 31 years, residing at Bay Roberts, Conception Bay, Newfoundland, fisherman, maketh oath and saith :

I am acquainted with the fisheries of this country, by having followed the same for eighteen years. I saw three United States fishing schooners in Spaniard's Bay and two in this harbor last year. I heard of a large number of these vessels being in this bay last year, but I only saw five as above. They came to the bay for fresh bait; the schooners seen by me came for fresh squids, and, as I believe, the other United States vessels that visited this neighborhood last year all came for fresh bait. They came in from the Banks, where they had been fishing, for fresh bait. They purchased bait from our people and jigged squids jointly with our people to supply their wants. Newfoundland fishermen catch codfish generally within a mile or two of the shore. The Newfoundland fishery (cod) is an inshore fishery, as is the bait fishery, including caplin, herring, and squids. I never knew of a Newfoundland vessel fishing on any of the shores or coasts of the United States of America.

I believe the supply of bait to United States fishermen will act injuriously upon the supply for local fishermen, and that it will certainly decrease the supply for the latter.

I believe that the operations of United States fishermen on the banks off our coast, well supplied with fresh bait, tends to reduce the catch of codfish by local fishermen, and that the short catch last year was owing to United States fishermen as aforesaid. The catch of local fishermen in this neighborhood last year was not over one-half what it used to be on the average before 1874.

ISAAC MERCER.

Sworn before at Bay Roberts, Conception Bay, Newfoundland, this 26th April, 1877.

J. O. FRASER,
Commissioner of Affidavits.

No. 164.

SAMUEL FIANDER, of Coomb's Cove, in Fortune Bay, maketh oath and saith: Is 44 years of age, and a fisherman. I have become acquainted with the fisheries of Newfoundland from being engaged in their prosecution since I was twelve years of age.

I have observed a large number of American fishermen in Fortune Bay during the present year, about fifty vessels. The Grace L. Fears, commanded by a Captain McDonald, was one of such vessels; the Edmund Parsons, commanded by Captain Saunders, was another of such vessels, both hailing from Gloucester. I did not particularly remark the names of the other vessels referred to. The two vessels named were about 70 tons each, and the others first named were from about 70 to about 100 tons. These vessels came to buy bait from British fishermen, and they did purchase bait as aforesaid.

I have sold bait to American fishing-vessels. I have baited eight such vessels this present year—about fifty barrels each vessel—the rate paid for baiting being from twenty to thirty dollars for each vessel.

The Newfoundland fishery is an inshore fishery. The caplin and herrings used for bait are all taken inshore. Squids occasionally are taken a mile from the coasts, but generally they are taken a few hundred yards from the shore.

I do not know of any Newfoundland fishing-vessel taking fish or try-

ing to take fish on any of the coasts of the United States of America. About twenty-five sail of American vessels have frequented Fortune Bay for the purchase of frozen herrings; they do not catch for themselves, finding it cheaper to buy from Newfoundland fishermen.

Formerly American fishermen used to catch large quantities of halibut about Pass Island in this bay. Captain McDonald got a load there. A British war ship, the *Racoon*, stopped their fishing for halibut, and they have not since renewed it. American fishermen frequent this neighborhood regularly in passing to and fro. Newfoundland fishermen did catch a large quantity of halibut about Pass Island.

I am aware that the supply of bait to American fishermen acts injuriously upon Newfoundland by attracting fish outside and preventing it coming in toward the shore.

I think the short catch of fish on the southwest coast of Newfoundland is caused by the Americans fishing on the outer Banks.

This neighborhood offers great facilities for the preservation of ice, which I am aware has been largely supplied to American fishermen for the preservation of bait purchased from Newfoundland fishermen as aforesaid.

his
SAMUEL + FIANDER.
mark.

Sworn before me, at Harbor Breton, this 3d day November, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 165.

GEORGE BISHOP, aged 50 years, trader, residing at Burin, Newfoundland, maketh oath and saith:

I have become acquainted with the fisheries of Newfoundland by over thirty years' experience.

I have observed United States fishing vessels in this neighborhood. The past season I have observed about twenty of these vessels. I can only name a few: *Gleaner*, Capt. Lyons.

These vessels came to this neighborhood to purchase fresh bait and ice, which they procured by purchasing from our people. The captain of the *Gleaner* purchased bait to the value of \$20.

Newfoundland fishermen catch fish, generally, within two miles of the shore, there being exceptional instances only when codfish is taken from six to nine miles off the coasts.

The Newfoundland fishery is an inshore fishery. The caplin, herring, and squid fisheries used for bait are altogether inshore fisheries.

I never heard of a Newfoundland fishing vessel having prosecuted any fishery on any of the coasts of the United States of America.

American fishermen have not, to my knowledge, sold any small fish or other fishery produce in this neighborhood. American vessels have fished for codfish on our grounds off Cape Saint Mary's. American masters partially refit their vessels occasionally at this port, but have not here transshipped their cargoes.

I undoubtedly think that the supply of bait to United States fishermen decreases the supply of bait to our local fishermen. They employ our people to sweep the coves, who have done so, leaving no bait after them.

I do think that the presence of the large number of United States vessels fishing with fresh bait on the Banks off our coasts greatly

interferes with and reduces the local catch of codfish. I am of opinion that the scarcity of codfish the past summer along our south and west coasts is attributable to the presence of the French and of the Americans fishing on the outer Banks; but chiefly to the United States fishermen, who are well supplied with fresh bait, whereas French fishermen principally use salted bait.

The catch of codfish the last season by fishermen of this neighborhood will only come to twenty quintals per man; in former years the average was from eighty to ninety quintals per man.

The number of craft of this harbor engaged each year in supplying bait to the French is about thirty, and these vessels take to St. Peter's from this per annum 1,000 hogsheads caplin, valued at 10,000 francs, and from Fortune Bay; 15,000 barrels herring, valued 40,000 francs of the latter about seven thousand barrels would be thrown away, being unsalable at St Pierre.

There is one ice-house at this harbor where ice is preserved for sale to United States fishermen, principally for the preservation of fresh bait. The quantity of ice sold to United States fishermen at this harbor per last summer sales is — tons.

GEORGE BISHOP.

Sworn before me, at Burin, this sixth day of December, A. D. 1875.

I. O. FRASER,
Commissioner of Affidavits.

No. 166.

GEORGE AMBROSE HICKMAN, aged 33 years, master mariner and planter, residing at Grand Bank, Newfoundland, maketh oath and saith:

I have become acquainted with the Newfoundland fisheries by following the same for twenty years.

I have observed a large number of United States fishing vessels in this neighborhood from time to time; this summer there have been over three hundred such vessels in this bay. These vessels came to purchase bait, and they did so purchase fresh herrings for bait.

I have sold fresh bait to United States fishing vessels; the number baited by me has been from twelve to fifteen vessels. Each vessel took from forty to sixty barrels herring; the price paid for such herrings at and in the neighborhood of Grand Bank has been about sixty cents per barrel. I have seen United States vessels fishing off Pass Island, inside of the headlands; this I have seen frequently, and at such times they always fished within three miles of the headlands, from Cape Labune to Point May.

Newfoundland fishermen catch codfish within three miles of the shore except in exceptional instances, when they go off certain special seasons to six to nine miles off the coasts, but generally the fishing is prosecuted along shore. The caplin, herring, and squid fisheries, used for bait, are taken near the shore, and are always inshore fisheries, never being taken at a greater distance than half a mile from the coasts. I never heard of a Newfoundland vessel prosecuting any fishing voyage on the coasts of the United States of America. I have no knowledge of United States fishermen selling codfish or other fishery produce in this neighborhood. From thirty to forty American vessels frequent Fortune Bay in winter for herrings for freezing, which they always purchase from Newfoundland fishermen. Their average cargo of such herrings has been about six hundred barrels.

I know of United States vessels having transshipped cargo in this bay from one vessel to another, so as to make up a load for one vessel dispatched to the United States. The practice in force of seining herrings for bait for United States vessels decreases the supply of bait to local fishermen. Instances are known of heaps of herrings that have perished from close "barring," measuring fifteen feet deep; this has been ascertained by measuring with poles.

The presence of the large number of the United States vessels fishing on the Banks off our coasts, using fresh bait, greatly reduces the catch of our local fishermen, and I can attribute the short catch of codfish the past summer to no other cause. Codfish will not pass fresh bait, and we all know that the Banks off these coasts are well manned by American fishermen. The withdrawal of a large number of American vessels from the Banks this fall is perceptible by an increased catch of fish along our coasts on the occasion of such withdrawal. About five thousand barrels herrings averaging forty thousand francs, and ten thousand hhd. averaging sixty thousand francs, will be a fair estimate of the bait sold at St. Pierre annually by fishermen belonging to Grand Bank; in addition to which over ten thousand barrels herrings are annually thrown away, being unsalable.

There is an ice-house at Grand Bank where ice is kept for sale to United States vessels for the preservation of fresh bait, which was used for that purpose last summer.

GEORGE A. HICKMAN.

Sworn before me, at Grand Bank, this 25th day of November, 1876.

J. O. FRASER,
Commissioner of Affidavits.

No. 167.

JOHN LAKE, sr., aged 60 years, planter, residing at Fortune, Newfoundland, maketh oath and saith, that—

I am acquainted with the fisheries of Newfoundland, by following the same since I was fourteen years of age. I have seen a large number of United States fishing-vessels in this neighborhood; in June and July from six to fourteen daily passed up the bay. These vessels came to purchase fresh bait, which they procured from our fishermen; the chief supply being from fishermen residing at Pelloram, St. Jacques, Bay de North, in Fortune Bay.

United States fishing-vessels two years ago fished about Brunette; two years ago they were fishing between Danjy Cove and Green Island, when one of them nearly lost their dory by a heavy sea, running for shore.

Before ruined by American fishermen, our people used to catch large quantities of halibut off Pass Island; now nothing can be done in this fishery.

Newfoundland fishermen, as a rule, catch their fish within two miles of the shore. The herring, caplin, and squid fisheries used for bait in Newfoundland inshore fisheries, generally taken along our coves and harbors, squid sometimes at the capes. I never heard of a Newfoundland vessel having engaged on a fishing-voyage on any of the coasts of the United States of America.

American fishermen have not sold any small fish in this immediate neighborhood; they have done so at Belloram and St. Jacques, in Fortune Bay, and elsewhere, but I cannot give particulars.

About three hundred sail of United States fishing-vessels frequented this bay this spring and summer for fresh bait.

From thirty to sixty United States vessels frequent Fortune Bay in winter for the purchase of fresh herrings which they freeze and take on to Cape Ann and Boston and elsewhere in United States; the price obtained for these frozen herrings in the markets of the United States varies from one to fifteen dollars. The herring taken in winter by these American vessels are purchased from our people, the price paid being one dollar nominally, but the measure exacted reduces the price to from sixty to seventy-five cents per barrel. In June and July the seining of large quantities of herrings shortens the supply of bait to local fishermen. In June I knew of twenty seines barring herrings for United States fishermen; some of which seines inclosed two thousand barrels herrings, kept inclosed till United States vessels came along to purchase, and sometimes thus retained for two months, at the end of which time the seines are taken up and the herrings alive set free; in all such cases there is a large destruction of herrings, and a ruinous interference with the bait supply of our local fishermen.

I am of decided opinion that the presence of the large number of United States vessels fishing on the Banks off our coasts using fresh bait greatly reduces the catch of codfish by our local fishermen, and that the short catch the past season along our southwest coasts is owing to the operations of United States fishermen on the outer banks. Previous to the last two years the fishermen of this harbor, average from eighty quintals upwards; the past season the average will not exceed eighteen quintals, but will be nearer fifteen quintals per man. The quantity of bait annually sent to St. Pierre from Fortune will be about, I calculate to be, 5,000 barrels herrings vauled at 40,000 francs, 10,000 barrels caplin valued at 60,000 francs.

About ten thousand barrels herring are annually thrown away, being unsalable at St. Pierre. There are no ice-houses at Fortune Harbor wherein ice is preserved.

JOHN LAKE, SR.

Sworn before me at Fortune, N. F., this 27th November, 1876.

J. O. FRASER,

Commissioner of Affidavits.

No. 168.

GEORGE SIMMS, aged 49 years, stipendiary magistrate and preventive officer, residing at Grand Bank, N. F., maketh oath and saith that—

I have had thirty years' experience of the fisheries of Newfoundland, having at 19 years of age carried on the fishery, and subsequently being with scarcely any intermission connected therewith. I have observed great numbers of United States fishing-vessels in this neighborhood, especially during the past season. The number would be from two to three hundred at different times frequenting Fortune Bay for the supply of fresh bait for the cod-fishery, chiefly on the Grand Banks of Newfoundland. I can only enumerate a few of such vessels, as they keep away from customs officers to evade the local laws of the country, particularly those referring to light-dues, which all Newfoundland vessels

have to pay. The six United States fishing-vessels that paid light-dues at my office the past two years, are the following:

	Tons.	Master.	Where he longs.
Ed. Drtver	77	Francis Wheeler.....	Gloucester.
Lizzie B. Knight	67	Wm. E. Morrissey.....	do.
Howard.....	74	Collins.....	do.
Frank A. Williams.....	66	Hugh H. Lyons.....	do.
Proctor Brothers.....	77	Edw. Trevey.....	do.
Elisha Crowell.....	67	Wm. N. Wills.....	do.

These vessels purchase fresh bait from our fishermen in Fortune Bay. Newfoundland fishermen catch codfish from half a mile to four miles from the shore, but principally within three miles along shore. The Newfoundland fishery is an inshore fishery.

The caplin, herring, and squid fisheries for bait are shoal-water fisheries, and caplin and herrings never taken more than three miles from the shore, and squids rarely taken that distance off.

I know of no Newfoundland vessel ever having prosecuted the fishery on any of the coasts of the United States of America.

From thirty to fifty American vessels frequent Fortune Bay in winter for the purchase of fresh herring to be frozen. They do not catch for themselves, but purchase from our fishermen. The average quantity taken by them yearly has been six hundred barrels per vessel. Sometimes a few of these vessels take salted herrings, when they take a much larger quantity.

I have seen United States fishing-vessels and crews catching codfish on the Newfoundland inshore fishing-grounds, but cannot state the number, having made no records.

I am not aware whether United States vessels refit in this bay, none of them having transhipped cargo in any Newfoundland port.

I consider the supply of fresh bait to United States fishermen to be injurious to our local fishermen.

I consider that the presence of the large number of United States fishermen fishing on the Banks off our coast with fresh bait injures the local catch by reducing it greatly.

I think the scarcity of fish along our southwest coast this summer has been caused by the increase in the number of American fishermen on the Banks off our coast.

United States vessels frequently foul nets along the coast, tearing them away and frequently carrying such nets out to sea, to the great loss of Newfoundland fishermen. In one instance last spring an American vessel thus destroyed five herring nets, without compensation to their owners, vessel being unknown. I have reason to know that very considerable damage is done in this way by United States fishing vessels to the fishermen of Newfoundland, and especially to those of this bay.

GEORGE SIMMS,

J. P., Stipendiary Magistrate, Grand Bank.

Sworn before me at Grand Bank, N. F., this 24th November, 1876.

J. O. FRASER,

Commissioner of Affidavits.

No. 169.

HENRY T. HOLMAN, aged 40 years, residing at Harbor Breton, manager of the trading business there, carried on under the name of Newman & Co., maketh oath and saith :

I have had twenty-four years' experience of the fisheries of Newfoundland. I have observed several American fishing vessels in this harbor every summer, and know of a large number (over fifty) that frequent Fortune Bay for herring bait, each vessel coming to the land once a fortnight for fresh bait, which they purchase principally from seine owners. The captain and crews of American vessels, with the aid of the owner of the seine, do all the work of shooting and emptying such seines.

I have known American vessels fishing about three or four miles off Pass Island, particularly about May, when they fished for halibut, catching a quantity of codfish also, all on bultows. The quantity and value, as nearly as I could learn, I have furnished to Mr. Hayward, of H. M. customs, St. John's. United States fishing-vessels do not now fish within three miles of our shores, as they find fish more plentiful farther off. When on the Banks, with fresh bait, they make good catches. Newfoundland fishermen catch fish from inshore to three miles off; exceptionally, they go to seven and nine miles off. Newfoundland fishery is an inshore fishery. Caplin and herrings used for bait are inshore fisheries; squids are sometimes taken farther off. I never heard of caplin or herrings being taken outside three miles of our shores. I never heard of a Newfoundland vessel prosecuting a fishing voyage on any of the coasts of the United States of America.

Some thirty or forty American vessels frequent Fortune Bay in winter for the purchase of fresh herrings, which they freeze before shipping. In some instances, American vessels ship salted herrings.

Frozen cargoes consist of from six to eight hundred barrels per vessel, and salt from twelve to twenty hundred barrels.

I do not know of Americans now fishing for turbot in these waters.

American vessels purchase ice in this neighborhood for the preservation of fresh bait, for which payment is made in small codfish and in cash. I only know of American vessels having transhipped cargo in this bay from one American vessel to another American vessel. I think the supply of fresh herrings in summer to United States fishermen decreases the supply to our local fishermen. This is particularly the case when large quantities are "barred" in seines, which prevents herrings playing about the adjacent coves and harbors, preventing herrings netting, as they otherwise would do.

I am of opinion that the presence of the large number of United States fishing vessels on the Banks off our coasts using fresh bait has the effect of reducing the catch by our local fishermen, and is acting ruinously upon our cod-fishery.

I am also of opinion that the scarcity of codfish this year along our southwest coast has been caused by the Americans fishing on the outer Banks, as aforesaid.

By a careful comparison of the fish per man previous to and since 1874, I find, by reference to the books of the firm under my management, that whereas before 1874 the catch per man was equal to an average of seventy-nine quintals per man, since 1874 it has decreased to an average of thirty-four quintals per man.

The difference is equal to forty-five quintals, or two hundred and

twenty-five dollars, for each fisherman in the bay, there being about fifteen hundred fishermen in the district of Fortune Bay and Grand Banks.

The estimate of fresh herrings sold to the French at St. Peter's in April, each year, amounts to fifty thousand barrels, the price paid being from one to sixteen francs; an average of about ten francs per barrel would be fair. In some years twice the quantity of herrings sold are destroyed, being thrown away as useless.

HENRY T. HOLMAN.

Sworn before me, at Harbor Breton, this 15th day of November, 1876.

J. O. FRASER.

Commissioner of Affidavits.

No. 170.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN LEGRESLY, of Point St. Peter, make oath and say as follows:

1. I am 42 years of age and have been 26 years on this coast. I have carried on the fishing business for myself for the past 11 years; before that time I was in the employ of the late firm of Abraham Degruchy for five years, and for ten years a partner in the fishing firm of Alexander and Legresly. I am thoroughly acquainted with all that relates to the fish of this coast, and the fishing and curing, as well as the nature of the markets for our fish.

2. I employ 14 boats of my own, and I supply from 15 to 20 other boats whose fish I receive. The price obtained in the foreign markets to which our fish is exported varies from \$4.00 to \$8.00 per quintal. The fish obtains a better price because it is hard cured, and thus is fit for warm climates; fish salted in bulk and kept in salt or pickle for any length of time could never be dried to stand in warm climates. The longest time our fish is allowed to remain under salt is three to four days.

3. I have never shipped any fish to the United States markets; my fish obtains a better price elsewhere.

4. The right of fishing on the American coast is of no value to us; none of our fishermen have ever gone there to fish.

5. The free market of our fish in the United States is of no use to the merchants and fishermen of this coast.

6. During the years of the Reciprocity Treaty, about 150 vessels came annually to Gaspé Bay, Meal Bay, and the neighborhood, where they fished for mackerel; during the years when the cutters were on the coast to prevent the Americans from fishing in the inshore waters, a few American vessels did still fish, managing to dodge the cutters. Since the Treaty of Washington the number has not been so great as during the Reciprocity Treaty. Mackerel are plentiful on the coast this season.

7. The privilege of fishing in our waters, and landing to get bait, of transshipping cargoes, and landing to dry nets and cure fish, is certainly a very great one to give any foreigner. I do not believe that a Bank fisherman can depend on the supply of fish taken for bait on the Banks by drifting or otherwise, and that to make a successful voyage they must obtain fresh bait from the inshores. Salt bait is not equal to fresh bait.

8. I consider in the interest of our population, which is fast increasing,

that our fisheries should be kept exclusively to ourselves, nor should foreigners be allowed to get fresh bait in our inshores, nor dry their nets, nor cure their fish on our shores. These are privileges which ought not to be granted to strangers; and if this continues, many of our people will be driven to seek employment elsewhere.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

JOHN LEGRESLEY.

The said John Legresley has sworn to the truth of the above statement and affidavit, at Point St. Peter, in the county of Gaspé, and Province of Quebec, this 13th day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 171.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN B. FAUVEL, of Point St. Peter, in the county of Gaspé, and Province of Quebec, make oath and says as follows:

1. I am a merchant in fish, of the firm of John Fauvel, of Jersey, in the Channel Islands. I am the manager of the firm in this county. I have lived on the coast for twenty-one years, all of which time I was engaged in the fish business on this coast. We have our principal establishment at Point St. Peter. We have others at Mal Bay and Long Point on the north shore of the St. Lawrence.

2. We employ altogether 36 boats of our own. These boats fish on shares. We also employ about 20 boats belonging to fishermen; these men sell their fish to us. We also purchase fish and fish-oils generally, but our principal business is the codfishery. Our codfish is specially prepared for warm climates, our principal markets being those of Brazil, the West Indies, Spain, Portugal and the Mediterranean ports. The special property of our fish, which enables it to command a higher price, is that it is so hard and thoroughly dried. Our fish cannot be allowed to remain more than three days under salt before being dried. Fish salted in bulk on board of vessels is too long under salt, and cannot be dried in the manner in which we dry our fish. Fish so long under salt as it must be when salted on board a schooner becomes salt burnt, and never will dry thoroughly. Another peculiarity of our fish is that it is dry salted and not pickled. This peculiar preparation enables us to command a higher price for our fish on account of its keeping qualities in warm climates. The name of Gaspé fish in foreign markets is always considered better than any other.

3. We ship about from 3,000 to 3,500 quintals of dried codfish besides other fish and oils. This fish commands from \$4.50 to \$8 per quintal. We ship this fish on our own and other bottoms.

4. We have never shipped any fish to the United States markets, as our fish gets a better market elsewhere.

5. The right of fishing on the American coast is not of any value to us. I never knew of any one having gone there to fish from this coast.

6. The privilege granted to the Americans of fishing in our inshore waters is a very serious injury to us. Our population is already large enough to fish our own waters, and must suffer severely by American competition. I do not hesitate to say that our fisheries ought to be kept exclusively to ourselves.

7. The principal bait-fish on this coast are mackerel, herring, lancee, squid, clams, caplin, &c., all of which are taken close inshore. I consider that the privilege granted to the Americans of landing to take bait is a very valuable one, as no vessel Bank-fishing can depend on taking a supply of bait on the Banks, and must land to obtain bait. Salt bait is by no means equal to fresh bait.

8. The privilege enjoyed by the Americans under the Treaty of Washington of entering our ports to transship cargo is also a very valuable one to them.

I hereby swear that, to the best of my knowledge and belief, the above statement is correct.

JOHN B. FAUVEL.

The said John B. Fauvel has sworn to the truth of the above affidavit at Point St. Peter, in the county of Gaspé and Province of Quebec, this thirteenth day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 172.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN LEGROS, of Point St. Peter, in the county of Gaspé, make oath and say as follows:

1. I am a fish-merchant. I am a partner in the firm of James Alexander, of Point St. Peter, for the past 11 years. Before that time I was for 12 years manager for the firm of Fruing & Co., of Jersey, Channel Islands, who are fish-merchants on this coast. I am thoroughly acquainted with all that relates to the taking and curing of fish and the fish-trade generally.

2. Our principal establishment is at St. Peter's Point; we have also one at Sheldrake on the north shore. We employ 24 boats of our own and supply about 20 more belonging to fishermen who give us their fish. Each boat is manned by two men, and we have employed on shore about one man and a half to a boat. We deal in other fish and fish-oils, but our principal business is in codfish.

3. Our Gaspe fish has better keeping qualities in warm climates, and this fact enables it to command a higher price in foreign markets because it is better dried. It is salted, and not pickled. It remains but three or four days in salt before it is exposed to the sun to be dried.

4. Our fish commands from \$4 to \$8 per quintal in the foreign markets to which we export it.

5. The privilege of fishing on the American coast is of no use to us; no one has ever gone from here to fish there.

6. The American free market for our codfish and other fish is of no value to us, as from the reason I have stated before our fish gets a better price in the markets for which it is specially prepared.

7. I certainly consider the permission granted to the Americans of fishing in our inshores, and of taking bait there, a very valuable one. The leave to transship cargoes, land and dry nets, curing and packing fish, &c., is also a very valuable privilege.

8. I consider it very important that we should have our fisheries exclusively to ourselves, and not be subjected to competition by Americans. The population of our coast is fast increasing, and many will have to go somewhere else if strangers are allowed to come and take the fish from their very doors.

9. I consider it impossible for a vessel to make a good fishery—Bank fishing—without obtaining fresh bait from shore, as the supply of bait on the Banks is very uncertain and cannot be depended upon. Salted bait is by no means equal to fresh bait.

10. During the existence of the Reciprocity Treaty I saw many American schooners fishing for mackerel in our inshore waters. I have seen as many as 30 at one time fishing in Griffin's Cove. I estimate the annual number of American schooners fishing for mackerel from Gaspé Bay to Fox River at about from 120 to 150. Since the Treaty of Washington American vessels have fished for mackerel in our inshore, but not in such numbers. Mackerel are generally plentiful on this coast; the number has increased of late years, and this year they are quite plentiful.

11. The Americans used during the Reciprocity Treaty to land, especially when I was at Griffin's Cove, and commit depredations and do damage to property, and threaten and annoy the people. I am also aware that they used to sell and barter goods that had not been entered at the custom-house. The vessels used to anchor among the moorings and nets and interfere seriously with our own fishermen by obstructing them.

I hereby swear that the above affidavit is, to the best of my knowledge and belief, correct.

JOHN LEGROS.

The said John Legros has sworn to the truth of the above affidavit at Point St. Peter's this thirteenth day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 173.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ADOLPHUS E. COLLAS, of Point St. Peter, in the county of Gaspé, in the Province of Quebec, make oath and say as follows:

1. I was born in Jersey. I am 31 years of age, and have been sixteen years on the coast here, and all that time in the employment of Messrs. J. & E. Collas, fish merchants, carrying on the fishery on the north and south shores of the River and Gulf of St. Lawrence. I am their general agent.

2. We have fishing establishments at the following places: Point St. Peter's (headquarters), Mallbay, Gaspé Basin, Moisie, Sheldrake, St. John, these three last places on the north shore, and English Bay at the west point of Anticosti.

3. We own ourselves 120 fishing-boats, and employ besides 230 boats owned by fishermen of the coast. They are supplied by us and give us their fish. These boats are engaged solely in the cod fishery. I may state that the cod is our principal business, although we deal in other fish and fish-oil. Our codfish is all dried and exported to foreign countries in our own vessels. This fish is specially prepared for exportation to the West Indies, Brazil, Portugal, Spain, and Italy. It is superior to any other codfish, prepared no matter where; its superiority lies in its being perfectly dried, so that it will keep for a length of time in hot climates when other fish will spoil. We own six sea-going vessels engaged in this foreign trade, and two coasters. We also at times charter other vessels.

4. We ship on an average from fifteen to twenty thousand (20,000) quintals of dried codfish annually, besides other fish and fish-oil. The price we obtain at the foreign markets above mentioned ranges from \$4.50 to \$8 per quintal.

5. We have never sent any of our fish or fish-oil to the United States, as the foreign markets above mentioned are better markets; that is, we get higher prices for our fish there.

6. My opinion is that the right of fishing in American waters is of no value whatever to us.

7. It is of the utmost importance to the people of this coast to have our fisheries in our own hands, and not to allow Americans to participate in them. The population of the coast is increasing so rapidly that new fishermen enter every year into the business, and we require all our fisheries to give them employment, and enable them to procure a livelihood.

8. The baits for cod fishing found on this coast are mackerel, herring, caplin, launce, smelt, chubs, squid, and clams; there is always an abundance of some kind of the above-mentioned bait. When one kind fails we can always find a substitute.

9. It is my opinion—and I base my opinion upon experience, because we had one of our vessels fishing on the Banks for several years—that American fishermen could not profitably carry on the cod and other fisheries of the deep sea without resorting to our inshore waters to procure bait, either by seining, netting, or by purchase.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

A. E. COLLAS.

The said Adolphus E. Collas has sworn to the truth of the above affidavit, at Point St. Peter's, this thirteenth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 174.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

1, DANIEL ORANGE, of Paspebiac, of the county of Gaspé, in the Province of Quebec, make oath and say as follows:

1. I am 43 years of age. I have been 29 years in this country, in the employment of Messrs. Charles Robin & Co. I have been the general agent for this firm for the last three years.

2. Our principal business is the cod fishing and curing and fish-oil trade. We own 450 fishing boats that take two men each, besides several fishing-schooners of from 7 to 50 tons, employed in the coast fishery. We own, also, 14 foreign-going ships and coasting craft—ten in number; most of these vessels were built here, there being now one actually building on the stocks. The sea-going vessels range from 100 to 350 tons each; the coasters average about 50 tons. Besides the 900 fishermen mentioned above, we employ 900 men, made up of shoremen, *i. e.*, those employed in curing fish on shore, ship and boat builders, blacksmiths, coopers, sailmakers, and other mechanics. Besides these, our foreign-going vessels are manned by about 140 men, and our coasters by about 70; making in all 2,010 men. Our firm has been established in this country for more than a century, and has always been in operation since.

3. In 1876, our firm exported 70,000 quintals of dried codfish to Brazil, Spain, Portugal, West Indies, and Italy. The fishery that year was a partial failure. We exported, also, that year 40,000 gallons of fish oil. In an average year we would export from 90,000 to 100,000 quintals of dried codfish.

4. None of our fish is exported to the United States, as our fish is prepared entirely for exportation to hot climates, where it is known to keep well, it being of a superior quality; we could not obtain in the markets of the United States for our fish a price that would be remunerative. We even tried the United States market with green herring during the Reciprocity Treaty, when there was no duty, and we found it did not pay.

5. Most of our codfish are taken within three miles of the shore.

6. During the Reciprocity Treaty and the period of licenses I saw annually a large fleet of American vessels fishing for mackerel on the north as well as the south shore of this Bay of Chaleur. On one occasion I saw at Perce 80 to 100 sail at anchor. Since I came to Paspebiac, three years ago, I have seen several American vessels fishing for mackerel in this bay, and to-day several are fishing within the 3-mile limit. The day before yesterday they took their mackerel with seine close to the shore, much to the injury of our inshore fisheries, as it hinders our cod-fishermen very much in their getting bait for their fishery.

7. The following is a list of our various fishing establishments: Paspebiac (headquarters), Perce, Grand River, Newport, Pabos L'Anse au Beau Fils, Magpie, Cape Cove, Dock, St. John, Natashquan, in the Province of Quebec, Carraquette, Shippegan, in New Brunswick, Arichat, Small and Big Cheticamp, in Cape Breton, N. S.

I hereby swear that the above statement is to the best of my knowledge and belief correct.

D. ORANGE.

The said Daniel Orange has sworn to the truth of the above affidavit at Paspebiac, this sixteenth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 175.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOSHUA MOURANT, of Paspebiac, in the county of Bonaventure, and Province of Quebec, make oath and say as follows:

1. I am 34 years of age, 27 years which I have lived on this coast. I am a native of the Island of Jersey, Chaniel Islands. I am 27 years in the employment of the firm of LeBoutillier Brothers, of Jersey, who carry on the fishing business. I am 20 years an agent, and for the past four years I have been the general manager of the firm.

2. The following is the list of the fishing establishments of this firm: Paspebiac (headquarters), Bonaventure Island, Thunder River, Magpie, Green Island, Wood Island, all in the Province of Quebec, and Fortune Bay, on the coast of Labrador.

3. We own 170 fishing-boats, with from 2 to 3 men each, and we employ, as fishermen and shoremen, carpenters, clerks, blacksmiths, and other mechanics, over one thousand men. We own 5 foreign-going vessels, and charter 7 others, 4 coasters.

4. Our principal business is the cod fishing and curing, and also her-

ring and fish oils. We export, on an average, annually, 21,000 quintals of dry codfish to Brazils and Mediterranean and West Indies. We also export about 50,000 gallons of cod and seal oils. All of this oil goes to English markets. We do not export any fish to the United States at present, nor for three years. We have tried both herring and large codfish (dry and green), and took great pains that it should give satisfaction, and with all that it was sacrificed in the American markets. As to the dry codfish that we prepare for the before-named foreign markets, and which is of a superior quality, the American market would not pay us what we pay for it here.

5. The American free market is of no use to us at all.

6. The great bulk of the codfish taken is got within three miles of the shore.

7. The right of fishing in American waters is of no value to us; we never go there to fish.

8. From 1854 until the expiration of the period of licenses the Americans fished in the Bay of Chaleur in great numbers for mackerel—they used generally to load their vessels. Since 1871 we have still seen them, but not in such numbers, and we see them still; they are here to-day. An American captain told me yesterday that he caught over 30 barrels of mackerel off the light-house on the point. The mackerel fishing in this bay generally begins about the 20th of this month. According to reliable information, I believe the mackerel is now plentiful in the bay, and lots are caught in the nets.

9. I believe it is our interest to keep our fisheries to ourselves, and not allow strangers to participate in them, as our population is increasing, and if strangers are allowed to fish in our inshore waters many of our young men will have to emigrate.

10. Many of the American schooners use trawl lines in the prosecution of their cod-fishing, which causes great injury, it being most of the mother fish they catch. They also do damage by the practice of throwing over the offal.

11. If the American Bank fishermen were prohibited from taking or buying bait on shore, they could not carry on their Bank fishery successfully, as the supply of bait on the Banks is not certain.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

J. MOURANT.

The said Joshua Mourant has sworn to the truth of the above affidavit at Paspebiac, in the county of Bonaventure and Province of Quebec, this sixteenth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 176.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, FRANK LEBLANC, of Port Daniel, in the county of Bonaventure, Province of Quebec, make oath and say as follows:

1. I am fifty years of age. Since the age of 14, that is, for the past 36 years, I have been a mariner. I have sailed in the Gulf of St. Lawrence, on the coasts of the maritime provinces and Newfoundland, the Atlantic coasts of America, to the West Indies, and to Great Britain, and for the last 25 years I have been master mariner in command of a coasting

vessel employed in the fishing business, and owned by Messrs. LeBoutillier Bros. Before entering into the employment of Messrs. LeBoutillier Bros., I lived for 7 years in Boston, U. S., and during that time I was engaged in fishing during the summer on board of American mackerel-fishing vessels, while during the winter I went to sea on different voyages—sometimes to the West Indies, sometimes to Europe. Our cruising grounds during those 7 summers, after mackerel, were for the first voyage the Bay des Chaleur, off Bathurst, and Grand Anse, close to the shore, and we made our second voyage on the north shore of Prince Edward Island, off Rustico, close to the shore, not only within the 3-mile limit, but as close as we could get. We took the fish with hook and line, the mode called bobbin_g. I mean to say that during the 7 summers alluded to we made two trips each year, going always to the places mentioned above. The American schooners on which I made those voyages hailed from Bass River, Cape Cod, and were about 60 tons each, carrying 18 men. Our voyages took usually from 3 to 6 weeks. The schooners were clipper vessels and carried 350 barrels. We never went home without a full load of beautiful fat fish. All the fish we took during those 7 summers were taken strictly within British waters. On one occasion we made our voyage off Rustico in 8 days; we took 140 barrels in one day, and I myself took with my two lines from sunrise till about 8 o'clock a. m. eleven barrels.

While fishing on the above-named grounds we used to see annually about 40 American mackerel vessels in the Bay of Chaleur, and from 80 to 100 on the north coast of Prince Edward Island. These vessels were all fishing on the same grounds as we were, but besides these there were a great many other American mackerel schooners fishing in the bay and off Prince Edward Island.

2. During the Reciprocity Treaty I have been, as before stated, in command of a coasting schooner owned by LeBoutillier Bros., and in that capacity made every year ten voyages from Paspebiac to the north shore of the River Saint Lawrence, and one trip to Quebec in the fall. Besides that, I used to go very often from Paspebiac to Bonaventure Island. During those trips I always passed along and usually close to the coast of Gaspé County.

3. During the Reciprocity Treaty and the period of licenses I saw myself, every year during the mackerel season, a great number of American vessels fishing for mackerel in the Bay of Chaleur, on the coast of Gaspé, on the south shore of the River Saint Lawrence as high as Magdalen River, and on the north shore as high as Point des Monts to the west, and as far as Mingan to the east. I saw annually on these shores above named, and nearly all within three miles of the coast, in the act of fishing, from 250 to 300 American mackerel schooners. This I consider a low estimate. Most of these vessels made two trips every year. Some of these vessels were 120 tons and carried 25 hands, and took as much as 800 barrels a voyage. These vessels all carried away on an average from 350 to 400 barrels each trip.

Between the period of licenses and the commencement of the Treaty of Washington I still saw a good many vessels fishing in British waters along the above-mentioned coasts. They used to dodge the cutters. Since the Treaty of Washington the number has been greater, and I estimate it at at least 80. They were of the same description as before, and fished in British waters. Most of them made two voyages, and carried away from 350 to 400 barrels each voyage.

4. For the last ten or twelve years I have seen along the north shore of the St. Lawrence from Point des Monts to Mingan about ten Ameri-

can halibut fishing schooners coming annually and fishing close to the shore, and all within three miles of the shore. They fished with trawl-lines. Each vessel carried from 4 to 6 dories, and each dory had a thousand hooks on their trawls. The halibut they took was gutted and packed in ice on board, and carried in a fresh state to the United States. Some of those vessels made two voyages, and I estimate their load at from 60,000 to 70,000 pounds each.

When those vessels commenced fishing on the north shore, I can state that the halibut were very abundant. At present, however, the inhabitants find it difficult to get any for their own use. I attribute this falling off to the number taken by the Americans with trawls, which is an extremely destructive mode of fishing, as it kills the large mother fish. While in the States, I learned that the Americans had ruined many of their fishing-banks with trawl-lines, and since then I have heard from United States fishermen that a similar destruction has been going on on the American coast.

5. I consider that the privilege of fishing in American waters is absolutely useless to us, as I know from experience that fishermen going from here there would not be able to catch fish enough to pay for their salt.

6. To my own knowledge the crews of some of those American vessels have gone ashore and often committed depredations on our coasts. They used to break down fences, trample the gardens and crops, and insult the people. Five years ago there were a great many United States fishing-vessels at anchor at Port Daniel, and a band of fishermen from them went to my house, burst open the door, and tried to force their way in. They were only prevented by my wife and children defending themselves. My wife herself had to threaten them with an ax; finding such resistance, they went away.

I hereby swear that the above statement is to the best of my knowledge and belief correct, as is also the following statement: In the same year a boat's crew landed from one of those American fishing-vessels at Port Daniel; they, during the evening, robbed the garden of Dan Sullivan, my neighbor; his wife saw them, and went out to remonstrate, when one of them pulled out a revolver and fired at her; the ball went through the door-post, she standing at the door.

F. LEBLANC.

The said Frank LeBlanc has sworn to the truth of the above affidavit, at Paspébiac, this sixteenth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 177.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, THOMAS C. REMON, of Little Pabos, of the county of Gaspé, of the Province of Quebec, make oath and say as follows:

1. I am a native of Jersey, and have been on this coast for more than 30 years. I was for seven years in the Gaspé Fishing and Coal Mining Company as clerk. I afterwards and since carried on business on my own account. I am thoroughly conversant with all that concerns fish and fishing. I keep fishing-boats.

2. I am well acquainted with the fishing carried on from Paspébiac to Perce, a distance of about 90 miles. The principal fisheries on this coast are the cod, mackerel, herring, and halibut. The baits are caplin, herring, mackerel, squid, smelts, and clams.

3. With regard to codfish, I think the number of fish on the grounds is as great as it ever was; though each individual boat may not take so many as formerly, still there are very many more boats now than then, and the quantity of fish exported annually is much greater now. The best quality of codfish is that taken close inshore.

4. I do not believe that any vessel fishing on the Banks could carry on that fishery with success and make a paying voyage without the privilege of coming inshore to buy or take bait, as the supply of bait on the Banks is very uncertain.

5. I have often seen American Bank-fishing vessels come close inshore, within the three-mile limit, to take bait; they also came frequently inshore to get wood and water.

6. The mackerel school inshore, and the bulk of them is taken inshore. They feed on the small fish and the shrimps in the shallow shore water.

7. Prior to the year 1854 a considerable number of American schooners fished in our inshore waters here for mackerel. In 1853 one of them was taken and confiscated by a British frigate, the *Devastation*. From the year 1854 till the expiration of the period of licenses, a very large number of American schooners fished on this coast for mackerel. I have seen as many as 60 at one time in the offing. The average annual number of United States mackerel schooners that visited the coast above mentioned, during that period, I estimate at not less than 200. They averaged, I should think, 80 tons, and carried crews of from 15 to 20 men. All their vessels took full fares; many of them made two voyages. They took each trip, I should think, from six to eight hundred (800) barrels. Most of this fish was taken inside the three-mile limit.

8. It was a common habit with the Americans when fishing for mackerel to come close inshore among our boats that were also fishing for mackerel, and by throwing overboard bait plentifully and allowing their vessel to slowly drift outside, to draw the fish away from our boats outside.

9. The herring and cod spawn in great numbers on this coast.

10. The American free market for our fish is not of the least use to us, for our fish are prepared for either our own market or for warm countries, where they find a better market than in the United States.

11. The privilege of fishing in the United States waters is of no value to us whatever.

12. I think it of great importance to us that our fisheries should remain entirely in our own hands.

13. The practice of throwing overboard offals is very injurious to the fishing-ground.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

THOMAS C. REMON.

The said Thomas C. Remon has sworn to the truth of the above affidavit at Little Pabos, this fifteenth (15th) day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 178.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM O'CONNOR, of Little Pabos, of the county of Gaspé, Province of Quebec, make oath and say as follows:

1. I am 50 years of age, and for the last thirty years have fished and

carried on the fishery at this place. I am practically well acquainted with fishing and all that relates to the fish trade. I know thoroughly all the coast from Gaspé to Paspebiac. The chief fish taken on that coast are cod, mackerel, halibut, and herring. The baits are caplin, mackerel, herring, squid, launce, smelt, and clams. All these baits are taken close inshore.

2. There are just as many codfish now as there ever were, although many more are taken every year, there being more boats; it does not seem to have diminished the number at all.

3. It is my opinion that the Americans could not fish for cod on the Banks and make profitable voyages without having the right to come inshore to take bait or to buy it.

4. During the Reciprocity Treaty and the period of licenses there were annually a great number of American vessels fishing for mackerel in our inshore waters on this coast. I mean within three miles of the coast. There were from Cape Despair to Paspebiac, annually, on an average, a couple of hundred, I should think, and I have seen as many as sixty sail American schooners at one time in the offing. These vessels took the greater part of their mackerel within the three-mile limit. The tonnage of these vessels varied from 60 to 100 tons, manned by from 15 to 18 men. They generally took full cargoes here, carrying on an average about 700 barrels. The mackerel taken was of a fine quality.

5. For the first five years of the Treaty of Washington, that is from 1871 to 1875 inclusive, I have seen a good many American vessels fishing for mackerel on the same grounds and over the extent of coast above described. I estimate their annual number at one hundred (100). They were vessels of the same description as before, and took about the same quantity of fish.

6. It is certainly of no value to us to have the right of going to fish in American waters.

7. The United States free market is of no use to us, for our fish is prepared especially for hot climates, where, unless it were extremely dry and hard, it would not keep at all.

8. I think the privilege acquired by the Americans, through the Treaty of Washington, of resorting to our inshore waters and harbors for drying and hauling their nets, getting wood and water and ice, obtaining shelter, and transshipping cargoes, is one of very great value to them.

I hereby swear that the above statement is to the best of my knowledge and belief correct.

WILLIAM O'CONNOR.

The said William O'Connor has sworn to the truth of the above affidavit, at Little Pabos, this thirteenth (13th) day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 179.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN M. LUCE, of Grande Greve, in the county of Gaspé, and Province of Quebec, make oath and say as follows:

1. I have been engaged on the coast of Gaspé for 16 years. I am manager for the firm of Wm. Fruing & Co., of Jersey, Channel Islands. I reside at Grande Greve, where we have our principal establishment.

We have also fishing establishments at Cape de Rosier, Griffin's Cove, Fox River, Claridorme, Grande Vallee, Mont Louis, and Gaspé Basin, all in the county of Gaspé. We have also several fishing establishments in New Brunswick.

2. I am practically acquainted with all that relates to the catching and curing of fish, as well as to the nature of the fish required for the different foreign markets.

3. The principal fisheries of this coast from Gaspé Bay to St. Anne des Monts are the cod, halibut, mackerel, and herring.

4. The cod is quite as plenty now as when I first came on the coast, though the quantity may vary each year. This year the fish are in unusually good condition.

5. Halibut were plentiful all along this south coast of the St. Lawrence when I first came here, especially at Grand Vallee and Magdalene River; now the quantity is very small indeed. I attribute this destruction of the halibut fishery to the exhaustive fishing of the Americans with their numerous and large trawls. All these halibut and other fish are taken close along shore, within the three-mile limit.

6. In the year 1860 and following years up to 1868, during the Reciprocity Treaty and two years of licenses, at least one hundred American mackerel schooners fished for mackerel along this bay and coast with seines and bobs. I have seen them seining in the harbor of Gaspé, inside of Sandy Beach. These vessels were from 70 to 150 tons, having from 15 to 20 men each. They generally loaded, and would average from 600 to 800 barrels.

7. The herring fishery is as good as usual. This spring they were very plentiful.

8. The right of fishing on the American coast is of no use to us. We have as much as we can do on our own coast. Our fishermen would not go there; and the fact that so many Americans come to our waters to fish, leads us to believe that they have not fish nearer home.

9. The free market of the United States is not of any benefit to us. I have never shipped fish to the United States, and I do not know of any other merchant from this coast who has. Our fish is prepared in a peculiar manner for the Brazilian, West India, and Mediterranean markets, where it commands a higher price than other fish.

10. Without the permission to fish in the inshore waters, and to get bait along shore, no foreign or other vessel could make a successful fishing voyage.

11. I am most decidedly of the opinion that our inshore fisheries should be kept exclusively to ourselves. Our fishing population is increasing, and will require the use exclusively of our own fisheries. No indemnity that we may receive will be an equivalent for the loss caused to us by granting the use of our inshore fisheries to foreigners; and if the Americans come here in greater numbers, many of our fishermen will have to emigrate from the coast.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

J. M. LUCE.

The said John M. Luce has sworn to the truth of the above affidavit, at Grande Greve, in the county of Gaspé, this 10th day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 180.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, HENRY PRICE, of Grande Greve, of the county of Gaspé, of the Province of Quebec, make oath and say as follows:

1. I am 53 years of age. I was born here, and have fished for the past 40 years. I am well acquainted with all the fisheries of this Bay of Gaspé and the neighboring coast. They are the cod, mackerel, herring, and halibut, and are all carried on inshore, within three miles of the coast and in the bay, except as to the cod fishery, as some few are taken off Ship Head, beyond the three-mile limit.

2. As long as I can remember, the American fishing-vessels have resorted to this bay for the mackerel-fishing, but it was during the existence of the Reciprocity Treaty and the period of licenses that they came in greatest numbers. There were, I should think, from 150 to 200 of them came here every year of this period. Many of these made two trips the season. They averaged from 50 to 100 tons, and took about 500 barrels each. During the first three or four years of the Treaty of Washington, a good many American vessels came still to this bay and the neighboring coast, of the same class as formerly—about two-thirds as many as before—say, from 100 to 140; but for the last few years we have seen only a few, although their catch was about the same as formerly. The mackerel they took was of the best quality, especially those caught at the latter part of the season. They fished with hook and seine.

3. The crews of those American fishing-vessels often committed depredations on this coast. I can state that some years ago about 30 of them came ashore and took forcible possession of my house, insulting and threatening my family, capsizing everything in the house, and I had to get the assistance of my neighbors to drive them away. Sometimes they anchored in the midst of our nets, and, when getting under way, broke and carried them off. One of my nets, worth \$20, was torn to pieces by one of those American vessels, when it could easily have been saved.

4. The American fisheries are entirely useless to us.

5. I think it most injurious to us that the American fishermen should be allowed to come to our waters, because they take such large numbers of fish, and draw the fish outside of our ordinary fishing grounds, by throwing overboard bait. I have myself seen United States fishermen preventing us from fishing near them, when in our own waters, ordering us off with threats.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

HENRY PRICE.

The said Henry Price has sworn to the truth of the above affidavit, at Grande Greve, this tenth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 181.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I. WILLIAM HYMAN, justice of the peace and mayor of the township of Cape de Rosier, of Grande Greve, in the county of Gaspé, make oath and say as follows:

1. I am a merchant, and have lived here for 34 years. I have been in the fishing business all the time. I have an establishment here, one at Cape de Rosin, one at Fox River, and another at Gaspé Basin. I understand every operation practically relating to the taking and curing of fish. I am acquainted with the fisheries carried on from Grand Etang to Gaspé Bay. The fisheries there carried on are the cod, herring, mackerel, and halibut.

2. Those fisheries are carried on mostly within three miles from the shore. The value of the inshore fisheries, therefore, is vastly greater than those outside; the fact is, very few boats go outside. The run of the codfish is about the same on the coast as it was formerly, though, owing to the greater number of boats, each boat may not have so much.

3. The herring, upon the whole, appears to be in the same quantity as formerly. They spawn in large quantities at Sandy Beach, in the Bay of Gaspé.

4. The mackerel were very abundant in this bay, and along the outside coast; for the last few years they have been scarce. They some years ago failed in the same way but came back again, and they have already appeared this year.

5. Ever since I settled here, I have seen American mackerel-vessels fishing for mackerel, both in the bay and harbor of Gaspé and the neighboring coast; they fished with the bob and with seines; sometimes the bay used to be full of them; from 100 to 200 vessels used to come during the season; the tonnage of these vessels was from 60 to 100 tons, carrying from 15 to 20 men; they fished with hooks and seines, some of them loaded more than once, and they carried on an average from 500 to 600 barrels. Although before the Treaty of Reciprocity the coast was guarded, yet they managed to come and fish, but the greatest numbers were seen during the existence of the Reciprocity Treaty and the period of licenses, a period of about 14 years; after this time, during the years 1868, 1869, and 1870, the coast was again guarded, and still they managed to come in certain numbers, defying the cutters; they did not mind the cutters, as they believed they could outsail them. Since the Treaty of Washington they came in numbers, until the last two or three years; during the first three years of the Treaty of Washington only about one-fourth of the number that used to come during the Reciprocity Treaty.

6. The presence of so many American vessels in this bay and along the coast, above described, was very injurious to our fisheries, depriving us of the bait for codfish, and by their superior dexterity preventing our people from taking as much as they would have done otherwise, as they used to draw the fish outside with their bait, and also, by throwing the offals of the mackerel overboard outside of the bay, they used to keep the codfish from coming inshore; the injury has been as great in proportion since the Treaty of Washington.

7. The American vessels fishing cod on the banks cause injury to the inshore cod fisheries—first, by using trawl lines, they kill the mother-

sh; second, by the hurt caused to the codfish by the offals, which being swallowed by the cod, the bones swallowed destroy them.

8. The American mackerelers using seines, fished in the Bay of Gaspé, inside of Sandy Beach and Peninsula, hauling their seines on shore.

9. The privilege of fishing in American waters is of no value to us; our fishermen will never go there.

10. The American free market for our fish is of no value to us; we make a superior dry codfish to them, and we ship to Brazil and European markets. I have been in business for 34 years, and have never shipped any fish to the United States. And we do not know of any other merchant ever having done so.

11. It is our interest to keep our fisheries to ourselves, and not to allow foreign fishermen to come into our inshore fisheries.

12. The competition of the Americans is very hurtful to our own fishermen, especially as regards the mackerel and halibut for this coast.

13. American fishermen committed many depredations, and they used to land and sell many articles without paying the duty.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

WM. HYMAN.

The said William Hyman has sworn to the truth of the above deposition, at Grande Greve, in the county of Gaspé, and Province of Quebec, this 4th day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 182.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ABRAHAM GAVEY, of Grande Greve, of the county of Gaspé, of the Province of Quebec, make oath and say as follows:

1. I am 35 years of age; I am a practical fisherman, and have been engaged in carrying on the fishery for the last 20 years; I am well acquainted with the fisheries carried on in this bay and the neighborhood. I was born here.

2. The fisheries here are cod, halibut, mackerel, and herring.

3. I have seen a large number of United States vessels fishing in this bay every year for mackerel and cod ever since I can remember, but they were much more numerous during the existence of the Reciprocity Treaty. I should think that there were, during that treaty, at least from one to two hundred American vessels fishing in this bay every year. They were, on an average, from 60 to 100 tons each, manned by from 15 to 20 men; a good many of these vessels, as they themselves have told me, made two voyages. I have seen myself, at one time, as many as 50 American fishing-vessels anchored from Grande Greve to Little Gaspé, a distance of one mile. The average catch of each vessel, as near as I can reckon, was about 500 barrels; and the mackerel they took was, especially at the latter end of the season, of the very first quality. That mackerel was taken by hook and seine; the seining was done in the harbor, inside of Sandy Beach, and also in the bay with purse seines.

4. During the first years of the Treaty of Washington the number of American schooners mackerel-fishing in this bay and the vicinity was

about a quarter of what it was during the Reciprocity Treaty, although there were as many fish then as during the Reciprocity Treaty; but for the last three years the fishing has fallen off. This year, however, they seem to be increasing again.

5. The throwing overboard of offal is extremely injurious to the fish and fishing-grounds. This is always done by the American fishing-vessels, both in the bay and outside.

6. The United States fishermen have often committed depredations on this coast, threatening to do bodily harm to the inhabitants, trampling down the crops, and stealing sheep and potatoes. One vessel tried to run down my brother, Daniel Gavey, and his partner, who were in their boat going codfishing; this occurred four years ago.

7. It is my opinion, and I am sure all the fishermen on this part of the coast think so also, that the privilege of fishing in United States waters is of no value whatever to us.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

ABRAHAM GAVEY.

The said Abraham Gavey has sworn to the truth of the above affidavit at Grande Greve, this tenth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 183.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PETER FERGUSON, of L'Ance au Beaufils, county of Gaspé, and Province of Quebec, make oath and say as follows:

1. I am 55 years of age. I was born here and have lived here all my life. I began to fish when I was 15 years of age. I am practically acquainted with the fisheries of this coast.

2. The fish found on this coast are codfish, herring, mackerel, and halibut; the principal baits are herring, capelin, squid, mackerel, smelt, and launce. The herring spawn abundantly along the coast, and we see great schools of young herring during the summer. Bait is generally abundant; when one fails we get another kind; we always get bait close inshore, always within the three-mile limit. We find that the codfish is generally as abundant as it was 30 years ago; but the fishing is more abundant; according to the state of the weather, and the supply of bait. In L'Ance au Beaufils Cove, where there are 36 boats, the fish is mostly caught within the three-mile limit, very few going to the Bank. Ninety per cent. of the fish is taken inside the limit of three miles.

3. It would not pay an American schooner fishing on the Bank to remain there fishing without the privilege of taking bait on shore. She could not make a profitable voyage and trust to getting bait on the Bank. I have several times seen American bankers coming to get bait on shore, and last year one of them employed my neighbor to seine caplin for bait for him.

4. During the Reciprocity Treaty and the period of licenses, I saw a great many American mackerel schooners along this coast, and several times I have counted as many as thirty between Whitehead and Cape Despair, within the limit. The average number during each season was between 200 and 250. They used both to take the mackerel inside

of the limits and bait them outside. I was on one occasion on board a schooner that baited the mackerel close to the shore, and thus brought them outside. This was an American schooner. I believe this was a common practice. These schooners were from 60 to 100 tons, and took from four to eight hundred barrels each. They told me themselves that they generally made two trips in the season. They used to grind up the small mackerel they took for bait. It is a common practice for the Americans to begin to fish inside the limit. The mackerel generally feed on shrimps, close inshore, and on other small fish.

5. During the first three years of the Treaty of Washington they continued to come in numbers, and fish as before in our inshores. There were at least half the number that used to come under the Reciprocity Treaty fishing each year on this shore; as I have said, after the beginning of the Treaty of Washington, for the last couple of years, I have not seen so many.

6. I believe that the mackerel spawn along the shore. We have often taken the young mackerel fry in our lance-seines along the beach. We generally see the mackerel schooling along this shore about the end of August, and two years ago I saw them as thick as caplin in among the boat-moorings. I believe if the Americans must come they could take as many as during the years past. The mackerel taken along the shore are of fine quality.

7. The right of fishing on the American coast is of no use to us; our people don't want to go there.

8. Their free market is of no use to us. Our fish is prepared for foreign markets other than that of the United States. I mean for Brazil, West Indies, Spain, Portugal, and the ports in the Mediterranean.

9. The competition of American fishermen in our waters is a tremendous detriment to our fishing interest.

10. It would certainly be more advantageous for us to keep our inshore fisheries to ourselves.

I hereby swear that the above statement is to the best of my knowledge and belief correct.

PETER FERGUSON.

The said Peter Ferguson has sworn to the truth of the above affidavit, at Cape Cove, in the county of Gaspé, and Province of Quebec, this fourteenth (14th) day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 184.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, CHRISTOPHER BAKER, of Cape Cove, make oath and say as follows:

1. I am mayor of Cape Cove. I am 39 years of age. I was born here, and have lived all my life at Cape Cove. I have fished for 14 years. I began to fish at 12 years of age. Since I was 26 years of age, I have been engaged in the fishery business on my own account, and keep fishing-boats. I have always had 10 or 12 boats fishing every season. I am practically acquainted with all that relates to fishing, and the fish trade. I am well acquainted with the coast of the Gulf of St. Lawrence and the Bay of Chaleur from Gaspé Basin to Paspébiac, a distance of about 100 miles.

2. The principal fish taken along this coast are the cod, herring, mackerel, and halibut, cod-fishing is the principal, and the baits are herring, caplin, mackerel, squid, smelt, and lancee. The run of cod-fish is about the same as formerly, though there are more boats now than formerly.

3. No vessel, American or other, could make a profitable voyage at Bank fishing without the privilege of taking bait on shore, or bringing it from the fishermen of the coast. I do know that bankers come for bait to the shore. I, last year but one, sold bait to an American Bank-fisherman, and hired my seine to another to seine caplin, which caplin he seined from the beach.

4. Herring spawn here along the shore in abundance.

5. I have seen many American vessels fishing along shore during the existence of the Reciprocity Treaty and the period of licenses. I have seen at one and the same time in Cape Cove, when I was fishing, 50 American mackerel schooners anchored in the bay. There were some at the same time at other places. I believe that each year along this coast during the period specified above, at least (200) two hundred American schooners used to fish for mackerel, each from 50 to 100 tons, manned by from 12 to 18 men; some, and I believe the most, made two voyages, and I believe they took on an average 600 barrels each. Most of the mackerel they took was taken inside of the three-mile limit.

6. A smaller number continued to fish for mackerel inshore, even when the cutters were placed on the coast to prevent them.

7. For the first years of the Treaty of Washington the Americans continued to come in numbers, but for the last two years they have not come in such numbers. They fished as formerly, inside of the three-mile limit. I consider the number that come about here was about one-third of the number that come during the Reciprocity Treaty.

8. It is a great advantage for the Americans to have the privilege of fishing inshore; without that privilege they would get very little mackerel outside of the limit. I have bought fish (codfish) and oil and cod roes from them. I have heard that they did trade a little on the coast!

9. I have seen the Americans throw offals overboard, and I believe this to be injurious to the fish and the fisheries.

10. The privilege they have of taking bait on shore, of getting ice, and transshipping cargoes is of great value to them.

11. The right we have acquired by the Treaty of Washington of fishing in American waters is not of any value to our fishermen.

12. The American free market is no benefit to us; my fish is prepared for the Brazil and European markets; the price we could get in the States would not pay us.

13. It is certainly our interest to keep our fisheries to ourselves, and not to allow foreigners to participate in them.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

CHRISTOPHER BAKER.

The said Christopher Baker has sworn to the truth of the above affidavit, at Cape Cove, in the county of Gaspé, this 14th day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 185.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DAVID PHILLIPS, of Peninsula, in the county of Gaspé, make oath and say as follows:

1. I have lived at Peninsula, in Gaspé Bay, for forty-six years. I am a farmer and have fished. I understand practically all that relates to the taking and curing of fish. I am 72 years of age.

2. The principal fish taken in this bay are the cod, mackerel, halibut, and herring.

3. The codfish taken varies in quantity year by year, but more is taken now than was taken 30 years ago. I believe that the codfish spawn in the bay, and we see great quantities of the young codfish.

4. The herring spawn in this bay. I have seen the sea whitened by the milt of the male.

5. Formerly mackerel were very abundant, and I have seen the mackerel schooling in great numbers. I have seen them so thick that one could almost walk on snow-shoes over them. Last year and the year before but few were caught. This year the mackerel are appearing in quantity, and there is the prospect of a good catch. I have not for many years seen the mackerel so large, and good in quality. When I first came here a few American schooners used to fish in the bay for mackerel, but afterwards they became so numerous that I have seen as many as forty of them in the bay at one time. During the time of the Reciprocity Treaty they fished in the bay in great numbers, and I estimate the annual number that did so at from 100 to 150 and 200. The tonnage of these vessels was from 50 to 100 tons. Some of these vessels made two voyages. I average the number of barrels taken by each to be about 500 barrels. When, after 1868, the coast-guard schooners were put on to keep the Americans from fishing in the inshore waters but few Americans came in to fish. In the first years of the Treaty of Washington about one-third of the number that came under the Reciprocity Treaty visited the bay to fish. These vessels were of the same tonnage, and the catch was about the same. The waters of this bay are most accessible; the bay is sheltered, there is a fine, convenient harbor in all weather, and a good supply of wood and water.

6. The privilege granted to the Americans to fish at our doors is no benefit certainly to us; far from it; it is a serious injury. I certainly wish to see our inshore fisheries kept exclusively for our own fishermen. Our population is increasing rapidly, and we require that all our fisheries should be preserved to ourselves, or otherwise our young men will have to emigrate.

7. There is an abundance of bait for codfish in the bay, especially lancefish, squid, and clams. Our fishermen on the outside coast frequently came in boats a distance of forty miles to get bait, especially lancefish.

8. The privilege of fishing in American waters is no use to us. If fish were plentiful on their coast, why do they come here? I never knew of any of our fishermen having gone to fish there.

9. The privilege of selling our fish duty free in the United States is no use to us. Our fish, especially codfish, has a more suitable market elsewhere.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

DAVID PHILLIPS.

The said David Phillips has sworn to the truth of the above affidavit, at Peninsula, in the county of Gaspé and Province of Quebec, this eleventh day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 186.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, RICHARD MILLER, of Peninsula, in the county of Gaspé, Province of Quebec, make oath and say as follows:

1. I am 68 years of age. I was born at Peninsula, and have lived here all my life. I have been engaged in fishing for the last forty-nine years, and am practically well acquainted with the cod, herring, mackerel, and halibut fisheries, and for thirty years, that is, of course, thirty summers, I have navigated through the Gulf of St. Lawrence and the Straits of Belle Isle for whale and cod fishing.

I was present when the testimony of Mr. David Phillips was given and sworn to, and the same having been read to me, I fully concur in all the statements and opinions therein contained, and hereby swear that they and what I have above stated are, to the best of my knowledge and belief, correct.

RICHARD MILLER.

The said Richard Miller has sworn that the above affidavit is the truth, at Peninsula, this eleventh day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 187.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES ROONEY, of Perce, in the county of Gaspé, make oath and say as follows:

1. I am 52 years of age. I was born in Perce, and have lived here all my life. I began to fish at the age of 17; I afterwards kept a fishery, which I still keep. I am well acquainted with the fisheries of this coast, and along this shore.

2. The fish found here are cod, herring, and mackerel; and the baits, squid, caplin, herring, mackerel, are also taken, generally close to the shore. The herring spawn abundantly along the shore.

3. The fish do not run every year the same, but the general run is about the same, some years more and some years less. I mean the codfish. The bulk of this fish is caught close along shore, that is, within three miles. The fish thus caught inshore is much the best fish; all the fish thus caught along this coast is sold either in Brazil, the West Indies, Spain, Portugal, or the Mediterranean. The Gaspé codfish is the best fish in the market, and commands a higher price, owing to its peculiar preparation. Codfish caught on the Banks and salted on board a vessel could not be dried to suit these markets. During the summer our fish is not kept more than three days in salt before it is exposed to the sun to dry. Codfish spawn in this neighborhood, especially around Bonaventure Island.

4. The habit of the Americans of throwing offal over on the Banks is

injurious to our cod-fishery. It gluts the fish, and they won't bite on the lines. It floats away with the tide and draws the fish off after it.

4. In 1854, and during the continuation of the Reciprocity Treaty, and years of the license system, a large number of American mackerel-fishing vessels were seen all along this coast. They used even to fish in among our boat-moorings for mackerel. I have seen at one and the same time about 30 American mackerel schooners in this neighborhood. I have counted 100 sail in different ports in view at the same time, and I believe that the total annual number that visited this coast during the time named was between 400 and 500. Many of them made two trips. Their tonnage would average from 50 to 150 tons, with from 15 to 20 men, and they took from 400 to 800 barrels. The most of this fish was taken within the three-mile limit. Since the beginning of the Treaty of Washington a considerable number continued to fish for mackerel in our inshores. I should estimate the number to have been from one to two hundred. The habit practiced by the Americans of coming in among our boats fishing for mackerel close inshore, and by throwing out large quantities of bait, thus baiting the mackerel away outside of the reach of our boats, was exceedingly injurious to us and our fishermen.

5. The mackerel spawn along this coast, and the Bay of Gaspé in particular I have seen alive with the mackerel-fry. I have seen the same thing along the coast.

6. The fattest mackerel are always closest to the shore, because there they find the most bait; and this is the case with every kind of fish.

7. The right of fishing on the American coast is of no use to us. We don't want to fish there, and I never knew of any vessel from here having gone there to fish. If there is any fish there, why do they want to come here and fish?

8. Our fish being prepared for warm countries will not find a market in the United States, so that the right of selling our fish duty free in the United States is of no use to us.

9. The right of fishing in our domestic waters, of drying fish on our shores, of taking bait along our beaches, and of transshipping cargoes in our harbors, is a very great privilege to the Americans and of great value to them. It is also a very serious loss and inconvenience to us.

10. Our population is rapidly increasing, and we require all our fisheries for our own fishermen. If the Americans continue to disturb our waters and drain our fisheries in front of our very doors, many of our young men will have to emigrate.

11. Many times I have known people on this coast obliged to keep in their houses, and in some cases to arm themselves for protection, to defend themselves from American fishermen on drunken sprees along shore. They also used to commit trespass, break down our fences, and overrun our fields. I have known of two young girls having been carried off on American vessels against the wishes of their parents.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

JAMES ROONEY.

The said James Rooney has sworn to the truth of the above affidavit at Perce, in the county of Gaspé and Province of Quebec, this thirteenth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, FRANCIS LEBRUN, of Jersey, Channel Islands, at present residing in Perce, the county of Gaspé, of the Province of Quebec, make oath and say as follows:

1. I have been living at Perce since 1857; since that time I have been carrying on the fishing business on my own account. I deal only in codfish, and employ ten boats. I am thoroughly conversant with every operation connected with the taking and curing of fish.

2. The quantity of codfish is as great now as it ever was, although the number of fishermen and the quantity exported have increased very much.

3. All the fish prepared by me are exported either to the Brazils, the West Indies, or to South Europe. The price obtained for this fish varies from \$4.50 to \$8 per quintal.

4. More than three-fourths ($\frac{3}{4}$) of the fish taken on this coast, is taken within the three-mile limit, and the fish taken inshore are always of a superior quality to those taken outside.

5. The baits for cod are herring, caplin, mackerel, launce, smelts, squids and sometimes clams; all these baits are plentiful, and are all taken close inshore; some of them, caplin and launce, are taken from the shore.

6. Since the Treaty of Washington cod and herring are taken in about the same quantities as before. Mackerel this year are very abundant, being much more plentiful than for some years back.

7. The cod and herring spawn on this coast. I have often seen their eggs and then the small fish here.

8. During the years of the Reciprocity Treaty great numbers of American fishermen used to fish for mackerel along this shore. The average number of these American vessels fishing annually in this immediate neighborhood was from 100 to 150, all fishing within the three-mile limit. The tonnage of these vessels ranged from 60 to 150 tons each, manned by from 12 to 20 men. Their catch averaged about 500 barrels each trip. Many of them made two trips, and some even three. Even during the years of the preventative cutters, the Americans still managed to fish in the inshore waters by dodging the cutters.

9. During the first years of the Treaty of Washington, there was still a considerable number of American mackerel vessels seen on this coast.

10. The inshore fishery for mackerel and herring is much more valuable than the outside; in fact these fish are seldom taken far from shore. The relative proportion of the two fisheries is as fifty to one I think.

11. I am aware that the American Bank fishermen are constantly in the habit of coming to the shore to obtain bait, either by taking it themselves, or by buying it from our fishermen. They also obtain ice, in which they preserve this bait.

12. I do not believe that any vessel fishing on the Banks could carry on the fishery with profit, or at all, without the privilege of obtaining fresh bait from the shore, as the supply of bait on the Banks is very uncertain, many vessels being for weeks at a time unable to obtain any.

13. The privilege of entering our harbors to obtain wood and water and to transship cargoes is a very valuable one to the Americans.

14. The privilege of fishing in the United States waters is of no use whatever to us. I never knew of any of our fishermen resorting to those waters to fish.

15. The free market of the United States is also of no value to us.

16. Many disturbances have been caused on shore by the American fishermen. On one occasion they abducted a young girl, a minor, against the consent of her parents; fortunately one of the cutters was near at hand, and, overtaking the American vessel, got back the girl.

17. I consider that much damage is done on the fishing-grounds by the Americans throwing overboard offals. They kill the fish by this practice.

18. The privilege granted to Americans of landing on our shores to dry their nets, cure their fish, of obtaining bait in our inshore waters, as well as of fishing there generally, is one that is exceedingly injurious to us, and of very great value to them.

I hereby swear that the above statement is to the best of my knowledge and belief correct.

FRANCIS LEBRUN.

The said Francis LeBrun has sworn to the truth of the above affidavit at Perce, this 13th day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 189.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM JOHNSTONE, of House Harbor, Magdalen Islands, county of Gaspé, Province of Quebec, merchant, make oath and say as follows:

1. Have been acquainted with all the fisheries that are carried on about the Magdalen Islands for the last 27 years.

2. Fishing by the Americans for herring about the Magdalen Islands has been extensively carried on. Their vessels average about 65 tons; the herring vessels have 8 men, and mackerel vessels from 12 to 15 men each for a crew.

3. The American herring fishing vessels take away yearly from the islands about 600 barrels in bulk each.

4. The Americans carry on the herring fishery by means of seines and nets. They are obliged to land in order to fish; they have erected establishments on shore latterly.

5. The practice of throwing the offal of fish overboard, as done by the Americans, is highly injurious to our fisheries, because it gluts the fish, and, decaying on the bottom, poisons the water, driving away the large fish, and killing the young and eggs.

6. During and before the Reciprocity Treaty the Americans have always fished from the beaches about the Magdalen Islands.

7. The inshore fisheries about the Magdalen Islands are of much greater value than the outside.

8. I have seen the Americans many times in each season come in among our boats whilst they were fishing mackerel in Pleasant Bay, and by throwing superior bait entice the fish away with them. These vessels drift in a straight line, and all the boats anchored in their way are obliged to move or be run down.

9. The hauling-seines are used from the shore. The purse-seins are tugged in deep water, but always inshore. The purse-sein is injurious to the fisheries, because it gathers in all kinds of fish, both large and small. The large mackerel only are saved; the others are thrown away dead, which destroys the ground as well as the fishery.

10. The American trawlers resort to the inshores of the Magdalen Islands for bait for their cod fishery.

11. Cod, halibut, and haddock are taken in the inshore waters of the islands by the American fishermen, and also by the Canadians.

12. The food of mackerel is found inshore. It consists of lance, shrimp, sea-leas, and insects adhering to rockweeds. Many breed inshore on sandy and muddy bottom in Pleasant Bay and the small Coves around the Magdalen Islands.

13. I consider it a great advantage to the Americans to be allowed to land to dry and repair their nets, and to cure their fish.

14. The privilege of transshipping cargoes enjoyed by the Americans is a great advantage, because it enables them to keep on the fishing-grounds, and to double their fares during the fishing season.

15. It is a great advantage to the Americans to be able to procure bait in our inshores, either by fishing for or buying it. If they buy it, it is because they find it more profitable, and it saves time.

16. The Americans could not carry on the cod and halibut fisheries about the Magdalen Islands so profitably without being able to resort to our inshores to procure bait.

17. It is of no practical advantage to Canadians to be allowed to fish in American waters. And I don't know of any Canadian vessels ever going there to do so.

18. The privilege of transshipping cargoes to the Americans is worth a load. And the privilege of getting bait in our inshores for their cod and halibut fisheries is worth from 50 to 60 per cent. of these fisheries, which would otherwise not exist.

19. Fishing by Americans in Canadian waters hinders the fishing operations of our fisheries to a great extent. Not only by their practice of enticing the fish away from the boats or by the practice of throwing fish offal overboard on our fishing grounds, but because they are so much better equipped with vessels and fishing-tackle that they take all the best and largest fish, and by superior numbers overpower the boat fishermen.

20. The Americans resorting to our inshores for fishing purposes take advantage of this opportunity to trade with the inhabitants with goods smuggled from the United States, these goods being an extra supply of ships' stores taken on board for that purpose. They give them in exchange for bait and in payment for labor, thereby defrauding the customs, and injuring legitimate trade by regular tax-payers.

W. JOHNSTONE.

Sworn to the best of his knowledge, information, and belief, at Halifax, county of Halifax, Province of Nova Scotia, Dominion of Canada, this 23d day of August, A. D. 1877, before me.

W. D. HARRINGTON,
Justice of the Peace, Province of Nova Scotia.

No. 190.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, CHARLES FOURNIER, of Magdalen River, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

1. Have been acquainted with the fisheries on this coast for 22 years.
2. From 1854 to 1866 the fishing by the Americans on this coast has

been very extensive for mackerel between Cape Chat and Magdalen River, a distance of 63 miles.

3. To the best of my knowledge, about 100 vessels have visited these shores yearly during the period mentioned mackerel-fishing.

4. These schooners used to make good voyages yearly, and their cargoes averaged 350 barrels of mackerel each trip. These schooners average about 65 tons, with a crew of about 15 men.

5. The mackerel fishery seems to have decreased, but the cod and herring fisheries are the same as formerly.

6. The Americans take mackerel by means of hand-lines and seines.

7. During the Reciprocity Treaty, on this coast the Americans have always fished for mackerel inshore.

8. It is the common practice of the Americans to come in among our boats, and by throwing bait, entice the fish away with them, thereby causing us a great loss.

9. I know that the American fishermen have used the hauling-seines very often. I once helped to load an American schooner in the Magdalen River with mackerel. They were all taken with a hauling seine inshore.

10. Since 1871 the codfishery has greatly increased. I believe it is owing to the absence of Americans from our waters. Mackerel were very plenty last year, and a great increase over former years.

11. Mackerel feed inshore on lance, sea-fleas, and other small animals.

12. It is a great advantage to Americans to be able to transship cargoes, because it enables them to keep on the fishing grounds and to double and triple their fares.

13. It is of no advantage to us to be able to fish in American waters; and I don't know of any vessel from here ever going there to do so.

14. Fishing by Americans in our waters injures our fishing operations to a great extent. It brings in a competition that we cannot sustain, they having better vessels and better gears.

15. Some years ago three American vessels came and anchored in Magdalen River until they had their full load of halibut. They caught them with trawls, and all inshore.

his
CHARLES + FOURNIER.

A. D. JOHNSTONE.

Sworn to the best of his knowledge, information, and belief, at Magdalen River, county of Gaspé, Province of Quebec, Dominion of Canada, this 27th day of July, A. D. 1877, before me.

L. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 191.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ALEXIS NOIL, of Fox River, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

1. Have been acquainted with all the fisheries on this coast from Griffin's Cove to Chlorydrome, a distance of 33 miles, for the last 30 years. From 1854 to 1866 the fishing by the Americans has been very extensive. The number of American vessels that have visited these shores

for mackerel fishing, during the period mentioned, have been about 150 yearly. The average tonnage of these vessels was about 65 tons, with a crew of about 16 men each. The average cargo of these vessels, yearly, is 350 barrels mackerel. And I have heard the captains of these vessels say that they generally make two trips in a season.

2. The cod and herring fisheries are about the same as they were 20 years ago.

3. The Americans take mackerel by means of seines and hand-lines, principally the latter, and all inshore in 2 or 3 fathoms of water.

4. The throwing of fish offals overboard on the fishing grounds is a great injury to them and the fisheries, because it poisons the water, drives away the large fish, and kills the eggs.

5. The Americans have always fished inshore and made their loads of mackerel. During the Reciprocity Treaty, and before, often very close to the shores.

6. The inshore fishery is by far of greater value than the outside, because all the fish on this coast are caught inshore.

7. I have seen the Americans frequently come in among our boats while they were fishing mackerel and entice the fish away by throwing bait, thereby causing our fishermen great loss. They have done the same to me often.

8. The cod fishery has greatly increased since 1871, owing no doubt to the Americans having left our waters, thereby giving them a chance to restock.

9. I have heard the Americans say many times that our mackerel were better and brought a higher price in their markets than their own.

10. Mackerel feed all along our inshores on lance and other small fish.

11. I have seen the Americans several times setting nets close to our shores for mackerel.

12. It is a great advantage to the Americans to be allowed to transship their cargoes, because it enables them to keep on the fishing grounds and to double their fares.

13. It is of no advantage to Canadian fishermen to be able to fish in American waters, and I never knew of any vessel from here going there to do so.

14. The privilege granted to Americans to transship cargoes is worth a load, and the privilege of getting bait in our inshores for their cod and halibut fisheries is worth these fisheries.

15. Fishing by Americans in our waters hinders the fishing operations of our fishermen to a great extent, because we cannot compete with such well supplied and geared vessels.

A. D. JOHNSTONE.

Sworn to the best of his knowledge, information and belief, at Fox River, county of Gaspé, Province of Quebec, Dominion of Canada, this 27th day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 192.

In the matter of the Fisheries Commission at Halifax, under the treaty of Washington.

I, JOHN PACKWOOD, fisherman and farmer, of Cape Rosier, county of Gaspé, Province of Quebec, make oath and say as follows:

1. I am acquainted with all the fisheries carried on on this coast from Cape Gaspé to Griffin's Cove since twenty-five years. During the Treaty of Reciprocity mackerel fishing by the Americans on this coast was very extensive. I mean from 1850 to 1856.

2. I have seen the Americans fishing for mackerel here in Cape Rosier Cove, at Cape Bon Ami, at Jersey Cove, and catching mackerel. I have been on board of their vessels when they were fishing, and I have seen them from the shore and from my boat, and catching mackerel, and always inshore, generally in line with the points. I have seen them yearly during the period mentioned above many times during each season.

3. During the period mentioned, to the best of my knowledge, sixty schooners visited these shores here yearly for mackerel-fishing. These schooners averaged 65 tons, and carried away from here and neighboring places about 400 barrels, for the Americans themselves told me that they always made good voyages.

4. Cod fishery is as good now as formerly; it has increased very much of late. Herring is about the same. Last year there was a good deal of mackerel on our coast.

5. The Americans fished mackerel with hand-lines and seines, but I never saw them use the seine here.

6. The practice of the Americans of throwing fish offals overboard is much injurious to our fishing grounds, because it gluts the fish and prevents the fish from biting; and also because the decaying of these offals poisons the water, drives the large fish away, and kills the eggs.

7. I have never seen the Americans fish here outside of three miles; they have always fished very close to the shores.

8. The value of our inshore fisheries is, by far, greater than the outside ones. All the fish here is caught inshore.

9. Since 1871 the cod fishery has considerably increased here; and I believe, with all the fishermen here, that it is because the Americans have been less in our waters.

10. I have heard many times the Americans say that our mackerel here was larger and of a better quality than their own, and that it is worth \$20 against their own \$10.

11. Mackerel feeds all along our coasts here upon launce, sea-fleas, &c.

12. The fishing by Americans in our waters is extensively injurious to us, because they are supplied so well with every kind of gear to carry on the fisheries of all kinds that we cannot compete with them, so that when they come to fish amongst us they take all the fish before we can take a share.

JOHN PACKWOOD.

Sworn to the best of his knowledge, information, and belief, at Cape Rosier, in the Province of Quebec, Dominion of Canada, this 28th day of July, A. D. 1877, before me.

Justice of the Peace, Province of Quebec.

No. 193.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MESIAH TAPP, of Fox River, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows :

1. I am acquainted with all the fisheries that are carried on on this coast for the last 25 years.

2. From 1854 to 1866 the fishing by the Americans was very extensive for mackerel.

3. About 100 American mackerel-fishing vessels have visited these shores yearly during the period mentioned above. These vessels average above 65 tons, having about 16 men for a crew. These vessels carried away from our shores yearly about 400 barrels of mackerel a trip.

4. The Americans take mackerel by means of seines and hand-lines.

5. The practice of throwing fish offals overboard, as done by the Americans, is injurious to the fisheries, because it gluts the fish, poisons the water, and kills the eggs.

6. The Americans have always fished inshore here during the Reciprocity Treaty for mackerel, about one-half mile from the shore.

7. The inshore fisheries are of much greater value than the outside. All the fish here are taken inshore.

8. I have seen the Americans come in among our boats, and by throwing bait entice the mackerel away with them; and I saw them one time throwing ballast rocks at a boat that had gone too near their lines.

9. Since 1871 the cod fishery has increased greatly, and I believe it is owing to the absence of Americans from our waters.

10. I have heard the Americans say frequently that our mackerel were better, and brought a higher price in their markets than their own.

11. Mackerel breed and feed on this coast inshore. Their food is launce and sea-fleas.

12. It is a great advantage to the Americans to be able to transship their cargoes, because it enables them to keep on the fishing grounds, and to double their fares.

13. It is of no advantage to us to be able to fish in American waters, and I don't know of any vessel from here ever going there to do so.

14. The privilege of transshipping cargoes to the Americans is worth a load, and the privilege of getting bait in our inshores for their cod and halibut fisheries is worth these fisheries.

15. The fishing by the Americans in our waters hinders the fishing operations of our Canadian fishermen, because they are better supplied and geared than we are, that they take all the best fish.

No. 194.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

1, JAMES SAMUEL, of Fox River, County of Gaspé, Province of Quebec, fisherman, make oath and say as follows :

1. Have been acquainted with all the fisheries which are carried on on this coast from Griffin's Cove to Chlorydorme, a distance of 33 miles, for 25 years.

The mackerel fishery by the Americans has been very extensive during the Reciprocity Treaty, from 1854 to 1866 and before, on these shores.

2. I have been several times during a season on board of American mackerel-fishing vessels. I have seen them fish, and have fished myself with them. They fished always inshore very close the shore in 2 or 3 fathoms of water.

3. The number of American schooners which have visited these shores for mackerel fishing yearly during the period mentioned above, was about 150. The average tonnage of these vessels is about 65 tons, having about 15 men for a crew each. These vessels have taken away from our shores yearly, at least 350 barrels of mackerel. I have heard the captains of some of these schooners say that most of them were on their second trip. They also told me that their first trip was generally made about the Strait of Canso, Magdalen Islands and Prince Edward Island.

4. The cod and herring fisheries are about the same as formerly.

5. The Americans take mackerel by means of hand-lines and seines. But I have seen them use the hand-lines only on this coast.

6. The throwing overboard of fish offals as practiced by the Americans injures our fishing grounds and fisheries; because it gluts the fish, and then the decaying of these offals poisons the water, driving the large fish away and killing the eggs.

7. The American schooners have always fished inshore during the Reciprocity Treaty and afterwards, and have made their loads of mackerel often very close to the rocks.

8. The inshore fishery is of much greater value than the outside. All the fish on this shore are caught inshore.

9. It is the common practice of the Americans to come in among our boats when we are catching mackerel, and by throwing bait entice the fish outside, where we cannot go.

10. Since 1871 the cod fishery has considerably increased, and it is my opinion that it is owing to the absence of Americans from our waters.

11. I have heard the Americans say frequently that the mackerel caught in our waters were of a better quality than their own, and brought a higher price in their markets.

12. Mackerel feed all along our inshores on lance and shrimp.

13. I have seen the Americans frequently setting their nets close to our shores for mackerel.

14. It is a great advantage to the Americans to be able to transship cargoes, because by doing so it enables them to remain on the fishing grounds and to double their fares.

15. It is of no advantage to Canadians to be able to fish in American waters.

16. The privilege of transshipping cargoes to the Americans is worth a load. And the privilege of getting bait in our inshores for their cod and halibut fisheries is worth these fisheries.

Fishing by Americans in our waters hinders the fishing operations of our fishermen to a large extent, because we are not supplied with vessels and gears to compete with them.

Sworn, to the best of his knowledge, information, and belief, at Fox River, county of Gaspé, Province of Quebec, Dominion of Canada, this 27th day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 195.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, EDWARD TRACHY, of Percé, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

1. Am acquainted with all the fisheries on this shore for 60 years past.
2. Between 1854 and 1866, the fishing by the Americans on this coast has been very extensive, between Cape Cove and Cape Percé, a distance of about nine miles.
3. I have seen the American schooners inshore engaged in mackerel fishing. I have been on board their vessels many times, and I have seen them from the shore and from my boat fishing and catching fish between Bonaventure Island and the mainland.
4. About 150 American vessels have visited these shores yearly for mackerel fishing, each vessel averaging about 70 tons, having from 12 to 15 men for a crew each.
5. During that time I have spoken to American captains, and they told me that they had made good voyages, and sometimes two during a season.
6. These schooners have carried away yearly from our shores an average of 500 barrels of mackerel each trip.
7. The fisheries are about the same as they were 20 years ago; but this year the cod fishery has increased greatly.
8. The Americans take mackerel by means of hand-lines. I have never seen them using seines.
9. The Americans, before and during the Reciprocity Treaty, have taken the most of their mackerel inshore.
10. The inshore fishery is of much greater value than the outside on this shore. Herring, caplin, launce, codfish, and the best part of the mackerel are taken inshore.
11. I have been greatly annoyed while out fishing mackerel, by having the Americans come in among our boats, and by throwing bait, entice the mackerel outside with them, where we could not go.
12. I have seen the American fishermen many times come inshore and set nets for bait, and thus taking the bait away from us.
13. I have seen yearly several American schooners come in the cove here for bait; and I remember once of one waiting two days until our fishermen had caught enough bait for her.
14. There is a great increase in the cod fishery since 1871. I think this is owing to the absence of Americans from our waters.

15. The same fish that are taken by the Americans inshore are also taken by the Canadians.

16. Herring are all taken inshore. The Americans catch them for bait only on this coast.

17. It is a great advantage to Americans to be able to land to dry and repair their nets. I have seen them doing so frequently.

18. It is a great advantage to the Americans to be able to drag ship cargoes; because it enables them to keep on the fishing grounds and to double their fares.

19. It is a great advantage to the Americans to be able to procure bait either by catching or buying it. If they buy it, it is because they save time, and more profitable to them.

20. It would be impossible for the Americans to carry on the cod and halibut fishery without being able to procure bait in our inshores.

21. The privilege of transshipping cargoes enjoyed by the Americans is worth a load; and the privilege of getting bait in our inshores for their cod and halibut fisheries is worth these fisheries.

22. Fishing by the Americans in our waters injures our Canadian fishermen very much. I have had my nets badly torn by the American fishing vessels anchoring among them and sailing over them. It is also an injury to us, because it brings in a competition that we cannot sustain. Their vessels and gears are so much better than ours, that they take all the best fish.

EDWARD TRACHY.

Sworn to the best of his knowledge, information, and belief, at Percé, county of Gaspé, Province of Quebec, Dominion of Canada, this 26th day of July, A. D. 1877, before me.

N. LAVOIE,

A. D. JOHNSTONE.

Sworn to the best of his knowledge, information, and belief, at Fox River, county of Gaspé, Province of Quebec, Dominion of Canada, this 27th day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 197.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOSEPH D. PAYSON, of Westport, in the county of Digby, make oath and say as follows :

1. I have been engaged in the fisheries twenty years ; two years on board of American fishermen in Canadian waters.

2. American vessels to the number of three and four hundred annually fish in the Bay de Chaleur for mackerel ; the average number of men is from twelve to fourteen to each vessel. This is within my knowledge for the past twelve years.

3. The average number of codfish taken by Americans is about twelve hundred quintals to each vessel ; and besides that, they annually make a mackerel trip of from three to five hundred barrels of mackerel.

4. The present condition of the fishery is not as good as it was in the

past for either codfish or mackerel. Herring have not decreased as much, but they also are not as good as the past.

5. Americans carry on the codfish and halibut fishery chiefly with trawls; they do some by hand-line on George's. Mackerel are caught by seines and hook and line.

6. Most of the mackerel caught in the Bay de Chaleur are caught within three miles from the shore, and have been before and during the Treaty of Washington, by large numbers of American fishermen.

7. The American fishermen use what is called "purse-seines," and are ruining the mackerel-fishery wherever they are used, by driving the fish from the shores.

8. American fishermen catch bait within three miles from the shores in Saint Mary's Bay, but not very large quantities.

9. American fishermen trawl for halibut and codfish in the Bay of Fundy in the inshore waters. Halibut, codfish, haddock, hake, and pollock are caught inshore by Canadian fishermen.

10. Since the Treaty of Washington there has been a decrease in all kinds of fish in the Bay of Fundy, caused principally by trawling, and by the large quantity of fish-offal thrown over by the fishermen from the vessels.

11. The herring-fishery is greater inshore than outside in Canadian waters. Americans catch herring for bait and for sale at Magdalen Islands. The American fishermen catch some herring for bait in the Bay of Fundy.

12. There are a few mackerel caught in American waters at some seasons of the year that command a higher price in the American market, but my opinion is that mackerel caught in the Bay de Chaleur are quite as good and usually bring about the same price in the American market.

13. The food of mackerel is found chiefly inshore, called "brit"; they breed in the head of the bays; their principal breeding and feeding places are inshore.

14. The privilege of transshipping cargoes enjoyed by American fishermen since the Treaty of Washington is a very great advantage to them; it enables them to catch a much larger quantity of fish.

15. It is a very great advantage to Americans to procure bait from the Canadian inshores. They prefer to buy it, as it saves time.

16. The American fishermen could not carry on the cod and other fisheries of the deep sea to any extent, or with any profit, without the privilege of resorting to our inshores for bait.

17. It is a great advantage to Americans to resort to Canadian inshores for ice to preserve bait. Quite a number of American vessels have been supplied with ice at Westport this present season.

18. The privilege of fishing in American waters is of no practical value or advantage to Canadians.

19. If it was not for the large fleet of American fishermen in Canadian waters, a large and very profitable business could be done by Canadian fishermen.

The foregoing statement is correct, to the best of my knowledge and belief.

J. D. PAYSON.

Sworn to at Westport this 11th day of August, A. D. 1877, before me.
BENJ. H. RUGGLES, J. P.

No. 198.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

1. THOMAS C. COOK, Cape Canso, in the county of Guysboro', merchant, make oath and say as follows :

1. I have been engaged in the fisheries actively for the period of twenty-five years. During that time I have been engaged in the fish trade, buying and selling and carrying on a general fish business.

2. During prosperous years, as many as three or four hundred American vessels, I understand, are engaged in the mackerel fishing in the North Bay. Each vessel would average from twelve to fifteen men. The American vessels now fishing are larger and better than those formerly used. Each vessel fits out to take three hundred barrels on an average.

3. I have known from two to three hundred American vessels call at Canso during the season for bait. To make up this number, I count several calls by the same vessel. I have known them hook squid inshore, but not much. They generally buy it, because it pays them best and saves them time.

4. The inshore fisheries are of greater value to the inhabitants along the coast than those outside. All kinds of fish are caught inshore by our fishermen. Our people do not, in the county of Guysboro', prosecute the outshore fishery almost altogether.

5. The opportunity given to the Americans of transshipping their cargoes is of great advantage to them ; also the privilege of getting bait and ice. They are enabled, by having these privileges, to make more trips and catch more fish. Bait can be bought cheaper in Canadian ports than in the United States. Ice also, I think.

6. American fishermen could not so profitably carry on the deep-sea fisheries if they were not permitted to land and buy their bait and ice, otherwise they would not land and do so.

7. Never heard of any Canadian vessels fishing in American waters.

THOS. C. COOK.

Sworn to at Canso, in the county of Guysboro', this 25th day of July, A. D. 1877, before me.

JAMES A. TORY, *J. P.*,
For the County of Guysborough.

No. 199.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

1. W. WYSE, of Chatham, in the county of Northumberland, in the Province of New Brunswick, at present of Chatham, merchant, maketh oath as follows :

1. I have been in business for five years in Chatham, and have had business with fishing parties around our coast previous to '72 and since 1854. I have had charge of a salmon-preserving establishment on Fox Island, Miramichi Bay, and exported salmon in tins to amount of from 8 to 10,000 per annum, also lobster and mackerel to amount of about 1,000 dollars per annum ; also during this time American fishermen have been accommodated on this island with water and other matters

necessary for the carrying on of their fisheries. This of itself was, I consider, a very great advantage to them generally.

2. I have been acquainted with the British fisheries in New Brunswick during the time I was engaged at my fishing establishment, say in each year from 15th May till 15th September. I have seen and counted in that time as high as 170 sail, partaking of all the benefits of the three-mile limit as much as if they were Canadian fishermen. I have seen them in a fine morning after a storm in our bay, between Portage and Badwin Island, for a whole day, and in that time a splendid fishing has been done. This was at a time they had no right to fish within the three-mile limit. This bay was their chief place of resort, and they had all the benefit of our buoys, lights, and every convenience. This valuable acquisition should be of a large value to American fishermen, and no benefit to us. I am quite sure the average of each vessel would be about four hundred and fifty barrels a voyage.

3. The effect of so large a fleet of American vessels fishing in British waters, and only one mile from Fox Island shore, was most injurious to our mackerel fishermen around the islands, as they would throw bait and draw them off.

4. The mode of fishing at that time was with hook and line. Since that period a seine, or purse-seine, is used, and large catches are made.

5. During the time I was engaged in fishing at Fox Island, a gradual falling off took place with the fleet; whether it was owing to finding other places more profitable, I could not say.

6. I would judge by the movements of the fleet, fully two-thirds of the fish were taken within the three-mile limit.

7. In the year I was on Fox Island, American fishermen had all the benefit of buying bait, getting fresh supplies, fresh water, wood, &c. This I consider a great benefit. At one time, when procuring these necessities at Badwin Island, they set on fire and burned about twenty acres of marsh and woodland, whether accidentally or not could not be ascertained. Damages were put down at the time about \$600.

8. The privilege of landing cargoes and transshipping to their own homes during the season is very great. It enables them to make two trips a season with ease. This privilege is worth about \$400 per trip.

9. I have not seen them fish for bait, but have sold them pogies. These are a fish about half the size of herring, and as fat as butter. When ground up, make good article of bait. They have bought our spring herring often.

10. Mackerel has decreased in quantity along the Miramichi Bay and coast, as our own shore fishermen say they are much more scarce of late years, and cannot account for the fact. Ten years ago establishments made it their business to buy mackerel for canning purposes, and preserved yearly from ten to fifteen thousand lbs.; now, and the last five years, they are all closed.

11. The food of mackerel is chiefly got along the shores. Small fry of the different species are their chief food. Their principal breeding places are along Bay Cheleurs and other places along Prince Edward Island and Gulf of St. Lawrence.

12. I consider the privilege granted to American fishermen to land and dry their nets invaluable.

13. I consider the privilege of fishing in American waters of no account or value to Canadians whatever.

14. The value of transshipping cargoes, and getting bait, &c., is worth about \$400 per trip.

15. I believe it has hurt our shore fisheries to a considerable extent; could not say the value.

16. It is true that United States fishermen have sold goods to our fishermen, and evaded the duty.

17. Another advantage the Americans have enjoyed is the Miramichi lights, our coast lights, harbor buoys, shelter from storms, getting fresh supplies, fuel, water; in fact, it is impossible to enumerate all the advantages and value of these privileges. Look at the protection of our rivers, the expense connected with protecting the spawning fish, the fry of which all serve to feed our deep-sea fisheries.

WILLIAM WYSE.

Sworn before me at Chatham this 11th day of August, A. D. 1877.

G. W. BLAIR, *J. P.*

No. 200.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES FLYNN, the elder, of Percé, county of Gaspé, Province of Quebec, planter, do make oath and say as follows:

1. I have been acquainted with the various fisheries on this coast for upwards of 40 years.

2. During the duration of the Reciprocity Treaty a large fleet of American vessels frequented this coast for fishing purposes, say from Point St. Peter's to Cape Despair, a distance of 18 miles or thereabout.

3. I have often seen the American schooners close to the shore mackerel fishing. I have often seen them fishing from shore, and catching mackerel in the channel between this and Bonaventure Island.

4. Upwards of 100 vessels or American schooners have fished mackerel in this vicinity each season. These schooners average about 70 tons, with a crew of about 12 or 14 men.

5. The fisheries generally speaking are much the same as heretofore. But the cod fishery has greatly increased this summer.

6. Mackerel is caught by the Americans both with hand-lines and seines.

7. The Americans previous to and during the Reciprocity Treaty took most of their fish inside of the limits.

8. The inshore fishery is decidedly the most valuable, as herring, caplin, lance, smelt, fully two-thirds of the mackerel, and the greater portion of the codfish, are taken inshore.

9. It was a common complaint with our fishermen that the American schooners came inshore and enticed away the mackerel by feeding them, thus preventing our people from catching any more.

10. I have also heard our fishermen complain that the Americans came inshore to set their nets for bait, thus preventing their obtaining a sufficiency.

11. I have on several occasions seen American schooners come into the coves and set their nets for bait.

12. The several kinds of fish taken inshore by the Americans are also taken by our fishermen.

13. A great increase has taken place in the cod fishery since 1871, caused no doubt by the absence of the Americans from our waters, thus allowing our fishing-grounds to be restocked.

14. Herring are all caught inshore, the Americans catching them for bait only.

15. I have often heard the remark made by persons who have heard the Americans say that the quality of our mackerel was superior to theirs, realizing a higher price in their market.

16. It is undoubtedly a source of great advantage to the Americans to be allowed to land, dry, and repair their nets.

17. The transshipment of cargoes will be a great advantage to the Americans, as it will enable them to keep on the fishing grounds and double their fares.

18. The procuring of bait, either by catching or buying, is also a great advantage for American fishermen. If they buy, it is in order to save time.

19. The Americans could not carry on the cod and halibut fisheries without procuring bait within our limits.

20. The privilege of transshipping cargoes, as now to be enjoyed by the Americans, will be equal to one load; and that of getting bait for their cod and halibut is equal to the value of those fisheries.

JAMES FLYNN.

Sworn to the best of his knowledge, information, and belief, at Percé, county of Gaspé, Province of Quebec, Dominion of Canada, this 25th day of July, A. D. 1877, before me.

R. N. DUVAL,

Justice of the Peace, Province of Quebec.

No. 201.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, EDMUND FLYNN, of Percé, county of Gaspé, Province of Quebec, planter, and mayor of Percé, do make oath and say as follows:

1. I have been acquainted with the various fisheries on this coast upwards of 35 years.

2. During the existence of the Reciprocity Treaty a large fleet of American vessels frequented this coast for fishing purposes.

3. I have often seen the American schooners close inshore mackerel fishing. I have seen them catching mackerel in the channel between this and Bonaventure Island.

4. I have seen as many as 50 to 100 American schooners during several successive seasons mackerel fishing in this vicinity. These schooners average about 70 tons—each crew consisting of from 10 to 14 men.

5. I have often spoken to American captains, who stated they generally made good voyages—making two, and I believe in some cases three, voyages during each season.

6. These schooners would, on an average, take 400 barrels of mackerel from our shores each trip.

7. The fisheries are, generally speaking, much the same as heretofore; but the cod-fishery has greatly increased this summer.

8. Mackerel is caught by the Americans both with hand-lines and seines.

9. The Americans previous to and during the Reciprocity Treaty caught most of their fish within the limits.

10. The inshore fishery is decidedly the most valuable, as herring, caplin, smelt, launce, fully two-thirds of the mackerel, and the greater portion of the codfish are taken inshore.

11. It was always a common complaint with our fishermen that the

American schooners came inshore and enticed the mackerel away by feeding them, thus preventing our people from catching any more.

12. I have also heard our fishermen complain that the Americans came inshore to set their nets for bait, thus preventing them from obtaining a sufficiency.

13. I have often seen American schooners come into the coves and set their nets for bait.

14. The various kinds of fish taken inshore by the Americans are also taken by our fishermen.

15. A great increase has taken place in the cod fishery since 1871, caused no doubt by the absence of the Americans from our waters, thus allowing our fishing grounds to be restocked.

16. Herring are all caught inshore, the Americans catching them for bait only on this coast.

17. I have heard it stated that our mackerel is superior to the American, but am not personally cognizant of the fact.

18. It is undoubtedly a source of great advantage to the Americans to be allowed to land, dry and repair their nets on this coast.

19. The transshipment of cargoes will also be a great advantage to the Americans, as it will enable them to keep on the fishing grounds and thus double their fares.

20. The catching or buying of bait is also a great advantage for American fishermen. When they buy, it is to save time.

21. The Americans could not carry on the cod and halibut fisheries without procuring bait within our limits.

22. The privilege of transshipping cargoes, as now to be enjoyed by the Americans, will be equal to one load, and that of getting bait for cod and halibut is nearly equal to the value of those fisheries.

23. Fishing in our waters by the Americans is, and always has been, a serious injury to our fishermen, who cannot cope with them on account of the superiority of their vessels and fishing gear.

EDMUND FLYNN.

Sworn to the best of his knowledge, information, and belief, at Percé, county of Gaspé, Province of Quebec, Dominion of Canada, this 28th day of July, A. D. 1877, before me.

R. N. DUVAL,

Justice of the Peace for the Province of Quebec.

No. 202.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN VARDON, of Mal Bay, in the county of Gaspé, province of Quebec, planter, and justice of the peace, do make oath and say as follows:

1. I have been engaged in and am intimately acquainted with the various fisheries on the coast of Gaspé, and those of the north shore of the St. Lawrence, upwards of 48 years.

2. Previous to and during the existence of the Reciprocity Treaty a large fleet of American schooners frequented our coast for fishing purposes.

3. I have often seen the American schooners close inshore catching mackerel, and should say that I have seen as many as one hundred sail at one time in Mal Bay.

4. During many successive seasons I have seen from 100 to 150

American schooners mackerel fishing in this vicinity. These schooners are from 50 to 100 tons, some even larger, and are manned by 10 to 15 men.

5. The American captains to whom I have spoken told me they generally made good voyages, generally two, but even three voyages during each season.

6. These schooners would, on an average, take from 400 to 500 barrels of mackerel from our shores each trip.

7. The fisheries are much the same, generally speaking, as in times past, but the cod fishery has greatly increased this season, and is far beyond an average so far.

8. The mackerel is caught by the Americans both with seines and hand-lines.

9. The Americans have, in my opinion, always taken most of their fish within the limits.

10. The inshore fishery is by far the most valuable, as herring, caplin, smelt, clams, launce, at least two-thirds of the mackerel, and a great portion of the codfish are taken within the limits.

11. It has always been a common complaint with our fishermen that American schooners came inshore and enticed the mackerel away by feeding them, thus preventing our fishermen from catching any more.

12. Another complaint with our fishermen has always been that the Americans came inshore to set their nets for bait, thus preventing them from getting sufficient for their own wants.

13. I have often seen American schooners come into Mal Bay to set their nets for bait.

14. Our fishermen catch the same fish as are taken by the Americans along our shores.

15. The absence of American fishermen from our waters since 1871 has no doubt been the main cause of the increase of the cod fishery, as they have thus allowed our fishing grounds to be restocked.

16. Herring are all caught inshore, those caught by the Americans on this coast being for bait only.

17. I have always understood from the Americans that our mackerel was of superior quality to their own, and fetched a better price in the American markets.

18. There can be no doubt that the right to land, dry, and repair nets on our coast will be an important benefit to the Americans.

19. The transshipment of cargoes will also be an important advantage to the Americans, as it will enable them to keep on the fishing grounds, and thus double their fares.

20. The buying and catching of bait is also a great benefit to the Americans. When they buy, it is in order to save time.

21. The Americans could not carry on the cod and halibut fisheries to advantage without the privilege of procuring bait within the limits. Halibut is generally caught within a mile of the coast along the north shore of the St. Lawrence.

22. The right to fish in our waters by Americans is, and must ever be a serious injury to our fishermen, who cannot cope with them, on account of the superiority of their vessels and fishing gear.

JOHN VARDON, J. P.

Sworn to the best of his knowledge, information, and belief, at Perce, county of Gaspé, Province of Quebec, Dominion of Canada, this 1st day of August, A. D. 1877, before me.

JAMES ALEXANDER,

Justice of the Peace, Province of Quebec.

No. 203.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEORGE DUMARESQ, of Fox River, county of Gaspé, Province of Quebec, merchant, make oath and say as follows:

1. I am acquainted with all the fisheries carried on on this coast and on the shores of the Gulf of St. Lawrence for the last 34 years.

2. During the Reciprocity Treaty, from 1854 to 1866, and previous to that time, mackerel-fishing by the Americans on these shores, from Cape Rosier to Mont Louis, and also in the Bay of Gaspé, has been very extensive.

3. During the period just mentioned, an average of 150 schooners have visited our shores here yearly for mackerel-fishing. These vessels averaged 70 tons, with a crew of 15 men.

4. These vessels made yearly a good voyage on these shores. I heard the Americans say so many times, and that often they were making two voyages.

5. American fishermen have acknowledged before me that yearly these schooners that visited our shores here for mackerel, carried away from 400 to 500 barrels of that fish. I have known vessels taking 250 barrels of mackerel in three days, and very close to the shore at about 4 and 5 fathoms of water, near Fox River.

6. The cod fishery is as good now as it was formerly.

7. The Americans catch mackerel with hand-lines and seining. I have seen them fishing, and catching fish with both. I have never seen the Americans fishing elsewhere on these coasts than inside the three miles.

8. The practice of American fishermen of throwing fish offals overboard is very injurious to our fishing grounds in several ways; in the first place it feeds the fish too much, thus preventing the fish from taking bait; also the putrid offals upon which the fish feeds on the bottom must be injurious to the mother fish, thereby destroying the fry.

9. On these shores the Americans have always fished inshore. I have seen them fishing inshore continually during the Reciprocity Treaty. I have seen vessels loaded. I have not seen them seining elsewhere than in Gaspé, but I have seen seines on board of several vessels.

10. The inshore fisheries are by far of a greater value than the outside ones. All the fish here are caught inshore.

11. I am aware that the Americans have been in the habit of using artificial bait when they came to fish among our own boats, and the moment that bait was thrown out mackerel would suddenly rise to the surface, and after them, making good catches. The Americans would leave for deep water, and no more mackerel was to be caught inshore. I am aware, also, that Americans have threatened to stone, and did stone, too, our fishermen in their boats, because they say our fishermen were interfering with their fishing.

12. This practice has been carried on during all the time the Americans have visited our coasts for mackerel fishing, and this was at a time of the cod fishery when mackerel as bait was most needed.

13. The Americans use both hauling and purse seines, both of which, in my opinion, are injurious to the fisheries in this respect, that it takes all size of fish, a part of which they do not save, being of no market value.

14. The cod fishery has rather increased since 1871; herring keeps

about the same. The increase of codfish in my opinion is greatly due to the fact that the Americans have retired from our waters.

15. I have heard American fishermen say that our number one mackerel was superior to theirs, and reached a higher price in their market than their own.

16. Mackerel feeds on shrimps, launce, and fry of other fish. The food of mackerel is all inshore; that is what keeps mackerel inshore on these coasts.

17. It is a great advantage for Americans to be able to land on our shores, and to dry their nets and cure their fish.

18. It is a great advantage to Americans to be able to transship their cargoes, because it enables them to remain on the fishing grounds and to double their fares.

19. It is a great advantage to Americans to be allowed to procure bait inshore by catching it, or by buying it; and if they buy, it is because it is more profitable to them.

20. It is not an advantage to us to be allowed to fish in American waters.

21. The privilege of the Americans of transshipping their cargoes on our inshores is worth to them another voyage, perhaps two.

22. The Americans would not carry on halibut or cod fishery profitably in our waters if they were not allowed to procure bait in our inshores.

23. The privilege of being allowed to get bait inshore for cod or halibut fishing by the Americans, is equal to their fisheries of cod and halibut.

24. The fishing by the Americans in our waters injures our fishing operations greatly, because it brings in a competition that we cannot sustain, the Americans being so well supplied and fitted out with vessels and fishing gears, that on the fishing grounds they take the best fish. Besides, with their large seines seining for mackerel, as I have seen them in Gaspé Bay, have prevented our fishermen from taking bait for cod-fishing.

25. The Americans being allowed to catch their bait themselves, this practice is an injury to our own fishermen, because it restrains their trade of bait.

GEORGE DUMARESQ.

Sworn to the best of his knowledge, information, and belief, at Fox River, county of Gaspé, Province of Quebec, Dominion of Canada, this 31st day of July, 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 204.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ALEXANDER CAMPION, of Magdalen River, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

1. Am acquainted with all the fisheries on this coast for the last thirty years.

2. From 1854 to 1866 the fishing by the Americans has been very extensive for mackerel between Cape Chat and Magdalen River, a distance of 63 miles.

3. To the best of my knowledge about 100 vessels have visited these shores yearly during the period mentioned, mackerel-fishing.

4. Have been piloting American fishing-schooners on this shore and on the north shore for three or four seasons, during the Reciprocity Treaty. I have seen them fishing and catching mackerel, and I have caught mackerel whilst in their employ, and always very close the shore, sometimes so close that I could step on shore from the schooner.

5. These schooners used to make good voyages yearly, previous to 1865, and their cargoes yearly averaged 300 barrels of mackerel each trip. These schooners averaged about 65 tons, with a crew of about 16 men.

6. The mackerel fishery seems to have decreased, but the cod and herring fisheries are the same now as formerly.

7. The Americans take mackerel by means of hand-lines and seines. During the Reciprocity Treaty each schooner had boats which they sent to fish inshore.

8. The throwing overboard of fish offals, as practiced by the Americans, injures the fishing grounds very much, because it gives too much nourishment to the fish, and because it poisons the water, drives away the large fish, and kills the eggs.

9. I have never seen the Americans fishing for mackerel other than inshore, during the Reciprocity Treaty and before, on this shore.

10. The inshore fishery is by far of greater value than the outside. All the fish are taken inshore there.

11. Many times, whilst I was fishing mackerel inshore, the Americans have come in among our boats, and by throwing bait, enticed the mackerel away with them, and thereby causing us great loss.

12. I know that the American fishermen have used the hauling-seines very often for mackerel. I have seen them using seines at the Cove, Mount Louisa, and at river a la Pierre. And one time there was so much mackerel in the bunt of the seine that it ruptured, and they lost all. The seines they used were hauling-seines; they hauled them from the shore.

13. The hauling-seines destroy more mackerel than the lines.

14. Since 1871, salmon and codfish have increased greatly. I believe it is owing to the absence of Americans from our waters. There was also a great quantity of mackerel on these shores last year, and a great increase over former years.

15. I have heard the Americans say frequently that our mackerel were of a better quality than their own, and reached a higher price in their markets.

16. Mackerel feed inshore on launce and other small fish; also on sea-fleas, which are plenty on this shore.

17. It is a great advantage to Americans to be able to transship their cargoes, because it enables them to keep on the fishing grounds and to double their fares.

18. It is of no advantage to us to be able to fish in American waters, and I never knew of any vessels from here ever going there to do so.

19. Fishing by Americans injures the fishing operations of our fishermen to a great extent. Without considering injuries actually done to our own fishermen, by enticing the fish out of their catch, and the injury done to their nets by sailing over them and spoiling them, the privilege granted to Americans of fishing in our waters brings in a competition that we cannot sustain, they being better equipped and geared than we are, so that they take all the best fish.

ALEX. CAMPION.

Sworn to the best of his knowledge, information, and belief, at Magdalen River, county of Gaspé, Province of Quebec, Dominion of Canada, this 27th day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 205.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ALEXIS MALOUIN, of Griffin's Cove, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

1. Have been acquainted with all the fisheries that are carried on on this coast and on the shores of the Gulf of St. Lawrence for the last 30 years.

2. During the Reciprocity Treaty, from 1854 to 1866, the fishing by the Americans has been very extensive on these shores.

3. To the best of my knowledge, about 100 American fishing vessels have visited these shores for mackerel, yearly, during the Reciprocity Treaty. These vessels average about 65 tons, having about 16 men for a crew each. Each of these vessels have carried away from our shores about 400 barrels of mackerel at a trip, yearly. The most of these vessels make two trips in a season.

4. The Americans take mackerel by means of seines and hand-lines. I have seen them seining several times in this cove and catching fish.

5. The throwing of offals overboard, as practiced by the Americans, is injurious to our fisheries, because it gluts the fish, poisons the waters, and kills the eggs.

6. The Americans have always fished inshore here during the Reciprocity Treaty, often inside of half a mile.

7. The inshore fishery is of much greater value than the outside. All the fish here are taken inshore.

8. I have seen the Americans several times each season during the Reciprocity Treaty come in among our boats, and by throwing bait, entice the mackerel away with them. They have done it to me frequently.

9. I have heard the Americans say many times, that our mackerel were better and brought a higher price in their markets than their own.

10. Mackerel breed and feed all along our inshores. They feed on lance and shrimps.

11. It is a great advantage to the Americans to be allowed to land to dry and repair their nets. I have seen them frequently doing so.

12. The Americans could not profitably carry on the cod and halibut fisheries without being able to procure bait in our inshores.

13. It is a great advantage to the Americans to be able to transship cargoes; because it enables them to keep on the fishing-grounds and to double their fares.

14. It is a great advantage to the Americans to be able to procure ice in our inshores to preserve their bait.

15. The privilege of transshipping cargoes to the Americans is worth a load; and the privilege of procuring the bait in our inshores, for their cod and halibut fisheries, is worth these fisheries.

16. Fishing by Americans in our waters hinders our fishing operations, because they are so much better equipped than we are, that they take all the best fish.

ALEXIS MALOUIN.

Sworn to the best of his knowledge, information, and belief, at Griffin's Cove, county of Gaspé, Province of Quebec, Dominion of Canada, this 31st day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 206.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, CHARLES GAUL, of Douglas Town, County of Gaspé, Province of Quebec, fisherman, make oath and say as follows :

1. Am acquainted with all the fisheries that are carried on in this bay for the last 30 years.

2. From 1854 to 1866, and before, the fishing by the Americans was very extensive for mackerel in the Bay of Gaspé.

3. During the Reciprocity Treaty, about 100 American vessels on an average have visited these shores for mackerel fishing. These vessels averaged about 70 tons, having a crew of about 15 men.

4. During the period mentioned above, the American fishing schooners made good trips yearly, and very often they make two voyages in a season. They carry away from our shores about 400 barrels each trip yearly on an average.

5. The cod and herring fisheries are as good now as they were formerly.

6. The Americans take mackerel by means of seines and hand-lines. I have seen the Americans seining in this bay at Sandy Beach.

7. The throwing of fish offals overboard as practiced by the Americans is injurious to the fisheries, because it poisons the fishing-grounds, drives the fish away, and kills the eggs.

8. The Americans fished all inshore in this bay during the Reciprocity Treaty.

9. Our inshore fisheries are of much greater value than the outside. All the fish are caught inshore in this bay.

10. I have seen the Americans many times come in among our boats and entice the mackerel away from us by throwing bait; and when we went to follow their vessels they threatened to sink us with ballast rocks.

11. The practice of seining is injurious to the fisheries, more especially the purse-seine, because it takes all kinds of fish, both large and small, and the latter are all thrown away.

12. The same fish that are taken inshore by the Americans are also taken by the Canadians.

13. There has been a great increase in the cod-fishery since 1871, and the mackerel are more plenty this year than they have been for many years past.

14. The Americans take herring inshore here for bait only.

15. Mackerel breed and feed in this bay; their food is launce, shrimps, &c.

16. It is a great advantage to the Americans to be allowed to land to dry and repair their nets.

17. It is a great advantage to the Americans to be able to transship cargoes, because it enables them to keep on the fishing grounds, and to double their fares.

18. It is a great advantage to the Americans to be able to procure bait

in our inshores, either by fishing for or buying it. If they buy it, it is because they save time, and they find it more profitable to them.

19. The Americans could not carry on the cod and halibut fisheries so profitably if they could not get bait in our inshores.

20. It is a great advantage to the Americans to be able to procure ice in our inshores to preserve their bait.

21. It is of no advantage to us to be able to fish in American waters.

22. The privilege of transshipping cargoes to the Americans is worth a load, and the privilege of getting bait in our inshores for their cod and halibut fisheries is worth these fisheries.

23. Fishing by Americans in our waters hinders the fishing operations of our fishermen to a great extent; their vessels are so much better than ours, and their gears also, that they take all the best and largest fish.

CHARLES GAUL.

Sworn to the best of knowledge, information, and belief, at Douglas Town, county of Gaspé, province of Quebec, Dominion of Canada, this 29th day of July, A. D. 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 207.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ROBERT TAPP, of Fox River, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

1. Have been acquainted with all the fisheries which are carried on on this coast for thirty years.

2. During the Reciprocity Treaty, from 1854 to 1866, the mackerel-fishing by the Americans was very extensive on this coast.

3. During the period above mentioned, about 150 American vessels have visited these shores for mackerel-fishing yearly. These vessels averaged about 65 tons, having about 15 men for a crew. They carry away from our shores about 400 barrels of mackerel at a trip, yearly. All that I have seen make two trips in a season.

4. Cod fishery is about the same as formerly; herring also.

5. The Americans take mackerel by means of seines and hand lines. I have seen the seines in their vessels, but never saw them using them.

6. The practice of throwing offals of fish overboard, as done by the Americans, is injurious to our fisheries; because it gluts the fish, poisons the fishing-grounds, and kills the eggs.

7. During the Reciprocity Treaty the Americans have always fished inshore, and very close to the shore.

8. The inshore fishery is of much greater value than the outside. All the fish here are taken inshore.

9. It was the common practice of the Americans to come in among our boats, and, by throwing bait, entice the mackerel away with them. They have done this to me several times in a season.

10. The cod fishery has greatly increased since 1871, owing, I believe, to the absence of Americans from our waters.

11. I have heard the Americans say frequently that our mackerel were better, and reached a higher price in their markets, than their own.

12. Mackerel feed all along our inshores on launce and sea-fleas.

13. I have seen the Americans several times setting nets close to the shore for bait, for their cod and mackerel fishery. It is a great advantage to the Americans to be allowed to land to dry and repair their nets.

14. It is a great advantage to the Americans to be able to transship their cargoes; because it enables them to keep on the fishing-grounds and to double their fares.

15. It is of no advantage to us to be able to fish in American waters, and I never knew of any vessel from here going there to do so.

16. The privilege of transshipping cargoes to the Americans is worth a load; and the privilege of getting bait in our inshore for their cod and halibut fisheries is worth these fisheries.

17. The fishing by the Americans in our waters hinders the fishing operations of our Canadian fishermen to a great extent, because they are so much better geared and supplied than we are that they take all the best fish.

Witness:

A. D. JOHNSTONE.

Sworn, to the best of his knowledge, information, and belief, at Fox River, county of Gaspé, Province of Quebec, Dominion of Canada, this 30th day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 208.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, LUKE MCCAULEY, of Douglas Town, county of Gaspé, Province of Quebec, fisherman and farmer, make oath and say as follows:

1. Have been acquainted with the fisheries that are carried on on this coast for the last thirty years. That is to say, the Bay of Gaspé.

2. During the Reciprocity Treaty, and before, the fishing by the Americans was very extensive for mackerel in the Bay of Gaspé, at Griffin's Cove, Cape Rozier, Cape Bon Ami, &c.

3. The average number of American vessels that have visited these shores for mackerel-fishing yearly have been about 100, between 1854 and 1866. The average tonnage of these vessels was about 70 tons, having from 13 to 15 men for a crew each.

4. During the period mentioned above, the American fishing-schooners that I have seen have made yearly good voyages. I have heard the fishermen say that they would sooner go on shares than on wages at \$40 per month, because they could make more. These schooners generally make two trips in a season, and some of the fishermen told me that all the schooners made two trips.

5. The cod fishery is as good now as it was formerly; herring also, and all kinds of bait.

6. The Americans take mackerel by means of hand-lines and seines, principally the former. I have seen as many as 15 schooners in the bay here with seines in their boats, ready to start seining whenever they saw a school of mackerel. But I have seen only a couple of hauls

of the seines, and I saw the boats loaded with mackerel taken out of them. This was at Sandy Beach, in Gaspé.

7. The throwing of fish offals overboard on our fishing grounds, as practiced by the Americans, is injurious to our fishing; because it poisons the waters, drives away the large fish, and kills the eggs.

8. The Americans fished all inshore during the Reciprocity, in this bay, at Griffin's Cove, Cape Rozier, and Cape Bon Ami.

9. Our inshore fisheries are of much greater value than the outside. All the fish are caught inshore in this bay.

10. It was the common practice of the Americans to come in among our boats, and, by throwing bait, entice the mackerel away with them. And when we went near their vessels they threatened to split our boats with ballast rocks.

11. The practice of seining is injurious to the fisheries; because the purse seine takes all kinds of fish, both large and small, and the latter are thrown away and left to perish.

12. To the best of my knowledge, about five American vessels have come in this bay for bait, yearly. And I have seen them setting nets for it during the Reciprocity Treaty and before. It takes about 40 barrels of herring for bait for a cod-fishing voyage.

13. The same fish that are taken inshore by the Americans, are also taken by the Canadians.

14. Since 1871 the cod fishery has greatly increased; and the mackerel are more plenty this year than they have been for many years past.

15. The Americans take herring inshore here for bait only.

16. Mackerel breed and feed in this bay chiefly inshore. Their food is lance, shrimps, and other small fish.

17. It is an advantage to the Americans to be allowed to land to dry and repair their nets.

18. It is a great advantage to the Americans to be able to transship cargoes; because it enables them to keep on the fishing-grounds and to double their fares.

19. It is a great advantage to the Americans to be able to procure bait in our inshores, either by fishing for or buying it. If they buy it, it is because they save time and find it more profitable to them.

20. The Americans could not carry on the cod and halibut fisheries so profitably if they could not get bait in our inshores.

21. It is a great advantage to the Americans to be able to procure ice in our inshores, to preserve their bait.

22. It is of no advantage to us to be able to fish in American waters.

23. The privilege of transshipping cargoes to the Americans is worth a load; and the privilege of getting bait in our inshores for their cod and halibut fisheries is worth these fisheries.

24. Fishing by Americans in our waters hinders the fishing operations of our fishermen to a great extent, because it brings in a competition that we cannot sustain. They are so much better supplied than we are that they take all the best fish.

LUKE MCCAULEY.

Sworn, to the best of his knowledge, information, and belief, at Douglas Town, county of Gaspé, Province of Quebec, Dominion of Canada, this 29th day of July, A. D. 1877, before me.

N. LAVOIE.

Justice of the Peace, Province of Quebec.

No. 209.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, THOMAS McRAY, of Gaspé, county of Gaspe, Province of Quebec, fisherman, make oath and say as follows:

1. Have been acquainted with all the fisheries that are carried on in the Bay of Gaspé and on the north shore of St. John's River for the last 30 years.

2. The fishing by Americans in this bay for mackerel was very extensive during the Reciprocity Treaty, from 1854 to 1866.

3. About 150 American mackerel-fishing vessels visited this bay yearly during the period mentioned above. These vessels averaged about 70 tons, having about 16 men for a crew each. I have heard the American fishermen say that they had always made good voyages, and often two in a season. They carried away about 350 barrels of mackerel each trip.

4. The cod fishery is as good now as it was 20 years ago.

5. The Americans take mackerel by means of seines and hand-lines. They generally use the purse seine. I once helped them to haul a seine at Sandy Beach. They haul them from the shore.

6. The practice of throwing fish offals on the fishing grounds is injurious to the fisheries, because it gluts the fish, poisons the water, kills the eggs, and drives the large fish away.

7. To the best of my knowledge, during the Reciprocity Treaty, the Americans have always fished inshore in this bay and at St. John's River for mackerel.

8. The inshore fishery in this bay is of much greater value than the outside. All the fish in this bay are caught inshore.

9. It was the common practice of the Americans, during the Reciprocity Treaty, to come in among our boats, and, by throwing bait, entice the mackerel away with them. They do this whenever they get a chance.

10. The use of the purse seine is injurious to the fisheries, because it takes all kinds, both large and small. The latter are thrown away and left to perish.

11. While on the north shore I have seen the Americans seine for bait, and we could not throw our seine until they had finished. And I heard one of the American fishermen say that if we were to do the same on their coast we would soon be driven away. They came in night and morning to seine for bait.

12. Herring are all caught inshore. The Americans take them for bait only.

13. Mackerel feed and breed all along our inshores. They feed on lance, shrimps, and sea-fleas.

14. The same fish that are caught inshore by the Americans are also caught by the Canadians.

15. Since 1871 the cod fishery has greatly increased, owing, I believe, to the absence of Americans from our waters. Mackerel also, and I think for the same reason.

16. It is a great advantage to the Americans to be allowed to land to dry and repair their nets.

17. It is a great advantage to the Americans to be able to transship their cargoes, because it enables them to keep on the fishing grounds, and to double their fares.

18. The Americans could not profitably carry on cod and halibut

fisheries in our waters if they were not able to procure bait in our in-shores.

19. The privilege of transshipping cargoes to the Americans is worth a load, and the privilege of getting bait in our in-shores for their cod and halibut fisheries is worth these fisheries.

20. Fishing by Americans in our waters hinders the fishing operations of our fishermen to a great extent, because they are so much better equipped with vessels and gears than we are, that they take all the best and largest fish.

Witness :

A. D. JOHNSTONE.

Sworn, to the best of his knowledge, information, and belief, at Gaspe, county of Gaspe, Province of Quebec, Dominion of Canada, this 1st day of August, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 210.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, FRANCIS NOIL, of Fox River, county of Gaspe, Province of Quebec, fisherman, make oath and say as follows :

1. Am acquainted with all the fisheries which are carried on on this coast from Griffin's Cove to Chlorydorme, a distance of 33 miles, for 30 years.

2. During the Reciprocity Treaty, from 1854 to 1866, and before, the mackerel fishery by the Americans has been very extensive on these shores.

3. I have been several times during a season on board American vessels fishing mackerel. I have seen them fishing, whilst I was on board, and catching mackerel, and I have fished myself, besides, during the period mentioned above. I have seen yearly, and many times during the season, from shore and from my boat, Americans catching mackerel, and always inshore and very close to the shore, in two or three fathoms of water.

4. The number of American fishing-schooners which have visited these shores for mackerel fishing yearly, during the period mentioned above, was about 150, to the best of my knowledge. The average tonnage of these schooners is about 65 tons, having 15 men for a crew ; each of these vessels have carried away yearly at least 350 barrels. I have heard the captain of these schooners say that most of these schooners were on their second trip, having made their first load about the Magdalen Islands, Prince Edward Island, and the Strait of Canso.

5. The cod-fishery is about the same as formerly ; herring the same also.

6. The Americans take mackerel by means of hand-lines and seines ; but on this coast I did not see them using seines.

7. The practice of the Americans of throwing fish offals overboard injures our fishing grounds and the fisheries in general ; because, first, it

gluts the fish : and, secondly, because the decaying of these offals poisons the water, drives the large fish away, and kills the eggs.

8. During the Reciprocity Treaty, and before and after, the American schooners have always fished inshore, and made their load of mackerel often very close to the rocks.

9. The inshore fishery is by far of greater value than the outside ; all the fish on this shore are caught inshore.

10. Every year during the period mentioned above I have witnessed American vessels coming amongst our boats when we were fishing for mackerel, and the moment they arrive they throw bait and entice the mackerel away from us, so that our boats could not take any more. They have done this to me and to my neighbors as often as they could get the chance, thereby causing us great damage.

11. Since 1871 the codfish have considerably increased ; and I believe it is because the Americans have left our waters.

12. I have heard the Americans state many times that mackerel caught in here were larger and of a better quality than their own, and brought a higher price in their markets than their own.

13. Mackerel feed all along our inshores on launce and other small fish.

14. I have several times seen the Americans setting nets close to the shore.

15. It is a great advantage to Americans to be able to transship cargoes ; because it enables them to keep on the fishing grounds and to double their fares.

16. It is of no advantage to us to be able to fish in American waters, and I never knew of any vessel from here going there to do so.

17. The privilege of transshipping cargoes to the Americans is worth a load ; and the privilege of getting bait in our inshores for cod and halibut is worth these fisheries.

18. The fishing by the Americans in our waters hinders the fishing operations of our fishermen to a great extent, because we are not supplied with vessels and fishing gears to compete with them.

F. NOIL.

Sworn, to the best of his knowledge, information, and belief, at Fox River, county of Gaspé, Province of Quebec, Dominion of Canada, this 28th day of July, A. D. 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 211.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES JESSOP, of Newport, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows :

1. Am acquainted with all the fisheries carried on on this coast for 30 years. I am living at Newport, and previous to that in Perce. I have been engaged on board an American mackerel-fishing schooner on shares. I have seen them fishing with hand-lines and seines, and have fished myself while on board, and caught mackerel always inshore, and besides I have seen them from the shore fishing at Newport and Perce ; and I have been on board many times while they were catching fish inshore during the period from 1854 to 1866.

2. A hundred American vessels have visited these shores yearly, from Point Macquereau to Perce, fishing mackerel. The average tonnage of these vessels is about 70 tons, having from twelve to fifteen men for a crew.

3. To the best of my knowledge the American vessels have made good voyages of mackerel yearly during and before the Reciprocity Treaty; 300 barrels per trip, on an average.

4. The cod fishery is better this year than it has been for 30 years, and it is because we are alone to fish on our grounds. Herring fishery is about the same. These last couple of years mackerel have not been plenty, but it seems to have increased this year.

5. The Americans fish mackerel with hand-lines and purse seines.

6. When I was engaged on board the American schooner we caught all our mackerel inshore, in fact on the net-moorings and inside the rocks; and all the schooners that I have seen here for mackerel have all made their loads inshore.

7. The practice of throwing offals of fish overboard, as practiced by the Americans, injures the fishing-grounds very much; it sickens the fish, and kills the eggs.

8. The inshore fishery is of greater value than the outside. Herring, caplin, launce, two-thirds of the codfish, and the greater part of the mackerel are taken inshore.

9. The Americans tuck their seines inshore, in fact I have only seen them use the seine inshore.

10. The use of the seine is injurious in this way, that the small fish are all thrown away and lost. They take all kinds of fish, big and small.

11. Almost every season whilst in Perce I have seen several American trawlers come in the cove and set nets to catch herring for bait.

12. Since 1871, codfish has certainly increased, both inshore and on the Banks. As I said before, it is because the Americans are not here to take our fish.

13. The Americans catch herring for bait only, inshore.

14. Mackerel feed on these shores on launce and other small fish, and that is what brings the mackerel inshore, and keeps them there during the fishing season.

15. It is a great advantage to Americans to be able to land, to dry and repair their nets.

16. It is a great advantage to the Americans to be able to transship their cargoes, because it enables them to keep on the fishing grounds, and to double their fares.

17. It is a great advantage to Americans to be able to procure bait in our inshores, either to catch or to buy it; but if they buy it, it is because they save time and they find it more profitable.

18. The Americans could not carry on the cod and halibut fishery profitably without being able to procure bait in our inshores.

19. It is of no advantage to us to fish in American waters.

20. The privilege of transshipping cargoes granted to Americans is worth a load; and the privilege of getting bait in our inshores for cod and halibut is worth these fisheries.

21. We cannot compete with the Americans with reference to the fisheries; they are so well equipped and supplied with fishing gears that on the fishing-grounds they take all the best fish.

JAMES JESSOP.

Sworn, to the best of his knowledge, information, and belief, at New-

port, county of Gaspé, Province of Quebec, Dominion of Canada, this 25th day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 212.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, S. B. HAMMOND, of Lockeport, in the county of Shelburne, make oath and say as follows :

1. I have been well acquainted with the fishing business for the last fifteen years, and have vessels at presenent gaged in that business, and am well acquainted with the inshore fisheries in this county.

2. Out of this port about one hundred vessels are engaged in the fishing business; most of these vessels are engaged in the shore fisheries. Fifty at least of these vessels get their bait in this county. Many American fishing-vessels run to this port for bait, and to other ports in this county. They also get ice in which to pack their bait in this port and in other ports in the county. The American vessels which get their bait and ice in this port fish from ten to forty miles off this coast, and without this bait and ice they could not profitably carry on the fishery on the coast. The Americans carry on the fishery off this coast within the said distance, by trawling, which I consider a bad way of taking fish. Our vessels take fish within the said distance principally by hand-lining, and have adopted trawling only this year to any extent in order to compete with the Americans.

3. The small codfish and scale fish, the greater part of which the Americans were in the habit of throwing overboard, they now bring into this port and sell at a profitable price. The Americans are thus enabled to come in and sell their small fish; run off and fish; come in again and sell their small fish, and finally go home filled up with a cargo of large and valuable fish.

S. B. HAMMOND.

Sworn to at Lockeport, in the county of Shelburne, this 21st day of August, A. D. 1877, before me.

AUSTIN LOCKE, J. P.

No. 213.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM LLOYD, of Lockeport, in the county of Shelburne, master mariner, make oath and say as follows :

1. I have been engaged in the fisheries for twenty-eight years, for twenty four years as master. I have fished along the southern coast of Nova Scotia from inshore off seventy-five miles and took mostly codfish, and am well acquainted with the inshore fisheries in Shelburne County.

2. I have seen in one day twenty sail of American vessels engaged in taking codfish on the above-mentioned fishing grounds. From La Have Bank to Brown Bank there are this summer at least fifty vessels of Americans. They are double the number of our vessels. These American vessels carry from ten to fifteen men each, and take from sixty

thousand to one hundred thousand pounds of fish each. They carry on the fishing on the above-mentioned banks by trawling and get the bait and ice with which they are enabled to do so principally in Shelburne and Yarmouth Counties, and without this bait and ice they could not carry on the fishing on the above-mentioned banks. These American vessels are a great hinderance to Nova Scotian vessels, as they have more hooks and are larger vessels and take away the fish from us. The Americans take mostly all their fish on these Banks by trawling; Nova Scotian fishermen principally by hand-lining. Trawling I consider a bad method of taking fish.

The Americans bring in here their small and scale fish, which they were formerly in the habit of throwing overboard, and find here a good market for them; these fish the Americans were in the habit of throwing overboard. They take away the best fish home with them. The Americans purchase bait and ice in this port and in other ports in this county. They purchase because it saves time and expense, and it would take a long time to catch sufficient bait.

WILLIAM LLOYD.

Sworn to at Lockeport, in the county of Shelburne, this 14th day of August, A. D. 1877, before me.

DAVID EISENHAUER, J. P.

No. 214.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES ALEXANDER, of Point St. Peter's, in the county of Gaspé, Province of Quebec, merchant, do make oath and say as follows:

1. I have been acquainted with the various fisheries on this coast for upwards of fifty-eight years.

2. Previous to and during the existence of the Reciprocity Treaty, a large fleet of American vessels frequented this coast for fishing purposes.

3. I have often seen a great number of American schooners close in shore catching mackerel, particularly in Mal Bay and the Bay of Gaspé.

4. I have seen as many as 50 to 100 sail and upwards of American schooners, for several seasons, mackerel-fishing in this vicinity. These schooners would average upwards of 70 tons each, manned by 10 to 15 men.

5. The American captains to whom I have spoken stated they generally made good voyages, always making two and often three voyages each season.

6. These schooners would take on an average from 400 to 500 barrels of mackerel from our shores each trip.

7. The fisheries are, generally speaking, much the same as heretofore. But the cod fishery has considerably increased this summer.

8. Mackerel is caught by the Americans both with hand-lines and seines.

9. The Americans, previous to and during the existence of the Reciprocity Treaty, took most of their fish inside the limits.

10. The inshore fishery is by far the most valuable, as herring, smelt, caplin, lance, fully two-thirds of the mackerel, and a great portion of the codfish, are taken inshore.

11. It has been a common complaint with our fishermen that the Amer.

ican schooners came inshore to entice away the mackerel by feeding them, thus preventing any more being caught by our people.

12. Our fishermen also complained that the Americans set nets for bait close inshore, which prevents their obtaining a sufficiency.

13. Have not seen them set nets.

14. The various kinds of fish taken inshore by the Americans are also taken by our fishermen.

15. The catch of codfish has greatly increased since 1871, caused no doubt by the absence of the Americans from our waters, thus allowing our fishing-grounds to be restocked.

16. Herrings are all caught inshore, and are only caught for bait by the Americans on this coast.

17. I have always understood from the Americans that our mackerel was superior to theirs, and fetched a higher price in their markets.

18. The landing of nets to dry and repair, by the Americans, on our coasts, is an undoubted advantage for them.

19. The transshipment of cargoes will also greatly benefit the Americans, as it will enable them to keep on the fishing-grounds and double their fares.

20. The catching and buying of bait is also an important advantage for the American fishermen. When they buy it is to save time.

21. The Americans cannot advantageously carry on the cod and halibut fisheries, without procuring bait within the limits.

22. The privilege of transshipping cargoes will benefit the Americans to the extent of one load. And that of getting bait for cod and halibut is nearly equal to the value of those fisheries, as the latter is all taken within the limits.

23. Fishing in our waters by the Americans is, and always has been, a serious injury to our fishermen, who cannot cope with them on account of the superiority of their vessels and fishing gear.

JAMES ALEXANDER, *J. P.*

Sworn, to the best of his knowledge, information, and belief, at Point St. Peter's, in the county of Gaspé, Province of Quebec, Dominion of Canada, this 1st day of August, A. D. 1877, before me.

PHILIP VIBERT,

Comr. P. D. P.

No. 215.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEORGE PRIVEL, fish merchant, of St. George of Mal Bay, county of Gaspé, Province of Quebec, make oath and say as follows:

1. I am acquainted with all the fisheries that are carried on on the coast of Gaspé for 40 years past. I have been fishing myself for cod, herring, and mackerel for 30 years.

2. During the Reciprocity Treaty, from 1854 to 1866, the American fishery for mackerel on this coast, from Point St. Peter to Sandy Beach, Gaspé, has been extensive.

3. To the best of my knowledge about 80 to 100 vessels have visited these shores for mackerel-fishing yearly. The average tonnage of these American vessels was from 60 to 65, with a crew of ten to fifteen men.

4. During the period mentioned above, I have been on board several American mackerel fishing vessels, while they were fishing close to our

coast. I have seen them actually fishing and catching mackerel with hand-lines inside three miles, and I heard many times the fishermen say to me that they were doing very well, and sometimes two trips during the season by each vessel.

5. These American fishing-vessels must have carried yearly during that period at least 800 barrels.

6. I have seen the Americans, yearly, during the Reciprocity Treaty, continually fishing for mackerel, and very close to the shore, from Point St. Peter, all along the coast of Gaspé Bay.

7. I have seen the Americans catching mackerel only with hand lines.

8. The use of the seine is injurious to the fisheries, because seines take all kinds of fish and of all sizes; the small ones not being marketable are thrown away and lost.

9. The practice of Americans of throwing fish offals overboard is injurious to our fisheries, because it gluts the fish and prevents the fish from biting, and also because it poisons the water, drives the fish, and kills the eggs.

10. Our inshore fisheries are by far more valuable than the outside ones. Mostly all the fish here is caught inshore.

11. The practice of the Americans of throwing their mackerel bait among our boats, and afterward retiring from the shore, has been highly injurious to us, because it enticed the fish away, so that we could not take mackerel afterward. They have done that as often as they got a chance; it has been done to me and to my neighbors very often, thereby causing us a great damage, not only in mackerel-fishing, but also in the cod fishery, by thus preventing us from getting bait.

12. The food of mackerel consists of lance, sea-fleas, and small animals floating in the water; this food is inshore; that is what keeps mackerel inshore. Mackerel breed in the Bay of Gaspé and feed along the shores.

13. I consider it a great advantage to Americans to be allowed to land for drying and repairing their nets or seines, and to cure their fish.

14. I consider it a great advantage to the Americans to be allowed to transship their cargoes in our harbors; because it enables them to keep on the fishing-grounds and to double their fare.

15. I consider that the Americans could not carry on profitably the cod or halibut fisheries in our waters if they were not allowed to procure bait inshore.

16. I consider it a great advantage for the Americans to be allowed to get ice in our harbors or on our shores to preserve their bait.

17. It is no advantage to us to be allowed to go and fish in American waters, and I know of none of our vessels having resorted thither for fishing purposes.

18. The privilege to Americans of transshipping cargoes is worth the value of a load and sometimes of two.

19. The value of the privilege to Americans of taking bait on our shores for cod and halibut is worth to them the profits of their fisheries of cod and halibut, because without that privilege they would not come.

20. Without speaking of the drawback the presence of Americans ashore sometimes causes to our own fishermen, their presence and fishing on our shores injures us very much, because we cannot compete with them, on account of their being far better supplied and equipped for the fisheries than we are. On the fishing-grounds they take all the best fish, and besides they ruin our fishing-grounds.

GEORGE PRIVEL.

Sworn to the best of his knowledge, information, and belief, at Point

St. Peter, county of Gaspé, Province of Quebec, Dominion of Canada, this 1st of August, 1877, before me.

N. LAVOIE,

Justice of the Peace, Province of Quebec.

No. 216.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DANIEL DEVOT, of the Basin Amherst Island, Magdalen Islands, make oath and say as follows:

1. I am 62 years of age; I was born here and have always lived here. I am well acquainted with all the fisheries of these islands. I have fished myself from these islands for forty years.

2. The herring are found all round these islands as soon as the ice has gone, some years as early as the 20th of April, but generally in the beginning of May. They come in the greatest quantities into Pleasant Bay. They begin to spawn about the 10th or 15th of May each spring. They have never failed to spawn here each spring, always in great numbers, but differing, sometimes more, sometimes less. They spawn in from half a fathom to two fathoms of water, close to the shore. They also spawn in abundance in the harbor of Amherst, and in the basin at the Moulin. In the harbor they spawn in very shoal water, there not being not more than a foot of water above the eggs at low water. I have seen the eggs at the bottom attached to the sea herbs, kelp, &c., and to the rocks. When the male herring are depositing their milt over the eggs the water is made as white as milk; this is especially the case, and to be seen in calm weather. After a strong breeze of onshore wind the the eggs are often washed by the surf upon the shore or beach in great banks. The herring here spawned by the end of May or the beginning of June, as when taken at this time they no longer contain any spawn. We find the young herring about an inch and a half long about the beginning of August in all the bays and coves round the islands, but more particularly in Pleasant Bay.

3. The Americans have come to these islands to seine herring every spring, as long back as I can remember, some years in greater numbers than others, but always in great numbers. They always have large schooners; sometimes I have seen large three-masted schooners, brigs, and even steamers—these were American vessels. They seined from the shore, landing to haul their seines, on to or close to the shore. Without landing on the shores they could not seine in this way. They take immense quantities of herring in this way, frequently taking as much as two thousand barrels in one haul of the seine. Several vessels join and help to haul the seine, and they load in common from the quantity of herring in the seine. When a great quantity of herring remains in a seine for more than one day, this herring is lost, as the fish thus jammed together soon die and sink to the bottom. These herring are lost, and I have often seen a thousand barrels of herring thus lost.

4. Without the right of landing on our shores the Americans could not thus haul their seines.

5. I have seen as many as from 100 to 150 American vessels here at one time for the herring fishery, and these were large vessels, carrying from 900 to 1,000 barrels at the least.

6. The mackerel are taken with nets in Pleasant Bay and all around these islands, beginning generally about the 10th of June. This net-

fishing for mackerel lasts about ten or twelve days, and generally ends about the 20th of June. When we take the mackerel at the beginning of this net-fishing season they are full of eggs. By the 20th of June, when this net-fishing ends, the mackerel have deposited their eggs. They spawn in deeper water than the herring, where the sea seldom breaks. The line and hook fishery for mackerel begins about the beginning of August, and by this time it is very seldom that we find mackerel with eggs in them. About the beginning of August the Americans come in great numbers for the mackerel fishery in Pleasant Bay and around the islands. I have sometimes seen from 600 to 700 sail of American mackerel fishers in and around the islands. I once saw 400 sail at one time anchored off my place at the Moulin.

7. The permission to fish in American waters is of no use to us; our fishermen do not go there.

8. The American free market is of no use to me. I am in the fish trade for myself for the last fifteen years, and I have never sent any fish to the United States. I sell my fish either in Halifax or Quebec. My dried codfish goes to the West Indies; my mackerel to Halifax or Quebec.

9. The American fishing-crews often land and commit serious depredations. No later than last week they landed from four schooners in Pleasant Bay, and got up a riot at Amherst Harbor. Two years ago some Americans forced an entrance into my own house, causing by their violence and noise much alarm to my family. They broke open the door of my house.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

P. FORTIN, J. P.

No. 217.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOSEPH SINETTE, of Griffin's Cove, county of Gaspé, Province of Quebec, fisherman, make oath and say as follows:

I am acquainted with all the fisheries that are carried on on the coast of Gaspé since 35 years.

1. During the Reciprocity Treaty, from 1854 to 1866, and some years before that time, the mackerel fishery by the Americans on these coasts, from Griffin's Cove to Madeleine River, has been very extensive.

2. To the best of my knowledge, 150 American vessels have been on these shores yearly for mackerel fishing, during the period mentioned. The average tonnage of these vessels was 70 tons, and their crew 16 men.

3. I have been one season employed on board of an American schooner during the Reciprocity Treaty. We went all along the coast from here to Madeleine River, and we fished at Grand Etang, Chloiydorme,

Grande Vallée, and Madeleine. We fished about five or six acres from land. With hand-lines we took fish. The large fish we kept and the small were thrown overboard.

4. I have noticed in one day as much as twenty barrels which were thus thrown overboard.

5. Besides I have seen the Americans fishing always inshore, and yearly, from my house and from my boat. I have never seen the Americans fishing on this coast elsewhere than inshore, and very close to the shore.

6. The American fishing vessels always made good fares at that time mentioned, and it is also to my knowledge that most of these schooners were making two voyages a season each.

7. These American schooners have yearly carried away from our shores here during the period already mentioned from 400 to 500 barrels of mackerel.

8. I have also noticed the Americans trawling along the shore here for catching halibut.

9. The cod fishery is as good now as formerly ; herring also.

10. The Americans catch mackerel with hand-lines and with seines, either hauling or purse seines. I have seen the Americans seining with a purse-seine at Griffin's Cove, at about two acres from land. There was so much mackerel in the seine that it burst. I have seen seines on board every American vessel I have been on board.

11. The practice of Americans of throwing fish offals overboard is highly injurious to our fishermen, because it gluts the fish and poisons the water by decaying on the bottom, thus killing the eggs and driving the fish away.

12. The Americans have always fished inshore during the period mentioned above, and caught all their fish very close to shore.

13. The inshore fisheries are by far of a greater value than the outside ones. All the fish on this coast are caught inshore.

14. When the Americans were not with us we would take mackerel as well as themselves, but the moment they were coming with their vessels among us and throw bait our catching was done, except if they allowed us to fish with them, but most of the time they threatened to stone us if we did not get away. They done that as often as they got a chance. They have done that to me many times; and, more than that, they once run into my boat, notwithstanding my cries, and would have drowned me had I not been quick enough to cut my boat-anchoring cordage.

15. In my opinion, the use of the seine is injurious to the fisheries, specially the purse seine, because it takes a great deal more fish, and of every quality and size, a part of which is not saved, but thrown overboard or aside to die.

16. I have seen many times the Americans coming in here for herring, which they have bought for cod, halibut, and mackerel fishing.

17. During the first years of the Reciprocity Treaty, and before, the Americans used to take all the mackerel, big or small, but later they only took the number one mackerel.

18. Mackerel feeds on launce, shrimps, sea fleas, &c. This food is inshore; that is what keeps here mackerel inshore. There is an abundance of food for mackerel all along our shores.

19. It is a great advantage for Americans to be able to land, to dry and repair their nets, and to cure their fish.

20. It is a great advantage for the Americans to be allowed to transship cargoes in our shores, because it enables them to double their fares. I have seen that done at Fox River.

21. I consider it a great advantage to the Americans to be allowed to come in our inshores to catch or buy bait. And if they buy it, it is because they save time, and are able to keep longer on the fishing-grounds, and catch fish.

22. The Americans could not fish profitably for cod or halibut, or even mackerel, if they were not allowed to come inshore to get bait.

23. I consider it also an advantage to Americans to be allowed to come inshore for ice to preserve their bait.

24. I do not consider it an advantage to us to be allowed to fish in American waters.

25. The privilege to Americans of transshipping cargoes is worth them a load, or the value of a load or two more.

26. The privilege of getting bait inshore for halibut and cod is worth to the Americans these fisheries.

27. Besides the troubles and riots which the Americans have raised inshore, and which I have witnessed myself, besides also the difficulties we had in our small coves here in setting our nets on the moorings, which was often impossible, on account of the Americans having anchored too close, or because we were afraid that they would lose them during the night in getting under way, the fishing by Americans in our waters is highly injurious to us, and ruin us, because it brings in a competition on the fishing-grounds that we cannot sustain, they being better supplied with vessels and fishing gears than we are.

his
JOSEPH + SINETTE.

Witness:

J. A. CUELLET.

Sworn to the best of his knowledge, information, and belief, at Griffin's Cove, county of Gaspé, Province of Quebec, Dominion of Canada, this 31st day of July, 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 218.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN PHELAN, of Port Daniel, county of Bonaventure, province of Quebec, fishery overseer, make oath and say as follows:

1. Have been acquainted with all the fisheries on the shores of Bay Chaleur for a space of 35 years. About 150 American fishing vessels have visited the shores of Port Daniel and neighboring shores from 1854 to 1866, for mackerel fishing. I have counted as many as 60 at a time inshore; each vessel having an average of 12 men for a crew. I have seen American fishing schooners every year fishing inshore, from Point Macquereau to Paspebiac, a distance of 30 miles.

2. During the period mentioned from 1854 to 1866, I have often been on board American fishing vessels which were fishing at about half a mile from the shore. I have seen them actually catching mackerel inshore.

4. I have often heard American fishermen say that they were doing well at the mackerel fishery.

5. To the best of my knowledge the American fishermen have always made good voyages yearly.

6. The cod fishery is fully as good on this coast now as it was 15 or 20 years ago: herring also. Mackerel has decreased. But this season they have increased, owing to the disappearance of Americans from our waters.

7. The American fishermen carry on the mackerel fishery with hand-lines and seines.

8. The practice of throwing mackerel offals overboard on the fishing grounds injures the cod fishery, because it gluts the fish. Mackerel offals being recognized as good bait for codfish, whilst cod gurry is the most deleterious, poisoning the fishing grounds, driving away the large fish and killing the small ones. When the Americans were numerous in the bay, the cod fishery was poor on this coast, whilst now there are codfish in abundance.

9. To the best of my knowledge, from 1854 to 1866 the Americans have fished mostly inshore.

10. Our inshore fishery is of greater value than the outside (I always speak of this shore from Point Macquereau to Paspébiac), because mackerel, cod, and herring are all caught inshore here.

11. Several times I have heard complaints from our own fishermen about the Americans causing them injury by coming in among the boats and enticing the fish away, thereby causing them great loss. The Americans do this whenever they get the chance.

12. Most of the American fishing schooners are supplied with the purse-seine for mackerel fishery. The Americans have always used the purse-seine inshore. I have seen them use them several times each season, and with success. I have never seen them use the seines outside. I can safely say that two-thirds of the mackerel are taken inshore. They have seined all along this shore.

13. The use of the purse-seine is injurious to the fisheries, because they take all kinds of fish, large and small, the latter being thrown away dead or maimed, so that it could not live.

14. Every year some American schooners come in Port Daniel for bait. They both fish for and buy it. They catch their bait with nets.

15. Herring are all caught inshore. The Americans take them here for bait only.

16. Mackerel feed all along the inshores in Bay Chaleur. Their food is lancee, small herring, and other small animals.

17. I have seen the Americans several times come ashore to dry and repair their nets. I consider it a great advantage for them to be allowed to do so.

18. It is a great advantage to the Americans to be able to transship their cargoes: because it enables them to keep on the fishing-grounds and to double their fares.

19. It is a great advantage to American fishermen to be able to procure bait in Canadian inshores. I don't believe they could carry on the cod and halibut fisheries otherwise.

20. The privilege granted to Americans to fish in Canadian inshores injures Canadian fishermen to a great extent. It brings in a competition that we cannot sustain. The Americans being better equipped with fishing gears and vessels, that they have all the chance.

21. If the Americans were not allowed to fish in our inshores we might do well in good seasons, even with our poor outfits for mackerel. The reason our outfits are so poor is, because we are not supported by strong and rich companies like the Americans.

JOHN PHELEN.

Sworn, to the best of his knowledge, information, and belief, at Port Daniel, county of Bonaventure, Province of Quebec, Dominion of Canada, this 23d day of July, A. D. 1877, before me.

N. LAVOIE,
Justice of the Peace, Province of Quebec.

No. 219.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, SIXTE LAFRANCE, of Amherst Harbor, Amherst Island, Magdalen Islands, county of Gaspé, Province of Quebec, make oath and say as follows :

1. I am 67 years of age, and I have lived here for 48 years, and I have fished during all that time, though for the last seven or eight years I have not fished much. I am well and practically acquainted with the fisheries carried on in Pleasant Bay, off Amherst Harbor, and around these islands.

2. The herring spawn in great abundance in Pleasant Bay and Amherst Harbor and all around the islands, and they have never failed to come and spawn here every year, as above stated, since I first came here. They spawn in shallow water, on the flats of Amherst Harbor, in among the seaweed, where at low water there is not more than one foot of water over the spawn. Their spawn is generally attached to the seaweed. In Pleasant Bay and around the islands they spawn in from half a fathom to two fathoms water. They spawn in May, and during the spawning season, when the weather is fine and the sea calm, the sea over the spawning ground gets white like milk; this is caused by the milt of the male fish. Towards the end of August and in September, large quantities of small herring about two inches long are seen in the harbor and in Pleasant Bay; these fish keep in small schools. Towards evening they come inshore, while in day-time they seem to go out to sea. The mackerel feed on them, and when the fishermen are fishing for mackerel in the bay, and when they see schools of small herring pass by their boats, they know that the schools of mackerel are near at hand, and get ready for them.

3. Ever since I came here, I have seen every year large numbers of American schooners fishing for herring with seines, and I have seen as many as 150 of them at one time. About 25 years ago they used to load and take away from 800 to 1,100 barrels each. They used to take the herring with seines; they used to draw their seines ashore, and the men went on the land to draw the seines. They used also to dry their seines on shore, when their voyage was completed. I have seen myself one haul of a seine for herring load two American schooners of at least 1,000 barrels each, and this was not a rare occurrence; and I know that as many as 3,000 barrels have been taken in one haul. I have seen seines that had been drawn near the shore, moored for three days; that is, as long as the fine weather lasted, and the schooners that were partners in the seine, sometimes six in number, used to send their boats to take out the fish with dip-nets. When the bad weather came on they were obliged to tip the seine and allow the fish to go, some of them still alive, but most of them dead and of course lost.

4. If the Americans had not the right of landing on our shores, they would not be able to draw their seines ashore.

5. Mackerel are found in great abundance sometimes, at other times

they appear in less quantities, in Pleasant Bay. They have never yet failed to come every year. The time of fishing mackerel extends from the 10th to the end of June—that is, mackerel-fishing by means of nets in Pleasant Bay. They are then, in the beginning of this fishery, full of spawn; towards the end of this fishery a great number have spawned, as we find their bodies empty of the spawn; but still some have retained it to deposit it a little later. When we begin to fish for mackerel with hook and bait we no longer find them full of spawn, they are then spent.

I hereby swear that the above statement is to the best of my knowledge and belief correct.

Witness:

JOHN GALT.

The said Sixte Lafrance has sworn to the truth of the above affidavit, at Amherst Harbor, Magdalen Islands, this twenty-first (21st) day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 220.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GABRIEL CORMIER, of Amherst Harbor, Amherst Island, Magdalen Islands, county of Gaspé, Province of Quebec, make oath and say as follows:

1. I am 77 years of age. I was born here and have lived here all my life. I fished from the age of 15 till about eight years ago, around the Magdalen Islands, at Anticosti, on the north shore of the gulf, from Natashquan to Blanc Sablon, and for the last 7 years I have confined myself to fish in Pleasant Bay and off the neighboring shore. I am well acquainted with all the fisheries carried on at the above-named places; they are cod, herring, mackerel, and halibut.

2. As soon as the ice disappears from the shores of these islands, herring are seen in great abundance, coming close to the shore for the purpose of spawning. They spawn in Amherst Harbor and all the islands. I have seen the eggs of the herring on the flats near the shores, everywhere around the islands. They spawn in a depth of one foot to two or three fathoms, and during the spawning season, that is during May, the sea gets white, as far as we can see, in Pleasant Bay, towards House Harbor and in Amherst Harbor with the milt of the male fish. In July we begin to see the herring-fry, half an inch long, with large heads and eyes. In September they are about two inches long, and begin to be shaped like the adult herring. In October they are about three inches long, and we use them then as bait for the codfish. We take those little herring with dip-nets along the shore, and sometimes we find enough in the stomach of the codfish taken to serve us as a bait for the whole day. Since I first commenced fishing, I have never seen the herring fail in Pleasant Bay or round these islands. They always come to spawn, though sometimes in greater numbers than others. There is no place in the gulf or on the coasts of the maritime provinces, as far as I

have heard from the numerous fishermen with whom I have spoken, where herring spawn in such abundance as at the Magdalen Islands.

3. The Americans have come to fish for herring round these islands ever since I can remember, and about 20 or 25 years ago they must have come some years to a number of 150 sail or more annually.

4. In June mackerel come into Pleasant Bay in great numbers; we then catch them with nets, and we then find them full of spawn. When, in August, we fish for them with hook and line we find them spent; they are then beginning to get fat, and recover from the effects of spawning.

5. I may also state that the Magdalen Islands are spawning-grounds for the codfish.

6. The right of fishing in American waters, granted to us by the Treaty of Washington, is not of the least use to us. I have never heard of one of our vessels going to fish in those waters.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

The said Gabriel Cormier has sworn to the truth of the above affidavit, at Amherst Harbor, this twenty-first day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 221.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, EDWARD A. CONWAY, of Gaspé, in the county of Gaspé, make oath and say as follows:

1. I am agent at Saint John's for the Messrs. J. & E. Collas, fish merchants. I was also agent at Moisie for 2 years before I came to this place. I am in the fish business for the last 7 years.

2. The principal fish on this coast are the cod, the halibut, mackerel, and herring. All these fish are caught in the inshore limits. At Saint John's we occasionally fish on the banks.

3. It would be impossible for any vessel to continue to fish on the Banks or inshore waters of this coast without coming on shore for bait, as all our bait is caught within three miles from shore; in fact all our bait is taken close along ashore. The usual bait—launce, herring, caplin, &c., are taken all the time right on shore.

4. The right of fishing in American waters is of no value to us; we have no desire to go there, as we have all the fish we can take, if left undisturbed, at our own doors.

5. The American free market is of no use to us. All our fish is prepared for and shipped to Brazil, the West Indies, or Europe. In my time, I have never known of any fish having been sent to the United States.

I hereby swear that the above affidavit is, to the best of my knowledge and belief, correct.

E. A. CONWAY.

The said Edward A. Conway has sworn to the truth of the above affidavit, at Saint John's, in the county of Saguenay and Province of Quebec, this 8th day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 222.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PHILIAS SIROIS, of L'Islet, in the county of L'Islet and Province of Quebec, make oath and say as follows :

1. I am engaged in the fishing business for the last 16 years. I own a fishing establishment in St. John River, north coast of the river St. Lawrence, on which I keep 24 boats. I am thoroughly acquainted with all the operations connected with fishing on this coast. I am acquainted with the fisheries carried on between Mingan and Seven Islands.

2. The principal fish caught are the cod, halibut, mackerel, and herring.

3. The cod is the principal fish, and gives rise to the principal fishing on the coast. All the fishing on the coast specified is carried on within the three-mile limit, with the exception of the St. John's Bank and Mingan Bank, upon which the boats of this coast go and fish sometimes, generally in the fall, but the great bulk of the fishing is carried on much inside of the three-mile limit.

4. The bait—we use caplin, launce, herring, clams, and trout, mackerel and squid occasionally, also smelt. These fish are all taken close on the beach, except the squid, but all far within the three-mile limit. It would be impossible for a foreign fishing vessel to fish for cod on the Banks of St. John or Mingan outside to the limit, without being obliged to come into Canadian waters to take their bait. I am sure of this fact, as I have seen during the last five years of the Reciprocity Treaty, and the two years during which the Americans were allowed to fish in British waters with licenses, a fleet of from 10 to 40 vessels, most of which were American vessels, fishing for cod and halibut, both on the banks and inshore waters. These vessels had to come on shore for bait, and I repeatedly saw them taking their bait by means of seines, inside of the mouth of the river, as well as on the beach. They might sometimes take their bait on the banks by means of drift-nets, and they might also bob for squid, but they could not depend on this manner of getting bait, but for cod fishing they have to come to the shore for bait. If they had not this right, they would have to stop the fishing and leave the coast.

5. After the period named, I saw but a few, say three or four of a season, fishing on the Banks and inshore waters, and, as usual, taking their bait on shore.

6. It is my opinion that vessels fishing on fishing grounds, and throwing overboard all their offal, as every vessel does, injure the fishing, because it gluts the fish, and they refuse to take the bait.

7. The competition by these foreign vessels also injures the fishing, as when the fish is scarce the more boats or vessels are fishing the less remains for each; and when bait is scarce and strangers come and interfere with our men in the taking of it with large seines, there is less chance for our men to get enough, and our fishing may be stopped or hindered accordingly.

8. The privilege of fishing in American waters is of no practical advantage whatever to Canadian fishermen, as it is not at all probalbe

that we will leave good fishing grounds to go such a distance to fish in grounds already exhausted.

9. The American free market is of no use to us, and for the last 17 years I have never shipped any fish to the United States. My fish goes to Europe, Brazil, or Canada.

10. It is important for us to keep our fisheries to ourselves, and not to give them to foreigners unless we obtain equivalent advantages in one way or another.

11. The American vessels I mentioned in paragraph 4 used, as a general thing, to load. They averaged from 50 to 60 tons, and they used to get full loads.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

PHIS. SIROIS.

The said Philias Sirois has sworn to the truth of the above affidavit at St. John's River, in the county of Saguenay and Province of Quebec, this eighth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 223.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN RENOUF, of Carlisle, of the county of Bonaventure, of the Province of Quebec, make oath and say as follows:

1. I have been on this coast for the last 21 years as agent for Mr. Clarence Hamilton. I have been his agent during that time at the following places: Seven Islands, Moisie, Long Point of Mingan, and St. John River. I understand thoroughly every operation connected with fishing and the curing of fish. I keep twenty-two boats here at St. John River.

2. The fisheries carried on on this coast are the cod, herring, mackerel, and halibut; all these fisheries are done within three miles of the coast in our waters, with the exception of two Banks, the St. John Bank and the Mingan Bank, where cod and halibut are occasionally taken late in the season; these Banks lie at about nine miles from shore.

3. The cod is the most important fish on this coast, and is the fishery most extensively carried on by our people.

4. The bait we use for cod fishing is caplin, launce, herring, clams, mackerel, occasionally squid and trout.

5. It would be impossible for a foreign fishing vessel not having the right of entry to our waters to carry on the fishing on the banks above described, for, although bait is occasionally taken on these banks by seines, this is by no means certain; the bait is almost entirely taken close inshore and in the mouths of the rivers and on the beach.

6. I think the practice of throwing overboard offal, while on the fishing grounds, which the Americans do extensively, most injurious to the fishing, as it gluts the fish, and they will no longer take the bait.

7. The competition carried on by foreign vessels is also very injurious to the fishery, for when the fish are scarce the more boats there are fishing the less each one will take, and when bait is scarce, if foreigners are allowed to come with large seines and fish day and night for it, as I know they have done, of course there is less chance of our fishermen getting enough to carry on their fishery.

8. I consider the privilege of fishing in American waters, granted to us by the Treaty of Washington, of no value to our fishermen, as they would never think of leaving their own profitable waters for ones already exhausted.

9. I consider it a matter of great importance to us to keep our fisheries in our own hands and not to allow Americans or any one else to have the right of exhausting our waters.

10. The American market for our fish, free of duty, is of no advantage to us. I have never shipped any fish to the United States; all our fish are sent to Europe or the Brazils.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

JOHN RENOUF.

The said John Renouf has sworn to the truth of the above affidavit at St. John, in the county of Saguenay, of the Province of Quebec, this 8th day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 224.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM FRANCIS BOWER, of Point St. Peter, of the county of Gaspé, of the Province of Quebec, fisheries agent at Shel Drake for Messrs. John & Elias Collas, make oath and say as follows:

1. I have for the last three years been manager of Messrs. J. & E. Collas's fishing establishment at Shel Drake. I understand thoroughly every operation connected with fishing and curing fish.

2. The fish taken here are cod, herring, mackerel, and halibut; of these I am only concerned in the cod-fishery; but I am well aware that all the fisheries here are carried on within three miles of the coast, except on one small bank, which lies some seven or eight miles from the shore, between Shel Drake and Thunder River. The fishermen, however, very seldom go there.

3. The codfish cured here rank as Gaspé fish, number one, and are superior to American cured fish, and command higher prices in the Brazilian and European markets.

4. I can confidently state that our fishermen will never go to fish in United States waters, and consequently that the right acquired by the Treaty of Washington is of no value whatever to us.

5. From the knowledge I have of the fish trade, I am in a position to state that the right of having a market free of duty for our fish in the United States is of no value to us.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

WILLIAM FRANCIS BOWER.

The said William Francis Bower has sworn to the truth of the above affidavit at Shel Drake, this seventh day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 225.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, HIPPOLYTE BOUDREAU, of Esquimaux Point, of the county of Saguenay, in the Province of Quebec, make oath and say as follows:

1. I am 40 years of age, and have been a fisherman for the last 25 years. I am well acquainted with the fisheries carried on at the Magdalen Islands, Anticosti, and the north shore of the river and gulf of St. Lawrence, from Sheldrake to Blanc Sablon. I was present when Mr. Julien Boudreau gave his affidavit, and having heard it read to me, I declare that I fully concur in all his statements and opinions, as being to the best of my knowledge and belief correct.

No. 230.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JULIEN BOUDREAU, of Esquimaux Point, in the county of Saguenay, make oath and say as follows :

1. I have lived here 16 years ; before that I lived at the Magdalen Islands where I was born. I am 63 years of age, and have been a fisherman for 50 years, and for the last 45 years I have been carrying on the fishery with a vessel of which I was master and owner, on the north coast of the Gulf of St. Lawrence, from Sheldrake to the Straits of Belleisle, and in the Straits of Belleisle, and on the Atlantic coast of Labrador, as far as Cape Harrison, at the Magdalen Islands, on La Have Bank, at the mouth of the Bay of Fundy, and on George's Bank. I am well acquainted with every operation relating to the taking and curing of codfish, halibut, mackerel, and herring.

2. I am also acquainted with seal hunting on the ice.

3. The fisheries carried on along the coast of the north of the St. Lawrence, from the Sheldrake to the Straits of Belleisle, are the cod, halibut, mackerel, and herring. All these fish are caught within the three-mile limit all along the coast named, with the exception of the St. John and Mingan Banks, Natashquan, Kejasca, Belles-Amours Banks, where the fisheries are carried on also outside of the three-mile limit, at a distance of from three to six miles from the three-mile line.

4. The bait for taking cod and halibut is caplin, herring, launce, squid, clams, mackerel, and trout. All this bait is taken near the shores, and generally, as in the case of launce, caplin, herring, with seines from the shore. Herring, as well as mackerel and trout, is also taken in nets. Squid are taken with jigs, by hand.

5. Since I visited the north shore of the St. Lawrence and the Straits of Belleisle, that is to say, for the last 45 years, I find that the quantity of fish is about the same upon the whole, but I must add that there are variations, some years being much better than others.

6. From the time that I first visited Natashquan, in 1832, that place was visited annually by American fishing schooners to the number of about 15, of from 80 to 120 tons, and having from 15 to 20 men, with from four to eight boats with each vessel. These vessels were in company with, on an average each year, 20 or 25 Canadian vessels. Each of these American vessels averaged 500 quintals. This state of affairs existed up to 1854, a period of 22 years, during which they took at this place alone about 8,000 quintals annually. Valuing this fish at \$3 per quintal, this would give a sum of nearly half a million of dollars for the value of the fish taken illegally by the Americans at Natashquan alone. Before my time, according to reliable information, American vessels were also in the habit of fishing at this place in even greater numbers. A number of American vessels still visited Natashquan after the existence of the Reciprocity Treaty, but the quantity of codfish having slackened, they did not visit the place in such numbers. I have always seen American vessels fishing on the Banks of Natashquan and Kejasca.

7. These American vessels fishing on these Banks and throwing the offal overboard cause great destruction to the cod by the codfish swallowing the heads and spinal bone, thus choking themselves; besides, it drives the cod off the grounds on which these offals are thrown.

8. American vessels fishing on the Bank of Natashquan or any other Bank in the gulf, cannot carry on the fishery with profit, or at all, unless they obtain the right of taking bait on shore, that is, in British waters. It is true they might bring salted clams from their own country or herring from the Gut of Canso, and sometimes take fresh herring on the Bank with drift nets, but this bait cannot be depended upon, and no schooner could make a profitable voyage under those circumstances; and without the right of taking fresh bait on our shores no American schooners could continue to fish on the Banks.

9. At Bonne Esperance, Five Leagues, Middle Bay, Belles Amours, Bradore, Blanc Sablon, the Americans use seines for taking cod; these they haul on shore, and by means of these seines they take large quantities of codfish—large and small—many of the small ones too small to be cured, and they have to be thrown away, thus causing a wanton waste of this precious fish. Two years ago, at Blanc Sablon, some American fishermen threw away six boat-loads of small fish which had been taken in the seine. This way of taking fish is an injury to the fishing ground, to the fish itself, which it destroys without profit, and to the fishermen who fish with hook and line.

10. The herring is a fish that is found in great abundance on this coast, and they spawn at many places, particularly at Betchewar, St. Genevieve, Pashashubac, Kejasca, Washshucotai, Coacoachoo, and many other places to the eastward. American fishing-vessels have been in the habit of visiting the coast between Washshucotai and Coacoachoo, both inclusive, for the purpose of taking herring for the last twenty years. They take this herring with seines, which they draw on shore. About 20 American schooners went there this year; the ordinary fishing schooners for herring took about 1,000 barrels each, and one three-masted schooner took 6,000 barrels (six thousand). This load was for the Norwegian market, and the vessel sailed directly from Washshucotai for Norway. During the last twenty years about the same number of vessels have loaded herring each year.

11. I am also acquainted with the fisheries of the north and south coasts of the island of Anticosti. The fisheries carried on there are those of cod, herring, and mackerel, and halibut, and are all carried on within three miles of the coast, there being no fishing beyond that limit; so that any vessel coming to fish there must fish within British waters. Some American schooners, about eight or nine, come to fish herring on the north coast of Anticosti, at Fox Bay, or Belle Bay. Some of them loaded there, others went to complete their load at Washshucotai. They have been in the habit of coming for a number of years till this year.

12. About fifteen years ago American vessels began to come and fish for halibut on the coast of Anticosti, and they fished there until this year. They also fished on this coast, and even in the harbor of Esquimaux Bay. I cannot state exactly what number, but I can say that they fished so exhaustively that they have nearly destroyed all the halibut on these fishing grounds.

13. The competition of so many American vessels in our waters is injurious in a very great degree to our fisheries and to our fishing interest: and the fishermen of this country have a much smaller chance of taking fish when they have so many American fishing-vessels on the

same fishing grounds as themselves than if they were left alone. It is consequently the interest of this country to keep the fisheries in our own hands if possible.

14. The right of fishing in American waters is of no value to us.

15. The privilege of selling our fish duty free in the United States is no use to us; our fish is not prepared for that market.

16. All the coasts that I have mentioned in and about the gulf of the St. Lawrence are very accessible to American fishermen, and they possess numerous harbors and good anchorage grounds, where their vessels can lay with safety. They also can and do procure wood and water and other supplies.

17. The advantage of fishing in the inshore waters is a very great one to the Americans. If they could only fish on the outside Banks, they would do but little harm to us, and would have but poor success themselves.

18. I rate the advantage to the Americans of fishing in our inshore waters and taking bait on our shores at from 75 (seventy-five) to 90 (ninety) per cent. on the total value of the fish caught.

I hereby swear that the above statement, is to the best of my knowledge and belief, correct.

his
JULIEN + BOUDREAU.
mark.

Witness:

WM. WAKEHAM.

The said Julien Boudreau, of Esquimaux Point, has sworn to the truth of this affidavit, at Esquimaux Point, in the county of Saguenay, and Province of Quebec, this 8th day of August, A. D. 1877, before me.
P. FORTIN, J. P.

No. 231.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PHILIP TOUZEL, of Shelldrake, of the county of Saguenay, in the Province of Quebec, postmaster, make oath and say as follows:

1. I have lived here for the last 21 years, and for three years previous to that I came every summer to this coast to carry on the cod fishery. I am a practical fisherman, and also fish merchant, and am well acquainted with the fisheries of this place and the neighborhood. The fisheries on this coast are cod, herring, mackerel, and halibut; of these the cod is the chief by far.

2. These fisheries are carried on within three miles of the shore, except that sometimes the fishermen take codfish on a Bank $7\frac{1}{2}$ miles from the shore. This Bank is a continuation of the St. John's Bank.

3. The quantity of codfish on this coast, I think, is now as great as ever it was, though of course the catch varies, some years there being more, some less.

4. Halibut were formally plentiful on this coast, and the fishermen could take plenty with hand-lines, especially off Shallop River and Manitou River. American fishing schooners, equipped purposely for halibut-fishing, began to show themselves on this part of the coast about ten years ago, as far as I can remember, although some might have come before. We used to see three or four at once off this place; those

vessels used to make two, sometimes three, trips each season; they kept their halibut fresh on ice. All these vessels took full loads at each trip; they were from 70 to 80 tons each, and could take on an average seventy or eighty thousand (80,000) pounds of fish each. These vessels continued to fish here till about three years ago, keeping here sometimes as late as the beginning of November. During the time that they had no right to fish, that is, between the time of licenses and the commencement of the Treaty of Washington, they came here in spite of the coast-guard cruisers.

5. I believe the present scarcity of halibut on this coast is owing to the immense numbers of that fish that were taken by the Americans; but if this fishery is left unmolested for a few years I am sure it will become soon as productive as it ever was.

6. This coast is very accessible for fishing boats and vessels, as it is full of harbors and roadsteads, and the shores abound with bait.

7. The bait found here in abundance is caplin, launce, herring, squid, and clams. Launce, caplin, and clams are the most plentiful throughout the season.

8. The halibut schooners take a supply of bait with them from the United States; after this is used up they take their bait on our shore. A vessel equipped for Bank fishing for cod or halibut, which would come to fish on the Bank above described, might at times find bait on this Bank in the shape of herring or mackerel, but more than half the time they would have to come to the shore to take bait, and foreign fishermen, not having acquired the right by treaty to fish in our waters, could not, therefore, take their bait on shore, and in consequence would not be able to carry on their Bank fishing.

9. While it is a great advantage to American fishermen to have the right to fish in our waters, it is not of the least use to our fishermen to have the same right with regard to United States waters, as there is no chance of our ever going there.

10. And the American free market is also of no use to our fishermen, for our fish are cured especially for home consumption or for exportation to Europe and the Brazils. These markets are large enough to take all the fish we can supply.

11. I consider it a matter of the utmost importance to our fishermen to have, if possible, our fisheries reserved exclusively to ourselves, as the competition carried on by Americans is most injurious, and will soon deprive our fishermen of their occupation, and oblige them to emigrate.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

PHILIP TOUZEL.

The said Philip Touzel has sworn to the truth of the above affidavit at Sheldrake, in the county of Saguenay, of the Province of Quebec, this seventh day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 232.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington:

I, SAMUEL BOUCHARD, of Amherst Harbor, Amherst Island, Magdalen Islands, make oath and say as follows:

1. I am 40 years of age. I was born here. I have fished for 20 years

at the Magdalen Islands and on the north shore from Natashquan to Belleisle.

2. The herring spawn here every spring, and never failed since I remember; they spawn in May.

3. The mackerel also spawn here in the month of June. They spawn in deeper water than the herring, and do not spawn till after the herring.

4. The Americans fish here for herring every spring. They generally haul their seines from the shore.

5. I fished on board American schooners for two seasons, 21 years ago. I fished all round the Magdalen Islands, and on the north shore of the island of Prince Edward, and in the Bay of Chaleur; and the greatest part of the fish taken by these American vessels was so taken close along the shore, and within 3 miles of the coast. We found greater facilities for taking mackerel close inshore, because mackerel are generally more abundant inshore, as they find inshore a greater quantity of small fish upon which they feed. We made one trip each season, taking 400 barrels each trip.

6. From 250 to 300 sail of American mackerel-fishers fish in and around the Magdalen Islands each season, and I have seen 100 in Pleasant Bay at one time; and only the other day I saw 72 American vessels anchored off Etang du Nord. The schooners we see this year are of much larger tonnage than we used to see formerly. Some are from 100 to 150 tons, and have two seines on board. They practice mackerel-seining now more than they used to here formerly, though they also, even the seiners, use the hook and line. The schooners, when loaded, carry from 300 to 400 barrels, that is, the ordinary sized ones; but the large ones can carry as much as a thousand barrels.

I hereby swear that the above affidavit is, to the best of my knowledge and belief, correct.

SAMUEL BOUCHARD.

The said Samuel Bouchard, of Amherst Harbor, Magdalen Islands, county of Gaspé, and Province of Quebec, has sworn, at Amherst Harbor, as above, to the truth of this above affidavit, this twenty-first day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 233.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GABRIEL SEABOYER, of Lower LaHave, in the county of Lunenburg, master mariner, make oath and say as follows:

1. I have been engaged in the fisheries for forty years. I have fished as master about eleven years, and have also been interested for the same period of time in vessels engaged in the fisheries. I have fished along the southern coast of Nova Scotia, around Cape Breton, Prince Edward Island, eastern coast of New Brunswick, and around the Magdalenes and Lower St. Lawrence. I have fished mackerel, herring, and codfish on the above-mentioned coast, and am at present well acquainted with the inshore fisheries in Lunenburg County.

2. I have seen in the North Bay at one time upwards of one hundred sail, the most of whom were Americans; and I have seen at Pleasant Bay a fleet of upwards of two hundred sail, most of whom were Ameri-

cans. Those vessels were engaged in mackerel-fishing, and they took mackerel mostly all within three miles of the shore; and in my experience I never saw any large quantity of mackerel taken beyond three miles from the shore. I have made calculations, along with other captains, and we concluded that there were nine hundred sail of American fishing vessels in the North Bay.

3. The Americans carry from fourteen to twenty men on board their mackerelmen, and took from three to four hundred barrels on board each vessel; some took as high as seven hundred barrels. They made from two to three trips. American codfish vessels carry from ten to fifteen men, and take in the bay from seven to ten hundred quintals to each vessel, on each trip, and make about two trips. I have often seen Americans in the spring of the year lying along Cape North, in Cape Breton, within three miles of the shore, engaged in taking codfish; and the vessels which now go from here to take codfish, fish close in to the shore.

4. In my experience the mackerel fishery has varied. It may have fallen off some during the past few years, which, I think, has arisen from over-fishing. Codfish can almost always be taken plentifully if bait is plenty. The herring fishery is good and has always remained the same.

5. The Americans took mackerel with hook and line and now use purse-seines. They take codfish mostly by trawling, which I consider a very improper method of taking fish. Trawling takes the spawn fish, as the bait lies quietly upon the bottom. In hand-lining spawn fish are seldom taken. The Americans trawled for codfish ever since I can remember. Our fishermen only commenced to trawl about five years ago, and were driven to this plan to compete with the Americans. I have seen American schooners take large quantities of herring inshore around the Magdalenes; some schooners took as many as two thousand barrels. Those herring were taken with seines.

6. In my opinion throwing overboard offals is injurious to the fishing grounds, and the sound bone which is thrown over kills many large fish.

7. The Americans always fished inshore when they could. When a cutter was in sight they disappeared, and when she went away they returned; and I have seen Americans kept off the shore beyond three miles, and they could not catch a mackerel, and our vessels caught hundreds of barrels.

8. The inshore fishery is worth double of the whole fishery, and more than double.

9. The Americans made a practice of lee-bowing us, and I have often seen them running into Nova Scotian vessels; and I have myself been driven off the grounds by American vessels, and away from schools of mackerel.

10. Over twelve years ago, I have seen American vessels in the North Bay with purse-seines, and I consider these seines injurious to the fishery. I have never seen a Canadian vessel with a purse-seine.

11. The Americans catch bait all around our coast, as much as they can get.

12. During the past six years there has been no increase in the quantity of fish in Canadian waters. This, I think, is owing to over-fishing, purse-seining, trawling, and throwing gurry overboard, and other improper methods of taking fish.

13. The herring fishery is all inshore, and the Americans fish and buy them for bait; they buy because they find it saves time and expense.

14. I have often heard the Americans say that our mackerel is superior to what they take in their own waters.

15. Mackerel make inshore to feed and spawn; they are taken inshore, and I consider them an inshore fish.

16. I have often seen the Americans transshipping cargoes at the Strait of Canso; by so doing they save time, expense, and catch more fish.

17. The Americans get bait, and ice in which to preserve it, from our inshore fishermen all along our coast, and without this bait and ice it would be impossible for them to carry on successfully the deep-sea fishery. The Americans being allowed to get bait is a great injury to our bankers, as they gobble up the bait from our men. Without ice it would be impossible to keep the bait fresh, and they get this ice in almost every harbor along our coast.

18. I have never known nor heard of any Canadian fisherman fishing in American waters, nor do I consider this right of any value.

19. The Americans hinder Canadian fishermen by taking away so many fish, by improper methods of fishing, by carrying off our bait, and by taking up our fishing-grounds.

20. I would consider it a great benefit to the Canadian fishermen if the Americans were excluded.

GABRIEL SEABOYER.

Sworn to at Lower La Have, in the county of Lunenburg, this 7th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, J. P.

No. 234.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PATRICK MULLINS, of South Br, Sydney, in the county of Cape Breton, in the Province of Nova Scotia, collector of customs, make oath and say as follows:

1. I have been about fifty-two years engaged in the inshore fishery, and have fished mackerel, codfish, herring, halibut, dogfish, pollack, and squid, caplin, and other bait, and have handled salmon to a considerable extent, and have been acquainted with many Nova Scotian and American fishermen.

2. To my knowledge, the amount of fish taken by American fishermen in Canadian waters is very great. They take mackerel inshore, and I have heard from Nova Scotian fishermen that they have interfered with their nets inshore, their bobs being found in the Nova Scotia fishermen's nets; and they take codfish and halibut off shore, which makes the inshore catch of these last-mentioned fish less plentiful, and they dress their fish off shore, throwing overboard the offals, which is injurious to the fishing grounds.

3. I live close to the coast, and have within the last seven years seen within the three-mile limit as many as twenty American fishing-vessels at one time engaged in fishing; and this fall ten years ago I have seen about one hundred fishing-vessels in Sydney Harbor at one time, most of whom were American fishermen. Such a large number of fishermen, there being from ten to fifteen men on board each vessel, caused uneasiness to the inhabitants, and from my own observation I would call them very ill-conducted people, and their conduct caused such alarm that the people talked about sending for a man-of-war to quell them.

4. The vessels fishing within the three-mile limit are said, within the last seven years down to the present time, to take on an average of twenty barrels a day to each vessel. About five years ago they took about thirty barrels on an average per day. They take those fish at the time of the year when mackerel are number one. The mackerel taken at that time are worth twelve dollars per barrel to our fishermen in the Halifax market. Our number two, large, are good number one in the American market. And if Americans were kept out, our fishermen would make more money by fishing. These statements I believe to be rather under than over the mark.

5. Twenty-five years ago I have seen over a thousand barrels of mackerel taken by thirty men within three weeks at Ingonish, in the county of Victoria. These fish were all taken by boats and nets inshore, some close in to the shore by nets made fast to the shore. These barrels I saw packed and weighed, and all of them I numbered and inspected. These mackerel were taken in the spring, about the middle of June. About 25 years ago, at Cape North, in the county of Victoria, in the fall of the year, about the first of November, within a fortnight, I have seen about seven hundred barrels taken, of which two-thirds at least were number one. These fish (number one) were worth in the Halifax market five pounds per barrel. These latter fish were taken within half a mile of the shore.

6. About fifteen years ago I conversed with an American fisherman who fished off Cape North, and who told me that he was glad when Saturday night came, as he would have a spell then, and that every codfish he took was as long as a splitting-table (about four feet), and besides his own vessel there were other American fishing-vessels.

7. In my opinion, over-fishing may have something to do with the scarcity of the mackerel; but within my knowledge, the fishing has varied, the mackerel, cod, and other fishing being some years good, and others poor. This year I have seen more squid, which is the best bait for codfish, and the best codfish follow them, than I have ever seen in any year during the last fifty years in this bay (Sydney), and to my knowledge codfish always follow the squid.

8. The inshore fishing I consider to be the most valuable, and if the American fishermen were not allowed to come inshore to fish mackerel, it would not pay them to come to our fishing-grounds, most of the mackerel being taken inshore.

9. I think the Americans must take three-fourths of the mackerel inshore.

10. In my opinion, mackerel may have decreased some, the other fish none, since the year 1871. The Americans have lessened the catch of fish for Nova Scotia fishermen.

11. The herring fishery is all inshore, and I know of no herring being taken outshore. The American fishing vessels have nearly all two herring nets with them, and with these they can catch herring for bait.

12. Our Nova Scotian inshore codfish are much superior to that taken by the Americans, commanding a better price in the American markets, and are better cured.

13. The food of the mackerel is found inshore. They come inshore and feed on the small bait found there—a small kind of fish found inshore, and of which the mackerel may be full when taken inshore, also on mussels found inshore on the rocks.

14. The mackerel breed in the North Bay, and around the Magdalen Islands. They feed and breed all round our coasts, in the bays and harbors.

15. In Sydney Harbor (north) the Americans, transship mackerel, which saves them a large amount of time, so that they can take more fish and make a good season.

16. The Americans purchase bait, and also ice, in considerable quantities; without the ice it would be impossible for them to prosecute their fishing voyages. They sometimes purchase a trifle of supplies when they fall short—when they lose an anchor, sail, or chain, without which they would have to return home, and in running home would run a great risk.

17. The Canadian fishing ground I believe to be much superior to the American, and I know of no Canadian fisherman who goes to take a fish in American waters, and I know hundreds of Americans come here and fish.

18. I consider it in no way in the world a benefit to us for Americans to come here and fish. They diminish the catch of fish for our men, injure our fishing grounds, and, in my opinion, it would be much better if they were totally excluded.

PATRICK MULLINS.

Sworn to at South Bar, in the county of Cape Breton, in the province of Nova Scotia, this 21st day of July, A. D. 1877, before me.

I, PETER BRIORD, of Douglastown, in the county of Gaspé, make oath and say as follows:

1. I have been for 30 years a fisherman, and am practically acquainted with all that relates to fishing. I am acquainted with the north coast

of the island of Anticosti. I have fished at McDonald's Cove, in the north coast of the island of Anticosti, for the past 12 years. I have heard Mr. Andrew Kennedy give his affidavit, and it has been read to me. I fully concur in all that he has said, and I hereby swear that, to the best of my knowledge and belief, what he has said is correct.

his
PETER + BRIORD.
mark.

W. WAKEHAM.

The said Peter Briord has sworn to the truth of the above affidavit, at McDonald's Cove, island of Anticosti, county of Saguenay, and Province of Quebec, this ninth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 237.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ANDREW KENNEDY, of Douglastown, in the county of Gaspé, in the Province of Quebec, make oath and say as follows :

1. I am 57 years of age, and have been a practical fisherman for the last forty years. I fished for twelve years on the north shore, at Thunder River, and for the last twelve years I have fished at McDonald's Cove, on the north shore of the island of Anticosti. I am thoroughly acquainted with the fisheries of the north shore of the island of Anticosti, from the east to the west points. I am part owner of the fishing establishment here, and understand thoroughly every operation connected with the taking and curing of fish.

2. The fisheries carried on here are cod, herring, mackerel, and halibut. These fisheries are all within the three-mile limit.

3. The bait used for taking these fish is herring, caplin, squid, and trout; all this bait is taken close inshore.

4. Herring are abundant on this coast, and they spawn along the shore, chiefly, however, at Fox or Bell Bay.

5. The American fishing-vessels have been in the habit of resorting to this coast for the purpose of taking herring by means of seines, and this year, according to reliable information, they have already taken 18,000 barrels at Bell Bay and the neighborhood.

6. Since I first came here I have seen from ten to fifteen American vessels fishing for halibut along this coast every year. Last year, however, there were only two here, and this year as yet none have appeared. Each of these vessels was from 80 to 120 tons; had a crew of from 10 to 15 men, and from 4 to 6 dories. Each dory has two trawl lines of 500 fathoms each, and each trawl line 350 hooks. Some of these vessels used to make two, some only one trip, and their load amounted to from 80,000 to 120,000 lbs. each vessel. When I first came here I could take plenty of halibut; sometimes twenty a day, but now we can hardly take one. My opinion is, and it is the opinion of all the fishermen on the coast, that the Americans have exhausted the halibut fishery here by their excessive fishing with trawls. And not only that, but as when catching halibut they also catch codfish and those generally the largest and as they are not prepared for curing those codfish, they throw them overboard when they don't find on the spot other fishermen with whom they can barter them. This great destruction of the large cod, which

are generally the breeding fish, is of no use to any one and much to be regretted.

7. Mackerel were very abundant now as when I first came here. There seems to have been a falling off for the last two or three years, but this year there is much better prospect.

8. The codfish seem to be as abundant now as when I first came here, but the number varies from year to year, sometimes striking one part of the shore more than another part.

9. Codfish and herring are the chief means of subsistence for the fishermen resorting to this coast, and it is of the utmost importance that they should be preserved as much as possible.

10. I consider the right of fishing in United States waters granted by the Treaty of Washington of no value whatever to our fishermen.

11. It is my opinion also that the free market for our fish in the United States is no advantage to us, for our fish is sold for home consumption or for exportation to Europe and the Brazils.

12. It is of the utmost importance for the future of our fisheries, and for the advantage of the fisheries and fishing interests of this country, that foreigners be not again allowed to participate in our fisheries after this treaty has expired; and the competition of American fishermen in our waters is a great detriment to us, as they prevent us from catching as much fish as we would if we were alone.

13. If the Americans did not possess the right of coming to our in-shores it would be of no use for them to attempt fishing anywhere on the coast of Anticosti.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

ANDREW KENNEDY.

The said Andrew Kennedy has sworn to the truth of the above affidavit, at Macdonald's Cove, Island of Anticosti, this ninth day of August, A. D., 1877, before me.

P. FORTIN, J. P.

No. 238.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington :

I, PIERRE BROCHU, of Seven Islands, in the county of Saguenay, and Province of Quebec, make oath and say as follows :

1. I am 64 years of age. I am a practical fisherman. I have lived for 24 years on this coast, 13 of which I have lived at Seven Islands, and at St. Margaret's River, 7 years, and 4 years at Moniquajan. I am well acquainted with the fisheries carried on, on this coast between Moniquajan and Esquimaux Point, on the north shore of the River St. Lawrence, a distance of 200 miles. I am also acquainted with the fisheries of the Island of Anticosti, from Ellis Bay, around the West Point and North Shore of the Island, as far as Cape Observation, a distance of 80 miles.

2. The principal fisheries of the coasts mentioned above are cod, halibut, mackerel, and herring. All these fisheries are carried on within three miles of the shore, except on the St. John and Mingan Banks and the Sheldrake Bank.

3. The quantity of codfish on this coast is, in my opinion, quite as abundant now as it was when I first came here, though the quantity varies from year to year; five years ago the boats averaging from 125 to 150 draughts at Seven Islands and St. Margaret's River.

4. From the time that I arrived here until 1868, the time that the Americans were permitted to fish inshore, I saw large numbers of American mackerelers along the shores, and also halibut fishers; and I have counted often as many as 30 at one time at Seven Islands Bay. They come there for shelter, and for fishing also. When they were prevented from fishing by the coast-guard schooners, after the end of the treaty, we saw but few, though they still continued to come in small numbers in spite of the coast guards. Since the Treaty of Washington I have only seen a few fishing for mackerel and halibut. I estimate the average annual number of mackerel and halibut schooners belonging to the Americans, from Seven Islands to Gadabout, to have been 100. These vessels were all fishing and seining close along the shore within the three-mile limit. They fished inside the limit, because there was no fish outside of the limit. They nearly all loaded. I fished for them, and with them for several seasons, both with the hook and with the seine. This enables me to give accurate information with regard to the fisheries of the Americans on this coast; each of these vessels took from 300 to 800 barrels. About ten of these vessels fished annually for halibut.

5. There was generally one seine for each three schooners, some seines were shore seines, and some were bay seines; even with the bay seines they never fished outside of British waters. Often they threw the seine after a school of fish, and when the seine was drawn near the shore, it was found that they had herring or young codfish, and not mackerel; and as they wanted no fish but mackerel, they would allow the greatest part to perish and rot upon the shore.

6. The halibut-fishing schooners fished along the coast, always within three miles. They stopped fishing in numbers about 7 or 8 years ago. Since that period we only saw a few; this year none. When I first came here I could take as many halibut as I liked, and the people used to sell large quantities, and besides used it largely as food; but now, since the Americans have fished so extensively along the shore, we only catch a few. It is not now worth our while to fish for them. My opinion is that this scarcity, which is so injurious to the people of the coast, and to the interests of the fishermen of this county in general, is due entirely to destructive over-fishing done by the Americans, as I have stated above, by trawls, &c. Now that the fishing for halibut is at rest, the restocking is taking place, as we see more small ones this year; and if the Americans keep away for a certain number of years, this fishing will certainly recuperate, as our fishermen never fish in such an exhaustive manner as to destroy the fishery.

7. We find on this coast, from Point Charles to St. Nicholas, a distance of 120 miles, excellent spawning-grounds, especially at Seven Islands Bay, St. Margaret's Bay, May Islands, Cawee, Trinity Bay, Gadabout, &c. At all these places any quantity of herring can be taken in the spring.

8. The American fishing-grounds are of no use to us; we don't want to go there.

9. Our fish is prepared for the Canadian markets and Europe and Brazil.

10. The population is increasing so fast on this coast, and the fisheries are so needful for their subsistence, that they should not be given away to foreigners; if they are, half our population will have to emigrate. Most of these American vessels trade extensively with the shore population, and sell and land articles without paying duties. The fisheries here are very accessible, as there are many harbors, good anchorage-grounds, and roadsteads.

11. The bait for cod-fishing and halibut and mackerel is very abundant along the shore, and the Americans used to go and get it themselves. I have seen them repeatedly go and dig clams at Seven Islands and the May Islands.

I hereby swear that the above statement is to the best of my knowledge and belief correct.

PIERRE BROCHU.

The said Pierre Brochu, of Seven Islands, has sworn to the truth of the above affidavit, at Moisie, in the county of Saguenay, and Province of Quebec, this sixth day of August, A. D. 1877, before me.

P. FORTIN, J. P.

No. 239.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ISAAC CHOUINARD, farmer and fisherman of Cape Chat, in the county of Gaspé and Province of Quebec, make oath and say as follows:

1. I have been engaged in fishing on this coast for about twenty years.

2. I am well acquainted with the fisheries of the south coast of the St. Lawrence from Matane to Gaspé, of the north shore from Point des Monts to Esquimaux Point, north and west coast of Anticosti, Bay de Chaleur, and the Magdalen Islands. I was engaged as fisherman on board an American mackerel fisher for one season, the summer of 1863; we made two trips of 850 barrels each trip, both of which took place within ten weeks. The first trip we took 100 barrels with the seine; the rest were taken with hook and line. The second trip was made entirely with theseine, and we filled our vessel in five days; that is to say, the seine was hauled once, from the shore at Cape St. Nicholas on the north shore of the St. Lawrence, and contained no less than 1,200 barrels; the seine was moored, and 850 barrels were taken from the seine, and the seine was capsized and the remaining 350 barrels were allowed to go, we having no means of preserving them; many of these were dead and became a total loss. The first voyage was made partly on the coast of Gaspé and partly in the Bay of Chaleur; the fish we caught were taken entirely within the three-mile limit in both voyages—that is, entirely in British waters. We also made a third voyage in September and October on the banks off the Magdalen Islands, where we loaded with codfish and halibut. The vessel was of 100 tons and hailed from Boston.

3. Mackerel was very abundant on this coast formerly; for the last few years they have been scarce; this year they are appearing in abundance.

4. According to my belief, the scarcity was caused by the great quantity taken by the Americans, and as they have not been fishing in any numbers for a few years back, the quantity of mackerel is again increasing. The year that I fished with the Americans it was reckoned that seven or eight hundred American vessels were fishing in the Gulf of the St. Lawrence; as far as I could see and learn, they were all fishing within the three-mile limit.

5. I affirm that the presence of so many American vessels in our waters fishing for mackerel was most injurious to our mackerel fisheries, as it must tend to diminish the supply, the methods practiced by the Americans, either by seines or by hook and line, enabling them to take such large quantities so easily.

6. The privilege of fishing in American waters is of no value to us. I have no knowledge of any Canadian vessels being engaged in fishing in American waters.

7. The free market for our fish in the States is of no use to us, as our fish is prepared either for home consumption or for foreign markets other than the American, where they command better prices.

8. It is my opinion that it is of the greatest importance to us as Canadians to keep our fisheries entirely to ourselves as a means of developing our own fisheries, and fostering our mercantile marine, and giving employment to our maritime population, and thereby keeping them from emigrating to foreign countries.

I swear that the above statement is to the best of my knowledge and belief correct.

his
ISAAC + CHOUINARD.
mark.

W. WAKEHAM.

The said Isaac Chouinard has sworn to the truth of the above affidavit, at Cape Chat, in the county of Gaspé, this thirty-first day of July, A. D. 1877, before me.

P. FORTIN, J. P.

No. 240.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, AUSTEN LOCKE, of Lockeport, in the county of Shelburne, merchant, make oath and say as follows:

1. I have been engaged in the buying and selling of fish for twenty years, in fishermen's supplies, and outfitting fishing-vessels, and am well acquainted with the inshore fisheries in Shelburne County.

2. From eight to ten American fishing-vessels run into this port within the two or three years now past. They purchased ice and bait and supplies to a small extent. They are fitted out at home with supplies and only purchase when they run short, which is a great accommodation to them. The American vessels which run in here sell their small fish, which would be an inconvenience for them to carry home; by doing this they take home a cargo of large and valuable fish. The American vessels which come in here and take ice and bait, trawl for codfish off this coast within twelve or fifteen miles. In my opinion trawling is an injurious method of taking fish, as it destroys the spawn fish. Out of this port there are about one hundred vessels engaged in the fisheries—mostly codfish—all fitted out here. The most of these vessels take codfish by hand-lining. The American vessels which fish off this coast take, during the year, about one thousand quintals of codfish each, and could not catch this fish unless they got bait and ice in our harbors to enable them to do so.

3. In the falls of seventy-one, two, and three, I had a vessel running to the North Bay for mackerel, and in seventy-one she made a good trip. She took three hundred and forty barrels of mackerel. She carried fifteen men. From seventy-one back to sixty-three I had vessels engaged in the mackerel fishery, and in my experience this fishery has varied, being some years good and others poor. Since seventy-three

the codfish have fallen off to some extent; this I attribute to trawling, as already stated.

4. The fishing-grounds are injured by throwing overboard offal, and so many American vessels throwing over this offal are very injurious to the grounds.

5. The inshore fishery is of greater value than the off-shore fishery, and twice the value of the off-shore fishery.

6. Canadian fishermen catch codfish in inshore waters along the coast.

7. Since eighteen hundred and seventy-one the number of American vessels engaged in taking codfish has very largely increased—there are more than five times as many.

8. Last year from four to five thousand barrels of herring were taken in the county of Shelburne; these fish are taken all inshore, within three miles of the shore.

9. In proportion to the whole number of mackerel taken in American waters they do not get so many number one as there are taken in Canadian waters.

10. It is a great advantage to American fishermen to be able to procure bait and ice in which to preserve it in the bay and harbors along the Canadian coast, and without this bait and ice they could not successfully carry on the fishery on the banks off this coast. They purchase this bait in this county, and do so because they save time and expense by so doing. It would require too much time to catch this bait to any large extent inshore in this county. The privilege of getting bait inshore in Canadian waters interferes with the supply for Canadian bankers, as they make the bait scarce, especially in the early part of the season.

11. I have never known nor heard of any Canadian vessels except two from this county fishing in American waters. One of these vessels I myself owned. She went from here to get seines at Gloucester, and only caught two barrels of mackerel on the American coast. She reported that she did not see a school of mackerel on the American coast. This vessel was in American waters during the month of July now past.

12. The privilege of getting bait in Canadian ports is worth six hundred dollars to each American vessel.

13. So many American vessels running down here to fish make the fish much more scarce for Canadian fishermen. They first employed trawling, and compelled Canadian fishermen to do so in order to compete successfully with them. By trawling the expense in catching is double. Nova Scotia vessels out of this port have commenced trawling within the last three years.

14. I have known of cases of smuggling by American vessels in this county, particularly kerosene-oil.

AUSTEN LOCKE.

Sworn to at Lockport, in the county of Shelburne, this 23d day of August, A. D. 1877, before me.

JACOB LOCKE,
Justice Peace.

No. 241.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DANIEL MCADAMS, of Lockport, in the county of Shelburne, master mariner, make oath and say as follows:

1. I have been engaged in the fisheries for the past twenty-four years.

I have taken codfish in the North Bay, along the southern coast of Nova Scotia, on the Labrador coast, and on the Banks. Along the southern coast of Nova Scotia, in the North Bay, and on the Labrador coast I have taken herring.

2. I left the North Bay a fortnight ago and saw a large number of American mackerel-vessels there and likewise round Prince Edward Island. I saw as many as thirty sail in one day. Last summer I also saw a large number of American vessels engaged in taking mackerel. Last year and this year I have seen many American vessels engaged in taking codfish in the North Bay. These American mackerel-vessels carry from fifteen to twenty men each. The American vessels which I saw had on board about three hundred barrels of mackerel each. The Americans take this mackerel inshore within three miles of the shore.

3. In the North Bay the American codfish-vessels carry from twelve to sixteen men each, and are fitted out to take from a thousand to fourteen hundred quintals of fish to each vessel.

4. The Americans catch almost all their codfish by trawling. Both last year and this I saw American vessels trawling for codfish around the Magdalen Islands within three miles of the shore. This year I have seen as many as seven American schooners trawling inshore within three miles of the shore for codfish. An American schooner which lay alongside of our schooner took inshore, within three miles of the shore, from ten hundred to twelve hundred quintals; she took as many as one hundred and fifty quintals in one day. The American vessels fished to a large extent inshore this year, as the fish were more plentiful this year within three miles of the shore than off. Four years ago I have seen the Americans set their trawls inshore around Scaterie. Since 1871 the Americans fished inshore whenever the fish made in.

5. In the North Bay last summer I have counted in sight from forty to forty-five vessels at one time, most of whom were Americans. This number I have counted day after day. Nearly all the American vessels, as already stated, take codfish by trawling. Most of the Canadian vessels hand-line. Trawling I consider an injurious method of taking fish, as it destroys the mother fish. In hand-lining very few mother fish are taken. In trawling the bait lies dead upon the bottom, and the mother fish which are on the bottom bite at it. In hand-lining the bait is almost continuously on the move.

6. On the Canadian coast of Labrador four years ago and for ten years previous, every year I have seen American vessels engaged in seining codfish on the shore. This I consider a bad method of taking fish, as it destroys all kinds of fish, and the large and very small codfish are taken. I have never seen any Canadian vessel seining codfish. The American schooners on the Labrador coast carry about twenty hands each, and are fitted for from two thousand to two thousand two hundred quintals, and generally take eighteen hundred quintals each.

7. I have seen many of the American vessels around the Magdalenes fishing herring and mackerel for bait within the last six years. These herring and mackerel the Americans take in nets. Nearly all the American vessels engaged in cod fishing in the North Bay catch their own bait inshore within three miles.

8. I have known American vessels on the Labrador coast to take a thousand barrels of herring by seining on the shore.

9. The mackerel fishery to my knowledge has always varied. In seventy-one, two, and three, there were good catches. The herring fishery is almost always good. The cod fishery in the North Bay and on the banks during the past five or six years has fallen off to a large extent,

particularly the off shore codfish in the North Bay. This I attribute to overfishing, and to trawling as already stated.

10. The throwing overboard of offal is very injurious to the fishing grounds, as it drives the fish away, injures the young fish, and destroys the spawn.

11. In Canadian waters the inshore fisheries are in my opinion double the value of the off shore fisheries.

12. The herring fishery in Canadian waters is all inshore. The Americans get them for bait, both buying and catching them. They buy in Nova Scotia bays and harbors along from Cape Sable to Scatenec. They buy because it saves time and expense, and without this bait, and ice in which to preserve it, they could not carry on the Bank fishing.

13. The Americans come along the southern coast of Nova Scotia early in the spring when bait is scarce, and gobble it up, which interferes with Nova Scotia bankers, and vessels running to the North Bay.

14. It would be a great benefit to Nova Scotia fishermen if the Americans were excluded from our inshore fisheries, and I know of no benefit whatever which we derive from American fishermen.

DANIEL McADAMS.

Sworn to at Lockeport, in the county of Shelburne, this 23d day of August, A. D. 1877, before me.

AUSTEN LOCKE, J. P.

No. 242.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MESSIE FOURNIER, of Grande Vallée, in the county of Gaspé, and Province of Quebec, make oath and say as follows:

1. I have been fishing in this place for 28 years. I am a practical fisherman and am well acquainted with the fisheries of this coast.

2. Before the American fishermen began fishing on this coast for halibut, this fish was to be caught in great abundance, and we frequently loaded our boats when fishing for cod. At this present time, and for several years back, we can hardly take any; in fact, not even enough for our own consumption. This complete destruction of our halibut fishery I believe is due solely to the exhaustive manner in which the Americans fished for halibut, by means of trawl lines, having an immense number of hooks.

3. Before the American schooners began fishing in our inshore waters for mackerel, as they did in such great numbers during the existence of the Reciprocity Treaty, mackerel existed in great numbers all along the bays and coves. Toward the latter years of the Reciprocity Treaty, the quantity of mackerel had sensibly fallen off. Last year and this present summer they are again to be found in great numbers. I attribute the scarcity of a few years ago to the great drain caused by the large fleet of Americans that fished here; and I consider that the present increase is altogether owing to the fact that for some years back the schools of mackerel have not been so much disturbed.

4. I have seen 32 American schooners anchored among the net moorings close inshore at the same time; but they used to come in less numbers almost every week during the mackerel season. They interfered with the drifting for bait and the setting of our herring-nets.

5. The crews of some of these vessels used to come ashore and tramp

over our crops, force themselves into our houses in the most rude manner. I myself was forced to keep guard in my house, as well as my neighbor, for eight days, fearing insults to the women of our households during the night; and one morning one of these schooners in getting under way, carried off five herring-nets, three that were on the mooring, breaking them on the moorings, and two nets that were on the drift, with the boat belonging to one of our men named Landry, the nets of course being fast to the stern of the boat. The schooner with her anchor caught in the net, dragged the boat, with the two men in it, stern foremost for 9 miles, the schooner's crew all the time laughing and making a joke of it. The lives of these two men being in constant jeopardy, the Americans never made the least effort to clear the net, by coming in the wind, as could have been easily done. The boat and men only got clear when the ropes broke, and the nets were lost to these poor fishermen.

I hereby swear that the above statement is, to the best of my knowledge and belief, correct.

MESSIE ^{his} + Fournier.
mark.

Witness:

W. WAKEHAM.

The said Messie Fournier has sworn to the truth of the above affidavit, at Grande Vallée, in the county of Gaspé, and Province of Quebec, this 2d day of August, A. D. 1877, before me.

P. FORTIN, *J. P.*

No. 243.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM HADDON, of Grosse Isle, Magdalen Islands, make oath and say as follows:

1. I am 36 years of age, and have been engaged in the fisheries from Grand Entry Harbor, and am well acquainted with the fisheries of Grand Entry and of the eastern shores of the Magdalen Islands.

2. The herring spawn without fail every season at Grand Entry, and they go in the lagoon, and they spawn outside as well. I have seen the eggs in the water and on the beach. I have seen the spawn after a heavy north wind cast on the beach knee deep. The people of Grosse Isle take the herring with nets, but the American fishermen take them with seines, which seines they haul on shore, and from the shores, they going themselves on shore to haul the seines ashore. They also go on shore to mend their nets and seines.

3. The American trawlers on the Banks resort to Grand Entry in June to get bait. I have seen 20 and 30 sail every spring for the last five or six years. They go on shore to dry their nets, and also hire nets from the inhabitants. I believe that trawling and throwing offal overboard is injurious to the cod and mackerel fisheries.

I hereby swear that the above affidavit is, to the best of my knowledge and belief, correct.

WILLIAM HADDON.

The said William Haddon has sworn to the truth of the above affidavit, at House Harbor, Allright Island, Magdalen Islands, county of Gaspé, and Province of Quebec, this twentieth day of August, A. D., 1877, before me.

P. FORTIN, *J. P.*

No. 244.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN CARTER, of Port Mouton, in the county of Queen's, at present of Lockeport, in the county of Shelburne, fisherman, make oath and say as follows :

1. I have been engaged in fishing for eighteen years in American vessels, and in Nova Scotia vessels for twelve years. I was in an American vessel this spring. While in American vessels I fished codfish on the Western and Quero Banks, and trawled codfish in the North Bay. I fished mackerel in American vessels year after year, down until the fall before last, around the north side of Cape Breton, around Prince Edward Island, the Magdalens, and on the eastern side of New Brunswick.

2. When in the North Bay, I have seen at one time five hundred fishing-vessels, most of whom were Americans, engaged in taking mackerel. In the falls of seventy-one, two, and three, the catch of mackerel in the North Bay was good. In the fall of seventy-three I was in the American schooner Waterfall, of Southport, Me., and we took in four weeks three hundred and twenty barrels; a crew of thirteen hands were on board. The mackerel trim the shore, and the most of them are taken inshore.

3. When fishing on the Banks in American vessels we always made good fares, taking on an average from seven to eight hundred quintals each trip, and two trips each year, carrying from eleven to twelve men. This I have done for six years now past.

4. The Americans get their bait for trawling inshore in the bays and harbors of Nova Scotia, and along the Canadian coast, and without this bait, and ice in which to keep it fresh, they could not carry on trawling.

his
JOHN + CARTER.

JACOB LOCKE, J. P.

No. 245.

Came and appeared before me, one of Her Majesty's justices of the peace, in and for the district of Gaspé, WILLIAM McLEOD, esq., J. P., who deposeth and saith that he has had an interview with Capt. Henry Smith, master of schooner W. T. Smith, of Gloucester, Mass., while lying in the harbor of Port Daniel, on a mackerel-fishing voyage, about ten days ago.

He being the same Captain Smith mentioned by him, William McLeod, in his evidence before the Commission at Halifax, he referred him to some remarks he had made to him some few years ago, on the evil results of seining on our shores and throwing fish offal overboard, particularly in our harbors and near the mouths of rivers where salmon resort and other young fry propagate. That he, the said Capt. W. Smith, does recollect that conversation, and also of stating that it was in comparison to killing the goose that laid the golden eggs. He,

the said Captain Smith, also stated that he would depose to the same before any legal tribunal if called upon; and that large quantities of mackerel were frequently taken that were unfit for market, and were consequently thrown overboard, to decompose and pollute the waters where thrown, which, if left to nature, would become of inestimable value to other fishermen at some future time.

And that he would willingly sign a petition against the use of seines altogether for mackerel-fishing, either to the United States or the Dominion Governments. Moreover, that it was his, Captain Smith, belief that if the practice of seining was continued for ten years consecutively, it would to a great extent annihilate the mackerel-fishery both in the Dominion and American waters.

And that he has been connected with the fisheries during the last thirty-five years, and feels competent to give an opinion on that subject. That he is a native of Nova Scotia, but has resided for several years in Salem, Mass.

And allowed the said William McLeod to use his name with reference to the above subject.

WILLIAM MCLEOD.

Sworn before me, at Port Daniel, this twenty-seventh day of August, in the year of our Lord one thousand eight hundred and seventy-seven.

W. MILLAN, *J. P.*

At same date, also appeared before me, the undersigned justice of the peace, Joseph Horie, of Port Daniel, who deposeth and saith that he was present and witnessed the conversation in the margin.

JOSEPH HORIE.

Sworn before me the day and year above mentioned.

W. MILLAN, *J. P.*

No. 246.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ALLAN MATTHEWS, of East Ragged Islands, in the county of Shelburne, fisherman, make oath and say as follows:

1. I have been in the habit of supplying ice to fishing vessels during the past two years, both Canadian and American vessels. I have last year and this present year supplied ten Canadian vessels with ice. The Canadian vessels take from one ton to three tons each. Last summer and the present summer I supplied two American schooners with ice. A ton and a half each. They used this ice for bait which they got in this harbor. With this bait the American vessels fished on La Have, Brown, and Port LeBear Banks off this coast. They take codfish on the said Banks by trawling.

ALLAN MATTHEWS.

Sworn to at Lockeport, in the county of Shelburne, this 22d day of August, 1877, before me.

AUSTIN LOCKE, *J. P.*

No. 247.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DAVID MURRAY, jr., of Port Mulgrave, in the county of Guys-

borough and Province of Nova Scotia, collector of customs, make oath and says as follows:

1. I have been acquainted with the fisheries on our coasts for the past twenty-four years, during twenty-one years of which I was engaged in the fishing business, and for the past four years I have been collector of customs at this port.

2. During the Reciprocity Treaty I have known as high as eight hundred sail of American mackerel and codfishermen go in the Gulf of Saint Lawrence in one season. Of late years about half that number. For the last two years there have been about three hundred sail each year, including cod, mackerel, and herring. These vessels average about fourteen men each. They fish all around the shores of the Gulf of Saint Lawrence. During the Reciprocity Treaty the mackerelers averaged about eight hundred barrels per vessel each season; of late years only about half that quantity. I have known eighteen hundred quintals to be landed in one year by an American cod-fishing vessel. The average catch of codfish I estimate to be about nine hundred quintals per vessel each season.

3. The Americans catch the codfish with trawls, and the mackerel with seines, and with hook and line.

4. I consider that the fishery around our coasts is much injured by the Americans throwing overboard offal and garbage. I have been informed on the best of authority that the codfishing at Banquereau has within the last two or three years been totally destroyed by this practice. On the Grand Bank, as I have been informed, the fishermen sometimes draw their trawls through "gurry" (that is the entrails and refuse parts of codfish) and bring it up on their lines. Wherever this practice is carried on, the fishermen say that the fish are driven away.

5. I have understood American fishermen to say that the greater part of the mackerel are caught within the three-mile limit, and at the present day a greater portion of the mackerel than formerly is caught inshore.

6. The value of the inshore fishery, so far as the mackerel and herring are concerned, is of much greater value than that outside.

7. The inshore boat-fishery is much injured by the Americans running in among the boats and throwing bait in larger quantities and of better quality than our fishermen, and by this means enticing away the fish away from the boats. The schooner Alice, Capt. H. B. Joyce, took one hundred and twenty "wash barrels" of mackerel on Sunday, the 22d of July last, close inshore.

8. The American fishermen are beginning to use purse seines on our coasts extensively during the last two or three years. These seines are very injurious to the fishery, as they uselessly destroy great quantities of herring and small mackerel, which are thrown away. They also tend to break up the schools of mackerel and drive them away. The American codfishermen generally buy herring and mackerel from our fishermen for bait, and catch squid for the same purpose themselves.

9. Halibut are caught to some extent by American fishermen in our waters, close inshore.

10. The mackerel caught of late years in Canadian waters are larger than those caught in United States waters, but being generally longer in pickle than the American mackerel, do not bring so high a price when put in the market.

11. The principal feeding and breeding places of the mackerel are around the Magdalen Islands and Prince Edward Island and in the Bay of Chaleur, and in all cases inshore.

12. The privilege of transshipping cargoes on our coasts is of great value to the American mackerelers. It enables them to make a greater number of trips and catch more fish than they otherwise could; and by this means they save about three weeks on each trip they make. I have known an American mackereler to catch a fare of fish in the time that another vessel was going to the United States and returning.

I consider it a very great privilege to the American codfishermen to be allowed to procure bait on our shores, either by purchase or by catching it themselves. They consider it more profitable to buy bait than to spend time in catching it; for this reason, that their ice would melt and their bait already obtained would turn sour while they were fishing for more. They, therefore, obtain almost all their bait by purchase from our fishermen. The Americans cannot profitably carry on the deep-sea fishery without obtaining bait on the shores of the Dominion or Newfoundland. Indeed, I do not see how they can carry on the deep-sea fishery at all without obtaining bait in Canadian or Newfoundland harbors or shores.

13. The privilege of fishing in American waters is of no practical advantage whatever to Canadians.

14. The value of procuring bait on our shores is worth to American codfishermen almost the whole value of their trip, as without getting the bait they could not catch the fish at all. And in the winter and summer seasons the Americans cannot procure bait except in Canada or Newfoundland.

15. The Canadian inshore boat fishery is injured to a great extent by the American vessels carrying on their fishing operations within the three-mile limit, especially by seining and throwing of bait.

DAVID MURRAY, JR.

The said David Murray, junior, was sworn to the truth of this affidavit at Port Mulgrave, in the county of Guysborough, this 30th day of July, A. D. 1877, before me.

JAS. PURCELL,

A Justice of the Peace.

No. 248.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, THOMAS CONDON, of Guysboro', in the county of Guysboro', merchant, make oath and say as follows:

1. I have been in engaged in the fisheries for five-and-twenty years, both for myself and others, in the county of 'Guysboro' and other parts of the eastern coast of Nova Scotia. During that time I have been actively engaged in the business, and have a general and fair knowledge of the business of fishing as carried on by both the Canadians and Americans.

2. I have known as many as seven hundred American vessels fishing on our coast during one season for mackerel alone. Some years there would not be so many. Their average tonnage would be from sixty to one hundred per vessel. The crews would average fifteen. When the fishing was good and they enjoyed the privileges now enjoyed under the Treaty of Washington, each American vessel would catch on an average one thousand barrels. This average I consider none too large. When they fished on our coast they used to land and refit. This enabled them to catch double the quantity of fish.

3. Whenever the Americans could they fished inshore. This they did during the Reciprocity Treaty and at other times when they could evade the law. This they also do since 1871. When restricted from our inshore fisheries their voyages were broken up and their vessels were ordered home. This I learned from dozens of the American masters themselves, while I did business at Port Mulgrave for W. O. Heffernan.

4. The value of the inshore fisheries are immensely more valuable to the people of Eastern Nova Scotia than those outside. Very few fish are caught by our people outside.

5. Where the practice of enticing fish off shore has or is being carried on, it is very injurious in drawing the fish beyond the reach of many of our own people.

6. All kinds of fish taken in our waters are caught inshore by our fishermen. Whenever there are a large number of fishing vessels in the North Bay there is less fall mackerel taken, which is and has been one of our most important inshore fisheries. The reason for this I believe to be that the excessive quantity of bait used in the bay keeps them from our shores so late that our fishermen cannot take them. Besides, when the Americans frequent our harbors and bays it injures our inshore fisheries and destroys the fishing gear and nets of our fishermen.

7. I consider the privileges granted to the Americans by the Washington Treaty of immense value to them, and the withdrawal of them would completely cripple their fishing operations. By enjoying these privileges they are enabled to double their trips and more than double their catches. Indeed, without such privileges I think it would be impossible for them to prosecute the fisheries. They catch and buy their bait. When they buy it, it is to serve their own interests, not ours. The right to land, catch, and buy bait inshore is indispensably necessary to them for the prosecution of their fisheries.

8. I am not aware of any Canadian vessels fishing in the American waters. The privilege to us I consider of little or no value.

THOMAS CONDON.

Sworn to at Guysborough, in the county of Guysborough, this 26th day of July, A. D. 1877, before me.

JAMES A. TORY, J. P.
For the County of Guysborough.

No. 249.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ALEXANDER MCKENZIE, of Crow Harbor, in the county of Guysboro', fisherman, make oath and say as follows:

1. I have been engaged in the fisheries during the last thirty years, in and about the northern coast of Nova Scotia, catching all kinds of fish caught along the Nova Scotian coast.

2. Crow Harbor is situated in Chedabucto Bay. Since 1871 American fishermen come into the harbor for bait and ice, to an average of fifty each year. They fish the greater part of their bait, but some they buy. The quantity of squid alone caught by them in this harbor since A. D. 1871 will average twelve hundred dollars annually, at least. They take quantities to the Banks for sale. Besides squid, they also buy herring and mackerel for bait. The American vessels come in twice and sometimes three times after bait.

3. When the American vessels are in fishing bait few fish can be caught. The principal fishing carried on in Crow Harbor is seine and net fishing. The American vessels are anchored on the seine grounds; their boats are all around the harbor and coast; the catching of bait and the noise made by them by firing guns, and in other noises made by them, break up the schools of mackerel, so that they are frightened off, and prevent them from coming in so that the fishermen can catch them. Neither can our fishermen set their nets when American vessels are coming in and out, or when they are at anchor, because the anchors and ships tear and destroy them. For these and many other reasons it has been very injurious to our fisheries to have the Americans come in for bait. In fact our fishing in this harbor is almost destroyed. Formerly the mackerel fishing in this harbor was one of the best in Canada.

4. The value of our inshore fisheries is immeasurably greater to us than those outshore. The whole fisheries of this bay are inshore.

5. Since 1871, wherever the Americans have resorted for bait the fishing has decreased. This is particularly the case in this harbor. The failure of the fishing in this harbor during the last few years, I attribute largely to the presence of the American fishermen in our harbor.

6. Mackerel feed upon shrimp and other small fish. This food is found along our shores where the mackerel feed. I think a portion of the mackerel spawn or breed along the coast of Nova Scotia, but the greater number spawn on the Bank and other shoal waters of the North Bay.

7. I consider it a great advantage to the Americans to be allowed to land and dry their fish and transship their cargoes. In this way they are enabled to catch a much larger quantity of fish, and, in fact, without the advantages granted by the Treaty of Washington I cannot see how they could carry on the deep-sea fisheries with profit. It will at least enable them to double the quantities they would otherwise catch.

ALEXANDER McKENZIE.

Sworn to at Crow Harbor, in the county of Guysboro', this 26th day of July, A. D. 1877, before me.

WM. S. McKENZIE,
J. P. for the County of Guysborough.

No. 250.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MICHAEL ROBERTSON, of Port Jollie, in the county of Queen's, fisherman, make oath and say as follows:

1. I have been engaged in fishing for upwards of thirty years. I have fished along the southern coast of Nova Scotia, around Cape Breton, on the eastern side of New Brunswick, around Prince Edward's Island, around the Magdalenes, and on the Labrador coast, both on the Canadian and Newfoundland coast. I am well acquainted with the inshore fisheries in Queen's County.

2. When fishing in the North Bay I have often seen from two to three hundred American vessels engaged in fishing at one time. These vessels were engaged in taking mackerel, and took the most of them inshore within three miles of the shore, and it would not pay to send a vessel to the North Bay unless she could catch mackerel within three miles of the

coast. I was in the North Bay when the fisheries were protected by cutters, and saw the Americans kept off beyond three miles, and they took scarcely any mackerel while our vessels within three miles of the shore were doing well.

3. In this harbor large quantities of clams are got for bait. About fifty sail of vessels are supplied every year with this bait. These vessels take from twenty-five to thirty barrels each. These vessels thus supplied are Canadian. They say the clams got here are just as good as the American. These vessels use these clams for bait in taking mackerel and codfish. The codfish taken by clam bait is with hook and line.

MICHAEL ROBERTSON.

Sworn to before me this 17th day of August, 1877.

S. T. N. SELLOX, *J. P.*

PORT JOLLIE, 1877.

No. 251.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEOFFREY W. PUBLICOVER, of Getson's Cove, in the county of Lunenburg, master mariner, make oath and say as follows:

1. I have been engaged in the fisheries for twelve years down to the fall of 1873 inclusive. I fished along the southern coast of Nova Scotia, around Cape Breton, on the eastern side of New Brunswick, around Prince Edward's Island, around the Magdalenes, on the Canadian coast of Labrador, and am well acquainted with the inshore fisheries in Lunenburg County. I have taken all the kinds of fish found on the above-mentioned coasts.

2. I have seen in Port Hood Harbor at one time four hundred sail of mackerel vessels, of which upwards of three hundred were Americans. I have seen in the fall of 1873 one hundred and eighteen vessels engaged in taking mackerel, of whom one hundred at least were American vessels. These vessels were all in sight. There were many which we did not see. I have often made calculations with Nova Scotia and American skippers, and during the falls of 1871, 1872, and 1873, we put the American vessels engaged in taking mackerel at over four hundred sail on an average for the three years. These vessels take the most of their mackerel inshore, and in my opinion it would not pay to fish mackerel in the North Bay unless they can be taken inshore.

3. These American mackerel men carry from fifteen to twenty-two hands. These vessels take from two to six hundred barrels on each trip, and make from three to four trips. In the falls of seventy one and two many of them made four trips and took as many as two thousand barrels of mackerel in the year.

4. I have seen many American vessels engaged in taking codfish in the North Bay. These vessels carry about twelve men each and take from about ten to twelve hundred quintals of codfish during the season. These vessels take fish inshore within three miles of the shore, and I have seen them take codfish by trawling close into the shore at Seaterie. They take fish wherever they can get them.

5. I have frequently seen the Americans take herring around the Magdalenes. These vessels carry about from eight to ten hands, and take from one thousand to two thousand barrels each. I have seen the Americans take herring and codfish on the Canadian coast of Labrador.

These fish they take by seining on the shore. These vessels take about two thousand barrels of herring each. The codfish vessels take about two thousand quintals each.

6. Mackerel, in my experience, have varied; in the falls of seventy-one and seventy-two the catch of mackerel was more plentiful than I have ever seen it for over ten years. In the fall of seventy-three my vessel, with a crew of sixteen hands, took in a few weeks two hundred barrels of mackerel. Codfish, in my experience, has remained about the same. The herring fishery has always been good.

7. The Americans formerly took mackerel with hook and line during a few of the last years I was there. I saw the Americans use purse-seins. These purse-seins I consider very bad for the fishery. They take both large and small mackerel; they break up the schools of mackerel and frighten them away. I have never seen nor heard of any Canadian vessel using a purse-seine. I am acquainted with over two hundred Nova Scotian vessels. The Americans take codfish in the bay mostly all by trawling. Many of the Canadian vessels take codfish with hand lines.

8. In my experience the Americans fished inshore whenever they could, whatever the terms of the treaty were. I have seen two American vessels taken by the cutter Sweepstake in one day.

9. I think it would be a great benefit to Canadian fishermen if the Americans were excluded from our inshore waters, and I know of no benefit that we derive from American fishermen whatever.

GEOFFREY W. PUBLICOVER.

Sworn to at Getson's Cove, in the county of Lunenburg, this 10th day of August, A. D. 1877, before me.

JOSEPH W. LOCKHART.

No. 252.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES S. SEABOYER, of Rose Bay, in the county of Lunenburg, merchant, make oath and say as follows:

1. I was engaged in the fisheries for twelve years, down as late as 1869. I fished along the southern coast of Nova Scotia, around Cape Breton, the eastern side of New Brunswick, around Prince Edward's Island, around the Magdalenes, and on the Labrador. I took principally mackerel, and I have fished also codfish. I have fished for one season in an American vessel, Charles P. Thompson, of Gloucester. We took all mackerel, and took them mostly all inshore within three miles of the shore; and in my opinion it would not pay to go to the North Bay to catch mackerel unless they can fish inshore; nor do I think it would pay to fit out a vessel for the North Bay if she had to fish outside of the three-mile limits. The American vessel that I was in was from the latter part of August till the latter part of October in the North Bay, and took in that time three hundred barrels of mackerel. The men's share averaged about one hundred dollars apiece. The Americans get bait around here at Moser's Island, and have got it in considerable quantities during the past six years.

2. When I was in the bay, the bulk of the Americans transshipped their cargoes at Canso, and by doing this they save time, expense, and take more fish.

JAS. S. SEABOYER.

Sworn to at Rose Bay, in the county of Lunenburg, this 8th day of August, A. D. 1877, before me.

JAS. H. WENTZEL, *J. P.*

No. 253.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, THOMAS RITCEY, Sr., of Lower La Have, in the county of Lunenburg, fisherman, make oath and say as follows :

1. I have been engaged in the fisheries for thirty-three years, and have a vessel now engaged in the fisheries. I have fished along the southern coast of Nova Scotia, around Cape Breton, Prince Edward Island, the eastern side of New Brunswick, and around the Magdalen Islands and Lower St. Lawrence. I have fished mackerel, herring, and codfish, and all the fish taken in Canadian waters.

2. I have seen in one day, in the North Bay, upwards of one hundred and fifty sail engaged in taking mackerel. All those vessels were American. We often made calculations among ourselves, and put the American vessels down at between five and six hundred in the North Bay. The American vessels carried from fifteen to twenty-five hands. The Americans fished in close to the shore, and took mackerel wherever they could get the most of the mackerel. The Americans got inshore. Very seldom they got much mackerel three miles from the shore. In my opinion it would not pay the Americans to go to the North Bay to fish mackerel unless they could fish within three miles of the shore. I have seen the Americans trawl inshore within three miles for codfish around Prince Edward Island.

3. The American vessels averaged about four hundred or upwards barrels to each vessel on each trip. They average two trips. The codfish-vessels carry from twelve to eighteen men, make two trips, and take from eight to twelve hundred quintals to each vessel on each trip.

4. In my experience mackerel has always varied, being some years good and others poor. Overfishing during the past few years may have something to do with the falling off in mackerel. This year mackerel have struck in plenty. The cod-fishing during the past fifteen years has been good, and if bait is plenty, plenty of codfish can be had. The herring has always been plenty.

5. The Americans take mackerel mostly with hood and line. I have seen them seining them around North Cape, in Prince Edward Island, with purse-seines. This plan of taking mackerel with purse-seines is injurious to the fisheries. I never saw any Canadian vessels using purse-seines. The Americans take codfish mostly by trawling inshore and off shore, and wherever they can catch them. Trawling, in my opinion, will be the ruination of the codfish, as by it the mother fish are taken. In trawling, the bait lies still upon the bottom ; in hand-lining the bait is moving, and very few fish are taken. Upwards of twenty five years ago I have seen Americans trawling. Nova Scotians never made a practice of trawling until the last four or five years, when they were compelled to do so in order to compete with the Americans.

6. The throwing overboard of offal I consider very injurious to the fishing grounds. I have seen the Americans throw overboard fish under a certain number of inches, which I also consider injurious to the grounds. By these practices the fish are glutted and driven away. The throwing overboard of the sound-bone I consider injurious, and I have often

caught fish with sound-bones in them in a consumptive state. This offal is also destructive to the spawn.

7. The Americans made but little difference under any treaty. They fished inshore when the cutters were out of sight, and made off when the cutters appeared. It was reported again and again that the American vessels carried two registers.

8. The inshore fishery is double the value of the off shore fishery.

9. I have often been lee bowed by the Americans. I have often seen them running into Nova Scotia vessels, and I have had my own vessel injured by them. They used to throw overboard bait and take the fish away from us.

10. The Americans get bait and ice all along our coast in the bays and harbors, wherever they can get it quickest and cheapest. They get this bait in order to carry on the Bank fisheries, and without this bait and ice it would be impossible for the Americans to carry on successfully the Bank fishery.

11. Since 1871, the number of fish has not increased. This is owing, in my opinion, to overfishing and the improper methods employed by the Americans in taking fish.

12. The Americans, since 1871, have injured Canadian fishermen by taking large quantities of fish by trawling and other improper methods of taking fish.

13. The herring are chiefly taken inshore, and the Americans purchase them for bait in order to save time.

14. The mackerel feed inshore and make inshore to spawn, and I call them an inshore fish.

15. I have seen Americans land their fish and then go out on the fishing ground to take more. By so doing they save time and expense and take more fish, as a vessel can carry home more than she can fish with.

16. It would, in my opinion, be impossible for the Americans to carry on the deep-sea fishery around our coast unless they could procure bait and ice in which to pack it. They purchase bait in order to save time.

17. The Americans are mostly all fitted out on leaving home, and only purchase supplies, except ice and bait, when they run short.

18. I know of no benefit to Canadians in the right of fishing in American waters.

19. The Americans make bait scarce for our bankers, and carry away large quantities of fish from our men.

20. I have often heard of Americans smuggling goods around our coast, and exchanging them for fish.

21. If the Americans were excluded from our inshore waters, it would be a great benefit to Canadian fishermen.

THOMAS RITCEY.

Sworn to at Lower LaHave, in the county of Lunenburg, this 7th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, J. P.

No. 254.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM D. SMITH, of Port Hood, in the county of Inverness, merchant, make oath and say as follows:

1. I have been actively engaged in the fish business in the way of a supplying establishment for the past thirteen years. I am owner of the fishing establishment on Port Hood outer island, and furnish supplies to fishing vessels and take fish in payment, and have a pretty good opportunity of judging of the condition of the fishing business on this part of the coast.

2. During the period I have been engaged I have known as many as 200 American vessels in Port Hood Harbor at one time. Mackerel and codfish are the chief fish obtained by the Americans in the gulf, though they take small quantities of haddock, hake, and halibut.

3. The average cargo of American fishing-vessels is three hundred barrels per trip of mackerel and from 600 to 1,000 quintals of codfish, and they make on an average from two to three trips during the season. The American vessels begin to arrive at about the first of May to procure bait for that cod fishing. In July they arrive here for the mackerel fishing, and continue fishing in the gulf and on the coast for several months until November.

4. The catch of mackerel has somewhat decreased during the past two or three years, but there is no reason to believe that this has been due to any falling off in the number of mackerel frequenting our coasts and waters. I believe that our mackerel fisheries will be as productive during the next eight years, if properly cared for, as during any past time.

5. The American mode of fishing in our waters is very destructive to our cod fisheries. Their system of trawling is very injurious; meeting the fish and killing the mother fish early in the season before they have spawned. I believe this mode, if continued by the Americans, will do serious damage to our fishing grounds.

6. I am not sufficiently familiar with practical fishing to understand fully the injury done to our fishing grounds by the practice of the Americans of throwing overboard offal; but I have understood that the fish were glutted by it, and I attribute the falling off in the catch of mackerel during the past two years as due to this practice of throwing bait overboard, which has prevented the mackerel from biting as freely as before. Our own fishermen exercise greater care in disposing of the offal, and usually bring it on shore with them.

7. I cannot speak positively as to the relative quantity of fish caught by the Americans at the time of the Reciprocity Treaty inshore and outside; but I know that the Americans fished there inshore, and I know that the inshore fisheries are much more valuable than those outside.

8. The Americans have injured our boat-fishing by their system of throwing bait overboard to entice mackerel to leave the shores. This at one period was a source of great damage to our boat-fishing.

9. The effect of the use of purse seines by the Americans in any great numbers would be the destruction of the fishing grounds and the glutting of the markets. The fish would be caught in such large quantities that many of them would be lost and thrown into the sea dead, which would be very destructive to the grounds.

10. The Americans, I understand, do catch small quantities of herring and squid for bait inshore, but chiefly purchase their bait from traders. The small fish used for bait is taken almost exclusively inshore and in bays and creeks.

11. Since the Treaty of Washington, to the best of my knowledge there has been a slight decrease in the number of codfish frequenting the gulf, and I attribute the cause of it entirely to the system of trawling adopted by the American fishermen.

12. The herring fishery on our coast is a very large industry, and very

important to our fishermen. Herring are caught altogether inshore. The Americans do not prosecute herring fishery to any great extent now, but should they do so at any time, as under the Treaty of Washington they may, they would very greatly injure the grounds, and their competition would be a great loss and injury to our fishermen, who are now profitably engaged in the business.

13. The mackerel spawn near the shore, and must necessarily feed near the shore, as the small fish upon which they feed only frequent shoal water.

14. It is unquestionably a very great advantage to American fishermen to be allowed to land and dry their nets and cure their fish. And a still greater advantage to be permitted to transship cargoes, because it enables them to land their fish and refit for another voyage at our ports, without returning to the States, and greatly saves time during the season. It also affords a reasonable likelihood of building up a profitable trade for the Americans by preserving the fish in ice and transshipping them fresh to the American markets.

15. It is one of the greatest advantages which the Americans gain under the Treaty of Washington to procure bait in our waters and ports. Most of this is purchased from our traders; but the Americans only adopt this mode of obtaining it, because it is more profitable to them than catching it. Our own fishermen procure it with much greater facility than the Americans can, and it would be a serious drawback for them to have to catch it now, and would involve extra time and extra outfit.

16. It would be nearly, if not quite, impossible for the American fishermen to carry on cod fishing and other deep-sea fisheries around our coast if deprived of the privilege of resorting to our ports for bait. Their bait will only last three weeks on ice, and to be entirely dependent on their own ports for this would be destructive of all profits in the business.

17. Another great advantage to Americans under the treaty is the privilege of resorting to our ports for ice, which they obtain from our traders every season.

18. The cash value of the privileges accorded to American fishermen in respect of our fishing grounds can be measured by the value of our fisheries to them; for if they were deprived of them, their cod fishing would be ruined, and their mackerel fisheries in the gulf at least be greatly crippled.

19. I know of no advantage which Canadian fishermen derive from the privilege of fishing in American waters, and I never heard of any Canadian vessel going to fish in these waters, save that I read an account this spring in an American paper of one vessel that had been fitted out at Lunenburg for that purpose.

20. I do not consider the privilege of sending our fish into American markets free of duty anything like an equivalent for the use of our fishing grounds. In fact, it is only a trifling advantage to us anyway.

WILLIAM D. SMITH.

Sworn to at Port Hood, in the county of Inverness, this 20th day of July, A. D. 1877, before me.

JOHN MCKAY, J. P.

No. 255.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ARCHIBALD B. SKINNER, of Port Hastings, in the county of Inverness, trader and inspector of fish, make oath and say as follows:

1. I have been engaged in the fishing business for the past thirty two years. I have been a practical fisherman and am familiar with the general character of the fishing business on this coast.

2. During the Reciprocity Treaty a large fleet of American fishing vessels came to this coast during the summer season to carry on a fishing business. The number increased during the treaty, until at the termination a fleet numbering hundreds of vessels were engaged in fishing around the coast of Nova Scotia, Cape Breton, Prince Edward Island, and the Magdalen Islands. These principally took mackerel and codfish, but they took other fish as well. The average cargo of mackerel was at least three hundred barrels per trip, and the cargo of codfish ranged, to the best of my knowledge, from six hundred to a thousand quintals. They made two or three trips per season.

3. After the Reciprocity Treaty the American fleet began to fall off very much, and their business and profits began to decline, and I believe it would have gone down much more, and possibly have been abandoned, if American fishermen had not violated the law.

4. During the past two or three years the mackerel fishery in the Gulf of St. Lawrence has fallen off considerably. The number of American vessels has been decreased and the catch diminished. This has been merely accidental and temporary, and not permanent. The reason for few American vessels coming here I attribute to the falling off in the price of mackerel in American markets; and also to the injury done to our fishing grounds by American fishermen, by their system of seining and their throwing bait and offal overboard, which gluts the fish and tends to destroy the catch.

5. Our herring fisheries are among the most valuable and important we have, and are the source of great profit to our own fishermen. Nearly the whole herring fishery is carried on inshore.

6. The inshore fisheries are considered more valuable than the outside. During the prosperous years of our mackerel fishing I have no doubt but that the larger number were taken inshore. I believe that our mackerel fisheries, if properly protected, will be more productive and valuable this year, and for the next eight years, than for some time past. The number of American vessels arriving here this season and passing through the strait is larger than it has been for some time past, and the mackerel season is only beginning. I know no reason why there should not be as large a mackerel fishery in these waters during the remaining term of the Treaty of Washington as under the Reciprocity Treaty.

7. The privileges granted to American fishermen under the Treaty of Washington, of catching and procuring bait in our waters and ports, is exceedingly valuable to them. In fact, without that privilege, I cannot see how they could carry on their cod fishing in these parts with profit. All their bait is procured here and preserved in ice obtained from our traders, and I do not have much hesitation in saying that if the Americans were entirely dependent on themselves for bait they would have to abandon cod fishing on the British-American coast.

8. The privilege of reshipment of cargoes which the Americans obtain under the Treaty of Washington is exceedingly valuable to them. They

are, to my knowledge, taking advantage of this privilege at the Strait of Canso. They have an advantage in this over Canadian fishermen, because by using American vessels they are able to avoid inspection, and they do avoid it, as in my capacity of inspector of fish I happen to know.

9. A large portion of the American fishing-fleet is now going every year up to the eastern side of Cape Breton and fishing in the vicinity of Seatarie, Cape North, and the section around there. I understand that these grounds are very rich in fish.

10. The value of the privileges acquired by American fishermen under the Treaty of Washington cannot be estimated accurately by the money value to each vessel engaged. It is worth nearly as much as their entire fisheries on this coast, for if deprived of all these privileges they would scarcely be able to carry on their fisheries on this coast with any profit without violating the law.

11. I am not aware of any advantages which Canadian fishermen derive from the privilege of fishing in American waters, nor do I know of any of our fishermen who have availed themselves of this privilege.

12. It would be a great advantage to our shore fishermen to have exclusive use of our fishing grounds. They would preserve them and derive greater profits from them than they possibly can when the Americans are using them in common. I consider the privilege of sending our fish into American markets no kind of an equivalent for the privileges given to Americans under the Treaty of Washington; in fact, it is only a trifling benefit to us at all. If we had exclusive use of our own grounds it would be better for us, even though the American Government imposed the highest duties on our fish.

A. B. SKINNER.

Sworn to at Port Hastings, in the county of Inverness, this 25th day of July, A. D. 1877, before me.

PETER GRANT, *J. P.*

No. 256.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM MUNROE, of Whitehaven, in the county of Guysboro', fisherman, make oath and say as follows:

1. I have been engaged in the fisheries during the last forty years, and have a personal knowledge of the matter hereinafter deposed to.

2. The Americans in large numbers fish in the North Bay for mackerel, and frequent the Canadian coast for bait and other necessities. I have known a hundred and fifty American sail come into Whitehaven Harbor during a single season for bait. The cod-fishing vessels average from ten to twelve men, the mackerel-vessels will average fifteen men. The tonnage will range from sixty to a hundred tons.

3. The present condition of the fishery on the coast of Nova Scotia is not as prosperous as formerly. Cod-fishing particularly has declined. I consider trawl-fishing the principal cause of this decline, as it kills the mother fish.

4. The principal portion of the American mackerel fishermen fish with hook and line. A small portion with seines known as purse-seines. The American cod-fishers fish with trawls or set-lines. Herring are principally taken by them with seines, and a few with nets. Halibut are fished in the same way as cod. They throw away all the small cod,

sometimes in as large quantities as three hundred pounds per vessel per season. This I consider very destructive to the cod-fishing. The cod thus thrown away is similar to those caught inshore by the Canadian fishermen.

5, The practice of throwing offal of every kind carried on by American fishermen on the fishing-ground I consider very injurious. It kills the fish and drives them off the ground.

6. The inshore fisheries are of greater value to Canadian fishermen than the outshore fisheries. I consider the inshore fishery of double the value of the outshore ones.

7. All kinds of fish are caught inshore by Canadian fishermen. Since 1871 the price of fish has gone down. This is due to the privileges granted to the Americans of fishing, landing, &c., inshore, thereby enabling them to produce a greater quantity than they otherwise would.

8. Herring fishing is all inshore, with very few exceptions. Americans fish herring inshore for bait.

9. Some mackerel spawn in Whitehaven Harbor and along the coast but their principal spawning-ground is in the North Bay. They always feed along the coast wherever they go.

10. It is a great privilege to the Americans to be allowed to land on our coast to dry their nets and cure their fish as well as to procure supplies, &c. The privilege of transshipping their cargo is of advantage to them, enabling them to make more trips per season, catch more fish, and thus compete with greater advantage with the Canadian fishermen.

11. I am of opinion that the privilege of being allowed to procure bait inshore is of very great advantage to the Americans. Without this privilege they could not fish with profit. They fish or buy as it pays them best. If they were not allowed the rights granted by the Washington Treaty they could not carry on their fishing operations at all.

12. To the best of my knowledge the privileges granted to Canadians by the Washington Treaty of fishing in American waters is worthless, as they have enough fisheries of their own. I never heard or knew of a Canadian vessel fishing in American waters.

13. It is an injury to Canadian fishermen that the Americans are allowed to land and fish inshore. Canadian fishermen have now to sink their nets for safety from vessels frequenting the inshore, and even with this precaution the nets are destroyed.

his
WILLIAM + MONROE.
mark.

Sworn to at Whitehaven, in the county of Guysboro', this 24th day of July, A. D. 1877, before me, first having been read and explained.

JAMES A. TORY,

J. P. for the County of Guysborough.

No. 257.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MATTHEW MUNROE, of Whitehaven, in the county of Guysboro, fisherman, make oath and say as follows:

1. I am acquainted with the fisheries during the last twelve years, and during that time I have been three years fishing with the Americans, both at cod and mackerel fishing.

2. I have seen as many as three hundred American sail fishing for mackerel during a single season at North Bay. Each vessel would, if allowed to discharge at the Strait of Canso, make from three to four trips per season. If not allowed to land they would not make more than from one to two. The vessel I was in one trip took only three hundred barrels. This was a very small catch. We fished round Bay Chaleur, on the north side of Prince Edward Island, on the west side of Cape Breton. The average crew of each American vessel would be fifteen men. The average tonnage would be from fifty tons to one hundred tons. I last fished five years ago with the Americans.

3. During the time I was fishing with the Americans we came into Canadian ports for bait and ice on an average four times each season. We bought ice and bait because we got it cheaper, and because it was of very great advantage to the American fishermen. If we could not land and procure the bait and ice in Canadian ports we could not have fished, and would have been compelled to have given up the voyage and returned to the United States.

4. I have known the American vessels raise schools of mackerel close inshore, and entice them out by bait. After they went out into deep water the fish were lost and the vessels had to work inshore to find others. I have known the American vessels to fish so near shore that there was not room to lie to for to fish, and were compelled to come to an anchor and spring up to their cables. I have known this take place on many occasions. The practice of enticing the mackerel by bait from the inshore is very bad for the people living on the Nova Scotia shores. I also think the practice of baiting the mackerel in the bay keeps them from coming along the shore later than they otherwise would, and thus hinders our fishermen from catching them.

5. Almost all the mackerel is caught inshore. The Americans do all they can to fish inshore, and will run every risk to do so. Unless they were permitted to fish inshore they could not fish mackerel with any profit.

6. The privilege of fishing in American waters by Canadians is worth nothing. I believe the privileges granted to the Americans by the Treaty of Washington worth half the value of the fish they catch.

7. The right of the Americans to fish inshore is of loss to Canadian fishermen, as they catch the fish which the Canadians might otherwise catch, and compel them to sink their nets for the purpose of protecting them from injury by the American vessels. The nets thus sunk do not catch as many fish as they otherwise would.

MATTHEW MUNROE.

Sworn to at Whitehead, in the county of Guysborough, this 24th day of July, A. D. 1877, before me.

JAMES A. TORY.

J. P. for the County of Guysborough.

No. 258.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ISAAC W. RENNELS, of Port Hood, in the county of Inverness, master mariner, make oath and say as follows:

1. I have been engaged in the fishing business for the past twenty-six years. For nine seasons I was engaged on board American fishing-vessels, and fished in both American and Canadian waters. I have

sailed in American fishing-fleets on the coasts of Nova Scotia, Cape Breton, Prince Edward Island, Magdalen Island, Gaspé, Anticosti, and the Bay Chaleur, and have had excellent opportunities during that period of understanding the whole fishing business. I am at present engaged in Canadian fishing on this coast.

2. While in the American fleet I carried on fishing on the coasts of the United States as well as British America, and found that the latter were much richer and better than the former. The Americans reckoned that they could catch twice as many fish in Canadian waters and make double the profits. When we fished in Canadian waters we chiefly took cod and mackerel, though sometimes other kinds of fish. We took from 300 to 500 barrels of mackerel at a cargo, and from 600 to 900 quintals of codfish, and made about three trips a year.

3. The inshore fisheries are much more valuable than those outside. We always took the great bulk of our mackerel inside of three miles of the shore. In the autumn the fisheries are chiefly carried on inshore.

4. After the Reciprocity Treaty I was engaged in carrying on Canadian shore-fishing, and we had the best fishing ever known when the American vessels were not allowed to come inshore, and were kept off by the cutters. The grounds were better preserved, the mackerel would bite freer, and we made better catches and more money. When the American vessels are allowed to come inshore they come up to our boats where we are catching, and throw bait overboard and entice the fish away, so that our chances are ruined.

5. I believe the American fishermen have done and are doing great harm to our fishing grounds. Within two years I have seen Americans using the purse-seine within half a mile of the shore, and this cannot but injure the grounds. The number of fish is not diminished, but the catch is lessened.

6. The reasons that the Americans do not catch mackerel on these shores in as large quantities as formerly are twofold. First, they have injured the grounds by their mode of fishing, so that the catch is diminished. This, I believe, will only be temporary. Second, the price of mackerel has so declined in American markets that they find it more profitable to devote themselves to cod-fishing. If the price of mackerel should go up, I have every reason to believe there would be as many Americans fishing there for mackerel as there were under the Reciprocity Treaty.

7. All the American fleet does not go through the Strait of Canso now. During late years I have known of American vessels going up the east side of the island, around Scaterie and Cape North, instead of coming through the strait. This is especially in the cod-fishing business, and I have understood there were some good fishing grounds in that part of the coast.

ISAAC W. RENNELS.

Sworn to before me this 9th day of August, A. D. 1877, at Port Hood, in the county of Inverness.

JOHN MCKAY, J. P.

No. 259.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN MCADAMS, of Port Jollie, in the county of Queen's, fisherman and dealer in fishermen's supplies, make oath and say as follows:

1. I have been engaged in the fisheries for forty years. I have fished along the southern coast of Nova Scotia, on the eastern side of New Brunswick, around Prince Edward Island, on the Labrador coast, and on the banks off the Canadian coast. I have taken all the kinds of fish found on the above-mentioned coasts.

2. About ten years ago I have seen over four hundred American vessels in Port Hood Harbor at one time. I have often see two hundred in one fleet fishing together at one time. These vessels were all engaged in taking mackerel, and took the most of their mackerel within three miles of the shore; and in my opinion it would not pay to send a vessel into the North Bay to fish mackerel unless she could catch mackerel within three miles of the shore.

3. During the past twenty or thirty years there have been supplied to Canadian vessels in this harbor large quantities of clams for bait; from forty to fifty vessels every year down to the present time. These vessels use the clams in taking codfish and mackerel. In cod fishing they use the clams for hand-lining, and could not use them in trawling. The clams are used for mackerel in the North Bay.

4. Our Nova Scotia fishermen say that the clams that they get here are superior to American clams.

his
JOHN + McADAMS.

S. T. N. SELLON, J. P.

No. 260.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DONALD CAMPBELL, of Port Mouton, in the county of Queen's, trader, make oath and say as follows:

1. I am well acquainted with the inshore fisheries in Queen's County, and have dealt largely in inshore fish in this county for twenty-four years.

2. During the past twelve years many American vessels are in the habit of running here for bait, and they have got ice here in which to pack their bait. During the last six years between twenty and thirty American vessels, at the least, have got bait here yearly. The Americans say it is a great benefit to them to be able to procure this bait, for without it they could catch no fish. Six years ago an American vessel, commanded by Capt. Randall McDonald, ran here for three trips of three weeks, to a day, taking fresh halibut on each trip, going to Gloucester and returning here within the said time.

3. The cod-fishing vessels have to return to get a new supply of bait, and they do this every fortnight or three weeks. The Americans take their codfish off on the banks within fifteen or twenty miles from the shore, by trawling principally.

DONALD CAMPBELL.

Sworn to at Port Mouton, in the county of Queen's, this 17th day of August, A. D. 1877, before me.

S. T. N. SELLON, J. P.

No. 261.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN DANIEL RICHARD, of La Have Island, at present of Getson's Cove, in the county of Lunenburg, fisherman, make oath and say as follows:

1. I have been fishing for about forty five years. I have fished around Cape Breton, on the eastern side of New Brunswick, around Prince Edward's Island, around the Magdalenes, on the Canadian coast of the Labrador, and on the southern coast of Nova Scotia. I have taken all the kinds of fish found on the above-mentioned coasts.

2. Six years ago on the Magdalene coast I saw four American vessels, each equipped with four trawls, and on each set of trawls were a thousand hooks. I asked the American skipper how many fish he had on his trawls. He said nine hundred, and of these nine hundred he only took seventy on board. The fish thrown overboard interfered with our fishing. These fish, to the best of my knowledge, were taken within three miles of the shore.

JOHN DANIEL RICHARD.

Sworn to at Getson's Cove, in the county of Lunenburg, this 9th day of August, A. D. 1877, before me.

BENJAMIN RYNARD, *J. P.*

No. 262.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, COLIN MCLEOD, of Brooklyn, in the county of Queen's, merchant, make oath and say as follows:

1. I have during the present year supplied American fishing vessels with ice, about twenty tons. I have supplied about twenty tons to Canadian vessels. The Americans say that if they could get plenty of bait and ice in this harbor it would be of great benefit to them. They say that if they can get plenty of bait they would be more likely to get larger fares.

COLIN MCLEOD.

Sworn to at Brooklyn, in the county of Queen's, this 16th day of August, A. D. 1877, before me.

S. T. N. SELLOX, *J. P.*

No. 263.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES BUSHEN, of Port Mouton, in the county of Queen's, fisherman, make oath and say as follows:

1. I have fished for eighteen years, every season down to the present included, principally inshore, in Queen's County, and on the banks off this coast. I have also fished in an American schooner for two years on the Western Bank.

2. During the past six years from twenty to thirty American vessels run into this harbor for bait, and without this bait they could not carry on the cod-fishery, and they only get this bait around the Canadian coast. If they cannot get it in one place they run to another. They buy this bait because it pays them better than to catch it, as it would take too much time to do so, and it would be too much expense. These American vessels take from about eighteen to twenty-five barrels of bait each.

3. The codfish vessels run here about every three weeks, and do so for about three times before they make a full fare. They make a trip in from six to nine weeks. These vessels take from seven to fifteen hundred quintals each when they make a full fare. They catch their fish from fifteen to twenty miles off this coast, and principally by trawling, which I consider a very injurious method of taking fish.

4. I have been fishing on the banks off the coast of Nova Scotia for eighteen years, and I have never seen so many American vessels fishing on these said banks as I have seen during the present summer.

JAMES BUSHEN.

Sworn to at Port Mouton, in the county of Queen's, this 17th day of August, A. D. 1877, before me.

S. T. N. SELLON, *J. P.*

No. 264.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN P. GARDINER, of Cape Sable Island, in the county of Shelburne, fisherman, make oath and say as follows :

1. I have been engaged in fishing for thirty-eight years ; mostly in the inshore fisheries on the cape off here. We catch large quantities of codfish within three miles of the shore, and all the mackerel taken around here are within three miles of the shore and in large quantities. Last summer and this present summer I have seen American vessels trawling within three miles of the shore around here. The Americans get bait in this harbor, which is a great advantage to them, as it enables them to carry on the trawling on the Banks off shore. This trawling in my opinion is spoiling the grounds.

JOHN P. GARDINER.

Sworn to at Cape Sable Island, in the county of Shelburne, this 27th day of August, A. D. 1877, before me.

D. G. DALEY, *J. P.*

No. 265.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ALEXANDER GILLIES, of Port Hood, in the county of Inverness, justice of the peace, make oath and say as follows :

1. I have lived in this place and been familiar with the fishing business here for fifty years. I have fished some myself and have had good opportunities of observing and knowing the general character and condition of the fisheries in these parts during the past half century.

2. I recollect well that previous to the Reciprocity Treaty in 1854 the few American vessels that used to come and fish in these waters on the coast of Cape Breton, complained all the time of the disadvantage of not being able to fish inshore, and the men used to say that they could not carry on a profitable business without it. As soon as the Reciprocity Treaty came into operation the number of vessels from American ports increased at once, until there was soon a large fleet. I am safe in saying that I have seen over four hundred American fishing-vessels in Port Hood Harbor at one time during the Reciprocity Treaty.

3. After the Reciprocity Treaty terminated, there was at once a great falling in the American fishing fleet on these coasts, and their business was not nearly as lucrative and profitable, and I believe if they had not violated the law they would scarcely have been able to carry on fishing with profit at all.

4. The American fishermen catch all kinds of fish in our waters. The larger part they take is mackerel and codfish; but they also take herring, halibut, hake, and haddock. Their average cargo is about four hundred barrels of mackerel, and when they take codfish they do not average less than six hundred to a thousand quintals each vessel. They will average three trips per season.

5. There has been something of a falling off in the mackerel catch in these parts during the past year or two; but I would not say that there had been any diminution in the number of mackerel in our waters. I regard the falling off as merely temporary, and I believe it will be as good mackerel-fishing here if the grounds are not injured by the American fishermen during the coming eight years as heretofore. I believe the falling off in the catch of late has been largely due to the mode in which Americans carry on the fishing.

6. The inshore fisheries are much more valuable than the outside, and more fish are caught within three miles of the shore than outside. More than half of all the fish which the Americans take from our waters are taken inshore.

7. American fishermen are doing great damage to our boat-fishing by coming up near our boats and throwing bait overboard to entice the fish away, and they leave at once, and thus seriously interfere with the profit of our own shore-fishermen.

8. Our herring-fisheries are the most important and valuable we have, and probably our fishermen derive more profit therefrom than from any other. All herring are caught inshore and nearly all taken within one-half mile of the shore. If the American fishermen should go into the herring-fishing along our shores they would be almost certain to ruin the grounds and would do great damage to our own fishermen.

9. It is undoubtedly a great advantage to American fishermen to be allowed to land and dry their nets and cure their fish. It is also greatly to their advantage to be able to transship cargoes, and it enables them to make more trips and take more fish each season.

10. It is also the greatest advantage to American fishermen to be allowed to catch bait and procure it by purchase on our shores. All bait is taken inshore, and upon the privilege of getting bait at our ports and in our waters the very existence of the American cod fishing depends, for it would be utterly impossible for the Americans to carry on the cod fishery in these waters if they were compelled to get all their bait from American ports and waters. Bait for cod fishing will only last three weeks on ice, and the ice used to preserve it is procured by the Americans from our own traders.

11. From a pretty careful estimate of the matter from its various

points, according to the best of my knowledge and experience, I would say that the privilege derived by the American fishermen from the use of our fishing-grounds and the privilege of getting bait, outfit, and supplies at our ports was worth at least half as much as the entire American fishing business on the coast of British North America every year. If all the privileges given by the Washington Treaty to American fishermen were taken away, they could only make fishing profitable here by violating the law.

12. I know of no advantage which Canadian fishermen derive from the use of American waters. Our own fishing grounds are well known to be more productive than the American. I have never heard of any Canadian vessel going to American waters for the purpose of taking fish.

13. The presence of American fishing-fleets on our shores is undoubtedly very injurious to our own fishermen, who would be able to take larger quantities of fish and carry on a better business if they enjoyed exclusive rights. They would also take better care of the grounds and preserve them better.

ALEXANDER GILLIES.

Sworn to at Port Hood, in the county of Inverness, this 21st day of July, A. D. 1877, before me.

ALEXR. McDONALD, J. P.

No. 266.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, HENRY HEMLOW, senior, of Liscomb, in the county of Guysboro, fisherman, make oath and say as follows:

I have been engaged in the fisheries during the last sixty years.

1. The principal fishing at Liscomb is cod and herring fishing. At times I have seen as many as forty or fifty American vessels going in and out at once. Each American vessel would catch, on an average, between six and seven hundred quintals per trip. They would make two trips each season, and afterwards fish on their own coast or on the coast of Newfoundland.

2. The cod fishing has improved lately; so has the herring fishing, but they are not so good as formerly. The Americans do not fish for bait in Liscomb Harbor, and this, in my opinion, accounts for the better state of the Liscomb fishery. When the American fishermen used to come in, they threw the fish guts, heads, &c., overboard and destroyed the eggs or young fish. This practice also drove out the fish from the harbor.

3. I consider the value of the outshore fishery much less than the inshore. Cod and halibut are principally caught outside, while all other fish are principally caught inshore. Formerly the Americans caught mackerel with hook and line; now they are caught by them with seines and purse-nets. Fishing with seines and purse-nets is injurious to the fisheries.

4. Haddock, codfish, and other fish caught inshore are fished by the Americans in the inshore waters. Canadian fishermen use the inshore fishery to a large extent, and it is of the greatest value to them. Very few herring are caught outside.

5. The food of the mackerel is found inshore. The privilege of land-

ing, drying their fish, &c., I consider of great importance, as is also the opportunity of transshipping. This enables them to make more trips in the season, and also enables them to watch the best chances to fish. Without the privileges granted by the Washington Treaty, I am of opinion that the American fishermen could not fish with any profit to themselves.

6. I never heard of any Canadian fishermen frequenting American waters, but the American fishermen interfere with the Canadian fishermen by disturbing their seines and in other ways injuring the fisheries. It would be much better for the Canadians to have the sole right of the inshore fisheries, and no right to sell fish free in the United States than the rights they enjoy under the Washington Treaty.

7. Since 1871 an American lobster factory has been opened in Liscomb, and the lobster fishery has largely decreased. The canned lobsters are principally sold in England.

his

JAMES A. TORY,
J. P. for the County of Guysboro'.

No. 267.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

1, WILLIAM WATTS, of Port Hood, in the county of Inverness, fisherman, make oath and say as follows:

1. I have been for eight years past engaged in fishing, and during two seasons I made trips in American fishing-vessels, and made trips and caught fish in the gulf and on various parts of the coast of Nova Scotia, Cape Breton, and the Magdalen Islands, and have had pretty good opportunities of judging of the fishing business done on this coast.

2. I have seen since the Treaty of Washington as many as four or five hundred American fishing-vessels in the harbor of Port Hood, and I should say that the whole number engaged in fishing in the gulf and around the shore has been as high as six or seven hundred in a season. These vessels were engaged principally in catching codfish and herring, although they take small quantities of herring, hake, haddock, and halibut. The vessels rate from 50 to 80 tons and are manned by from twelve to twenty of a crew. They usually average about three trips during the season, and in the codfish season take from five to seven hundred quintals at a trip, worth from \$4 to \$5 per quintal. Their average cargo of mackerel would be about three hundred barrels, worth formerly about \$15 per barrel.

3. I do not know as there has been any great increase or decrease in the cod-fishing in these parts of late. It is about as good this season as usual. There has been something of a falling off in the catch of mackerel within the past year or two; but I don't think there has been any falling off in the numbers of the mackerel. They would not bite so well; that is all. I cannot tell why this should be, unless it is on account of the American fishermen using seines and throwing bait overboard and offal, which makes the mackerel less free to bite.

4. Within the last two or three years I have seen American fishermen using the purse seines in the mackerel fisheries, and I consider that this practice is very injurious to our fishing-grounds. Sometimes as many as a thousand barrels of mackerel are taken in one haul, which cannot be cured or saved, and part of them have to be let out and many are killed. This must be destructive to the fishery. I have never known Canadian fishermen to take this course, and most of them catch mackerel in boats.

5. American fishermen to my knowledge have caught mackerel since the Treaty of Washington within one mile of the shore and even less. Within two or three years I have seen them catching in this harbor. It is always considered that the best fishing is within three miles of the shore. When I was on board of American fishing-vessels we took nearly all the cargo inshore.

6. I have seen Americans catching bait within three miles of the shore—in fact, all bait is caught inshore, being smaller fish, which only live in shoal water. Now the Americans buy most of their bait, because it is more convenient and profitable for them to do so, and our fishermen catch it with greater facility than they do. Not less than fifty or sixty American vessels have baited here this present season already, chiefly herring and squid.

7. The American practice of throwing bait to entice mackerel away is very injurious to our boat-fishing. Their vessels often come along where we are fishing, and throw bait overboard, and the fish leave us and go in the direction of their bait, which is very damaging to our catch.

8. Our herring fishery is one of the most important and valuable we have. Large quantities of this fish are taken by our shore fishermen now. I have known as many as one hundred and fifty barrels of herring to be taken by one boat in two days. If the Americans should enter into this branch of fishing under the Washington Treaty, and they do somewhat now, and use their seines, it would injure our business very seriously and damage the grounds very much.

9. To the best of my observation and experience as a fisherman, I say that the main body of the mackerel feed around the shore in shoal water. Their food being small fish, they must necessarily be obtained near the shore, and in the fall season especially the mackerel cluster near the shore, and it is there chiefly that they are caught.

10. I consider it a great advantage for American fishermen to be allowed to land in our ports and dry their nets and cure their fish, and still more to be allowed to transship their cargoes. There can be no doubt about this. They do it continually, and say themselves that it is a great advantage, as it enables them to fit out for new voyages and ship men without going back to American ports. They can catch more fish in a season by means of this privilege and take more trips.

11. I regard the privilege of being able to catch and buy bait in Canadian waters as one of the greatest advantages the American fishermen get from the treaty. If they had not this privilege they would have to abandon cod-fishing in our waters and on our coast altogether. They begin the cod-fishing about the first of May, and get bait continually all the season. When preserved in ice, which they get from our traders, the bait is allowed to last about three weeks. If they could not get it from us, and ice to keep it, the only way they could preserve it would be to salt it, and this injures the quality of the bait. If the Americans had to go back to their own waters and ports to get bait every three

weeks they could do nothing with their cod-fishing, and it would be impossible to carry it on profitably.

12. I could not tell in figures just what the money-value is to each American fishing-vessel to be allowed to fish in our waters and get bait and supplies, but I do not think it is too much to say that it is worth nearly as much as their entire fisheries at present on these grounds, for without these privileges they would find it very difficult, without violating the law, to carry on fishing of any kind profitably in the gulf or around the British-American coast. They could not possibly take as many trips, nor could they carry on their business with any facility.

13. I know of no advantage of any kind which our Canadian fishermen gain from being able to fish in American waters. I have heard American fishermen admit that our grounds were the richest and best. I have never heard of any Canadian or British vessel going to American waters for the purpose of fishing, nor can I imagine any reason to induce them to do so.

14. If our fishermen had the exclusive right to fish in our own waters on the British-American coast, and no American fishermen were allowed to compete, I am certain we would be able to catch more fish every year and make more profits out of the business. Our fishing grounds would also be better preserved, because our fishermen carry on their fishing with much greater care and do not destroy the grounds as the American fishermen do, by throwing offal overboard and using purse seines.

WILLIAM WATTS.

Sworn to at Port Hood, in the county of Inverness, this 21st day of July, A. D. 1877, before me.

JOHN MCKAY, J. P.

No. 268.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOSHUA SMITH, of Port Hood Island, in the county of Inverness, Cape Breton, fisherman and trader, make oath and say as follows:

1. I am a member of the firm of J. & H. Smith, which has been actively engaged in the occupation of fishing and supplying fishermen for the past fifteen or twenty years, and I have had ample opportunities of becoming familiar with the general business done on the coast of Cape Breton. Our firm has dealt in mackerel, codfish, haddock, hake, and herring to the value of over \$3,000 annually.

2. I have known as many as five hundred sail of United States fishing-vessels engaged in the fisheries around the Island of Cape Breton. This was during the Reciprocity Treaty from 1854 to 1864. After that treaty terminated the number of American vessels very much decreased. These have fished around the coast of Cape Breton, Antigonish Bay, Prince Edward Island, Magdalen Islands, and the coasts of Nova Scotia proper. They take mackerel chiefly. Also codfish in large quantities and herring and halibut in smaller quantities.

3. The average tonnage of United States fishing-vessels is 70 tons, and each of them has a crew of about fifteen men. During the Reciprocity Treaty each vessel averaged about three hundred barrels of mackerel per trip and made from two to three trips per season from this coast. This average was much reduced after the Reciprocity Treaty.

4. During the past two or three years the catch of mackerel has been somewhat less than formerly on the coast of Cape Breton. But I regard this diminution as merely accidental and temporary. These grounds are exceedingly rich in fish, and I have no hesitation in giving it as my opinion that the mackerel fisheries on this coast will be as productive and valuable during the next eight years as during the eight years just past. The mackerel season for the present year has only just commenced, but the prospects are favorable.

5. From what I have observed and from information received from American fishermen, I should judge that at least one-half of the cargoes taken from this coast were caught inside of three miles of the shore. And always late in the season as the autumn approaches much the larger part of the fish are taken within three miles of the shore. The privilege of the shore-fishing is valuable on account of prolonging the fishing season.

6. The privilege accorded to American fishermen of taking fish within three miles of the coast is of very great value to them. I have no hesitation in saying that if they were restricted to the Treaty of 1818, they would be compelled to abandon the fisheries or nearly so.

7. The American fishermen do catch bait within three miles of the coast to some extent, but they purchase a great deal of it now from traders. The privilege of catching and procuring bait from our ports I consider a very great advantage to the United States fishing-fleet, and enables them not only to carry on their operations with greater facility, but to make more trips per season than if they were compelled to procure their bait exclusively from American waters and ports.

8. I consider it decidedly an advantage to American fishermen to land and dry their nets and cure their fish on our coasts.

9. A large number of American fishing vessels get supplies every season from our establishment, and from other establishments on the coast. They call here annually for outfits, men, and boats to land cargo, and to refit for other voyages. I certainly consider it an advantage to American fishermen to exercise this privilege. The United States fishermen also procure ice in our ports for preserving fish, and I have sold ice to Americans for that purpose during the present season.

10. I am not aware of any advantage that Canadians will derive from the right to fish in the American waters, nor of any they have derived under the Treaty of Washington, unless it is procuring pogies for bait.

11. I consider it would be a valuable advantage for the British fishermen to carry on the inshore fisheries exclusively, and without competing with American fishermen, and this advantage I would estimate at one hundred per cent., or equivalent to the entire value of our fisheries.

12. I would not like to state positively the cash value to each American vessel of the privilege of catching fish within our coasts and bays, and of procuring bait and outfitting, but I am safe in saying it enables them to double their voyages at the very least. And without such privileges I don't know as American fishermen would be able to prosecute their business on this coast.

13. The privilege of transshipment enjoyed by American fishermen under the Treaty of Washington is important and valuable, and may become within the next few years a source of great profit.

JOSHUA SMITH.

Sworn to at Port Hood, in the county of Inverness, this 19th day of July, A. D. 1877, before me.

DUNCAN CAMPBELL, J. P.

No. 269.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, LIVINGSTON COGGINS, of Westport, in the county of Digby, fisherman, make oath and say as follows:

1. I fish out of this port in a schooner of forty-three tons, manned by eight hands, and we fish off to twenty miles off shore, and in the spring close inshore. Large numbers of Americans fish on the same grounds; often seeing four and five in sight at one time, mostly trawling. In this county the Americans trawl halibut off from six or seven miles to close inshore. This trawling is very injurious to the fishery, as the mother fish are taken, which is not the case in hand-lining. On Bear Cove ground the Americans trawl inshore for all kinds of fish. The Americans which trawl on our grounds throw overboard their gurry, which is very injurious to the grounds. From this port, including Freeport, there are fishing out every year twenty vessels, from fifteen to forty tons each. The most of these vessels hand-line, and use kids on board for the gurry. These American vessels which trawl on our grounds get their bait inshore at Grand Manan and in this county.

LIVINGSTON COGGINS.

Sworn to at Westport, in the county of Digby, this 31st day of August, A. D. 1877, before me.

H. E. PAYSON,
J. P., County Digby.

No. 270.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, MARTIN WENTZEL, Lower LaHave, county of Lunenburg, fisherman, make oath and say as follows:

1. I have been upwards of twenty-five years engaged in the fishery, and have fished along the southern coast of Nova Scotia, around the eastern side of Cape Breton, around Prince Edward Island, the eastern side of New Brunswick, and around the Magdalen Islands, and am well acquainted with the inshore fishery in Lunenburg County. I fished mostly as master, and am part owner of a vessel at present engaged in the fishery.

2. From three to four years ago I fished in the Bay of Chaleur, and have there fished mackerel and bait. About nine years ago I have heard persons in the bay say that there were upwards of two hundred vessels there at one time fishing mackerel. The American vessels carried from fourteen to eighteen men, and some as high as twenty. The Americans fished the mackerel mostly all inshore, within three miles of the shore. If I had not been allowed to fish inshore in the Bay of Chaleur for mackerel, it would not pay me to go there, and I took more than three-fourths of my cargo inshore.

3. I have seen the Americans take codfish inshore in the Bay of Chaleur. The Americans fished inshore in boats for codfish, and wherever there was fish. The Americans made the fish scarce for us inshore, and they took large quantities.

4. In fishing mackerel the Americans often lee-bowed us, and threw

over bait to take the fish away from inshore. I have often seen the Americans running into Nova Scotian vessels, and being so many, we were often afraid of them.

5. The Americans fit out their vessels to take from three to eight hundred barrels per vessel, and take on an average of from three hundred to four hundred barrels to each vessel on each trip, and make about three trips. Some years the Americans do better than this and some not so well. Our vessels are not so large as the Americans, and I have taken three hundred barrels of mackerel in one trip. About four years ago I took codfish in the Bay of Chaleur, and took in my vessel eight hundred and twenty-five quintals, mostly all inshore.

6. The Americans carry on the fishing by trawling, and I think this kind of fishing should not be allowed.

7. The Americans fished inshore when the fishery was protected by the cutters, and used to run off shore when the cutters were around, and used to come in when they disappeared. It would not pay the Americans to fish unless they could catch fish inshore.

8. The Americans get bait here year after year, and this spring have got bait at Mosher's Island, in this harbor, and have, during the past five or six years, got ice in this harbor in which to pack their bait.

MARTIN WENTZEL.

Sworn to at Lower LaHave, in the county of Lunenburg, this 7th day of August, A. D. 1877, before me.

JAMES H. WENTZEL, J. P.

No. 271.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WILLIAM B. CHRISTIAN, of Prospect, in the county of Halifax, and Province of Nova Scotia, at present of the city of Halifax, make oath and say as follows:

I keep a general store and do a general mercantile business at Prospect, supplying our fishermen and others with goods and supplies.

I also supply ice and bait to American cod and halibut fishermen, and advertise in the Gloucester Advertiser to that effect.

Several others at Prospect tried this last business, but could not do it with success.

Another person at Prospect doing that business to the extent that I do it would render the thing of little or no profit or advantage.

I purchase goods in Boston every year, personally visiting that city; but the trade of the American fishermen with me, except for bait and ice, is very trifling. When in Boston, I usually each year go on to Gloucester to settle up with those who buy ice and bait, and arrange for further business in those things, and I am thus in frequent communication with American capitalists, whose vessels fish in our water.

I am aware that it would be useless for the Americans to attempt to carry on the cod or halibut fishery in our waters without the liberty now enjoyed since the Washington Treaty, of procuring ice and fresh bait on our shores.

This year an American halibut-fishing vessel came into Prospect, the William Thompson, a new vessel, belonging to the well-known firm of Cunningham & Thompson, of Gloucester, and had sixty-five thousand pounds of halibut on board, which required immediately four or five

tons of ice to save it from being destroyed. This ice could not have been supplied anywhere nearer than Cape Sable or Liverpool, and there would have been great risk of losing the fish in attempting to reach that place. I was the only one who could supply this at Prospect, and shipped it at the usual rate of \$2.50 per ton, and this whole fare of halibut was thus saved and \$3,700 at Gloucester. Two fares of halibut were saved in the same way by my supplying ice at Prospect last year.

I never carried on the mackerel fishery in the waters of the Gulf of St. Lawrence, but I am aware, from the United States fishermen themselves, that they catch their mackerel within the three mile limit, as they term it, on our coasts. I never heard anything to the contrary from any mackerel-fishermen.

About 100 American cod-fishermen on an average are supplied at Prospect with bait and ice, and very often they run in from the cod-fishing ground on our coast in eight or nine hours for a fresh supply, and usually run in three or four times, on an average, from the Western Bank, and about twice, on an average, from the Grand Bank of Newfoundland. Many of the American cod-fishermen fishing on the latter Bank are supplied with fresh bait and ice at Canso, which is more convenient than the Newfoundland coast in May and June for that purpose.

W. B. CHRISTIAN.

Sworn to at Halifax, in the county of Halifax, this 31st day of August, A. D. 1877, before me.

JOHN DOULL, J. P.

No. 272.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ALEXANDER McDONALD, of Port Hood Island, in the county of Inverness, fisherman and trader, make oath and say as follows:

1. I have been engaged in fishing and in a fish trading establishment for the past fifteen years, and have had large opportunities for personal observations and experience in the business.

2. Under the Reciprocity Treaty I have known as high as five hundred or five hundred and fifty American vessels engaged in fishing on this coast during one season. After the Reciprocity Treaty the number became much less. These have carried on fishing on the coast of Nova Scotia and Cape Breton, Prince Edward Island, and the Magdalen Island and Gaspé. Each vessel averages about 60 or 70 tons, and has a crew of about fifteen men. They fish for mackerel and codfish chiefly, but catch some hake, halibut, and herring.

3. The American vessels usually carry about three hundred barrels of mackerel per trip each vessel, and from 600 to 1,000 quintals of codfish. They make on an average three trips per season. During the Reciprocity Treaty the price of mackerel was about \$15, American currency, per barrel.

4. The cod fishery on this coast is about the same as usual. There has been something of a falling off in the mackerel fishery in this part during the past year or two, but I do not regard this as permanent. I believe that mackerel always exist in great quantities along our coast, and I know no reason why there should not be as productive a catch during the next eight years as in the eight years past. The prospects for

the present season, so far as I can learn, are good, and more American vessels are coming to these parts this season than for two or three years past.

5. The American fishing-vessels begin to arrive here in May each year for bait to carry on the cod fisheries. In July they come for mackerel, and continue fishing along the coast until as late as November. The American fishermen are in the habit of throwing offal, &c., overboard, the effect of which is liable to glut the fish and injure the young. About here, so far as I have the means of knowing, Canadian fishermen are more careful in their mode of carrying on fishing than the Americans.

6. About two thirds of the entire American catch during the Reciprocity Treaty was taken within three miles of the shore; and I think since the Washington Treaty the proportion is about the same.

7. The inshore fisheries are much more valuable than those outside, and the privilege of using them is very important, because when it comes late in the autumn nearly all the fish are taken inshore, and if the American vessels could not fish inshore it would shorten their season.

8. After the Reciprocity Treaty, the practice of the American fishermen of throwing bait overboard to entice the mackerel outside was considered an injury to our boat fishermen.

9. The American fishermen do catch bait within three miles from the shores here to some small extent, both herring and squid; but the larger portion of the bait used by them now is bought from our people.

10. It is a great advantage to American fishermen frequenting Canadian waters to be allowed to land and dry their nets and cure their fish, and it is so recognized by them.

11. It is also a great advantage to Americans to be allowed to transship their cargoes. It enables them to take more fish and make more trips each season.

12. The privilege of procuring bait both by catching it and purchasing it in Canadian waters and ports is a great advantage to American fishermen; and though they are getting in the habit of buying it rather than catching it, yet this is done simply because they find it more profitable to do so, and not because there is any difficulty or obstacle in catching it.

13. I do not see how the Americans could carry on the cod and other deep-sea fisheries around our coasts without the privilege of resorting to our waters and ports to procure bait. It would compel them to make at least one less trip every season, and it would be less convenient for them in every way.

14. It is likewise a valuable privilege for Americans to be able to resort to our ports to procure ice and other supplies and outfits. Large numbers of American vessels are coming to Port Hood every season for this purpose, and I consider it a great advantage to them.

15. The value of the rights which the Americans acquired by the Treaty of Washington to fish in our waters and to get bait and supplies is very great. I would not fix a money value, but it enables them to fish with much greater facility, to take more trips each season than they could possibly do otherwise. Without these privileges just referred to they would have to abandon our fishing grounds altogether, or nearly so.

16. The privilege granted to Canadian fishermen to fish in American waters is no advantage that I know of whatever to Canadians. I never heard of a Canadian vessel using these waters, and know of no reason whatever why they should.

ALEXANDER McDONALD.

Sworn to at Port Hood, in the county of Inverness, this 21st day of July, A. D. 1877, before me.

ALEXANDER GILLIES, J. P.

No. 273.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ANGUS GILLIES, of Port Hood, in the county of Inverness, justice of the peace, make oath and say as follows:

1. For the past eighteen years I have been a part of the time engaged fishing about the coasts of British America, and during all that period I have been familiar with the fishing business done here. I have been engaged on board of American fishing-vessels during that time, and have been myself master of a vessel, and have otherwise had pretty large opportunities of becoming familiar with the general business.

2. I have known as many as five or six hundred American fishing-vessels engaged in fishing on these coasts during one season under the Reciprocity Treaty. Each vessel would average about sixty or seventy tons, and was manned by from twelve to fifteen men. The average cargo of mackerel would be three hundred barrels, and the average cargo of codfish would not be less than from five to seven hundred quintals.

3. After the Reciprocity Treaty the American fishing fleet on this coast declined very much, and their business materially lessened. They were not able to take as many trips during the season. Their mackerel-fishing, which was chiefly inshore, fell off very much.

4. Now, the American cod-fishing in the gulf is about as large as ever. They get bait to carry it on in our waters, and from our traders. Their mackerel-fishing has greatly fallen off, which has been caused chiefly by the result of their mode of fishing, which has injured the ground. This has been done by their system of seining, and of throwing bait and offal overboard, which has caused the mackerel to be less sharp in biting. The other cause of the falling off in the mackerel-fishing is the low price of mackerel in the American markets, which makes the fishery less valuable and profitable. If the price of mackerel should go up, I believe the Americans would fish for mackerel now as much as ever.

5. The richest and best grounds for mackerel-fishing are within three miles of the shore. Most of the mackerel are caught there. When I was on board of an American vessel, we took nearly all our mackerel inshore.

6. The best mackerel-fishing we ever had along this coast was after the Reciprocity Treaty was terminated and the American vessels were kept off our grounds by the cutters. Our Canadian fishermen had the best catch then that ever they had, because they were undisturbed. When the Americans have the right to come within three miles, they watch our boats taking mackerel, and come up close to us, and then throw bait overboard in large quantities, and entice the fish away from the boats. They could not do this if they were not allowed to come inshore, because our boats take the fish in the bays and harbors, and within a mile from the shore; and it is only by coming close up to us that they can entice the mackerel away. Their vessels often run down our boats, and it is with difficulty that we escape out of the way.

7. The privileges which the Americans gain by the Treaty of Washington in being allowed to catch fish inshore, and to catch and buy bait, and to procure ice and outfits at our ports, I am safe in saying, is worth at least half as much to them per season as their whole fisheries on this

coast. I do not see how they could carry on their great cod-fisheries if they had not the privilege of getting bait and ice from us. All bait is got inshore, and the great part of it very close to the shore.

AGNUS GILLIES.

Sworn to at Port Hood, in the county of Inverness, this 23d day of July, A. D. 1877, before me.

JOHN MCKAY, J. P.

No. 274.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES O. FRASER, of Saint John's, Newfoundland, having been duly sworn, do depose and say that I have carefully examined the accounts of the government of the said island, and compiled therefrom the cost of erecting and maintaining the light-houses and fog-alarms between Cape Ray and Cape Race, and from thence to Quirpon, and that the annexed statement marked A, contains a true statement of the average annual expenditure for the maintenance of said light-houses and fog-alarms, and as deponent believes of the original cost of the said light-houses and fog-alarms.

In answer to Mr. Foster's question, I say that caplin continue upon the Newfoundland coast for a period of from five to seven weeks.

Halifax, Nova Scotia, fourth day of September, A. D., 1877.

JAMES O. FRASER.

Maintaining light-houses and fog-whistles on the coasts of Newfoundland, between Cape Ray and Cape Race, and from thence to Quirpon.

No. 275.

In the matter of the Fisheries Commission, at Halifax, under the Treaty of Washington.

I, JOHN BETHELL, of West Barcrow, in the county of Shelburne, fisherman, make oath and say as follows :

1. I have been engaged in taking fish for the last seven years inshore, by means of a trap set one hundred and fifty fathoms from the shore, low-water mark. We take in this trap all kinds of fish, principally mackerel, pollock and herring. Last year we took one hundred quintals of haddock. We take in each year about five hundred barrels of both mackerel and herring. Out of this, on an average each year, there would be one hundred and fifty barrels of mackerel.

2. Last year I supplied thirty-three Canadian schooners with bait and ice, besides supplying seventy-eight boats engaged in the inshore fisheries. The Canadian vessels took on an average of twelve dollars' worth of bait to each vessel. The boats take on an average of three dollars' worth of bait. Last year we supplied about forty tons of ice to Canadian vessels; this year about the same. Last year is about an average year's supply to Canadian vessels and inshore boats. This year we would have sold double of this supply to Canadian vessels if we had the bait. During the past four years I have supplied on an average ten American vessels. They took on an average between twenty and thirty dollars' worth of bait. The Americans always are very anxious to get this bait, and if they have bait they are almost always sure of fish.

JOHN BETHELL.

Sworn before me this 29th day of August, A. D., 1877.

D. SARGENT,

J. P. for the County of Shelburne.

No. 276.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, EDWARD D. TREMAIN, of Port Hood, in the county of Inverness, collector of customs, make oath and say as follows :

1. I have been, from information received from American fishermen and otherwise, somewhat acquainted with the fisheries on the coast of Nova Scotia and Cape Breton, Prince Edward Island, and the Magdalen Islands for some years past.

2. Among the last years of the Reciprocity Treaty, I believe that about eight hundred American fishing-vessels were yearly engaged in the fisheries along our coasts from the Strait of Canso northward. I should estimate the total tonnage of the American fleet in these waters at that time to be over fifty thousand, and as many as ten thousand men engaged. Their occupations embraced principally mackerel and codfish, but I believe herring, haddock, hake, and halibut were also taken.

3. The American fishermen begin to arrive on our coasts about the first of May each year, and continue their operations till about the tenth of November. Their vessels average about three trips per season.

4. American vessels were, under the said treaty, in the habit of frequenting this locality for the purpose of landing, procuring extra bait, obtaining sets of sails, getting men and outfits for extra trips, and occa-

sionally for reshipping cargoes to the United States. I consider the privilege of doing this granted by the Treaty of Washington a very valuable advantage to American fishermen.

5. I estimate the average money value to each American fishing-vessel taking advantage of the free access to provincial ports, bays, and harbors for piling, shipping bait and supplies, &c., at something between seven hundred and fifty dollars and one thousand dollars per season.

6. I believe the concession of the right to fish in American waters by Canadians is no advantage whatever to Canadians. I am not aware of any Canadians who have availed themselves of this privilege.

EDWARD D. TREMAIN.

Sworn to before me at Port Hood, in the county of Inverness, this 23d day of July, A. D. 1877.

JOHN MCKAY, *J. P.*

No. 277.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ROBERT CURRIE, of Louis Harbor, in the county of Shelburne, justice of the peace, make oath and say as follows:

1. I have been well acquainted with the inshore fisheries in this county for forty years now past, and have had vessels engaged on the Labrador coast, and there is at present a vessel fishing out of this port on the Labrador coast. This vessel carries eighteen men, and is fitted out to take two thousand quintals of fish.

2. The vessels fitted out here get bait in this harbor, both herring and clams, the latter principally. At Port LeBear, six miles from here, large quantities of clams are obtained for bait, and the Americans get these clams at Port LeBear for bait. In this harbor and at Port LeBear these clams are dug on the shore and barreled, and sold principally at Lockeport. These clams are used in hand-lining.

ROBT. CURRIE.

Sworn to at Louis Harbor, in the county of Shelburne, this 22d day of August, A. D. 1877, before me.

JACOB LOCKE, *J. P.*

No. 278.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, PARKER MATTHEWS, of Black Point, in the county of Shelburne, fisherman, make oath and say as follows:

1. About thirty years ago I fished in the schooner Rapid, of Lockeport, in the North Bay for mackerel, and in three months we only took 80 barrels; the said schooner carried a crew of 10 hands.

I supply, at the present time, fishing schooners with ice. Last year I supplied three or four American schooners with ice; and the same number this present year. These vessels took about from eight to ten tons of ice last year, and the same amount this year. Last year and the present year I supplied from eight to ten Canadian vessels with ice, from four to five tons each.

The Americans could not carry on the fisheries on the Banks off this

coast without bait and ice. With the ice and bait which they procure here the Americans fish on LaHave, Brown, and Port LeBear Banks. Until this year the Canadian vessels took codfish all by hand-lining. The Americans always trawled with the bait and ice which they procured from me. I consider trawling a very injurious method of taking fish.

PARKER MATTHEWS.

Sworn to at Lockeport, in the county of Shelburne, this 22d day of August, A. D. 1877.

AUSTEN LOCKE, *J. P.*

No. 279.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ROBERT DEAGLE, of Souris, in the county of Kings, and province of Prince Edward Island, but at present of Harbor-au-Bouche, in the county of Antigonishe, and province of Nova Scotia, fisherman, make oath and say as follows:

1. I have been a practical fisherman for the past twenty years. During ten years of that time I have been employed in American vessels from the port of Gloucester principally, and I have had large experience in and have a very perfect knowledge of seine-fishing. I have fished both on the American coast and in the Gulf of Saint Lawrence, and on the shores of Newfoundland and Labrador.

2. I am well acquainted with the cod fishery as carried on by the American fishermen in our waters, and I believe the practice of trawling, followed by the Americans fishing for codfish, tends to destroy the mother fish when they are spawning, and otherwise is injurious to the fishery.

3. I estimate that there has been an average of three hundred mackerel-catching vessels from United States ports in our waters during each of the last twenty years. I myself have known of four hundred sail of United States fishing-vessels in our waters in a single season, and there would be a great many of which I would have no knowledge. It is impossible for any one person to know of all the American vessels fishing in our waters in any one season. The average catch of mackerel each season is about three hundred and fifty barrels per vessel. Last spring there were about one hundred vessels fishing for herring at the Magdalen, and they caught their usual catch of from seven hundred to one thousand barrels per vessel. I have known one American vessel in the Gulf of Saint Lawrence to get fourteen hundred barrels of mackerel in a single season.

4. I have been seine-master of American fishing vessels, and have used seines in catching mackerel both in American and Canadian waters, and I perfectly understand fishing with seines. In American waters I have used seines two hundred and twenty-five fathoms long and thirty fathoms deep, and in our shallower waters I have fished, while employed in American vessels, with seines one hundred and eighty fathoms long and twenty fathoms or less in depth. The American mackerel fishery has been almost destroyed by using these seines, and it will not take long to ruin our fisheries if the Americans are permitted to use them here. It is only during the last two or three years that these "purse-seines," as they are called, have been used in our waters.

Fish are uselessly destroyed and the schools broken up and driven away by this practice.

5. From 1871 to 1874 the mackerel fishery in the gulf was fair. Their scarcity in 1875 and 1876 was owing to the variableness of the fish, which are sometimes scarce for a year or two, and then come in again as thick as ever. The prospect this year is very good, and quite a fleet of American vessels is already in the bay, and in all probability there will be three hundred or four hundred of them here this season, as there are no mackerel on their own coasts. I saw an American vessel, called the Eastern Queen, take from their seine at one catch what I was afterwards informed by the crew amounted to one hundred barrels of mackerel. On Sunday last four American mackerelers got very good catches; two of them got one hundred barrels each, and the other two got eighty and fifty barrels, respectively.

6. The inshore mackerel fishery is, to a large extent, within 3 miles of the shore, and I estimate that two-thirds of the mackerel caught by American fishermen on our coasts is taken within 3 miles of the shore; and I have no hesitation in saying that the inshore fishery is of far greater value than the outside, so far as the mackerel are concerned, and the herring fishery is almost altogether in shore.

7. Our boat fishery is much hindered by the Americans running in among the boats and drawing the fish off shore by means of throwing bait, and the bait they use is much better than what our fishermen have; thus they are enabled to entice away the fish, as the mackerel will follow the best bait. I think it would be better for our fishermen to have the inshore fisheries to themselves, even if the Americans put a heavy duty on fish.

8. The Americans cannot profitably carry on the cod and other deep-sea fisheries without resorting to our shores for bait, of which they buy a large quantity from our fishermen and merchants.

9. The privilege of fishing in American waters is of no advantage whatever to Canadian fishermen, and I have never heard of Canadians availing themselves of it.

10. The spawning and breeding places of the mackerel are principally in shoal water and inshore. I am of opinion that the great gale of 1873 may to some extent have caused the scarcity of mackerel in the gulf during the years 1875 and 1876, by driving out and destroying the small fish on which the mackerel feed.

11. Of late years the Americans are getting a good many halibut on the shores of Anticosti and near the Seven Islands, in the Lower Saint Lawrence.

ROBERT DEAGLE.

The said Robert Deagle was sworn to the truth of this affidavit at Harbor au Bouche, in the county of Antigonishe, this 28th day of July, A. D. 1877, before me.

EDWARD CORBET,

A Justice of the Peace.

No. 280.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES CAREY, of Port Mulgrave, in the county of Guysborough and Province of Nova Scotia, fisherman and trader, make oath and say as follows:

1. I have been a practical fisherman for twenty-five years of my life, and fishing was my sole employment up to the year 1871, since which time I have been both fishing and trading. I have fished for mackerel all around the shores of the Gulf of St. Lawrence, and in Chedabucto Bay. I have been herring fishing at the Magdalens, and on the shores of Labrador and Newfoundland. I have fished for codfish in the Straits of Northumberland. During about ten years of the twenty five, I was employed in American fishing-vessels.

2. I am of opinion that the American mackerel-fishing fleet up to the year 1874 would average four hundred sails at least each season. In 1875 and 1876 they were not quite so numerous. These vessels carried a crew of about fifteen men each, and the tonnage ranged from fifty to one hundred tons. The American herring fleet has averaged about thirty or forty sails each season. These mackerelers fish all around the Gulf of St. Lawrence, and the herring fishers go principally to the Magdalen Islands.

3. The average catch of mackerel per vessel during the whole twenty-five years that I have been acquainted with the fishery has been about five hundred barrels each season, worth from ten to twelve dollars per barrel. The herring fleet catch each season between eight and nine hundred barrels per vessel.

4. I consider the herring fishery about as good as ever it was. The mackerel are a variable fish, and in some years they are scarce, and then become plenty again after a year or two. In 1875 and 1876 they were somewhat scarce, but it is my opinion that they will come in again as plenty as ever they were.

5. The herring are caught almost altogether with seines. The mackerel are caught principally with hooks and lines, but of late years the American fishermen are using seines also to some extent.

6. During the Reciprocity Treaty the American fishermen fished for mackerel to a large extent within three miles of the shore. The herring fishery at the Magdalens is altogether inshore.

7. In my opinion, at least one-half the mackerel are caught within three miles of the shore, and almost all the herring are caught within that distance.

8. The principal breeding-places of the mackerel are, in my opinion, inshore in shoal water. Their coming inshore in the spring is, I believe, for the purpose of spawning.

9. It is an advantage to the American fishermen who supply the market with fresh fish to be allowed to procure bait on our shores. It is also very advantageous to them to procure ice on our shores to preserve their bait, and also to procure other supplies on our coasts.

The foregoing statements, according to the best of my knowledge and belief, are true in substance and fact.

his
JAMES + CAREY.
mark.

The said James Carey was sworn to the truth of this affidavit, the same having been first read over and explained to him, at Port Maitland, in the county of Guysborough, this 30th day of July, A. D. 1877, before me.

JAMES PURCELL,
A Justice of the Peace.

No. 281.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I. THOMAS PINKHAM, of Booth Bay, in the State of Maine, master mariner, make oath and say as follows:

1. I have been engaged in fishing for thirty-four years. I have fished along the American coast down to Cape Harrison in Labrador, and have taken mackerel, codfish, and the fish found on the above-mentioned coasts. I have fished on the Banks along the above-mentioned coast. Cod fish on the Banks is taken principally by trawling, which I consider a bad method of taking fish, as the mother fish are destroyed, which is not the case in hand-lining.

2. In taking mackerel, purse-seining is employed to a very large extent, which I also consider a bad way of taking mackerel. Large quantities are wasted, the schools of fish are broken up and frightened away. This year scarcely any mackerel are taken on the American coast. This I attribute to the large amount of purse-seining that has been done on that shore.

3. We get bait and ice in the Canadian ports to carry on the Bank fishing, which benefits the inhabitants, and enables us to carry on the Bank fishery.

THOMAS PINKHAM.

Sworn to at Sand Point, in the county of Shelburne, this 24th day of August, A. D., 1877, before me.

JOHN PURNEY, *J. P.*

No. 282.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I. REUBEN HARLOW, of Shelburne, in the county of Shelburne, merchant, make oath and say as follows:

1. I am the proprietor of an ice-house situated at East Point, in the above-named county. I sold two hundred and fifty tons of ice this year and last—one hundred tons to Canadian vessels and one hundred and fifty to American vessels. About fifteen American vessels have been supplied each year during the two now past. About one hundred have called which have not been supplied. The Americans say it is a very valuable privilege to be allowed to obtain this ice in our ports.

REUBEN HARLOW.

Sworn to at Shelburne, in the county of Shelburne, this 24th day of August, A. D. 1877, before me.

JOHN BOWER, *J. P.*

No. 283.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I. JUDAH C. SMITH, of Barrington, at present at Lockeport, in the county of Shelburne, master mariner, make oath and say as follows:

1. I have been engaged since the first of May now past in the taking

of fish by a trap, for the purpose of taking deep-sea fish. At this trap large numbers of vessels are supplied with bait, most of whom are Canadian. During the past five days, six American vessels have run here for bait, none of whom we were able to supply. If the Americans do not get bait here they run to other Canadian ports for this bait, for without it they could catch no fish. Since the first of May I have baited eight American vessels, which took, on an average, twenty-five barrels of bait each. Twenty Canadian vessels have been supplied with bait, and have taken on an average fifteen barrels each.

JUDAH C. SMITH.

Sworn to at Lockeport, in the county of Shelburne, this 24th day of August, A. D. 1877, before me.

AUSTEN LOCKE, *J. P.*

No. 284.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, AMOS H. outhouse, of Tiverton, in the county of Digby, make oath and say as follows :

1. Have been engaged in the fishing business for thirty years.
2. At least five hundred American vessels from all ports of the United States annually fish for mackerel, codfish, and halibut, in the Bay de Chaleur, and on the shores of Nova Scotia ; this is within my knowledge for the past thirty years.
3. The average quantity of mackerel taken by each American fishing-vessel in the Bay de Chaleur is about three hundred barrels, and seven hundred quintals of codfish.
4. The present condition of the fishery is not as good as in the past, for mackerel, codfish, halibut, herring, hake, and pollock.
5. The Americans use trawls chiefly for codfish and halibut ; mackerel by hook and line and seines.
6. Great injury is done to the fishing grounds by the American fishermen throwing overboard offal ; it drives the fish from the fishing grounds.
7. American fishermen usually fish close to the shore, and have before and during the Reciprocity Treaty of 1854, and before and during the Treaty of Washington, at the Bay de Chaleur and Bay of Fundy.
8. The value of inshore fisheries are more valuable than outside.
9. American fishermen catch bait within three miles from the shores and in the bays, with nets, on the shores of Nova Scotia, to a great extent.
10. Halibut, codfish, haddock, hake, and pollock are caught by the American fishermen in the inshore waters of Canada, and the same kinds of fish are also caught inshore by Canadian fishermen.
11. Since the Treaty of Washington of 1871, the fish have decreased very much in the Bay of Fundy, for the last five years, as much as twenty per cent., which is caused by using trawls.
12. American fishermen have caused great injury to the fisheries in the Bay of Fundy, by the use of trawls, since the Treaty of Washington.
13. The herring fishery in Canadian waters is greater inshore than outside, and American fishermen catch herring for bait and for sale in the Bay de Chaleur, Bay of Fundy, and St. Mary's Bay.
14. Mackerel caught in Canadian waters are as good, if not better,

than those caught in American waters ; take one year with another, the price would be about the same in the United States market.

15. The opportunity of transshipping cargoes enjoyed by American fishermen since the Treaty of Washington is a great advantage to them. I have known American vessels to make three trips in one season, by transshipping their cargoes at the Bay de Chaleur.

16. It is a great advantage to American fishermen to procure bait in the Canadian inshores, and it is more profitable and causes them less delay to buy it than to catch it.

17. The American fishermen cannot carry on the cod and other fisheries of the deep sea around our coasts, without the privilege of resorting to our inshores to procure bait, and would have to abandon the business to a great extent if they were deprived of the privilege.

18. It is a great advantage to American fishermen to resort to Canadian inshores for ice and other supplies required in their fishery business.

19. The privilege of fishing in American waters is of no practical advantage to Canadian fisherman. I never have known any of our Canadian fishermen to make any use of their fishing-grounds.

20. The privilege to each American vessel of procuring bait and transshipping cargoes in Canadian inshores, would be at the least one thousand dollars.

21. The Americans having free access to our Canadian inshore fisheries, and the large quantities of all kinds of fish taken by them, hinders the Canadians from getting as good a market as they would if they had the exclusive right of the inshore fisheries.

The foregoing statement is correct to the best of my knowledge and belief.

Captain A. H. outhouse.

Sworn before me at Tiverton, in the county of Digby, this 13th August, A. D. 1877.

JOHN A. SMITH, J. P.

No. 285.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN MERCHANT, of Hardwicke, in the county of Northumberland, fisherman, make oath and say as follows :

1. I have been fifteen seasons, or years, engaged in business as a fisherman in Bay Chaleur, Miramichi Bay, Gaspé, all through the Gulf of Saint Lawrence, and all along the shore of Kent County ; and was also five years as master on board of various American fishing-vessels—say three years in the Oak Grove, two years in King Fisher, both belonging to the port of Belfast, United States. The balance of the fifteen years I was chiefly engaged in small and large vessels of Miramichi Bay and Prince Edward Island, and in different places around our coast.

2. During the years I was master of Oak Grove and King Fisher, the number of sail would average about 500 sail, would average about fifteen men each, and tonnage about 75 ; and the places fished were Prince Edward Island, Bay Chaleur, Miramichi Bay, Gaspé ; the kind of fish caught, mackerel.

3. I would say the average catch during the five years I was fishing was about 400 barrels each vessel, valued about \$12 per barrel.

4. Mackerel are as plentiful now as when I fished.

5. Modes chiefly used in capturing mackerel were seining and jigging.

6. I consider the fishing water injured by throwing overboard chaff from mackerel; but offal from codfish is very injurious, as the bones swallowed by the mackerel penetrate the fish, causing a large quantity to die.

6. I would say, two-thirds of the mackerel, during the time I have fished, were caught within the three-mile limit.

7. I consider the inshore fishery of great value to the American fishermen, and, in fact, could not do without it.

8. American fishermen still use the seine for taking mackerel. The manner used is: The seine is stretched out and around the school of mackerel, then hauled in together, then scooped out into the boats. I do not think the manner any way injurious, as when they find more than can be cared for, the seine is tripped and the mackerel let go. The seines are used inside the limit the same as other places—in fact, any place where mackerel is seen.

9. Mackerel have not decreased since 1871, as in some places. They are plentiful. The winds and feed is the cause of their scarcity in different localities.

10. Herring are caught entirely inshore.

11. Mackerel caught in Canadian waters are fully one-third better than caught in American, and bring prices one-third more than American mackerel caught in American waters.

12. The food of mackerel is about equally divided within the limit and outside. They feed on shrimps, smelt, fry, and smaller fishes. Their breeding places are around the sheltered bays and estuaries, during the months of May and June.

13. I consider the privilege to land by American fishermen very great. If deprived of this privilege they could not carry on their business.

14. It is a great advantage to be allowed to transship cargoes. It saves great loss of time and expense to owners. It enables them to make two trips during the season, sometimes three; and once I knew of five shipments of two hundred and fifty barrels each.

15. I consider it a great advantage to be enabled to buy bait from Canadian fishermen, and much easier and more profitable than fishing for it, as the bait is not procurable always when wanted.

16. It is considered impossible to carry on deep-sea fishing in Canadian waters without being enabled either to catch or buy the bait inshore.

17. I consider the privilege of fishing in American waters of no value to Canadian fishermen. I never knew of a Canadian fisherman resorting to American waters to fish.

18. I have known instances where United States citizens have carried on considerable trade with the inhabitants of the localities where they fish.

19. Do not consider that it hinders the operation of Canadian fishermen.

J. S. MERCHANT.

Sworn to before me, at Hardwicke, this 14th day of August, 1877.

ALEXANDER MILLS, J. P.

No. 286.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WALLACE TRASK, of Little River, in the county of Digby, fisherman, make oath and say as follows:

1. I have been engaged in fishing for twelve years now past, and am still so engaged, altogether on the inshore grounds in this county. I fish from close inshore to off six miles, and catch most of the fish I take within three miles of the shore. I fish every year on the north and south side of Digby Neck, and take codfish, haddock, hake, pollock, halibut, and herring, the latter principally for bait.

2. On the north side of Digby Neck, the place at which we fish is called Whale Cove; on the south side the port is called Little River.

3. At Whale Cove I have counted forty sail of fishing-vessels at one time, in the latter part of June; most of these vessels were American, from the State of Maine. These American vessels are from five to forty tons each, and carry from five to twelve men on each vessel. They take fish altogether by trawling, and do so close inshore among our boats, within three miles of the shore.

4. These American vessels set their nets for bait inshore, close in to the shore, and so many of them take up the grounds and carry away the bait from us.

5. These American vessels take from two to six hundred quintals of fish to each vessel. They throw their gurry overboard on our inshore boat grounds, and sometimes among our nets.

6. Our fishermen all bring their gurry inshore, in order to protect the grounds.

7. At Little River, on the south side of Digby Neck, from fifteen to twenty American vessels have fished inshore for the same kinds of fish as we take. They set their nets for bait, and throw "gurry" overboard on the inshore grounds.

8. Since 1871 the Americans have come upon our inshore grounds and interfered with our fishing.

9. American vessels come around here with purse seines for mackerel.

WALLACE TRASK.

Sworn to at Little River, in the county of Digby, this 1st day of September, A. D. 1877, before me.

J. W. DENTON, J. P.

No. 287.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GEORGE E. MOSLEY, of Tiverton, in the county of Digby, fisherman, make oath and say as follows:

1. I have been engaged in fishing for twenty years now past, and am still so engaged. I fish from inshore to offshore three miles, and take codfish, haddock, hake, pollock, halibut, and herring, the latter principally for bait.

2. From eight to ten American vessels come here on our inshore grounds on which we fish, and trawl for the same kind of fish that we do. They have come on our inshore grounds since 1871.

3. These American vessels are from nine to sixty tons each, and carry from eight to ten men each. These American vessels carry away four hundred quintals of fish each.

4. They set their nets for bait on our inshore grounds, which interferes very much with the setting of our nets, as they take up the ground and take the bait away from us. They keep their nets set both day and night, a whole week at a time.

5. They throw overboard their offal from their fish on our inshore grounds, which is very injurious to our grounds. Our fishermen, of which there are about two hundred out of this place, bring their gurry inshore on the gurry-grounds set apart for this purpose—both boats and vessels. There are from eight to ten vessels, from fifteen to twenty five tons, engaged in fishing out of this port, besides a large number of boats. The vessels bring their gurry ashore, having kids on board to keep the gurry.

6. Large numbers of Americans come into St. Mary's Bay every spring for fish. Thirty at least come and trawl around here for all the kinds of fish found in St. Mary's Bay. American vessels also come with purse seines on board for mackerel.

GEORGE E. MOSLEY.

Sworn to at Tiverton, in the county of Digby, this 1st day of September, A. D. 1877, before me.

JOHN A. SMITH, *J. P.*

No. 288.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, CHARLES H. PAYSON, of Westport, in the county of Digby, merchant, make oath and say as follows:

1. I have during three years now past supplied American vessels with ice—about thirty tons each year, and about twenty tons to Canadian vessels. These vessels use this to preserve their (1 bait); and with this ice and bait they fish on the coast along here.

C. H. PAYSON.

Sworn to at Westport, in the county of Digby, this 31st day of August, A. D. 1877, before me.

H. E. PAYSON,
J. P., County of Digby.

No. 289.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ELEAZAR CROWELL, of Clarke's Harbor, in the county of Shelburne, merchant, make oath and say as follows:

1. I have been engaged in the buying and selling of fish for twenty years. I have gone fishing for seventeen years, mostly in the inshore fisheries in this county.

2. Large numbers of American vessels run in here for bait. They come and go here every week. With the bait the Americans get here they trawl for codfish and halibut.

3. Around this harbor large quantities of mackerel are taken, principally in traps, and the Americans purchase them for bait. The selling of these mackerel to Americans is of no advantage to us, as we can sell them in other markets. Thousands of barrels of mackerel are taken around in this vicinity: as many as six thousand barrels at least last year were taken. The mackerel taken in here bring better prices in American markets than the mackerel taken in American waters. I have been informed of Americans being interested in traps for mackerel around here. The Americans purchase the most of their bait here, because by so doing they save time. All the American vessels which run here carry nets to catch bait.

4. American vessels run in here and sell their small fish; by so doing they are enabled to purchase bait and supplies, and carry home a cargo of large and valuable fish. The Americans run in here for supplies when they run short, sometimes for salt; by so doing they are greatly benefited.

5. The trawling carried on by the Americans on the Banks off the shore is, in my opinion, very injurious to the fisheries. Trawling has been carried on to a considerable extent lately by our fishermen. They have been compelled to do so, in order to compete with the Americans.

6. The Americans also get large quantities of herring here for bait. These herring are all taken inshore within three miles of the shore. On this island there is a population of over two thousand, and there are upwards of four hundred boats engaged in fishing around this island. Many of these boats take one hundred and seventy-five quintals of fish each.

ELEAZAR CROWELL,
Merchant.

Sworn to before me this 27th day of August, 1877.

D. G. DALEY, *J. P.*

No. 290.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, DANIEL V. KENNY, of Cape Sable Island, in the County of Shelburne, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for twenty years now past, mostly in the inshore fisheries in Shelburne County, and have been engaged in American vessels in Bank fishing from 1870 to 1874. We got our bait in Canadian ports, and we could not have carried on the Bank fishing successfully unless we got this bait in Canadian ports inshore. When fishing in the American vessels we took codfish on the Banks by trawling, which I consider very injurious to the fisheries, as it destroys the spawn fish. When fishing in the American vessels we trawled inshore around Cape Breton, on Anticosti, and around Newfoundland within three miles of the shore. In getting bait our supply is interfered with by American vessels, as they often gobble up the bait from us and make it dearer.

DANIEL V. KENNY.

Sworn to at Cape Sable Island, in the county of Shelburne, this 27th day of August, A. D. 1877, before me.

D. G. DALEY, *J. P.*

No. 291.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, GILBERT MERRITT, of Sandy Cove, in the county of Digby, fisherman, make oath and say as follows:

1. I have for seven years now past been engaged in fishing in this county all inshore, off to six miles from the shore. The most of the fish I take is within three miles of the shore. I take codfish, haddock, hake, pollock, halibut, and herring; the latter principally for bait.

2. Since 1871, large numbers of American vessels come round here to fish, and fish upon our inshore grounds, within three miles of the shore. In this harbor many American vessels come. I have seen here this last spring from eight to ten American fishing vessels at one time. They buy and catch bait. They catch more than they buy by setting their nets inshore, within three miles of the shore.

3. These American vessels which come here are from ten up to sixty tons each, and carry from six to twelve men, and are fitted out to take from one hundred to four hundred quintals each. They generally take full fares.

4. The American vessels which get bait here fish in this bay (St. Mary's), which is here only five miles across.

5. Last summer and this American purse-seiners were here for mackerel, and have hove their seines and taken them here.

6. Out of this port there are twenty-seven boats engaged in fishing inshore, and three vessels which fish part of the time off shore. These boats and vessels carry seventy-four men, and bring their gurry inshore and use it on their farms for manure. The Americans who fish around here on our inshore grounds throw their gurry overboard, which is very injurious to the grounds.

7. Inside Sandy Cove and the outside Sandy Cove, the latter being on the Bay of Fundy, from eight to ten American vessels fish on our inshore grounds every year. These vessels are of the description already stated.

GILBERT MERRITT.

Sworn to, at Sandy Cove, in the county of Digby, this 1st day of September, A. D. 1877, before me.

SAMUEL SAUNDERS, J. P.

No. 292.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, CHARLES W. DENTON, of Little River, in the county of Digby, fisherman, make oath and say as follows:

1. I have been engaged in fishing on the inshore grounds in Digby County for seven years, and am still so engaged. I have always taken the most of my fish within three miles of the shore, and have taken codfish, haddock, hake, pollock, and halibut—herring we take principally for bait.

2. On the north side of Digby Neck, the place at which we fish is called "Whale Cove"; on the south side of Digby Neck the port is called "Little River."

3. At Whale Cove I have counted forty sail of vessels in June last, the most of whom were American, all engaged in fishing inshore, within three miles of the shore. These American vessels are mostly from the State of Maine. They are from five to forty tons each. They carry from five to twelve men on each vessel. They take fish altogether by trawling, and do so close inshore among our boats within three miles of the shore. At Whale Cove there are upwards of sixty Digby fishermen engaged in fishing, and there would be more if the Americans were not allowed to fish on our inshore grounds. These American vessels set their nets for bait inshore, close in to the shore, and so many of them take up the grounds and carry away the bait from us.

4. These American vessels take from two to six hundred quintals of fish to each vessel. They throw their gurry overboard on our inshore grounds and sometimes among our nets.

5. Our fishermen bring their gurry all inshore in order to protect the grounds.

6. At Little River, on the south side of Digby Neck, where we commence fishing in April and fish until June, then going to Whale Cove, from fifteen to twenty American vessels fish inshore for the same kinds of fish as we do. They set their nets for bait, and throw gurry overboard on the inshore grounds within three miles of the shore.

7. American vessels come around here with purse-seines for mackerel, and I have heard they took two hundred barrels in one day.

CHARLES W. DENTON.

Sworn to at Little River, in the county of Digby, this 1st day of September, A. D. 1877, before me.

J. W. DENTON, *J. P.*

No. 293.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOSEPH E. DENTON, of Little River, in the county of Digby, fisherman, make oath and say as follows:

1. I have been engaged in fishing for 15 years now past, and am still so engaged altogether on the inshore grounds in this county, going off sometimes six miles from the shore. I fish every year on the north and south side of Digby Neck, and take codfish, haddock, hake, pollock, halibut, and herring; the latter principally for bait.

2. On the north side of Digby Neck, the port at which we fish is called "Whale Cove"; on the south side the port is called "Little River."

3. At Whale Cove I have counted forty sail of fishing vessels at one time, in the latter part of June, most of whom were American vessels from the State of Maine. These American vessels are from five to forty tons each, and carry from five to twelve men on each vessel. They take fish altogether by trawling, and do so close inshore among our boats.

4. These American vessels set their nets for bait, and so many of them take up the grounds and carry away the bait from us.

5. These American vessels take from two to six hundred quintals of fish to each vessel.

6. These American vessels throw their gurry overboard on our inshore grounds, within three miles of the shore, among the nets sometimes.

7. Our fishermen bring their gurry on shore in order to protect the grounds.

8. At Little River, on the south side of Digby Neck, from fifteen to twenty American vessels have fished inshore for the same kinds of fish as we have fished. They have set their nets for bait, and thrown their gurry overboard on the inshore grounds.

9. Since 1871 the Americans have come on our inshore grounds, and this summer more numerous than ever before.

10. American vessels come around here with purse-seines for mackerel, and one is said to have taken two hundred barrels of mackerel in one day within three miles of the shore. The bay here is only six miles across. I mean by the bay, St. Mary's Bay.

JOSEPH E. DENTON.

Sworn to at Little River, in the county of Digby, this 1st day of September, A. D. 1877, before me.

J. W. DENTON, J. P.

No. 294.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN MCKAY, of Tiverton, in the county of Digby, master mariner, make oath and say as follows :

1. I have been engaged in the fisheries in this vicinity for ten years, and am well acquainted with the fisheries around St. Mary's Bay. We take around this bay codfish, haddock, hake, pollock, halibut and herring, mostly all within three miles of the shore.

2. Large numbers of Americans come around here since eighteen hundred and seventy-one, and have fished on our inshore grounds. They have also set their nets for bait in this harbor and around here within three miles of the shore, which interferes with our supply to a large extent.

3. From eight to ten American vessels fish around this harbor on our inshore ground, and from twenty to thirty at least in St. Mary's Bay. These are from the vessels in this harbor and in St. Mary's Bay, are from ten tons to sixty tons, and carry from five to twelve men. (Sic.)

4. So many Americans coming here interferes with our inshore fishery to a large extent, by taking away the fish from us, by trawling and catching bait, and throwing overboard their gurry.

5. Our boats and vessels bring their gurry ashore on to gurry grounds set apart for this purpose.

6. American vessels come here every year with purse-seines for mackerel.

JOHN MCKAY.

Sworn to at Tiverton, in the county of Digby, this 1st day of September, A. D. 1877, before me.

JOHN A. SMITH, J. P.

No. 295.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, WHITEFIELD OUTHOUSE, of Tiverton, in the county of Digby, fisherman, make oath and say as follows :

1. I have been engaged in fishing inshore in this county for thirty

years now past, and am still so engaged. I fish from inshore, off to three miles, and there are about fifty boats here so engaged. We take codfish, haddock, hake, and pollock, and herring, the latter principally for bait.

2. From eight to ten American vessels since 1871 come here on our inshore grounds, and take fish in our harbor, and within three miles of the shore. These vessels are from nine to sixty tons, and carry from five to nine men each. They take fish mostly by trawling. They trawl in this harbor close inshore. They get bait by setting their nets, which interferes very much with the inhabitants here, as they take up the grounds so that we find it difficult to get a place for our nets, and take away the bait from us. They set their nets Saturday, and keep them set on Sunday, which the inhabitants here do not. They keep their nets set during the day-time, which is injurious to the herring fishery.

3. The Americans here throw their "gurry" overboard, which our small vessels and boats do not do. We have a gurry ground here laid out, where our fishermen throw their "gurry."

4. There are eight vessels owned here which fish off to four or five miles from the shore, and from that into the shore. These vessels are from fifteen to twenty-five tons each, and carry from six to ten men. These vessels take on an average each year eight hundred quintals of fish each, and bring all their gurry inshore.

5. Every spring, from 1871, American vessels, at least thirty sail, come into St. Mary's Bay, and around here, and trawl for fish, which is a great injury to us fishermen. These vessels come mostly from Eastport, Me. Every summer American vessels come here with seines—purse-seines—for mackerel.

WHITEFIELD OUTHOUSE.

Sworn to at Tiverton, in the county of Digby, this 1st day of September, A. D. 1877, before me.

JOHN A. SMITH, *J. P.*

No. 296.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JOHN W. SNOW, of Digby, in the county of Digby, fisherman, make oath and say as follows:

1. I have been engaged in the fisheries for thirteen years now past, and am still so engaged. I fish in Annapolis Basin and in the Bay of Fundy. I take fish within three miles of the shore; codfish, haddock, pollock, hake, halibut, and herring, the latter principally for bait, and get this herring all inshore, within three miles of the shore.

2. Since 1871 I have seen in this harbor at one time from eight to ten American vessels. These vessels come here to harbor and for bait. They set their nets here in Annapolis Basin and along the Bay of Fundy. They all set their nets for bait inshore, the same as our own fishermen. With this bait they trawl for fish both inshore and off shore around the coast in this vicinity.

3. These American vessels which fish around here throw all their "gurry" overboard, which is a great injury to our fisheries.

4. Since 1871 American purse-seiners come around our inshore grounds for mackerel. There were two American purse-seiners in this harbor this summer.

5. The American vessels which come around here nearly all trawl,

which is a very injurious way of taking fish. Our fishermen have only commenced trawling to any considerable extent within the two years now past, and have been compelled to do so in order to compete with the Americans.

JOHN W. SNOW.

Sworn to at Digby, in the county of Digby, this 3d day of September, A. D. 1877, before me,

JOHN DAKIN, J. P.

No. 297.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES PATTERSON FOSTER, of Port Williams, in the county of Annapolis, merchant and dealer in fish, make oath and say as follows :

1. I have been acquainted with the fisheries along the coast of this county for twenty-five years now past, and am at present acquainted with them.

2. I have dealt in codfish, hake, and herrings.

3. Since 1871, about half a dozen American vessels come in here, principally for bait, which they get by setting their nets inshore within three miles of the shore, mostly within a mile of the shore. This number have come here every year since 1871. Some of them take cargoes of herring.

4. Some of these American vessels take from four to five hundred barrels of herring around this port and in this vicinity inshore within a mile of the shore ; at least four or five do so every year since 1871. These American vessels are from twenty to fifty tons each.

5. The herring taken in this vicinity range in price from two to four dollars per barrel.

6. The American vessels fish off shore beyond three miles from the shore for codfish, haddock, hake, halibut, and pollack, and get the bait which enables them to do so inshore by setting their nets for it.

7. The American vessels which fish around here come early in April, and remain until the last of August.

8. It would be a great advantage to the fishermen in this vicinity and along the coast of Annapolis County if the Americans were excluded from our inshore grounds, as they take large quantities of herring for bait, and also cargoes of herring from our inshore grounds, and injure our inshore grounds by throwing "gurry" overboard.

9. I have never known nor heard of any of our fishermen going to fish on the American coast, and this right given us by the Treaty of Washington is of no value to us.

JAMES P. FOSTER.

Sworn to at Port Williams, in the county of Annapolis, this 6th day of September, A. D. 1877, before me.

JOHN ANTHONY,

Justice of Peace, Acting in and for the County of Annapolis.

No. 298.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, BYRON P. LADD, of Yarmouth, in the county of Yarmouth, merchant, make oath and say as follows :

1. I have been engaged in trading and outfitting fishermen for the

last twenty-five years; at Westport from 1843 to 1870, the remainder in Yarmouth.

2. The fishing by American vessels in Canadian waters varies very much from year to year; from fifteen to twenty vessels yearly usually put in at Westport for supplies, &c.: during my residence there, have known years when mackerel were plenty; as many as seventy or eighty vessels fishing in St. Mary's Bay; the number of American vessels in other waters on the Canadian shores, I have no personal knowledge.

3. There is an improvement in the inshore cod fishery for the past four years.

4. American fishermen use trawls chiefly for cod-fishing, seines and hook and line for mackerel, nets for herring.

5. I consider the value of the inshore fisheries much greater than the outside, particularly for mackerel.

6. American fishermen use purse-seines, and they are considered very injurious to the mackerel fishery.

7. American fishermen yearly catch codfish, halibut, hake, haddock and mackerel on the inshores of Nova Scotia.

8. Americans buy herring for bait from our inshore fishermen. Do not think they fish very much for them.

9. My opinion is that the mackerel caught in the Bay de Chaleur are better than those caught in American waters, and would command a higher price in the American markets.

10. Mackerel feed inshore.

11. It is a very great advantage to American fishermen to land their fish in Canadian waters.

12. The privilege of transshipping cargoes of fish by Americans in Canadian waters is very great, particularly the mackerel fishery; it enables them to prosecute that fishery to much greater advantage and profit.

13. It is more profitable to the Americans to buy bait when they can; they only fish for it when they cannot buy it.

14. The Americans could not carry on the cod fishery with any profit without having access to our Canadian inshores to procure bait and other supplies.

15. The privilege of fishing in American waters is of no practical value or advantage in any way to Canadian fishermen.

The foregoing statement is true and correct to the best of my knowledge and belief.

BYRON P. LADD.

Sworn before me at Yarmouth, in the county of Yarmouth, this 10th day of September, A. D. 1877.

ENOS GARDNER, J. P.

No. 299.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ABRAM THURSTON, of Sanford, in the county of Yarmouth, fisherman, make oath and say as follows:

1. Have been engaged shore-fishing for the last twenty-eight years, mostly boat-fishing for codfish, halibut, pollock, herring, and mackerel.

2. Inshore boat fishing for halibut and codfish is not as good as it was in the past; haddock are much more plenty; herring are about the same; mackerel are much more plenty, particularly the present year. The increase in the catch of mackerel is very large in the county of Yarmouth.

3. I believe that the practice of throwing fish offal on the fishing grounds is very injurious, and is practiced to a large extent.

4. Some few years ago American fishermen fished close in to our shores in the Bay of Fundy for halibut.

5. The value of the inshore fisheries are much greater value than the outside.

6. American fishermen catch halibut in the inshore waters of Canada; they catch some codfish inshore. Halibut, codfish, haddock, hake, and pollack are caught inshore by Canadian fishermen.

7. I can only speak of the locality in which I reside for boat fishing, mostly since 1871. Codfish are not so plenty; halibut has also decreased; and my opinion is that trawling in the past by American fishermen, and some also by our own fishermen, have injured the halibut fishery very much.

8. The food of mackerel is chiefly inshore. The first mackerel that comes on our shores are full of spawn; their principal feeding and breeding places are inshore.

9. Should think the privilege of transshipping cargoes enjoyed by American fishermen since the Treaty of Washington is a very great advantage to them; it would certainly allow them to catch more fish and make more trips.

10. It is a very great advantage to Americans to be able to procure bait in the Canadian inshore bays, creeks, and harbors, and it is more profitable for them to buy it than catch it themselves. I supplied two American vessels with fresh mackerel for bait this present year for \$120.

11. I do not consider or believe that the American fishermen could carry on the deep-sea fisheries around our Canadian coasts without the privilege of resorting to our inshores to procure bait.

12. It is a great advantage to Americans to resort to Canadian inshores for ice to preserve bait and other supplies to carry on their fishery business.

13. The privilege of fishing in American waters is no practical value or advantage to Canadian fishermen; do not believe our fishermen make any attempt to fish in the American waters.

14. I know that it must be very much to the advantage of American fishermen to procure bait and transship cargoes in Canadian inshores, but cannot give an estimate of the value.

15. American fishermen in their operations do not hinder Canadian fishermen, but the large quantities of fish caught by them would certainly make a lower market for Canadian fish than if they were excluded from our inshores.

The foregoing statement is true and correct, to the best of my knowledge and belief.

ABRAM THURSTON.

Sworn before me at Sanford, in the county of Yarmouth, this 8th day of September, A. D. 1877.

ENOS GARDNER, J. P.

No. 300.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, SAMUEL M. RYERSON, of Yarmouth, in the county of Yarmouth, merchant, make oath and say as follows:

1. I have been engaged since 1861 in outfitting fishermen for cod,

mackerel, and herring fishery, and am at present engaged in that business as one of the firm of Ryerson & Moses to a small extent.

2. I know that there are several hundred American vessels yearly engaged in fishing in Canadian waters; they average from ten to fifteen men per vessel. They fish in the Bay of Fundy and St. Mary's Bay for codfish, halibut, and mackerel.

3. They take from 800 to 1,500 quintals codfish per trip. Halibut is taken to their market in ice in small quantities; cannot give estimate of mackerel trip, as their fares are generally carried to their ports without stopping here.

4. The American fishermen use trawls mostly for codfish, halibut, and haddock; mackerel on the Nova Scotia shores are mostly taken by seines by them.

5. Most of the mackerel caught on the Canadian inshores are caught close inshore, from half a mile to three miles from shore. The Americans catch large quantities of halibut inshore, from one to three miles from the shore.

6. The value of the inshore fisheries are as valuable as the outside; for bait they would be more valuable.

7. I know that American fishermen use purse-seines for taking mackerel, and have taken large quantities in that way, and they are very injurious to the fishery wherever they are used.

8. I know that American fishermen set their nets along our shores for the purpose of catching bait, and get all they require.

9. Large quantities of halibut, codfish, pollack, haddock, hake, and mackerel are caught by American fishermen in the inshore waters of Canada; the same are caught inshore by Canadian fishermen.

10. There has been a large increase in the cod fishery since 1871. Mackerel has also increased in the county of Yarmouth the past few years.

11. If American fishermen had been prohibited from fishing in Canadian waters, the Canadian fishermen would have probably caught double the quantity.

12. The herring fishery in Canadian waters is nearly all inshore. American fishermen catch herring for bait; they buy them for sale.

13. I do not think there is any difference in the quality of the mackerel caught in the Canadian or American waters, and the value in their markets would be about the same.

14. The mackerel follow the shores and feed.

15. It is a great advantage to American fishermen to transship their cargoes at Canso; it enables them to catch two fares during the fishing season.

16. American fishermen could not carry on their fisheries, or make profitable voyages, without the privilege of buying and catching bait from the Canadian inshores.

17. It is a great advantage to Americans to have the privilege of purchasing ice to preserve their bait from Canadian inshores, large quantities of which is furnished to American fishermen during the fishing season. They also employ large numbers of our men for crews, which they also find is greatly to their advantage.

18. Do not think Canadian fishermen use American waters for fishing purposes; it is of no practical use, our own fishery being so much better.

19. Should think the privilege to American fishermen procuring bait and being allowed to transship their cargoes in Canadian inshores would be at least from six to eight hundred dollars per vessel yearly.

20. I do think that fishing by American fishermen hinders the fishing operations of Canadian fishermen. Our vessels would take many more fish if they had the exclusive right to the inshore Canadian fisheries.

21. Our fishermen are employed largely by American fishermen, and take their supplies in American ports. The American vessels land the goods to the families of the fishermen without paying duties, and in the fall the wages are mostly expended for supplies, which come over in some of our coasters, and landed in the same way.

The foregoing statement is true and correct, to the best of my knowledge and belief.

SAMUEL M. RYERSON.

Sworn before me at Yarmouth, in the county of Yarmouth, this 11th day of September, A. D. 1877.

ENOS GARDNER, J. P.

No. 301.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ROBERT S. EAKINS, jr., of Yarmouth, in the county of Yarmouth, merchant, make oath and say as follows :

1. Referring to my memorandum made 12th August, 1873, as then I have some indirect knowledge of the fisheries from 1865 to 1876.

2. The extent of American fisheries in Canadian waters during the (11) eleven years from 1865 to 1876 was very great; I should say from 1,000 to 1,500 vessels from all ports of the New England States fished in Canadian waters, averaging about twelve men to each vessel, during years 1865 to 1870.

3. The quantity of fish usually average, if codfish, two thousand quintals; if part of year codfish, fourteen hundred quintals; balance year mackerel, three hundred barrels for trip.

4. As far as my knowledge goes, the American vessels usually trawl their codfish, halibut, and haddock partly in our waters and partly outside. The mackerel are principally caught in seines, purse seines, dressed on board the vessels, the offal being thrown overboard.

5. For mackerel, in Bay de Chaleur they always fish with hook and line, or used to, during the years I named, and always inshore, quite close to the land, near Magdalen Islands, Prince Edward Island, Cape Breton, and Nova Scotia.

6. I should say the value of the shore fisheries was much greater than outside, more especially for mackerel fishing.

7. The American fishermen use purse seines, by means of large boats sweep it around a school of mackerel, draw in the bottom, and have the fish in a sort of large bag, from which they are taken on board the vessel and dressed at leisure.

8. American fishermen yearly catch more or less fish inshore in our water, such as halibut, codfish, and haddock, besides mackerel, which are almost entirely caught inshore.

9. Do not think the Americans trouble themselves much about catching herrings; they buy them when they can from our people for bait.

10. We formerly considered our Bay de Chaleur mackerel the best in America, but for some years past the quality has not been so good as formerly. I have known our mackerel to sell by the cargo in the United States at \$26 per barrel gold in the years 1859 and 1860.

11. I am of the opinion that the mackerel feed principally inshore.

12. It is considered a great advantage to American fishermen that they are allowed to fish, land and dry their nets, and cure and transship their fish in the Canadian inshores.

13. The transshipping of cargoes by Americans has been carried on for many years and much to their advantage, as it allows them to make more trips for the fish during the season. This I think is principally done in the mackerel-fishery department.

14. The Americans, while cod fishing, buy large quantities of bait from the Canadians. They only take time to catch bait when they cannot buy it to advantage.

15. It would seriously injure the American fisheries if they were prevented from using our shores to buy bait and catch it.

16. It is considered a great benefit to the American fishermen that they have the privilege of procuring ice to preserve their fish, and to procure supplies such as trawl-lines and hooks, which they often lose; also to procure other articles and salt.

17. I never knew of an instance where our people fish in waters of the United States.

18. Could not say what value would accrue to American vessels by being allowed to procure bait and transship fish, but it must be very considerable, perhaps from \$400 to \$800 to every vessel making use of these privileges.

19. Cannot say that Americans being allowed to fish in our waters prevents our fishermen in their general operations, except that it affords larger and more valuable cargoes to be taken by the Americans than they would get were they deprived of our fisheries; and the catch being by them large, generally reduces the price of fish, which, of course, injures our fishermen indirectly.

The foregoing statement is true and correct to the best of my knowledge and belief.

ROBERT S. EAKINS, JR.

Sworn before me, at Yarmouth, in the county of Yarmouth, this 11th day of September, A. D. 1877.

ENOS GARDNER, J. P.

No. 302.

DOMINION OF CANADA,

Province of Prince Edward Island, Queen's County, to wit:

I, DANIEL ROSS, of North Rustico, in the said island and Dominion, fish-merchant, make oath and say:

1. That I reside at North Rustico, in Prince Edward Island, and have resided and carried on the fishery business there for the past eleven years, previously to which I had, for about six years, been engaged in the fishery business as an employé of Captain Marshall and others.

2. That my knowledge of the fishing business, as carried on at and near Rustico, covers a period of about twenty years.

3. That, during the past eleven years, while carrying on business for myself, I have owned each year four or five boats, and employed about thirty men each season.

4. That the average catch per season of my boats has been about one hundred barrels of mackerel each, and each boat takes a crew of about five men.

5. That I myself am a practical fisherman, and engage personally in the catching and curing as well as in the sale of the fish.

6. That the best mackerel-fishing is about one mile or one mile and a half from the coast-line of the shore, and very frequently the best catches are made much closer to the shore than that.

7. That the mackerel-fishing prosecuted in boats from the shore is chiefly within the limits of two miles. At times the schools of mackerel go farther out, extending as far as three miles and beyond that; but I have no hesitation in positively swearing that at least nine tenths (9-10ths) of the mackerel caught by the boat-fishermen are taken within the three-mile limit.

8. I have known good catches to be taken as much as five miles from shore in the fall of the year, but that is a very rare occurrence.

9. The American fishing-fleet are frequently, during the season, fishing off Rustico shore. The fleet follow the schools of mackerel, and consequently fish within the limits of three miles, but I have never fished on board any of them. When out fishing in my boats, however, I have found the fleet frequently all round us prosecuting the work and catching the fish. With an off-shore wind they approach as closely to the shore as they can with safety, and then throw bait and drift off, catching fish all the time and drawing the fish off shore to sea. Sometimes they would drift away from the school, and then beat up to windward and again drift over the school. This practice is adopted within the three-mile limits, and it is with reference to these limits alone I am now speaking.

10. My experience has been that the presence of the fishing fleet tends to break up the schools of mackerel, and our fishing is consequently injured. I mean the boat-fishing. The boat-fishers all look upon the arrival of the fleet among them as the signal for good fishing to cease. One cause is that too much bait is thrown from the vessels; and the boats which are anchored have to make way for the vessels which are drifting. It's universally looked upon among the shore-fishermen as a great injury and loss when the fleet arrives to fish among them.

11. In the month of May, from the opening of navigation till about the 10th of June, I prosecute with dories the herring-fishery. These herrings are all taken within about half a mile from the shore. My average catch of herrings per season would be a little over one hundred barrels. These herring are used by me for mackerel, and such is the custom all around the shores. If put up in barrels for sale they are worth about \$3 a barrel.

12. As soon as the herring fishery is over we fit up our large boats for the codfish and follow them. My catch is small, averaging per season from one to two hundred quintals. This would be the catch of my five boats. The cod-fishing lasts from one month to five weeks, or until the mackerel strike, and then we at once turn our attention to mackerel, which we follow the rest of the season.

DANIEL ROSS.

Sworn to at Charlottetown this 18th day of June, A. D., 1877, before me.

JAMES D. IRVING,
Commissioner, &c.

No. 303.

I, JOHN ARTEMAS MCLEOD, of Kensington, in Prince County, in Prince Edward Island, merchant and fish dealer, make oath and say:

1. That I have been engaged in fishing since the year 1867, both in vessels and boats, and know the fishing grounds from Boone Bay, New-

foundland, round this island, Cape Breton, New Brunswick shores, and up the St. Lawrence to Seven Islands Bay, and the Labrador shore, Newfoundland from Boone Bay to Cape Ray.

2. That, at the present time and for five years past, I have been engaged in fishing at New London Harbor, and there are about one hundred and fifty boats engaged in fishing out of that harbor and round the sand hills and beach, and the number is increasing fast and has doubled within the last year; and three years ago there were not more than thirty boats where the hundred and fifty are now. The boats are now larger, better built, and equipped, and, in fact, superior in every way to what they were three years ago. I should say, from my own actual knowledge as an owner and employer of boats, that the capital invested in the boat fishing has increased from fifteen to twenty fold in New London and neighborhood during the last three years. Where three years ago I could sell one hundred bushels of salt for curing fish, I can now sell five thousand bushels, and where I had five hundred dollars invested then I have ten thousand invested now. Three years ago there was only one fishing stage doing business on New London beach—doing business with three boats—and now there are eleven stages doing business on the beach, giving employment to about fifty boats and about two hundred and fifty men.

3. That the causes of the increase in the boat-fishing is that men found it paid, and that they could make money easier in that than in any other way; it also gives employment to the men at home, as there is a surplus population growing up who have no lands for farming, and who are able to find remunerative employment in boat-fishing, while they would not be able to get employment in other ways without leaving the country.

4. That the average crews of the boats, taking one with another, are about four men to each boat, clear of the stage and shore men. There is generally one stageman employed for every boat. Besides these, there are also coopers, cooks, and clerks, and sometimes inspectors employed, the number of whom vary, and it would be difficult to give an estimate of their number, although they are a good number.

5. That the boats, as a rule, catch about ten quintals of codfish before the mackerel come, and when the mackerel strike, the boats, taking small and large together, catch, on an average, one hundred barrels of mackerel each during the season, worth about \$1,000.

6. That nine-tenths of our mackerel are caught within one and one-half miles from the shore, and I may say the whole of them are caught within three miles of the shore. There may be an odd catch of mackerel got more than three miles from shore, but that does not often happen. The greater part of the codfish caught by hand-line are caught at from two to five miles from the shore, and all the codfish caught by the trawl or set lines are caught within three miles from the shore. There are no mackerel or codfish at all caught by the boats outside of the three-mile limit—that is, outside of a line drawn from points three miles off the headlands; while the herring are all caught close inshore, within two miles of the shore.

7. That I have fished about five years in the bay, in schooners. I fished in five British vessels in the bay, and in one American. I was master of four of the British vessels, and I was master of the American vessel after we cleared from Boston. An American had to clear her out of Boston.

8. That in the British vessels I have taken, on an average, three hundred barrels of mackerel each year.

9. That in the year 1870 I fished in the American schooner *Ida E. Davis*, of Harwich, in the United States, a schooner of about fifty tons burden, and carrying thirteen hands. In her we were out about two months, or about half or two-thirds of the mackerel season, and caught two hundred and thirty barrels of mackerel. Nine-tenths of these mackerel were caught within two miles of the shores of the Magdalen Islands and of this island. The Dominion cutters were round that year, and we risked the vessel and outfit in order to fish near the shore. The outfit belonged to me.

10. That it would not be worth while for vessels to fit out for the bay fishing if she could not fish within three miles of the shore. During the five years that I was fishing in schooners I never saw a schooner get a good catch more than three miles from the shore.

11. That I should put the average catch of the American schooners in the bay during the last ten years, at the least, at from three to four hundred barrels of mackerel each.

12. That the American schooners do harm to our boat-fishing, because, when they see the boats getting fish, they come in and drift down upon and lee-bow the boats, taking the fish away. They come inshore and drift down on the boats, and off the shore, throwing bait and carrying the fish off with them. The boats have often to get under way to avoid being run down by the schooners drifting. When the American fleet comes, fishermen look upon their arrival as the end of the good fishing. They break up the boat-fishing; they also do harm by cleaning their fish on the fishing grounds and throwing the offal overboard. Fish will not stay on the grounds when the offal has been thrown over.

13. That I have been engaged for seven years herring-fishing at the Magdalen Islands, Anticosti, Labrador, and Newfoundland, and the herring are all caught within one mile of the shore. That there is a large fleet of American fishing vessels getting herring at Magdalen Islands every year. They seine the herring and ship them off to the States and West Indies. At the Magdalen Islands and at Anticosti the Americans do a lot of trawling for halibut near the shore. At Labrador and Newfoundland the Americans have from one hundred and fifty to two hundred vessels fishing herring every year. These herring are all taken in the rivers and bays, and are sent to the States, to Sweden and to the West Indies. They use these herring for baiting their Georges and Bank fleets.

14. That we find that the mackerel strike in here from the northward and work up towards the south and along the shore, and towards the end of the season they work back. The Americans, and all experienced fishermen, know about the way the fish go, and are able to follow them up.

15. That the right of transshipment is a very valuable privilege to the Americans, as they save thereby about a fortnight each trip, which would amount to about a trip saved for the year. I have made a trip in the bay in eight days. They can also refit here as cheap or cheaper than they can at home, and in less time. By being able to transship they are able to watch the markets; they can send the fish in in time to get good prices when the prices are up. They can get the fish in quicker by steam than if they took them on themselves. The mackerel market is more fluctuating than any other market, and therefore it is a great advantage to be able to watch it. The fish also get worse by being kept in the hold of a vessel, as they have to be rehandled and repickled; they lose in weight, don't look so well, and they weigh less by being kept on board, and do not bring such good prices.

JOHN A. McLEOD.

Sworn to at Kensington, in Prince County, Prince Edward Island, this 14th day of July, A. D. 1877, before me.

THOMAS H. SIMS,

Justice of the Peace for Prince County.

No. 304.

I, JAMES McDONALD, of Chepstow, in King's County, Prince Edward Island, master-mariner, make oath and say :

1. That I have been engaged in fishing in one way or another ever since I was old enough to fish, in both boats and schooners; some of the schooners belonged to this Island, and the rest of them belonged to the United States. That I have been fishing in schooners for seventeen years, and have fished all round this island, from North Cape to East Point, and from Schimenac to St. Annes, on the Canada shore, and then to Seven Islands, the Labrador shore, up Bay Chaleur, Gaspé Bay, and all round the Magdalen Islands.

2. That, taking one year with another, since 1860, the average fleet of American fishermen in the bay would be fully five hundred sail; there were not so many last year, but this year they are coming down again. This year they are coming down seining. I was on board one this year, and they had seines for both deep water and for shallow.

3. That in the American schooners, in which I fished, we used to catch on an average five hundred barrels of mackerel each year. I have fished on both this shore and the American shore, and this is much better than the American fishing. That two-thirds of the fish caught in American and other schooners are caught within a mile and one-half from the shore; the best fishing is generally close into the shore. I was master of an American vessel about five years ago, and have sailed in Americans as fisherman at other times. I have been part of three seasons fishing on the American shores, and the other part fishing in the gulf, and there are more mackerel in the gulf round our shores than there are round the American shores.

4. That in the spring of the year vessels from all parts go to the Magdalen Islands to catch herring. I have been there often. It is the best herring fishery in the gulf. There are Americans, Nova Scotians, and others. There are, on an average, about two hundred sail of American vessels getting herring down there every year. The herring are all caught right close in on the beach. There are large catches made there. The Americans send a great part of these herrings to Sweden now, that being their market.

5. That in the fall of the year there are large numbers of vessels down in Newfoundland, at Boone Bay and other places, getting herring. There are about one hundred sail of American herring-fishermen which go down to the northward of Newfoundland every fall. In the winter about two hundred sail of Americans go down to Bay Fortune to get herring to freeze for the New York and other markets.

6. That the right of transshipment was of considerable advantage to the Americans, as they could send their fish on in the steamers, without having to go home in their own vessels with their fish, and they could in this way save much time. They save about four weeks in this way, which would be equal to a trip saved. They can also fit out here as cheap, or cheaper, than they can at home. The great advantage is, however, that it enables fishermen to watch and take advantage of the markets; they can find out what the prices are, and sell their fish "to arrive." In the schooners in which I fished, we several times trans-

shipped in Charlottetown, and sent the mackerel on by the Alhambra and other steamers. We never lost anything by sending the fish on in this way, and we made money by catching good prices.

JAMES McDONALD.

Sworn to at Souris, King's County, Prince Edward Island, this 21st day of July, A. D. 1877, before me, the words opposite my initials being first interlined or erased.

JAMES R. McLEAN, J. P.

No. 305.

I, DANIEL McCORMACK, of Black Bush, in Township Number Forty-five, in King's County, Prince Edward Island, fisherman, make oath and say:

1. That I have been engaged in fishing in schooners for ten or eleven years, in both Island and American schooners, and have fished all down this gulf, and for three years mackerel and cod fishing on the American coast, and I know the fishing-grounds well.

2. That the first five years I was down here in Americans we used to get from seven to nine hundred barrels of mackerel each season. I was in a small vessel. In 1871, or the year the cutters were around, I was down in the Annie Lewis, from Maine, and we only got one hundred and forty barrels; the reason we got so few was that the cutters kept us away from the shore, and the mackerel were on shore so we could not get good catches.

3. In the year 1874, I was down here part of the year on board the Clytie, and that season she got five hundred and forty barrels of mackerel. These fish were caught right in as close as we could get to the shore.

4. That I fished for some time on the American coast, and the seining there has destroyed the fishing. The seines both frighten the fish and kill large quantities of them. This year and last there have been no fish to be had there, they having been frightened away or destroyed by the seines. The seines take a large body of fish, both large and small, and they can only cure a small quantity of them, and the rest, including all the small fish, are thrown overboard and sink to the bottom. These fish rot at the bottom and poison the other fish or drive them away. I believe, and all practical fishermen believe, that this seining has been the cause of the breaking up and destroying of the American fisheries. Their fisheries are not now worth much for that reason. They are only now beginning to seine round here now. When we left their shores on the fourth of this month, the Americans were intending to come down here with their whole fleet, as they could not get any mackerel on their own grounds.

5. That the right to transship here is of great advantage to the Americans, as they save nearly three weeks, as a rule, by being able to land and transship here instead of having to take their fish home in their own vessels. This would be equal to another trip in the summer. They can also refit here cheaper than they can at home. I have known some of them come down here and fit out instead of doing so at home, on account of its being cheaper.

6. That, judging from my own experience of the two coasts, I am of opinion that it would not pay the island or Canadian vessels to fit out for fishing on the American shores.

DANIEL McCORMACK.

Sworn to at Souris, in King's County, Prince Edward Island, this 24th day of July, A. D. 1877, before me.

JAMES R. MACLEAN,
Justice of the Peace for King's County.

No. 306.

I, ANGUS B. McDONALD, of Souris, in King's County, in Prince Edward Island, fisherman and trader, make oath and say :

1. That I have been engaged in fishing out of the United States, off and on, for the last twelve years. I fished one summer in an island schooner, and traded one summer in an island vessel. The rest of the time I was in United States vessels. I have not much acquaintance with the boat-fishing. In the schooners I have fished around this island principally; also at the Magdalen Islands, and for herring at Newfoundland, and also up Bay Chaleur, and on the New Brunswick and Quebec coasts.

2. That there are large fleets of Americans, numbering from eight hundred to one thousand sail, engaged in the different cod fishing waters, and these all get their bait along the shores of the Dominion of Canada and Newfoundland, and without the bait got on these shores they could not go cod-fishing. They can only get bait on their own shores for a couple of months in the year, and that bait won't suit the cod-fishing on the Banks, as it consists of pogies, and they get spoilt before they get down to the Banks, so that now they must get herring for bait on our shores, or they cannot get codfish. From Gloucester, and other places in the United States, there are about four hundred sail in the winter season engaged in fishing herring at different parts of the Dominion and Newfoundland shores. They freeze these herring for bait and also for their city and country markets. From Bay of Islands and other parts of Newfoundland there are about fifty American vessels engaged in carrying herring in bulk. The vessels engaged in cod fishing use about four hundred barrels of herring each, during the run of a year, and these have all to come from our shores. These herring are all caught right in on the shore, all of them within a mile of the land. They are seined and netted. Large quantities of the herring are also sent away by the Americans from those shores to the Swedish and other foreign markets. I have been engaged myself for two winters in Boston, putting up Newfoundland herring for California and other States. At the present time and for years past the Bank cod fishing is entirely dependent on the herring fishery. I have fished a great deal on the Banks; at one time I fished on the Banks of Newfoundland and Nova Scotia for three years in succession, winter and summer, and as soon as our herring were done we had at once to start for the British Possessions for more, or our voyage would have been at an end.

3. That on an average each cod-fisherman takes 3,500 quintals of cod-fish in the year, or 350,000 pounds weight of pickled fish, all of which are caught with the herring, caught as mentioned in the last section. Even the codfish caught on the George's Banks are taken with herring caught on the British shores, as also the haddock caught for the Boston and other markets. I have been engaged at that business a great deal.

4. That I lived in both Boston and Gloucester, and fished out of both places, and boarded many of the American fishermen, and my own personal experience, and what I learnt from other practical fishermen with whom I came in contact, all pointed to just what I have said about the herring and cod fishing.

5. That many of the British fish are better than the American, such as the Strait salmon, and help to sell the American fish.

6. That I was engaged in mackerel fishing in American vessels for four years in the gulf; the first year I was out mackerel fishing was in 1865, on board the B. D. Haskins, of Gloucester, of about 60 tons, and carrying 15 men. We got within a few barrels of 800 barrels of mackerel in her that year. The greater part of these, I should say three-quarters at the least, were caught within two and three miles of the shore. Near the shore is always the best mackerel fishing.

7. That in 1866 I was out in the Helen M. Woodward, of Gloucester, of about 80 tons burden, and carrying about 18 hands. We caught 600 barrels of mackerel in her. These were all caught in close to shore; half of them were caught when we were sprung up to anchor at the Magdalen Islands, not having room to drift.

8. That in 1871 I was fishing in the gulf in the Adele, a Charlottetown vessel chartered by Americans. She was about 70 tons burden, and carried 16 hands. We took 700 barrels of mackerel in her, all of which were caught inshore; after the mackerel fishing was over she went to Newfoundland for the herring fishery.

9. That I was out part of the season of 1872 in the yacht Rambler, for two months and a half; she was an American, and carried nineteen hands. We caught four hundred and seventy barrels of mackerel in her. They were all caught right round the shore of this island and close inshore. We used to have to watch the cutters close that year.

10. That I was out in the River Dale, the fourth American vessel, in the gulf for about a month and one-half, after the 5th of September. We caught three hundred and twenty barrels of mackerel in her. She was about sixty-five tons burden and carried fifteen hands. Before coming in her that season I had made two trips to the Banks in the Yosemite, and in her we took over three hundred thousand pounds weight of codfish.

11. That when I was in the gulf there used to be a fleet of five hundred sail of American schooners fishing down here in the gulf, and nearly all their mackerel were caught close to the shore. It would not have been worth while to come down to the gulf at all for fish if they were not allowed to fish close to shore.

12. That the cutters interfered a great deal with the American fishing when I was out, as at sight of the cutter's smoke the schooners had to leave the fishing-grounds and clear out, sometimes losing the fish for a week on that account. The sailing-cutters were better than the steamers, as the smoke of the latter could be seen a long way off, and we could either salt our fish or throw them overboard before the cutters reached us.

13. That the American seiners are now seining down here already; they have left their own shore because the fish on their own coast have been destroyed or driven away by the seines. The seiners take a school of mackerel or other fish in their purse-seines and scoop as many of them on board as they can, and then the rest of the mackerel get smothered in the purse of the seine and sink, and the seiners have to let go their lines and empty the fish out, or lose their seines. These dead fish sink to the bottom and rot, and poison or drive away the other fish, whether mackerel or codfish. There are large quantities of herring killed in the same way. The opinion of fishermen, even the seiners themselves, is that the seining destroys the fishery.

14. The Americans clean their fish on board and throw the blood and gurry overboard, and that poisonous and kills the fish. That kills the

boat-fishing altogether; it does not hurt the schooners much, as they can run somewhere else for another school.

15. That the right of transshipment is a very valuable privilege to the Americans, as they can refit here as cheap or cheaper than they can at home, and they save on an average at least two weeks the trip by not having to run home, which would amount to another trip during the season. They also gain a great deal by being enabled to get their fish down quick to market, and being thereby able to watch and take advantage of good prices. When there is a large quantity of mackerel on board, the barrels get knocked about and get damaged so as to lose the pickle, and then the fish get rusted and spoiled so that they lose their quality and are sometimes entirely destroyed. The right of transshipment prevents this, as the fish can be taken out of the holds of the vessels and shipped away without getting damaged.

ANGUS B. McDONALD.

Sworn to at Souris, in King's County, in Prince Edward Island, this 24th day of July, A. D. 1877, before me, the words opposite my initials having been first interlined.

JAMES R. MACLEAN,
Justice of the Peace for King's County.

No. 307.

I, PETER McDONALD, of Souris, in King's County, in Prince Edward Island, master mariner, make oath and say:

1. That I have been four seasons fishing in British vessels, and four seasons in American schooners; always mackerel-fishing.

2. That I fished in the Mary Ellen, of this port, for part of one season, or about four weeks. We got about one hundred and eighty barrels of mackerel. She carried sixteen or seventeen hands.

3. That I fished about eight weeks one season in the Comus, of this port, and we got two hundred barrels of mackerel. She was about fifty tons burden, and carried fifteen hands.

4. That I fished in the Dominion, and was master of her one season, until August the 24th. We had then landed two hundred barrels of mackerel. She was sixty-nine tons burden and carried sixteen hands.

5. That I fished in the Florence Silver, of Charlottetown, the rest of the season that I was out in the Dominion. We got over two hundred barrels while I was in her. She was sixty tons.

6. That the first American vessel I fished in was the Abbie M. Heath. I fished about half the season in her. We got three hundred and twenty barrels of mackerel in her in that time. She was about sixty tons and carried sixteen hands.

7. That the next American schooner I fished in was the Oriental, a schooner of about fifty-five tons and carrying fourteen hands. We were out from September till the end of October in her in the same year that I was in the Abbie M. Heath, and in her in that time we caught three hundred and fifty barrels of mackerel.

8. That I sailed two seasons in the John Smith, and the first summer we got six hundred and fifty barrels, and the next season we got four hundred and fifty. We only made one trip the second season, and two the first, taking our fish home ourselves. She was about sixty tons and carried fifteen hands.

9. That I was out in 1871 in the Cadet, an American schooner, and got six hundred and fifty barrels. That was the year the cutters were round. Part of the time I was master of this schooner. We transhipped at Canso, and were in that way enabled to make three trips.

10. That three-quarters of all the fish caught by us in any of these vessels were caught within three miles of the shore. In the *Cadet* they were all caught close into shore; in fact, two of her trips were almost entirely caught while she was sprung up to anchor off Nail Pond and other places along the shore. The cutters disturbed us a great deal, otherwise we would have caught more fish. We had to watch the cutters close, and had continually to hoist sail and leave the grounds on their account.

11. That for my own part I would not fit out a vessel for fishing if I had not the privilege of fishing within three miles of the shore.

12. That the American schooners, to my own knowledge, interfere considerably with the boat-fishing, as when they see the boats getting fish they make up and lee-low them, taking away the fish. I have often seen that done, and have been in vessels myself that used to do that. That of course spoils the fishing for the boats.

13. That the Americans clean their mackerel on board their vessels and throw their gurry overboard. That spoils the boat-fishing, as the mackerel will not bite when there is any blood or gurry about. It does not hurt the schooners, as they work away from the gurry.

14. That the seining breaks up the schools of mackerel and frightens them off. That, in seining fish, large quantities of fish are taken that cannot be cured, or are too small for use, and these are lost entirely. I have seen large quantities of herring destroyed in this way. Seining is the destruction of the fisheries. This bay is now beginning to be full of seiners. Seven seiners have come into this harbor (*Souris*) this evening. They destroy the boat-fishing entirely.

15. That the right of transshipment is of considerable value to the Americans, as they can fit out here and in *Canso*, except for bait, cheaper and just as well as they can at home. They also save enough time in the summer when the fishing is good to make another trip. They can save about a fortnight each trip.

16. That there are considerable numbers of American vessels engaged every season at the *Magdalen Islands* seining herring. They get as many herring there, as a rule, as they want. These herring are salted or smoked, and numbers of them sent to the *West Indian* market.

17. That I have been on the *Newfoundland* coast when the American cod-fishermen came in to get bait and ice. They get large quantities of herring and ice there for the cod-fishing. At that season they could not get bait for the codfish anywhere except on the *Newfoundland* or *Nova Scotian* shores, so that the cod-fishing is dependent on the herring fishery. If the cod-fishermen could not get bait on the *British* coasts they could not get it anywhere else, and consequently could not get any codfish.

18. That in the spring of the year the codfish and mackerel come into the bay from the southward and strike the *Magdalens*, and then the mackerel go toward the *Bay Chaleur*, and then they strike up toward *Bank Bradley* and *North Cape*, and toward the middle of the summer they begin to work back again. The American fishermen understand the routes and customs of the fish, and know where to strike them at the different parts of the season. The mackerel season lasts from about the beginning of July till about the middle of October, here.

PETER McDONALD.

Sworn to at *Souris*, in *King's County*, in *Prince Edward Island*, this 24th day of July, A. D. 1877, before me, the words opposite my initials having been first interlined.

JAMES R. McLEAN,

Justice of the Peace for King's County.

I, JOHN MCINTYRE, of Fairfield, Township No. 47, in King's County, Prince Edward Island, master mariner, make oath and say:

1. That I have had experience in the mackerel-fishing for the last thirty-five years, and also in the cod-fishing, in both boats and schooners, in both island and American schooners, having fished all round the gulf fishing grounds, and also on the United States coasts, and I know the fishing grounds well.

2. That from East Point to Black Bush there are about one hundred boats, besides dories, engaged in fishing, that is in a distance of fifteen miles. The number is increasing fast. The number has doubled in the last year, and are still increasing; there are not yet enough boats for the crews.

3. The reason I give for the increase in the boat-fishing is, that fishing pays better than anything else, and it affords employment to people who can get no other employment. It is a ready-money business, and puts a lot of money into circulation.

4. That these boats take, on an average, crews of three men to a boat. The boats along here are small, as we have to beach the boats.

5. That the boats get as many herring on this shore as are required for bait through the season, and also for home use. They do not try for more than that. They might take quantities to export, if attention were given to the business. There are any quantities of them along the shore. These boats for the whole season, taking one season with another, take, on an average, one hundred quintals of codfish and hake to a boat; some years more and some years less. They also average fifty barrels of mackerel in the season to each boat. The herring are taken right inshore, within a couple of hundred yards of the shore; in the summer season they are taken as far as a mile and a half from the shore. The codfish are all taken at from half a mile to three miles from shore. All the mackerel here are taken inshore, within a mile of land.

6. That I was fishing round this island shores in the island schooners *Aeneas McIntyre* and in the *Emerald*. In the former of these I fished two years, and was master of her. We packed out the first year three hundred barrels of mackerel—we were only out six weeks that season. The second year we were also out six weeks, and got two hundred barrels. She was a schooner of sixty-two tons burden, and carried fourteen hands. In the *Emerald* we were out not more than five or six weeks, and we got about two hundred and sixty barrels of mackerel. These fish were all caught inshore, none of them more than three miles off.

7. That I fished for seven or eight seasons in American vessels, among which were the *Isabella*, Robert D. Rhodes, the P. H. Corliss, the *Horatio Babson*, Albert Clarence, B. S. Young, the *Lucinda*, and the *Native*.

8. That I was on board the *Isabella* the same year that I was in the *Emerald*, for ten days, and in that time we took two hundred and sixty barrels of mackerel. She carried thirteen men.

9. That I was in the Robert D. Rhodes for three weeks, and in that time we took two hundred and seventy barrels of mackerel. She was about sixty tons burden and carried thirteen hands.

10. That I was three weeks in the P. H. Corless, during which time we took two hundred and sixty barrels of mackerel. She was about fifty tons burden and carried twelve hands. She fished round this island, between here and North Cape.

11. That I was fishing in the Horatio Babson about four weeks, during which time we took two hundred barrels of mackerel. She was about seventy tons burden and carried fourteen or fifteen hands.

12. That in the Albert Clarence we fished about the Magdalen Islands. I was in her for five weeks. We took two hundred and eighty barrels of mackerel. She was a vessel of one hundred and ten tons burden and carried nineteen hands.

13. That I was out in 1873, the year of the big August storm, in the B. S. Young, for four weeks. We did very little in her, only taking one hundred barrels of mackerel. She was a vessel of eighty tons burden and carried seventeen hands.

14. That in the Lucinda and Native we fished principally on the American shore. We fished principally out ten or twelve miles from the coast and on the Banks. We did pretty well in the Native but not in the Lucinda.

15. That in all the vessels in which I fished in the gulf, we fished along the shore of the bend of this island, and at the Magdalens right inshore. From one to three miles off is the best fishing-ground.

16. That, including the whole gulf, the American fishing fleet for the past ten years has averaged good six hundred sail. I have counted over three hundred sail of them within sight at one time. They begin to come down here about the middle of June and stop till November, making two or three trips each season.

17. That the American fishermen, both cod and herring fishermen, clean their fish on the fishing-grounds and throw the offal overboard. That hurts the fish. It sickens and poisons the fish, and drives them away from the grounds.

18. That the Americans are now coming down on our shore seining. Some of them have already caught large quantities of fish by seining. Seining destroys the fisheries, as it scares the fish and kills a great many. That is what has injured the fishing on the American shores.

19. That, from what I know of both shores, it would not be worth while for Canadian or island fishermen to fit out for the American shores. It would not pay them to do so.

20. That the privilege of landing their fish, transshipping, and refitting is a great advantage to the Americans, as they lose so much time, I should say, on an average, three weeks each trip, by having to go home with their fish. They can also refit here as cheap as they can at home. The time saved during the season would be at least equal to a trip saved during the year. It is also a great advantage, as enabling them to watch and take advantage of the fish markets, which are very changeable.

21. That I believe the fish come into the gulf through Canso and by Cape North, and then strike for the Magdalen Islands, and from there they strike up towards the North Cape of this island, and towards the north shore generally. The American fishermen understand all about the routes of the fish and follow them up.

JOHN MCINTYRE.

Sworn to at Fairfield, in King's County, Prince Edward Island, this 26th day of July, A. D. 1877, before me, the words opposite my initials having been first interlined or erased.

JAMES McDONALD,
Justice of the Peace for Kings County.

No. 309.

I, MICHAEL McDONALD, of French River, in New London, in Queen's County, Prince Edward Island, fisherman, make oath and say :

1. That I have been engaged in fishing for about twenty-five years in both boats and schooners. I have been in island, New Brunswick, and American schooners, and I know the fishing grounds well, having fished up the Bay Chaleur, round this island, Cape Breton, the Magdalen Islands, and elsewhere.

2. That there are about one hundred and fifty boats fishing out of New London, the harbor and beach, and the number is increasing fast ; it is only about six years since the boats began to go in for fishing to any extent.

3. That the boats take on an average crews of four men each, besides the men employed at the stages, of whom there are a good number.

4. That the boats are now better built, better modeled, and better fitted out than they used to be ; people are paying more attention to the business than they did a few years ago ; they find that the fishing pays, and that is why people go in for it. There is a class of men now coming on who give their whole attention to fishing and attend to nothing else.

5. That I have been fishing in island vessels for the last eleven years. On board these vessels we used to get from two hundred and fifty to three hundred barrels of mackerel a trip, and we used to make on an average two trips a summer, making for the whole summer average catches of from five to six hundred barrels of mackerel.

6. That we caught about three-quarters of our fish close to shore, within three miles from land. The best fishing is from one mile and one-half to three miles from shore. We used to catch our fish up the Bay Chaleur, round the island coast, and Cape Breton.

7. That I sailed out of Portsmouth in New Hampshire, in the United States, for two years, one year on board the schooner Commonwealth, and the other year on board another schooner, both of which fished down in the bay. They did not do very well, as they did not get more than sixty barrels of mackerel each year. The reason for the smallness of their catch was that they were not well acquainted round the bay and fished too far from the land, catching most of their fish about nine miles off the shore. They would have done better in closer to the shore. At that time the cutters were about and the Americans were afraid of them ; some of their schooners were taken by the cutters those years.

8. That I was out one season in the schooner Water Lily, of Carlton, New Brunswick, and on board of her we did pretty well, getting over six hundred barrels of mackerel. She was of about seventy tons burden, and carried seventeen or eighteen hands. These six hundred barrels were nearly all caught around the island shore, mostly all at from one and one-half to three miles from shore.

9. That there have been large fleets of American vessels down in the gulf fishing every year ; I have seen as many as two hundred at one time in Port Hood, and that would be only a part of their fleet.

10. That the right to refit and transship the fish is a great advantage to the American fishermen down here in the gulf. They are able to land their fish, send them away in the steamers, and take in another outfit without losing much time. By being able to transship here and refit instead of going home with their fish, they save a fortnight each trip, and that right in the fishing season. That would amount to another trip in the course of the season as a general thing.

11. I do not think it would be worth while for the Americans to fit

out and come down here to fish unless they were allowed to fish within three miles of the shore.

MICHAEL McDONALD.

Sworn to at French River, in New London, Queen's County, Prince Edward Island, this 12th day of July, A. D. 1877, before me.

JOHN SHARPE.

Justice of the Peace.

No. 310.

I, THOMAS WALSH, of Souris, in King's County, Prince Edward Island, master ma iner, make oath and say :

1. That I have been connected with the fishing business, as a practical fisherman, since the year 1851; that is, twenty-six years, in both boats and vessels. I fished for seven years out of Gloucester, United States, in vessels; thirteen years I fished out of Rustico, in boats. I ran a fish-stage there and I am well acquainted with the fishing and the fishing grounds. I have fished down to Seven Islands, up the Bay Chaleur, at Anticosti, the Magdalen Islands, and in fact all over the gulf fishing grounds; and I fished for herring for two winters, in an American vessel, on the coast of Newfoundland.

2. That out of Rustico, New London, and round that side of the island, there is a vast increase and improvement in every way in the boat fishing. There are now twenty boats on that side engaged in fishing, to the one there was when I went there in 1862. The boats themselves have improved two hundred per cent.; they are better in every way. There is now a very large capital invested in the business there now, and it has all been put in during the past few years. These boats, taking large and small together, take crews of four men to each boat, besides stage-men and others employed on shore, who are a large number.

3. That these boats average about fifty quintals of codfish each, and about one hundred barrels of mackerel each, during the season, besides large quantities of herring. There are also plenty of hake in about six fathom of water, or about two miles from shore. The fish caught in Rustico are nearly all, in the spring, sent to Charlottetown and Summerside and the country while fresh, and there sold for good prices. Over there they catch as many herring as they want for mackerel bait, besides what they sell fresh and what they salt for the winter.

4. That the mackerel are nearly all caught from one to four miles from the shore. The greater part of the mackerel, fully two-thirds, are caught within three miles of the shore. The herring are all caught within a few hundred yards of the beach. In the spring the codfish are caught about two miles from land; as the season advances they go further off.

5. The reasons for the big increase in the boat fishing are, that people find there is money in the business, and consequently go into it. There is now also a large class of men whose number is constantly increasing, who have not got any land, and who depend entirely upon fishing. The boat fishing affords employment to these men, which they could not get in any other way. The business, in fact, keeps these men home; it is the support of their families.

6. That I was out for seven years in vessels belonging to the United States. We used to catch from three to eight hundred barrels of mackerel in the season; we would average good five hundred barrels during the season, taking one with another. These fish we caught nearly all together close to shore, within three miles of the land. The truth is,

there are not many caught more than three miles off, the good fishing is all near the shore. Here this week, the Americans are taking the mackerel with seines close to the shore. The mackerel are now schooling close in, and there are few or none more than three miles off. These seines do a great deal of harm, as they kill a great many small mackerel and other fish, which are thrown away, the seiners only taking the large mackerel. I saw twenty sail of Americans fishing in one bunch within about two miles of the land, on Thursday last, some of them seining. They were fishing between East Point and Saint Peters. The seining destroys the fisheries. The Americans are now scattered all down the coast; they are just now beginning to arrive. There will be a large fleet of them here this summer. There are already about forty sail of them along this shore, and they are coming all the time.

7. If the Americans were not allowed to fish in near the shore, they would not be able to get enough fish off shore to pay the expenses of the crew while out. They might get an odd catch, but that would be all, and they know this.

8. That when the cutters were about these coasts, they prevented the Americans fishing near the shore to a great extent, and consequently damaged their fishing. There were not enough cutters around to keep the vessels off altogether; they used to watch the cutters, and when the smoke was seen the schooners would clear out. I have known some of the Americans leave the bay and fish on their own shore, on account of the cutters.

9. That I fished one summer and four or five falls on the American shore, and there are more fish here than there are on the American shores, and the bay mackerel generally command a better price than the others. There is very poor hook-fishing on their shore; they can only seine.

10. That I have been four or five times down at the Magdalen Islands herring fishing, and there are often a hundred sail of Americans down there for herring. Their cod-fishermen get much of their bait at the Magdalenes, and they catch large quantities for the Swedish and other foreign markets. These herring are all seined close inshore. That is about the best paying branch of the fishing business.

11. That I was two winters at Fortune Bay, in Newfoundland, in American vessels, getting herring. The last winter I was there (1862) there were forty-two sail of Americans in Fortune Bay. In the fall they go up to the Bay of Islands. The last winter I was in Gloucester, there were over twenty sail from that port alone, down at Newfoundland after herring. In the winter time they freeze the herring and send them down to bait their George's fleet; and they also send them to their towns and cities to retail. That is a big business down there for the Americans.

12. The right of transshipment is a very great advantage. I look upon it as the greatest privilege the Americans have got. They can run in from the fishing grounds, land their fish and ship them away to market, without loss of time. They thus save, on an average, three weeks in the trip, and when they have to go home, it is generally right in the good fishing. It is also a great advantage to be able to refit here, as they can buy all their general stores here cheaper than at home.

The right of transshipment is also of great advantage to the Americans, as they are thereby enabled to keep themselves well posted up in the markets, and can send their fish in so as to catch good prices. This is a very great thing, as I have known a rise of three and four dollars a barrel in two days for mackerel. The mackerel market is a very variable one.

13. The mackerel, I believe, in the spring and first part of the summer strike in to the northward first, and then work up to the westward along by Bay Chaleur, the North Cape, and the bend of this island. The Americans and all skillful fishermen know about the habits of the fish, and follow them up.

THOMAS WALSH.

Sworn to at Souris, in King's County, Prince Edward Island, this 21st day of July, A. D. 1877, before me,

JAMES McDONALD,
Justice of Peace for King's County, Prince Edward Island.

No. 311.

I, DOMINICK DOVIANT, of North Rustico, in Prince Edward Island, farmer and fisherman, make oath and say:

1. That I have been engaged in fishing for over twenty years at North Rustico aforesaid, both in boats and schooners, but principally in boats, and am thoroughly acquainted with the fishing business and best grounds for catching fish.

2. That there are about eighty boats used in fishing out of North Rustico, with an average of from five to six men in each boat, besides one man to each boat engaged in attending to the stages and fish on shore.

3. That within the past ten years the number of boats has more than doubled, and are very much better in build and outfit, as well as larger.

4. That this increase is owing to more attention being paid to fishing now than was formerly—men now using it entirely as a means of livelihood, whereas some years ago they combined fishing with some other occupation.

5. That the average catch of each boat is, taken one year with another, from one hundred and forty to one hundred and fifty barrels of mackerel, and about fifteen quintals of codfish—the cod-fishing being only followed about one month before and after the mackerel.

6. That a small schooner of fifteen tons will catch about one hundred and eighty quintals of cod in a season.

7. That on this island there are very few schooners employed in either the cod or mackerel business, the American vessels principally doing that kind of fishing.

8. That the American fishing fleet around this island generally numbers about five hundred schooners, averaging a catch of between four and five hundred barrels of mackerel each in a season.

9. That the Americans generally fish between two and two and one-half miles from the shore, sometimes nearer. The great bulk of their mackerel being caught inside of three miles from the shore.

10. That invariably the American fishermen spoil the boat-fishing when they come near them, lee-bowing the boats and drawing the fish away, and after a catch throwing the offal overboard and sickening the fish so that none can be caught in the same place for a day or two after.

11. That the right of transshipment is valuable to the Americans, both on account of the time saved between landing the fish here and taking them home, and from the cheapness of fitting out here and the better opportunities of "catching" the market.

his
DOMINICK + DOVIANT.
mark

Sworn to at North Rustico, in Queen's County, Prince Edward Island, this 10th day of July, A. D. 1877, before me, having first been read over and fully explained to the said Dominick Doyiant.

WM. S. McNEILL,
J. P., Queen's County.

No. 312.

I, ROBERT CARSON, of North Rustico, in Queen's County, in Prince Edward Island, fisherman, make oath and say :

1. That I have been engaged in fishing in Rustico for about six years, and that my experience has been mostly in boat-fishing, and I am acquainted with the fishing-grounds on this side of the island.

2. That there are about eighty boats fishing out of North Rustico, averaging about five hands to each boat as crew, besides the men employed on shore at the stages curing the fish, the men on shore being about one man for each boat, so that each boat gives employment to about six men.

3. The boats catch, on an average, about one hundred barrels of mackerel to each boat, besides hake and codfish. About two miles from the shore is the best part for mackerel fishing. They are sometimes caught farther off.

4. The boats have doubled in number in the last five years. The boats themselves are much better than they were, both in hull and rigging, and they are still increasing in number and improving in outfit and in every respect.

5. That there is a class of men about here who are entirely devoted to fishing and go in for nothing else. The reason people go in for fishing about here is that it is found to pay, and it affords employment to men who otherwise would be unemployed.

6. There are large numbers of Americans fishing off this coast every year. They often fish close inshore. Fishermen look upon the coming of the Americans as an injury to the fishing; they draw off the fish. They come inshore, throw bait, and drift off, taking the fish with them. Their coming is looked upon as an injury to the boat-fishing. They dress their fish on the fishing-ground and throw the offal overboard, thus causing great injury to the fishing. Fishermen never want to see them around.

7. The right of transshipment is invaluable to the Americans, as they are thereby enabled to come in and refit, and ship away their fish without loss of time, so that they are nearly able to make another trip while they would have been away carrying their fish home. They are also enabled to take advantage of the markets; if there is a good price for mackerel, the schooners can come in, land their fish, and ship them away without loss of time.

8. The Americans generally fish at from two to three miles from the shore, although at odd times they fish farther off.

9. The fish generally come down from the Magdalen Islands to our shore, and the Americans follow the fish.

ROBERT CARSON.

Sworn to at North Rustico, Queen's County, Prince Edward Island, this 10th day of July, A. D. 1877, before me.

WM. S. McNEILL,
J. P., Queen's County.

No. 313.

I, CHARLES MCEACHAN, of Township Number Forty-six, North Side, justice of the peace, and manager of fishing stage, make oath and say:

1. That I have been engaged in boat-fishing on the north side of this part of the island for the last twenty-four years, and am well acquainted with the fishing on that side.

2. That from the North Lake to Saint Margarets, on the same side, a distance of fourteen miles, there are, this year, at least sixty boats engaged in fishing. The boats are increasing in number and improving. The number of boats has trebled in the last three years. The reasons that I would give are that there is now good encouragement given to men to go in for fishing; the business pays now; and many men who formerly went to the States to fish on the American shores found they could not do so well there and returned here, and many of them have taken to boat-fishing. The fishing employs a great many people who could not get employment, and could scarcely exist in any other way. The fishery is a ready-money business, and puts a lot of cash in circulation. The boat-fishing for the past two years, when the Americans were not so numerous on the shore as they were before and as they were this year, has been better than it was when they were around.

3. That the boats, in the distance mentioned above, take from three to five hands each as crew; they would average four. That does not include the men who are employed on shore, who are a considerable number. These boats get herring enough for mackerel bait and for home use every year; if attention were directed to that branch, there could be as many herring taken as could be required. The average catches of the boats are at least sixty quintals to the boat; some boats double that number and others do not get so many. A great many more codfish might be taken, only the owners of a large number of the boats are farmers as well as fishermen, and only fish when they have time from their farming, and that lowers the average all round. The boats also take at least thirty-five barrels of mackerel for the season, and the average is greatly lessened by the same reason given for the codfish, that the men farm as well as fish.

4. That nearly all these fish are taken at from one to three miles of the shore; along the shore is the best fishing ground.

5. That there are nearly every season over five hundred sail of American fishing schooners fishing in the gulf. We can see them passing along by where we are fishing. I have some days seen two hundred of them passing by in a day. These vessels fish very much close in to the shore.

6. That the Americans do a lot of harm to our boat-fishing by coming in shore and lee-bowing the boats, and taking the fish away from the latter. They come in, throw bait near the shore, and drift off, drawing the mackerel after them. We always look upon the coming of the Americans as the end of the good fishing. They clean large quantities of fish on the grounds and throw the offal overboard; this gluts and poisons the fish so that they won't bite, and our boat-fishing is thereby spoiled.

7. The year the cutters were about they kept the American schooners off to a great extent, and we were very sorry when the cutters were taken away.

8. That the American seiners are coming round here this year: one of them took a hundred barrels at one throw of the seine, off my farm shore the other day, and they kill more fish than they use. The fish

that are killed in this way are thrown out and rot in the water, and that goes still further to ruin the fishing. Fishermen believe, by what they see, that this seining will destroy the fishing in a short time.

CHAS. McEACHAN.

Sworn to at Souris, in Kings County, in Prince Edward Island, this 24th day of July, A. D. 1877, before me.

JAMES R. MACLEAN,
Justice of the Peace for Kings County.

No. 314.

I, DANIEL C. McLEAN, of Black Bush, Township Number Forty-five, in King's County, in Prince Edward Island, fisherman, make oath and say:

1. That I have been engaged in fishing in both boats and schooners; in both island and American schooners. I have fished in both in the gulf and on the American shore.

2. That this year there are more boats in the fishing on our side than there were ever before, and the number is increasing very fast. The reason for the increase is that the fish are becoming more valuable, and it is a better business than anything else to engage in.

3. The boats along our side take crews, on an average, of three men each. These boats get in the spring all the herring they want for bait in the other fisheries during the season. These boats last year averaged fully forty quintal of codfish each, but they were only at codfish for three weeks last season. They also get large quantities of mackerel. This year promises to be a good year. I have not seen as many mackerel in the bay for the last twenty years as there are now.

4. That three-quarters of the fish caught by the boats are taken within three miles of the land. Along the shore is the best fishing. In the fall of the year they are farther off.

5. That I was out one trip in the island schooner E. Hodgson. We did very well in her, but I forget the exact amount. The fish were all taken within three miles of the shore.

6. That I was out one trip one season, at the end of the season, in the Queen of the Cape, an American schooner. We got about one hundred and eighty barrels in her. We were only out in her a short time.

7. That I was out part of one season, in fact for a trip of ten days, in the Ida D. Spoford, in the gulf. We got over two hundred barrels in that time. She carried fourteen hands.

8. That I fished all the early part of one season in the Queen of the Cape on the American shore. The fish there were small and not worth catching. The fishing was so bad that we left and came down to the gulf, where we did well.

9. That the American schooners are now going in for seining here, and that destroys the fishing on the coast. It scares and kills the fish. They purse the mackerel up in the seines and the fish smother there, and quantities of them are destroyed in this way that cannot be cured, and are thrown into the water again. This is the ruin of the fisheries. There are a lot of seiners down here now.

DANIEL C. McLEAN.

Sworn to at Souris, in King's County, Prince Edward Island, this 25th day of July, A. D. 1877, before me.

JAMES R. McLEAN,
Justice of the Peace for King's County.

No. 315.

I, DANIEL MCINTYRE, of Black Bush, Township Number Forty four, in King's County, Prince Edward Island, master mariner, make oath and say :

1. That I have been engaged in fishing since 1859 ; in vessels all the time except two years. Five years I fished in American schooners, and the rest of the time in island vessels. I fished all around the Gulf of Saint Lawrence, in the herring-fishery, on the Newfoundland shores, and one fall on the American coast mackerel-fishing.

2. That there are now about seventy-five boats engaged in fishing between this and the East Point, a distance of about eighteen miles. The number has increased very much this year ; last year there were about forty or fifty boats. These boats take crews of from three to five men each. They get a large quantity of both codfish and mackerel, and what herring they want for bait.

3. That the mackerel are caught by the boats at within two and two and one-half miles from the shore ; the codfish are farther off.

4. That I have fished in schooners belonging to this island for twelve years. In the P. Æneas McIntyre I fished one season after August, and we caught three hundred and forty barrels of mackerel. She carried sixteen hands. The next year I was in her for four weeks, when we got one hundred and sixty barrels. The same year I was in the Jane for five days, when we got one hundred and ten barrels. The year following I was in the Mary Ellen for about six weeks ; we took one hundred and seventy barrels ; she carried sixteen hands. After that I was in the Amateur for about six weeks in one season ; we took a hundred and thirty barrels ; that was a bad year. After her I was in the Wilhe, and we took one hundred and seventy barrels. The next year I was one of the crew of the Dominion ; in her we brought in about four hundred and fifty barrels of mackerel. She was a schooner of sixty-four tons burden. The year following I was in the Tyro, and we got four hundred and seven barrels. She was forty-one tons burden, and carried fourteen hands ; that was six years ago. After that I was in the Florence Silver, and we took four hundred and twenty barrels of mackerel. She was sixty-eight tons burden, and carried sixteen hands. After her I fished in the Lion ; in her we got four hundred and thirty barrels of mackerel. She was thirty-eight tons burden, and carried fifteen hands.

5. That these fish, caught in the island vessels, were caught along the island shore, the Bay Chaleur, at the Magdalens, and in the gulf generally. The greater part of the fish were taken within three miles of the shore. Along shore is the best fishing ground.

6. That I fished one season in the Alfaretta, an American vessel—we took two hundred and fifty barrels of mackerel ; that was in 1859. After her, I was in the Daniel McPhee, another American, and we got one hundred and ninety barrels. After her, I was in the Daniel Webster for one trip of five weeks ; we caught two hundred and fifty barrels of mackerel ; she was seventy-four tons, and carried fifteen hands. After her, I was in the Nanadaha one season, and we got two hundred and fifty barrels ; she carried fifteen hands. After her, I was in the Grape Shot for the season, when we took in eight hundred and forty barrels of mackerel ; she was about sixty-five tons, and carried sixteen hands ; she made three trips, landing twice in the Gut of Canso.

7. The most of these mackerel were caught within three miles of the shore, a good many up the Bay Chaleur and at the Magdalens. I do

not believe that it would be worth while to fit out for fishing in the gulf if fishermen were not allowed to fish near the shore.

8. That one fall I fished in the Isaac Walter, on the American coast, but we did nothing.

9. That the Americans hurt the shore fishing; as they come in, heave a lot of bait, and drift off, dragging the fish after them. They also clean their fish on the grounds, and throw the gurry overboard, and that injures the fishing; that frightens the fish away from the grounds, and they won't bite while the gurry is about; it sickens the fish and poisons them.

10. That the right to land here, transship, and refit is a great advantage to the American schooners, as they can save about two weeks and a half each trip right in the heart of the season, which I should think equal to a trip saved in the summer. They refit here just as cheap as they can at home.

11. That I was two falls down at Boone Bay and Bay of Islands herring fishing; the fish are netted there. The Americans go down there for herring, which they send out to the southward. The Fortune Bay herring they freeze for bait and for market. The bulk of the bait for their cod-fishing vessels comes from the shores of these provinces; in fact, their cod fishery is dependent on the herring fisheries of these provinces.

12. That the Americans are now beginning to seine in this bay, and that destroys the fishing. The seiners frighten the fish and break up the schools, so that line-fishermen cannot get fish. Large quantities of fish are also killed by the seines. Large quantities of herring are taken in the seines, and these are killed and all thrown away. Besides herring, they kill large quantities of other fish and mackerel, which cannot be cured and are thrown away. These fish, sinking to the bottom, rot there, and further injure the fishing. There are, I should say, fifteen or twenty seiners down here already, and they are only just beginning to arrive.

13. That there is a large fleet of American fishing-vessels down here every year. Last year there were not more than one hundred sail; this year a large fleet is reported to be coming.

14. That the mackerel, in the spring, come into the gulf from the southward, and work from the south towards the north. Skillful fishermen know about the courses the fish take and follow them.

DANIEL MCINTYRE.

Sworn to at Black Bush, in King's County, in Prince Edward Island, this 26th day of July, A. D. 1877, before me.

JAMES MACDONALD,

Justice of the Peace for King's County.

No. 316.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, THOMAS MILNER, of Parker's Cove, in the county of Annapolis, fisherman, make oath and say as follows:

1. I have been acquainted with the fisheries on the shore of this county for forty years. I have taken pollack, hake, and haddock, and large quantities of herring; about 2,000 barrels of herring being taken in this vicinity every year.

2. Twenty-five American vessels come along the coast of this county

for the same kinds of fish as we take. They get their bate inshore within a half a mile of the shore by setting nets in which they take herring. With this bait they fish off to twenty miles and take codfish, haddock, hake, and pollack, and early in the spring large quantities of halibut by trawling, which is injurious to our fisheries.

3. These American vessels average from sixty to sixty-five tons registered tonnage, and carry from eight to fifteen men each. They take codfish, haddock, hake, pollack, halibut, and herring, and fish all along the coast of this county. They take from four to twelve hundred quintals each. They take about 100 barrels of herring to each vessel for bait.

4. These Americans get all their herring within half a mile of the shore for bait, and without this bait they could not carry on the fishing in this vicinity. The most of them bring their ice with them in which they preserve bait.

5. These American vessels come here in April to trawl halibut, and remain on our coast until August, included.

6. The Americans which come on our coast bring their own supplies. They obtain bait which enables them to carry on the fishing in this vicinity. They have to get a fresh supply of bait every week.

7. If the Americans were excluded from our coast it would be a great benefit to our fishermen, as their supply of bait would not be interfered with, and fish would be more plentiful.

8. The right of fishing on the coasts of the United States is of no benefit to the fishermen of this county, as I have never known or heard of any of them fishing there while large numbers of Americans come on to our coast to fish.

THOMAS MILNER.

Sworn to at Parker's Cove, in the county of Annapolis, this 4th day of September, A. D. 1877, before me.

JOHN ANTHONY,

Justice of the Peace, acting in and for the County of Annapolis.

No. 317.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, JAMES W. COUSINS, of Digby Town, in the county of Digby, fisherman, make oath and say as follows :

1. I have been engaged in fishing for eighteen years now past, and am still so engaged. I am at present in charge of a vessel of thirty-two tons register, and manned by ten men, and can take five hundred quintals of fish in one cargo.

2. We catch bait in Annapolis Basin and in the Bay of Fundy, all inshore, within three miles of the shore. American vessels get bait upon the same grounds, by setting their nets and by buying; mostly by setting nets.

3. We take codfish, haddock, hake, and pollack, halibut and herring; the latter for bait. We take this fish from close inshore to off fifteen miles. We get the most within five miles of the shore, and I have this year, up to this date, taken in my vessel nine hundred quintals.

4. The Americans take fish the same as we do on the same grounds. Twenty sail at least of American vessels fish on the same grounds as we do.

5. These American vessels are from ten to thirty tons each, and carry

from five to ten hands; the average would be from seven to eight men to each vessel. They are fitted out to take on an average at least three hundred quintals of fish, and more often make full fares than fall short.

6. These American vessels are a great injury to us, as they catch the bait, carry off the fish, and throw their gurry overboard on the grounds. By gurry, I mean the offal of the fish.

7. American purse-seiners come into this harbor, on Annapolis Basin; this harbor is on Annapolis Basin. I have seen two American purse-seiners in this harbor this summer.

JAMES W. COUSINS.

Sworn to at Digby, in the county of Digby, this 3d day of September, A. D., 1877, before me.

JOHN DAKIN, J. P.

No. 318.

I, DAVID SWAIN, of Port Clyde, in the county of Shelburne, trader, make oath and say as follows:

1. I have been engaged and am acquainted with the fisheries on the coasts of Nova Scotia, New Brunswick, Quebec, and Prince Edward Island, for over fifty years, and have been engaged in catching, curing, and trading in fish in this province and on Labrador.

2. I have dealt chiefly in codfish and mackerel.

3. The American schooners which run into this harbor average about sixty tons and carry about twelve men each. They take codfish, halibut, and mackerel.

4. These American vessels fish for cod, halibut, and mackerel; for mackerel principally in the North Bay. Fifteen hundred quintals is a small average take for these vessels. The value of their cargo is about nine thousand dollars.

5. I cannot say how much they take within three miles of the shore except mackerel, which is mostly all taken within three miles of the land.

6. These American vessels fish along our coast from May till November, inclusive, and some all winter.

7. In this vicinity from twenty to thirty American vessels come and go yearly in order to procure men, bait, and small stores.

8. It is of very great value to Americans to come into our ports to land, dry nets, cure and repack fish, transship cargo, obtain bait and supplies, and is worth 25 per cent. of their whole catch—including the herring and mackerel fisheries in the North Bay is worth from 70 to 80 per cent.

9. It would be a great benefit to our fishermen if they could carry on the inshore fisheries without local competition on the part of the Americans. This summer inshore boat-fishermen have complained to me of Americans trawling on their grounds. If the Americans were excluded, it would be worth forty per cent. to our fishermen on their present catch.

10. The privileges ceded to the Americans by the Treaty of Washington is worth twenty-five per cent. of their entire catch.

11. The privilege of fishing in American waters I consider of no value to Canadian fishermen, as our own grounds are better and nearer.

12. From 1854 to 1864 I never knew nor heard of any Nova Scotian vessels fishing in American waters.

DAVID SWAIN.

Sworn to at Clyde, in the county of Shelburne, this 28th day of August, A. D., 1877, before me.

WM. HY. COFFIN, J. P.

No. 319.

In the matter of the Fisheries Commission at Halifax, under the Treaty of Washington.

I, ROBERT HENRY BOLMAN, of Sand Point, in the county of Shelburne, make oath and say as follows:

1. I have been engaged in the fisheries for twelve years. I have bought codfish from American vessels and sold them herring for bait. I am well acquainted with the inshore fisheries in Shelburne County.

2. During the last three years I have supplied American fishermen with bait and ice—about 100 during the three years now passed. Last year I have given orders to American vessels to get 175 tons; the year before 275 tons. The American vessels take from 15 to 40 barrels of bait to each vessel. Each American vessel takes from three to five tons at each baiting. They bring a considerable quantity of their ice from home, and if the weather is bad at home and they have a long passage, it is more profitable to buy it here.

3. The American vessels which are baited here fish on the Western Bank, on LaHave, Roseway, and Brown's Banks, and must have fresh bait if they trawl, which the greater part of them do. These vessels take fish along the coast in this county within three miles of the shore, during the last two years in particular. Last summer and this, American schooners have fished inshore—within two miles of the shore. These vessels bring in here cusk and small fish, which enables them to procure funds for ice and bait instead of drawing on their owners, and they are enabled to go home with a cargo of large and valuable fish. Formerly the Americans threw their cusk and small fish overboard. The American vessels which run in here for bait require to be baited three or four times during the trip, and unless they got this bait in Canadian ports they could not carry on successfully the fishing on the Banks along this coast. Last year and this the number of small American vessels have increased in our inshore waters. These American vessels carry about twelve men each, and go home with from four to six hundred quintals of fish each.

ROBERT HENRY BOLMAN.

Sworn to at Sand Point, in the county of Shelburne, this — day of August, A. D. 1877, before me.

JOHN PURNEY, J. P.

APPENDIX H.

OFFICIAL CORRESPONDENCE FROM THE YEARS 1827 TO 1872, INCLUSIVE, SHOWING THE ENCROACHMENTS OF UNITED STATES FISHERMEN IN BRITISH NORTH AMERICAN WATERS SINCE THE CONCLUSION OF THE CONVENTION OF 1818.

No. 1.

[Extract of dispatch from the Right Hon. Earl of Dalhousie to the Right Hon. Earl Bathurst, dated Quebec, June 8, 1827.]

"The nomination of the superintendent of the fisheries in Gaspé, obliges me to ask of your lordship some more accurate information on that subject than I have been able to obtain here, even from the officers of the navy whom I have had any opportunity of conversing with upon it, and who have been employed in cruising in the Gulf of Saint Lawrence, for the protection of our fisheries.

"Your lordship knows that repeated complaints have been made by those occupied in the fisheries along the shores of Gaspé and Bay Chaleurs, that they have been for the last ten years wholly overpowered by the American fishing-vessels which resort there annually; an average of 1,500 sail pass at Canso into the Gulf of Saint Lawrence, spreading early in the season along the Labrador shore, high up in the salmon fisheries, near the rivers of the Mingan and Seven Islands, then to the Magdalen Islands and Cape Breton shore, and latterly coming down upon the Gaspé shore, Orphan Bank, and north shore of Prince Edward Island, completely driving the British fishermen out of their way."

No. 2.

HER MAJESTY'S SHIP ALLIGATOR,
Halifax, November 9, 1827.

SIR: In compliance with your orders, I have the honor to inform you that the night after I left this place I anchored off Canso light-house, and the next day visited the light-house and the Fox Islands. The Fox Islands I found had been perfectly quiet for some time, and the broils which had taken place seem to have been very much exaggerated, and only to have been such as must always occur in a place where 3,000 men (for that, I understand, is the number congregated there in the fishing season) of different nations, English, Irish, and French, meet together without any legal authority to control them. The priest who has lately been sent there seems to have great influence, and will, I have no doubt, be the means of preserving tranquillity. I met the Chebucto as I was coming away, and Captain Potter informed me that they had been perfectly quiet since he had been there. The light-house, which I visited the same day, appears to be kept in perfect order, and very clean, by

the persons who are entrusted with it; but the light is very bad, and cannot, I should think, be seen far enough, as it consists only of lamps with eight common cotton wicks in each, without any reflectors. There is no register kept at the light-house of the American fishing-vessels which enter the Gulf of Saint Lawrence that can be depended upon, as many pass in the night, and the greater number of those which go to the Labrador go round Cape North; but from the best accounts which I could get there have been from 1,600 to 1,700 in the gulf this year, with crews averaging from seven to ten men. They nearly monopolize the Labrador coast, and have the greater part of the Bradelle and Orphan Banks. From Causo I proceeded round Cape Breton, the winds being always westerly, to the Magdalen Islands, calling at Sydney on the way. At the Magdalen Islands I heard great complaints that the French and American fishermen had taken all the best fish away this year, very much to the prejudice of the revenue, although to the advantage of the lawless inhabitants, who thereby receive French and American goods without paying any duty, as the subcollector has no power of enforcing his demands, which are openly set at defiance, and his own life threatened, whenever he attempts to execute his duty. The civil law in these islands is in perfect abeyance, as there is only one magistrate whose authority is doubtful, as he has, since receiving his warrant, changed his religion to the Roman Catholic, and has been suspended. The only remedy that I can see for these evils would be the having a small armed vessel frequently to visit the islands during the summer. Nearly 400 Americans have dried their fish on the Magdalen Islands this year, paying 10 per cent. to the inhabitants, chiefly in goods, without duty; and an American man-of-war schooner anchored in the roadstead for two or three days, for the purpose of inspecting their fishermen. I learnt here that the fishing season is entirely over on the 28th September, that being the day to which all the fishermen are hired, and none continuing above a week after it. I therefore intended to have gone to Pictou from the islands, but meeting with strong contrary winds and currents, I went to Antigonish, where the court was sitting, and from thence to Port Hood, from whence, after remaining a few days, and finding the season was too far advanced for it to be useful or prudent for me to remain longer in the gulf, I went to Pictou for letters and came direct thence to this place.

I have, &c.,

W. P. CANNING.

Rear-Admiral Sir C. OGLE, *Bart.*

No. 3.

TO THE KING'S MOST EXCELLENT MAJESTY.

The joint address of Your Majesty's Council and House of Assembly for the Provinces of Nova Scotia, now in General Assembly convened.

May it please Your Majesty:

We, Your Majesty's Council and House of Assembly of this, Your Majesty's loyal Province of Nova Scotia, now convened in general assembly, beg leave most respectfully to submit to the consideration of

Your Majesty's Government the great importance of preserving unimpaired the rights and privileges belonging to Your Majesty's subjects engaged in the fisheries upon the coasts of this province, and also to prevent foreigners from interfering or participating in such rights and privileges. That by the statute of the Imperial Parliament passed in the 59th year of the reign of our late most Gracious Sovereign George the Third, power was given to His Majesty, by and with the advice of his Privy Council, by an order or orders in council, to be from time to time made for that purpose, to make such regulations and give such directions as may be necessary to prevent fishermen of the United States from taking, drying, or curing fish in the bays or harbors of His Majesty's dominions in America, or in any other manner whatever abusing the privileges by the treaty and act of the Imperial Parliament reserved to them.

That as no such order in council has passed, it may be presumed that it may be extremely difficult for Your Majesty's council to submit such order to Your Majesty's consideration as may be best adapted to meet the exigencies of the case in all Your Majesty's dominions in America. That Your Majesty's subjects in this province have experienced great inconvenience and loss in this branch of industry by foreign interference, and the revenue is injuriously affected by the illicit trade carried on by vessels ostensibly engaged in the fisheries, who hover on the coast, and, in many cases, combine trade with the fisheries; a traffic prejudicial alike to the revenue, the importation of British manufactures, the honest trader, and the political and moral sentiments, habits, and manners of the people.

To prevent the continuance and extension of such evils the legislature of this Your Majesty's loyal province of Nova Scotia have embodied in an act such regulations and restrictions as they conceive will most effectually prevent such interference in the fishery and the illicit trade connected with it, and thereby secure the rights and privileges recognized by the treaty, and intended to be guarded by the statute. This course has become the more necessary as the act of the Imperial Parliament contemplates the further regulation of the fisheries by some such means, of which all persons concerned will be bound to take notice. Many of the irregularities complained of may have taken place from the want of such regulations. There is no intention of intimating that the Government of the United States approve of or sanction any interference with a branch of the fishery which they have expressly relinquished.

We therefore most earnestly but respectfully pray that Your Majesty will be pleased to give your royal assent to the said act, and, by an order of Your Majesty in council, declare the said act to contain the rules, regulations, and restrictions respecting the fisheries for the coasts, bays, creeks, and harbors of Nova Scotia.

In council, 22d February, 1836.

BRENTON HALLIBURTON,
President of His Majesty's Council.

In the house of assembly, 24th February, 1836.

S. G. W. ARCHIBALD,
Speaker of the Assembly.

No. 4.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble address of the legislative council and house of assembly of
Nova Scotia in Provincial Parliament.

May it please Your Majesty:

The council and house of assembly of your loyal Province of Nova Scotia humbly approach Your Majesty with their complaints against the citizens of the United States of America, who violate with impunity the provisions of treaties existing between the two nations, to the injury and detriment of the inhabitants of this colony.

Your council and assembly humbly refer Your Majesty to the convention made in the year 1818, whereby the American Government obtained for the citizens of that country privileges not ceded to them by the treaty of 1783, and under the effect of which these provinces have languished ever since, and the operation of which is fully explained in the annexed report and documents.

The commercial eagerness which characterizes the people of the United States of America, aided by the spirit of their government, has for years caused them to transgress the bounds defined by treaty, and exercise rights over the fisheries of these colonies not ceded even by the unfortunate convention alluded to. Their fishermen, in violation of that convention, enter the gulfs, bays, harbors, creeks, narrow seas, and waters of these colonies; they land on the shores of Prince Edward and the Magdalen Islands, and by force, and aided by superior numbers, drive British fishermen from Banks and fishing grounds solely and exclusively British, and by carrying on an unlawful intercourse with needy and unprotected fishermen, induce them to violate all the laws of trade, and introduce feelings and opinions destructive to the principles of a well-intentioned but secluded and uninformed portion of Your Majesty's subjects, thus demoralizing and contaminating the ignorant but loyal inhabitants along our extensive shores, and most essentially injuring the manufacturers of the United Kingdom, the merchants and ship-owners of the empire, and the revenue of this and the other provinces.

Your council and assembly solicit your royal attention to the address of this province to His late Majesty George the Fourth (hereto annexed) as prophetic of the effects of the Convention of 1818, and urge Your Majesty to mark the fulfillment of its anticipations in the report of 1837. Aware of the solicitude of Your Majesty for the happiness and welfare of your faithful North American subjects, your council and assembly humbly pray encouragement and protection of their commerce and fishery, and that Your Majesty will order small armed vessels to cruise on the coasts of these colonies to prevent such encroachments, or direct two steamboats to be added to the fleet on this station, to resort to the various fishing-grounds during the season. And the legislature will cause depots of fuel to be provided for them at the provincial expense. Confident that Your Majesty, considering the foregoing facts, and marking the character of the times, will adhere to the enlightened policy which has distinguished your illustrious house, and extend to your faithful and loyal subjects of Nova Scotia that protection of their interests which they ask as Britons, and which may prove consistent with the claims of other portions of Your Majesty's extensive dominions.

In council, 22d March, 1838.

J. B. ROBIE,
President of the Legislative Council,

In the house of assembly, 20th March, 1838.

S. G. W. ARCHIBALD,
Speaker of the Assembly,

No. 5.

Proceedings of the general assembly of Nova Scotia upon the convention concluded between His Majesty and the United States of America, published by order of both houses in general session, at Halifax, in April, 1819.

HALIFAX, 88 :

Robert Molleson Cutler, of Guysborough, in the county of Guysborough, esquire, a member of Her Majesty's legislative council for the Province of Nova Scotia, maketh oath and sayeth: That he had been engaged upward of thirty years in commerce and the fisheries of Canso, Fox Island, and Crow Harbor, in Chedabucto Bay, where, until within the last four or five years, immense quantities of mackerel were annually caught and taken in seines and nets by persons resorting thither from various parts of this and the neighboring provinces; that since the citizens of the United States have prosecuted the mackerel fisheries to any extent in the Gulf of St. Lawrence, those of Chedabucto Bay, aforesaid, have every year gradually decreased, and are now so seriously injured that they are no longer considered by merchant or fisherman an object of profitable pursuit; that being apprehensive the almost entire failure of the fisheries in the said bay would compel many of the fishermen, resident on its shores, to abandon in utter despair an occupation no longer likely to yield them adequate support, and cause them to remove with their families to a foreign land; and being desirous of ascertaining the practicability of prosecuting from the bay the mackerel fisheries upon the system on which they are now carried on by American subjects in British waters, this deponent, by way of experiment and to stimulate others to follow his example, sailed from Guysborough, aforesaid, in the month of August last, in a vessel equipped and manned by him for the purpose, on a mackerel voyage to the Gulf of St. Lawrence aforesaid, where he remained about five weeks fishing, sometimes on the shores of Cape Breton and Prince Edward Island, within the distance of three miles, and at other times within a half a mile of the shore; that he frequently observed American vessels in numbers of from fifty to seventy along the shores of Cape Breton and Prince Edward Island, many of which were fishing within the distance of three miles therefrom; that it is the almost invariable practice of the American fishermen to make a harbor every Saturday night and remain at anchor until the Monday morning following; that during his said voyage this deponent frequently anchored in the harbors of Prince Edward Island and under Marguerite Island, distant about four miles from the shore, and at Port Hood, in the Island of Cape Breton, in company with from forty to sixty American fishing vessels, which seemed to enter the said harbors as freely and with as little restraint as the vessels of British subjects; that this deponent is now perfectly satisfied from actual observation that the manner and system on which the citizens of the United States prosecute the mackerel fishery on the shores of the Gulf of St. Lawrence, in numbers almost incredible, must be in the highest degree injurious to the net and seine fishery carried on by British fishermen on the eastern shores of Nova Scotia: and he

hesitates not to declare it as his deliberate opinion that if prompt and effectual measures be not soon adopted to prevent encroachments upon our coasts, and the open violation of existing treaties by the fishermen of the United States, the hitherto important and valuable net and seine fishery of Chedabucto Bay, and of Nova Scotia generally, already so much diminished, will ere long be entirely destroyed.

R. M. CUTLER.

Sworn to at Halifax this 23d March, 1838.

JOHN LIDDELL, J. P.

GOVERNMENT HOUSE,
Fredericton, January 27, 1838.

SIR: With reference to the subject of your excellency's communication of the 10th instant, and the document by which it was accompanied, I have the honor herewith to transmit a copy of information upon oath from two most respectable individuals of this province, detailing in very clear and forcible terms the unwarrantable proceedings of American fishing-vessels within our waters on the northeast coast of this province.

These informations, resting on no equivocal authority, I should feel obliged by your excellency taking an opportunity of communicating to his excellency the vice-admiral commanding in chief Her Majesty's naval forces on the North American station.

I have, &c.,

J. HARVEY.

His Excellency Maj. Gen. Sir COLIN CAMPBELL, K. C. B.,

&c., &c.

[Inclosure in No. 6.]

NEW BRUNSWICK:

Duncan Hay, of Carraquette, in the county of Gloucester, in the Province of New Brunswick, British North America, yeoman, and Charles Coughlan, of the same place, yeoman, make oath and state as follows:

First, the said Duncan Hay deposed and saith that he has lived in Carraquette, in the Bay of Chaleur, in the Gulf of Saint Lawrence, for three years last past, and that during that period and for three years before was personally employed in carrying on the fishery at Point Miscou, being the outermost point of the island of Miscou, a fishing station very much resorted to by the inhabitants on both sides the Bay des Chaleurs as well as other British settlements both in this Province of New Brunswick as well as Nova Scotia, embracing a line of coast of nearly 100 miles; that for the whole of the period of time above mentioned the said fishing-grounds have been during the fishing-season frequented by great numbers of American fishermen, who are in the constant habit of coming within the line marked out by the treaty subsisting between the British and American Governments, and in so doing interfering with the British fishermen, to their very great detriment and the prevention of their taking fish, the destruction in a great measure of the beneficial use of the said fishery by British subjects, and dispersing the shoals of fish. That this deponent has witnessed every year, from the commencement and during the continuance of the fishing season, in the months of June and July, American fishing-vessels, varying in numbers from 30, 40, 50, and sometimes 100 at a time, actively employed in taking fish, and, not content with so doing in the deep waters, they approach within the small bays and close in with the shore, as well for catching fish as for the purpose of taking bait, without which latter the fishing cannot be carried on, and in so doing frequently directly interfere with the inhabitants and British fishermen, and, in some instances, being the most numerous, and, therefore, not to be restrained or prevented, take such bait out of the nets and seines used by the said inhabitants for taking such bait, and also by the number of vessels extended in continuous lines in positions that break up and turn the shoals of fish from entering the different bays and places of resort to which the

said bait and other fish have been and are in the habit of resorting. That to protect the British subjects in the right of fishing it will require more than an occasional visit of an armed vessel—some permanent establishment during the whole of the fishing-season, in the opinion of the deponent, will be necessary to do away with the interference and annoyance above detailed.

And the deponent, Charles Coughlan, for himself saith, that he has resided at Carraquette aforesaid, thirty miles from Point Miscou aforesaid, about nine years last past, and has also been employed in carrying on a fishing establishment, and that the foregoing statement as relates to the interference of the American fishermen in taking fish, and the other interruptions mentioned by the deponent, Duncan Hay, are correct and true, and that he perfectly coincides with him as to the means of preventing the same.

DUNCAN HAY.
CHAS. COUGHLAN.

Sworn this 24th day of January, 1838, before me, at Fredericton, in the county of York.

THOMAS C. LEE, J. P.

Duncan Hay and Charles Coughlan, the deponents named in the accompanying affidavits, further by way of general observations relating to the subject of the interference of the American fishermen, would particularly mention the mode in which they carry on their fishing, which they, these informants, consider to have a very injurious effect on the fishery in general.

In the first place, they, the said American fishermen, are in the constant habit, after catching the fish, of bringing their vessels in very near to the shore, frequently as near as they will ride, and in that situation clean their fish and throw overboard the garbage, which at that season of the year shortly becomes putrid, and has a direct tendency to drive away the shoals of fish there resorting.

Secondly, they are in the habit, when their vessels are surrounded by a shoal or shoals of mackerel, of cutting up with machines calculated for that purpose, quantities of fish into small pieces, and then scattering the same about to keep the shoals about their vessels, and at the same time throwing into the water quantities of dry salt, which the fish seize together with the small cut up bait, which is supposed to stupefy or have such effect as to detain them, and thereby the fishermen are enabled to take fish in great quantities and break up the shoals. They also throw into the water, together with the said small bait and dry salt, quantities of Indian meal, which renders the surface turbid. This course being pursued by a large number of vessels stationed generally across the entrance of the bays and other places into which the mackerel are in the habit of resorting, necessarily turns their course and prevents the British fishermen from taking the same into those bays, coves, and inlets, where they have always, before the American fishermen were in the habit of frequenting the said fishing-grounds, been accustomed to take fish.

DUNCAN HAY.
CHAS. COUGHLAN.

FREDERICTON, *January 24, 1838.*

No. 7.

[Extract from the Royal Gazette, vol. 8, dated Charlottetown, Prince Edward Island Tuesday, June 26, 1838.]

On the evening of Sunday, the 17th instant, the bark Sir Archibald Campbell, Tait, from Maramichi for Sunderland, in a thick fog, and the sea running high, struck on the reef off the North Cape of this island, and is a complete wreck. The crew got on shore the same night. Next morning a boat put off for the wreck for the purpose of saving what they could. An American fishing-vessel was seen leaving the wreck; and on the boat's crew arriving on board, they found that the cabin had been rummaged by the Americans, the lockers broken open, and that all the provisions, and every article they could lay their hands upon in the cabin, carried off, except two flags. Not contented with this, they had also carried off the hawsers, two new sails, part of the rigging, and the jolly boat. Another boat had in the mean time put off from the shore after the American, and demanded the bark's jolly-boat, which

they observed her to have in tow. On their demanding it, they were told to be off or they would sink them. The shore boat was close enough to discern the name of the schooner, and the port she belonged to.

Captain Tait and his crew were busily employed landing all they could from the wreck, but as there were no less than forty-eight sail of American fishermen close in upon the reef, he was under continual apprehension that some of their crews would land and plunder what he had saved.

It is certainly high time that some means were adopted to put an end to such depredations on our coasts, and for the protection of the fisheries from the Americans. A few days ago there were a number of them in the harbor of Richmond Bay carrying on their avocation.

No. 8.

Copy of a dispatch from Lieutenant-Governor Sir J. Harvey to Lord Glenelg.

Fredericton, March 19, 1839.

My LORD: I have the honor herewith to transmit to your lordship copy of a report of the House of Assembly of this province, relative to the encroachments which continue to be made on the fishing grounds of this province. A copy of this report will also be transmitted by me to the naval commander-in-chief upon this station, and to Her Majesty's minister at Washington.

I have, &c.,

J. HARVEY.

The Right Hon. LORD GLENELG, &c., &c., &c.

[Inclosure in No. 8.]

HOUSE OF ASSEMBLY,
March 18, 1839.

The select committee, to whom was referred that part of the petition of Wilford Fisher, James Chaffey, J. Snell, esquires, and 181 others, of the parishes of Grand Manan, West Isles, and Campo Bello, in the county of Charlotte, relating to the encroachments which continue to be made on the fishing grounds of this province by vessels of the neighboring states, report:

That the affidavits of ten credible persons, residents of Grand Manan, sundry certificates of the overseers of the fisheries of the same island, with a mass of other evidence, have been laid before your committee, and had most deliberate consideration from them. That it manifestly appears that the aggressions so often complained of, and so frequently brought under the notice of the legislature of this province, not only have not ceased, but have actually increased, to a degree which calls loudly for the immediate interposition of government.

It distinctly appears, from the affidavits and certificates, that from ten to twenty sail of American fishing-vessels are almost continually to be found at anchor, catching fish, within one mile of the shores of Grand Manan, in audacious violation of the rights of the people of this province, and in open and avowed defiance of any force which the inhabitants could possibly bring against them. That those persons, restrained by no fishery regulations, either British or American, carry on their lawless practices in a most reckless manner, to the great and lasting injury of the fisheries; and that they do not hesitate to have recourse to violence in repelling the fishermen of Grand Manan from their own fishing-grounds, by means of which, and of many other outrages, this valuable source of provincial wealth is almost wholly wrested from its natural possessors.

It has been satisfactorily shown to your committee that the overseers of the fisheries of Grand Manan, in the due execution of their public duty, have frequently endeavored

to prevent these proceedings, but in vain; but they have been threatened with corporal violence by the American fishermen, who on several occasions have attempted to capture and carry them off to the States.

From undoubted information laid before your committee it is manifest that American aggressions of this nature are not confined to the southern shores of the province. The Bay of Chaleur and the adjacent harbors are annually infested by American fishing vessels, carrying on an illicit trade with the inhabitants and committing such depredations upon the fisheries as ought no longer to be endured.

Your committee earnestly submit the subject to the grave consideration of the house, and cannot forbear expressing their hope that the wisdom of the house may suggest such prompt measures as will immediately remove the grievances complained of.

W. F. W. OWEN.
JAMES BROWN, JUN.
W. EVET.

COMMITTEE-ROOM, March 16, 1839.

This report being accepted by the house—

Resolved, That an humble address be presented to his excellency the lieutenant-governor, communicating the foregoing report and requesting that his excellency will be pleased to take such measures thereon as to him shall seem expedient.

CHAS. P. WITMORE, *Clerk*.

No. 9.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

Most Gracious Sovereign:

We, Your Majesty's dutiful and loyal subjects, the legislative council and assembly of Prince Edward Island, in general assembly convened, humbly approach the Throne, with sentiments of the most sincere and affectionate attachment to Your Majesty's person and government.

We beg leave to state to Your Majesty that the subject of encroachments upon the shores of this island by American fishermen has been brought to our notice by his excellency the lieutenant-governor, in his opening speech at the commencement of the present session; that we have given this important subject due consideration; and from information that we have collected, we find that the Americans are constantly in the habit of fishing within the prescribed distance, as defined by the convention of the year one thousand eight hundred and eighteen, of running into our harbors, bays, and creeks, whenever it suits their convenience, to procure bait, and of thus seizing the opportunity to carry on a contraband trade with the inhabitants of this island.

That the ship of war graciously sent by Your Majesty every season, for the purpose of cruising round our coast to protect the fisheries, is ineffective, inasmuch as it cruises to visit the several fishing stations around the shores of the Gulf of St. Lawrence, for which they are better adapted than for the shallow waters around this island, and the American fishermen take advantage of the absence of the ship of war to continue their encroachments.

That an armed steamer, drawing but little water, would, in the opinion of the council and assembly, be much more effective in protecting our fisheries from the encroachments of the Americans than a ship of war, as the steamer could take advantage of the light winds and calms so frequent during the fishing season, and could run into the smaller bays, rivers, and creeks of our shores, and seize American vessels, if the crews thereof are acting contrary to and in violation of all the terms of the Convention.

We, therefore, humbly pray that Your Majesty will be graciously

pleased to order that an armed steamer, drawing but little water, be placed upon this station every season, to protect our fisheries from the encroachments of the Americans.

And, as in duty bound, we shall ever pray.

Council chamber, 24th March, 1843.

House of assembly, 24th March, 1843.

R. HODSON, *President*.

JOSEPH POPE, *Speaker*.

No. 10.

[Extract of dispatch from Commander Cochran to Vice-Admiral Seymour, dated Her Majesty's sloop *Sappho*, Halifax, October 3, 1851.]

I have the honor to inform you that on leaving Pictou I proceeded to visit, in accordance with your orders, the north shore of Prince Edward Island. Off the eastern shore and about East Point, from fifty to sixty schooners were catching mackerel. Five of these were English, the rest Americans. One of these, being within the limits, I ordered off.

St. Peters.—A small schooner named the *Experiment*, fitted out by Sir Alexander Bannerman to test the value of the cod fisheries to the northward of the island, was at anchor in the bay. She had not been very successful, being too small to ride on the grounds in blowing weather.

Warned off four American schooners hove to within the limits, though not actually fishing. Passed thirty sail of schooners at night.

Richmond Harbor.—Four schooners were absent, engaged in the fisheries.

New London.—Two schooners engaged in the mackerel fisheries.

Casumpeque.—Two schooners belong here, engaged in fishing, and a few boats. Forty English and 120 American schooners have been seen at anchor in this harbor at one time, engaged in mackerel fishing.

Miscou Island.—The only firms residing are those of Mr. Botillier and Mr. Alexander. They have caught 2,000 quintals of cod, which is considered a good average. The firm of Mr. Boutillier think of abandoning the island, as the fishing is falling off very much. This island, once famous for the quantity of bait that used to strike in, is now comparatively deserted. I was informed that forty American schooners had been fishing close off the beach a few days previous, catching No. 1 mackerel.

Paspébiac.—Mr. Robins and Mr. Boutillier have large establishments. Five vessels of Mr. Robins's were at anchor, representing 1,056 tons. The catch of fish had averaged 50 quintals per boat, which was considered very good. The number of boats twenty-five. Complaints of the American fishermen catching mackerel close to the shores, and of their attracting and drifting off shoals of fish. Thirty or forty are said to have been fishing close to the beach.

New Carlisle, I was informed, has eighteen boats.

Port Daniel.—Though open to the southeast, is said to be a very safe anchorage during the summer. Winds from that quarter are said not to blow home. The cod-fishing has been very successful, the boats, of which there are thirty, having taken four or five quintals per day. The fishing-grounds are about five miles from the land.

Pierre.—The quantity of cod taken is very large, averaging per boat

(of which there are 120) ninety quintals. Complaints of American fishermen fishing close to the shore and attracting mackerel to sea. One schooner took seventy and another sixty barrels in one day close to the beach. Mr. Robins and Mr. Botillier have the largest establishments here.

Mal Bay.—Made two American vessels weigh and proceed to sea, who were at anchor without any good reason. In consequence of a strong current was unable to reach St. Peter's before dusk, and being a dangerous place to visit at that hour made sail for Gaspé Bay. St. Peter's has eighty-two boats and the cod fishery has been successful.

Gaspé Bay.—Owns nearly 200 boats, of which Douglas Town claims thirty. The average catch has been fifty quintals per boat, which was considered good. M. Botillier, Janvein, Wilson, and Prichard have establishments in Gaspé Harbor. Three English schooners engaged in the mackerel fishery, which they prosecuted by seines, arrived from the Bay of Seven Islands, Labrador, in which harbor they had seen as many as forty American schooners engaged in mackerel fishery; almost all had left in consequence of the fish not having struck in. It was stated that the Americans had set fire to the woods, and made themselves very troublesome. Five schooners belong here engaged in the whale trade, and have been very successful, and three schooners in the cod fishery.

At *Grand Greve* as many as fifty American schooners have been fishing close to the beach for mackerel.

REMARKS.

The curious circumstance that about 1,000 sail of American schooners find it very remunerative to pursue the herring and mackerel fisheries on the shores of our northern provinces, while the inhabitants scarcely take any, does indeed appear strange, and apparently is to be accounted for by the fact that the colonists are wanting in capital and energy. The Jersey merchants, who may be said to possess the whole labor market, do not turn their attention to these branches. The business of the Jersey houses is generally, I believe, with one exception, carried on by agents; these persons receive instructions from their employers to devote their whole time and energy to the catching and curing of cod. Such constant attention to one subject appears at least to engender a perfect apathy respecting other branches of their trade. They are all aware, I believe fully aware, of the advantages to be derived from catching the herring and mackerel, when these come in shoals within a few yards of their doors, but still nothing is done.

Commercial relations of long standing, never having engaged in the trade before, possible want of the knowledge of the markets, and the alleged want of skill among the fishermen of the method of catching and curing these fish, together with the twenty per cent. duty on English fish in America, may tend to induce the Jersey houses not to enter into these branches. Added to all these reasons the capital of the principals is, I am informed, in most instances small. It will probably be difficult to find about the Bay of Chaleurs and Gaspé any fishermen not engaged by some one of the numerous Jersey houses; and it may be said that a new branch of industry would much interfere with the cod fishery, but so lucrative a trade as the herring and mackerel one would prove would enable higher wages to be given than are done for cod. In fact I believe that very small, if any, wages are given at all, the money due to the fisherman for his summer labor being absorbed in food and clothing for himself and family, repairs of boats and fishing gear, almost

always deeply in debt in the spring, or at any rate sufficiently so to insure his labor for the ensuing summer, and so more persons would be induced to resort here the summer season.

The want of knowledge of the method of catching and curing could be easily remedied. A little practice, with the aid of some government inspectors well conversant with the whole operation, together with the method of curing herrings in the Dutch fashion, who should inspect and brand the barrels, would soon remedy the evil complained of, and give a character and value to their fish. The fishermen, when asked why they do not catch mackerel, replied that they have not the means, and that the Americans have some secret of catching the fish, which consists, I am told, in throwing overboard chopped and crushed bait, thereby attracting the fish around their vessel, when they are ready with plenty of hands and good gear to take advantage of the opportunity.

The American schooners engaged in fishing during the summer in the gulf are, I am told, in the winter employed in the coasting trade, and some fish off the Banks near New York. This employment during the winter is an advantage which the vessels of our colonies would not have, but this is counterbalanced by having the fish so abundant along the shores at all points as to render the necessity of employment of vessels devoted to that purpose almost unnecessary.

About 600 American schooners passed through the Gut of Canso this year in the prosecution of the mackerel fishing, many of which have returned with two or three cargoes. There are three qualities of mackerel—those taken in the spring are of an inferior quality, called No. 3; later in the year No. 2, and in the fall No. 1.

It is said that from 60 to 70 more schooners this year than last, many of them new, are in the gulf this season.

No. 11.

[Extract of a dispatch from Sir A. Baunerman to Earl Grey, dated Prince Edward Island, November 15, 1851.]

6. To the United States Government the fisheries are of vast importance, and they will become more so in this part of North America when the New Brunswick Railway runs, as is proposed, near to Shediac, within a few hours' sail of the harbor of Bedouque in this island, from which the produce of the fisheries would be sent to Boston in a very short space of time, leaving the fishing-vessels to prosecute their occupation, instead of carrying home their cargoes, as they frequently do, and returning to the fishing-grounds in the same season, performing a voyage of 1,200 to 1,500 miles.

7. Your lordship will have some idea of the magnitude of the American fleet of fishermen when I inform you that about the latter end of September 250 United States schooners came into Malpeque, on the north side of this island. They are beautifully equipped, averaging from 60 to 110 tons, and their crews consist of from ten to twelve men each. About 1,500 of them landed at Prince Town and attended an agricultural show there. They behaved as well and peaceably as so many sailors congregated together could be expected to do; but this will not always be the case where brandy and rum are to be had cheap. They are under no control, and, as they daily infringe the treaty by fishing close to the shore, the United States Government cannot be ex-

pected to send one of their cruisers to enforce it, and otherwise to keep the peace among them. Should any disturbance hereafter take place, which, from many accidental causes, is not improbable, the lieutenant-governor of this colony would be placed in a delicate position with the subjects of a foreign yet friendly power.

No. 12.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

We, Your Majesty's dutiful and loyal subjects, the legislative council and assembly of Prince Edward Island, in Colonial Parliament assembled, humbly beg leave to renew our assurances of devoted loyalty and attachment to Your Majesty's person and government; and we beg again to approach the foot of the throne on the subject of our joint address, forwarded to Great Britain so long ago as the year 1849, praying for an abrogation or relaxation of the Treaty of 1818 with the United States Government, as concerns the fisheries surrounding this island. This address, as we were informed by Your Majesty's colonial minister, was most graciously received by Your Majesty, and, we were told, would receive the earnest consideration of Your Majesty's Government.

We beg to state that this subject becomes of daily increasing moment.

Your Majesty's representative, the lieutenant-governor of this island, in the late fishing season had the opportunity of personally witnessing hundreds of fishing vessels, belonging to the United States, fishing on our shores and frequenting our harbors, in direct contravention of the treaty of 1818.

His excellency has not the means of preventing an intrusion so detrimental to our best interests; the single ship of war of Your Majesty's fleet usually employed in this duty being inadequate to the extensive service required of her.

The citizens of the United States have an advantage over the subjects of Your Majesty in this island, which prevents all successful competition, as our own fish caught on our own shores by strangers are carried into their ports by themselves, whereas we are excluded by high protective duties.

The legislature of this island passed an act in the twelfth year of Your Majesty's reign which offered to reciprocate with the United States in the interchange of certain enumerated articles, notwithstanding which offers our fish and agricultural produce, for which latter there is an extensive demand in the Northern States of the American Union, remain subject to high duties.

And although the British navigation laws have been so relaxed that foreign-built vessels owned by British subjects may obtain British registries, a concession from which the citizens of the United States have very recently derived great advantages by the sale of their vessels stranded on the shores of this island during the disastrous gale of last autumn, no reciprocal advantage is offered to us, which, if obtained, would be of immense importance to the builders of ships and fishing vessels in this island.

Her Majesty's subjects are desirous to continue to cultivate the good will of the citizens of the United States by every reasonable concession, and with a due consideration of the value of the intercourse which, on

a basis of reciprocal advantage, might be established. They presume that the immense importance to the United States of an uninterrupted right of fishing on the shores of this island as a basis of treaty ought to insure for them valuable concessions; and if this be not possible, that the fisheries ought to be scrupulously maintained in the spirit of the treaty of 1818.

We most humbly pray that Your Majesty will be most graciously pleased to take the premises into your favorable consideration, and cause to be removed the restrictions of the treaty of 1818, prohibiting American citizens from fishing within certain prescribed limits on the shores of this island, provided the American Government admit articles the growth or production of this island into the United States duty-free, in accordance with the act of the general assembly of this island passed in the twelfth year of Your Majesty's reign, entitled "An act to authorize free trade with the United States of America in certain enumerated articles, including fish, also vessels built on this island to American registry."

And as in duty bound we shall ever pray.

R. HOGDSON,
President.

COUNCIL CHAMBER, *February 9, 1852.*

ALEXANDER RAE,
Speaker.

HOUSE OF ASSEMBLY, *February 9, 1852.*

No. 13.

Copy of a dispatch from Lieutenant-Governor Sir A. Bannerman to Earl Grey.

GOVERNMENT HOUSE, *February 12, 1852.*

MY LORD: In reference to the accompanying dispatch, I beg leave to direct your lordship's attention to a colonial act, 6th Viet., cap. 14, page 698 of the volume of statutes which I recently forwarded to your lordship. The act to which I refer is one which received the royal assent on the 3d September, 1844, and an order was on the same day made by Her Majesty in council, declaring "that its clauses and provisions should be the rules, regulations, and restrictions, respecting the fisheries on the coasts, bays, creeks, or harbors of the Island of Prince Edward."

2. By the provisions of this act officers of customs and excise, sheriffs, magistrates, and any person holding a commission from the lieutenant-governor, are authorized to board, search, &c., vessels within three marine miles of the coast; "and if found fishing, preparing to fish, or to have been fishing" within that distance, such vessels, with their cargoes, to be seized, and forfeited, &c., &c.

3. The provisions of this act have never yet been enforced, but should the fishery question remain much longer unsettled, in all probability attempts will be made to seize American vessels and such attempts will be resisted, which may lead to collisions, the consequences of which are not easily to be foreseen.

4. To guard against any such occurrences, I think it would be very desirable for Her Majesty's Government to order a steamer to be stationed here from the 1st June to the 1st October, the commander of

which, in addition to his instructions from the admiralty, would be fortified with a commission from the lieutenant-governor of this island enabling him, in terms of the act and order in council, to legally enforce their provisions within the limits prescribed by the act; for I consider that the powers which the statute vests in custom house officers, &c., &c., in so far as the fisheries are concerned, to be very dangerous ones, and such as ought only to be intrusted to those who have the means as well as the authority to enforce them.

5. I understand that there is nothing more likely to urge the American Government to an amicable settlement of this long-vexed question than an enforcement of the treaty around this island, where their fishermen catch most of the mackerel sent to the United States, and where, last autumn, one of Her Majesty's steamships could in a few hours have seized and got legally condemned property amounting to upward of £50,000.

6. Notification of the royal assent to the act alluded to and order in council were published in the Royal Gazette of this island on the 8th October, 1844; but I am ignorant whether the United States Government are aware of its provisions; and it will be for your lordship to determine if any intimation should be made to that government on this important subject.

7. I trust from what I have already stated that Her Majesty's Government will perceive the peculiar position in which this colony is placed in regard to the fisheries, so very different from the adjoining provinces. I apprehend that the lieutenant-governor, irrespective of any other interests, is entitled to carry that law into effect, applicable to this island, which has received the sanction of the sovereign, and that the legislature may modify, relax, or abrogate such law on conditions subject to the approval of Her Majesty's Government. The importance of the subject will, I trust, be my excuse for troubling your lordship at such length.

I have, &c.,

A. BANNERMAN,
Lieut. Governor.

The Right Hon. EARL GREY, &c., &c.

No. 14.

PRINCE TOWN, *July 2, 1852.*

SIR: On the 1st of July there was a number of American fishing-schooners in this harbor, and I boarded them to collect anchorage duty from them; they would not pay, and positively affirmed that they would not comply with the law; and I had not force enough to take so many vessels, each of them comprising a crew of from twelve to fifteen men, and I could say well equipped for a defense; and I beg to state that we have neither ammunition or any weapons of defense that if all our population would turn out, and the men will not turn out to my assistance; they state that the law does not compel them. I issued a *capias* for one of the captains, but they only made fun of us. Hoping that your excellency will adopt some means to make them comply with the laws; if not, it will be useless for me to demand it at all; when two or three hundred sail comes in, the same as there was last year, they will do as

they please; they state that if the lights were up they would pay, but not till then.

I have, &c.,

WILLIAM H. M'KAY,
Harbor Master.

Hon. J. WARBURTON,
Colonial Secretary

Dated July 30, 1852.

SCOTT TREMAIN, *Reg'r.*

No. 16.

HER MAJESTY'S SHIP DEVASTATION, *Charlotte Town, September 16, 1852.*

SIR: I have the honor to intimate to your excellency that the American fishing vessels driven from other parts more easily protected are now flocking in vast numbers to the shores of this island, no less than 110 of them having been seen off the North Point alone on Tuesday last. As, therefore, it will require the utmost exertion on the part of Her Majesty's cruisers to keep the intruders in check, my hands would be much strengthened in the performance of this very important duty if I could leave boats from time to time at places along the shore most frequented by the foreign fishermen.

As the season, however, is now far advanced, the crews of such boats would require shelter; and I have to request that your excellency will be pleased to authorize me to give orders for any trifling expense which may be incurred for the housing of the men to the people providing such accommodation.

From what I have seen, I feel sure that the mackerel-fishing around the shores of this island might be a mine of wealth to its inhabitants as well as to those of the other British provinces, and I trust if we succeed in our efforts this will yet be found to be the case.

The water close to the shore is now absolutely teeming with mackerel in the finest condition, and this entirely within three miles of the land, so that by keeping the foreigners at that distance the shore becomes a vast and valuable preserve for the fishermen of the British provinces.

I have, &c.,

COLIN Y. CAMPBELL,
Commander.

His Excellency Sir ALEXANDER BANNERMAN,
&c., &c.

No. 17.

REGISTRY OF THE COURT OF VICE-ADMIRALTY,
Charlotte Town, October 6, 1852.

A return of American vessels detained and prosecuted in this court for a violation of the convention made between the Government of Great Britain and the United States of America, in the year A. D. 1818, and prosecuted in this court.

Name of vessel.	Date of seizure.	Date of condemnation.	Remarks.
Schooner Florida, of Gloucester, United States of America.	Aug. 3, 1852	Sept. 7, 1852	{ Detained by Her Majesty's schooner Telegraph, Hon. H. Weyland Chetwynd, commander, on the northern coast of Prince Edward Island.
Schooner Union, of Brooklyn, United States of America.	July 20, 1852	Sept. 24, 1852	
Schooner Caroline Knight, of Newburyport, United States of America.	Sept. 11, 1852	* Not yet adjudicated.	
			Detained by Her Majesty's steam sloop Devastation, Colin Yorke Campbell, commander, on the northern coast of Prince Edward Island.

* Subsequently condemned.

WILLIAM SWABEY, Registrar.

In addition to this return, the schooner Golden Rule of Gloucester, United States, was detained by the Telegraph, Lieutenant Chetwynd, and brought into Charlotte Town. Before she was delivered over to the proper authorities in terms of the imperial statute, Vice-Admiral Sir George Seymour arrived in Her Majesty's steam-sloop Basilisk, to whom the master of the Golden Rule appealed, stating he was part owner of the schooner, and would be ruined if she was condemned. The admiral on the 23d August left authority with the lieutenant-governor to direct Lieutenant Chetwynd to liberate the schooner, provided the captain acknowledged the violation of the convention, and that his liberation was an act of clemency on the part of the commander-in-chief. Bartlett, the captain of the Golden Rule, left such an acknowledgment in writing, which was forwarded to Sir George Seymour, along with an addition on a question from the lieutenant-governor, that he had stood inshore to fish, mistaking the Telegraph tender for one of his countrymen's schooners.

A. BANNERMAN,
Lieutenant-Governor.

PRINCE EDWARD ISLAND, October 11, 1852.

No. 18.

CUMBERLAND, AT HALIFAX,
October 30, 1852.

SIR: Several American fishing-vessels having been this season detained by Her Majesty's ships employed in protecting the fisheries, for breaches of the convention of 1818 with the United States, which were subsequently condemned in the courts of vice-admiralty, under the 59 Geo. III, cap. 38, I have the honor to request the instructions of the lords commissioners of the admiralty as to the mode in which the proceeds of the said vessels are to be disposed of.

By the Queen's proclamation for the distribution of prize-money, the net proceeds of captures, seizures for breaches of the customs and navigation laws, &c., &c., not otherwise especially apportioned, are divided among the crews of Her Majesty's ships; but by the colonial act, 6 Will. IV, cap. 8, clause 6, an abstract of which is contained on page 6 of the inclosed pamphlet, one-half is apportioned to the colonial treasury, and the other half to the officer or person seizing the same.

Four of the seizures in question were made by the Netley and Telegraph, tenders of the Cumberland, and I am desirous of instructions as to whether, according to the former practice observed in cases of capture, the ship sending out the tender is entitled to share in the proceeds of their seizure. In two of these cases, I should add, the tender was on detached service, under the orders of Commander Campbell, of the Devastation.

The proceeds are now in the hands of the comptroller of the customs at Prince Edward's Island, and St. John, New Brunswick, and I request their lordships will be pleased to direct what proportions of the seizures I am to obtain, and to describe the mode of distribution.

I have, &c.,

G. F. SEYMOUR,
Vice-Admiral and Commander-in-Chief.

The SECRETARY OF THE ADMIRALTY, &c., &c., &c.

No. 19.

COUNTY OF BONAVENTURE,
DISTRICT OF GASPÉ,
October 18, 1852.

SIR: We, the undersigned magistrates, merchants, ship owners, and other inhabitants of this county and district, deem it our duty to make known to you the high sense we entertain of the valuable services you have rendered to the inhabitants generally on this coast during the past summer. To your untiring perseverance and active zeal we owe the disappearance of American fishermen from the waters of the Bay of Chaleurs; and for the first time during the last fifteen years our waters have teemed with mackerel. The benefits which you have conferred on our fishermen can only be appreciated and understood by those who, like yourself, have studied the subject, and been eye-witnesses of the evils arising from the encroachments of strangers who have no earthly right to trespass on our fishing-grounds.

To the present advisers of our most gracious Sovereign we are indebted for this tardy and long-sought for act of justice, as well as for

the judicious selection of a steam-sloop, commissioned by so well-qualified and efficient a commander. Your duty has been both delicate and harassing, and we feel fully justified in asserting that, though enforcing the terms of the treaty, you have carefully and studiously avoided all harsh or arbitrary acts.

We likewise beg leave, through you, to tender our sincere acknowledgments to the officers under your command for the efficient manner in which they have seconded your exertions, more especially in the dangerous and arduous task of boat-duty, which has been so judiciously and effectively performed.

Most sincerely do we hope that the good work thus commenced will be persevered in by the home government, and that Her Majesty's steamship *Devastation* will return to our shores under your command next spring.

We have, &c.,

JOHN FAUVEL, *Merchant*.
ALFRED CARCAUD, *Merchant*.
PHILIP VIBERT, *Merchant*.
JNO. J. THOMPSON, *C. J.*
JN. WILKIE, *Proctor*.
S. D. DUBORD, *Surgeon*.

And thirty-five others.

C. Y. CAMPBELL, Esq.,
Her Majesty's Ship Devastation.

No. 20.

CUMBERLAND, AT BERMUDA,
November 18, 1852.

SIR: I have the honor to transmit herewith, to be laid before the lords of the admiralty, a copy of a report, dated 10th instant, made by Commander C. Y. Campbell, of Her Majesty's steam-ship *Devastation*, on the fisheries in the Gulf of St. Lawrence, and of his observations during the six months he was employed in their protection.

I beg to call their lordships' attention to the zeal and activity displayed by Commander Campbell whilst on this difficult service, and to the increased productiveness of the colonial fisheries at Prince Edward's Island, Gaspé, and Chaleur, during the present season. I have also to draw their lordships' notice to the favorable terms in which the services of Mr. John Jenkins, mate of the *Devastation*, are mentioned in the report.

With respect to Commander Campbell's opinion that the encroachments of foreigners could be most advantageously prevented by boats, I should acquaint their lordships that I do not consider boats should be employed on any service beyond the reach of support.

A disposition to resistance may not be unlikely to prevail among the United States fishing vessels.

I would therefore repeat the recommendation I offered to their lordships in my letter of the 5th August, 1851, that small vessels with steam power should be sent out early in the next season, supplied with two or more good boats, the latter to be employed within the boundaries upon which the vessels will be engaged.

I inclose an estimate of the expense of the fuel consumed by the *Devastation*, *Basilisk*, and *Buzzard*, during the last summer, which will

show that it is desirable in point of economy, that smaller vessels should be substituted for the protection of the North American fisheries, and of a light draft of water, which would enable them to enter the harbors to which the fishing vessels usually resort.

Their lordships will observe in Commander Campbell's abstract of the deficiencies in the papers of the English vessels, the explanation he offers of the cause of their detention at Port Hood; but the result of his proceedings proves the case would have been more judiciously settled by one or two examples of seizure, and by a representation of the general irregularities in the documents of the vessels, which would have enabled the colonial government to have met the evil in another season, instead of adopting the course he pursued on that occasion.

I shall transmit copies of the report to the Earl of Elgin, and to the lieutenant-governors of the British Provinces, to point out the position which Commander Campbell considers most favorable to the development and extension of the fisheries.

I have, &c.,

G. F. SEYMOUR,

Vice-Admiral and Commander-in-Chief.

The SECRETARY OF THE ADMIRALTY,

&c., &c., &c.

[Inclosure No. 1 in No 20.]

HER MAJESTY'S STEAMSHIP DEVASTATION,

Halifax, November 10, 1852.

SIR: I have the honor to state, that having in pursuance of your orders arrived in the Gulf of St. Lawrence, for the protection of British fisheries, on the 20th of May, I visited the principal fishing-stations along the coast, from time to time, and beg to forward a report of my observations while on that service.

Up to the middle of July there was no encroachment by the Americans on the fishing-grounds; the cause is that the inducement does not present itself until the commencement of the mackerel-fishing, about that time, when they arrive in great numbers.

There is no part of the gulf where fish of all kinds abound more than on the shores of Prince Edward's Island; it is, however, extraordinary, but no less true, that during the summer months a vessel may in fine weather pass along the whole shore without seeing twenty boats, until arriving off the North Point, where a considerable fishery has been lately established at Tignish, a well-chosen station; for having boats on each side of the point, they can even in strong winds have shelter on either side, and have this year succeeded well.

It is to be hoped that this will be an encouragement for enterprise on other parts of the coast, for it is indeed to be lamented that so much wealth should be lost to the island; true it is, that from position and soil, Prince Edward's Island may be called the garden of North America, and that the people are principally engaged in agricultural pursuits; but having the one advantage, they seem to overlook the additional, and certainly the greater one, of a coast teeming with fish, an advantage which in less favored lands is counterbalanced by a sterile and unfruitful soil.

If appreciated sufficiently to arouse exertion, the wealth of that island, through its fisheries, might be great; this would immediately provide the circulation of money now so much required.

During July, when the mackerel strike in, the Americans arrive in their very fine schooners in pursuit of them. The fish are only to be taken close along the shore, so that if they do not encroach they must be unsuccessful; in former years I am assured these vessels have been in the habit of taking away two, and sometimes three, cargoes from the gulf, and as from the 1st August to 7th October, in fine weather, you cannot run the north shore down without seeing 100 United States fishing-vessels, sometimes 150, which carry on an average 500 barrels, worth say at least £200 sterling per vessel. Supposing only that 100 vessels fill up once, the smallest possible estimate of the value taken away annually from the coast of that island alone is £100,000 sterling. The mackerel as the season advances are both more numerous, and of a finer quality; indeed the spring fish are very poor, and it would add greatly to the value of the fisheries if they were not taken early.

Nature has provided that at this their spawning season they do not readily take bait; but from seining, and other means adopted by the Americans, if it had not been checked, the fish would have been exterminated in a few years, while the protection of the coast this year will in all probability cause a great increase in future seasons.

The water already abounds with small mackerel, about three inches long; this, I am told, has not occurred before to any extent, and is imputed to the protection of the spawning-fish during spring.

It seems to be a clearly established fact, that not only is the mackerel valuable in itself, but where that fish is plentiful the cod is also so.

Proceeding north from Prince Edward's Island, the Bay Chaleur is the next important fishing-ground. At its mouth, on the south side, is the Island of Miscou, where there are two considerable fishing establishments connected with Jersey houses.

On Shippigan Island up the bay, on the same side, are also several establishments. Again, higher on the mainland is Caraquette, from which there are 150 boats; the people are all of French extraction and speak the language. They sell their fish to the Jersey merchants, of whom they loudly complain in summer for grinding them down as to prices, but in winter are often kept from starvation by advances from these houses. They appear to be a most improvident and thoughtless people.

These islands, Miscou, Shippigan, and the mainland, form a bay of great extent; the water is shallow, and, from being land-locked, is usually very smooth. This is a very favorite spawning-ground for the mackerel in spring, but the Americans have in former years flocked in after them, capturing them in incredible numbers.

The offal thrown over while cleaning the mackerel has had a most injurious effect on the cod-fishing, for, as I before remarked, the large number of mackerel would insure a good cod-fishing were it not that they were fed in this way, and prevented from taking bait; so that what would, if the treaty were observed, be a certainty of success to the British fishermen, has thus been made the cause of failure.

Is it highly essential that this ground should (in spring and the early part of summer especially) be rigidly protected, not only on account of its great local importance, but if the mouth of Chaleur Bay is protected it is all protected.

Crossing Chaleur Bay, there is a considerable fishing carried on at Port Daniel, by a race peculiar to that place. They are descended from some French settlers who attached themselves to Indian women; they are very indolent and improvident, and could not succeed if the fisheries were ever so productive; they also find a market in the Jersey houses.

Higher up, at Paspébiac, are the large fishing establishments of Messrs. Robin & Co., and Messrs. Le Boutillier, of Jersey, whose vessels, amounting to about 2,500 to 3,000 tons, assemble in early spring, moor and dismantle; the crews are then dispersed among these fishing-boats and curing establishments till the autumn, when they return to their vessels, load, fit them out, and proceed to the Mediterranean and South American ports.

The cod-fishing at Paspébiac has been as good as in former years, and for the first time for many seasons the mackerel have appeared; for although from the number of American schooners which infested their coasts formerly the people were aware the mackerel were there, they never were permitted to see them close to the shore.

This change gives them great hope for the future, for they attribute all their want of success of late years to the Americans taking the mackerel, and especially to their cleaning them in their waters.

Few, however, of the intruders have entered the bay this season, and if they can be kept out in future great results are expected.

The next and by far the most important fishing establishments are at Percé, Point St. Peter, and Gaspé Bay, chiefly connected with Jersey houses. They have been this year more successful with fewer men employed than for many years past, and attribute it to the Americans having been kept off completely by a boat from this sloop, which for the whole season was stationed at Point St. Peter by your orders.

So effectually was the duty performed by this boat, that I am assured scarcely an American vessel encroached within the limits between Percé and Cape Gaspé.

To the attention, energy, and zeal of Mr. Jenkins, mate of this sloop, the service is alone indebted for the very satisfactory performance of this important duty, as well as for the creditable and steady behavior of the boat's crew, of whom there was not a single complaint during the season.

I would respectfully suggest the expediency of stationing a boat at that point each season, as from it, in clear weather, the officer can see a great extent of the most important fishing-ground in the gulf.

A great number of the fishermen employed on this coast are from Quebec; but much time is lost in consequence of their not arriving early enough in the season.

In Chaleur Bay, round as far north as Gaspé, the fishing is carried on exclusively in open boats.

Round the shores of Anticosti, codfish are numerous, but from the want of harbors even for boats, the pursuit of them would be hazardous.

There is, however, at the southwest light-house, a fine harbor for boats, and a fishery might be established there without difficulty, and with great advantage.

On two occasions, while this sloop was hove-to off there, the ship's company were most successful, catching great quantities of cod, even under the disadvantage of having no proper bait.

Along the coast of Labrador, between the Bay of Seven Islands and Cape Whittle, there are no fishing establishments; but in former years the Americans were in the habit of frequenting Seven Islands very much; they last year, mustering 100 sail of vessels, committed excesses in stealing and destroying wood, the property of the Hudson Bay Company's agent, the only European resident there. This year, however, only seven or eight vessels have appeared, and they only for a few days. The Arrow, hired tender, was fortunately there on their arrival, and on removing her to the Bay of Chaleur I was enabled, in consequence of the cordial co-operation of the Canadian armed brigantine Alliance, to keep that coast perfectly protected.

Seven Islands is an excellent harbor, and as, during the early part of summer, mackerel abound within the shelter of that beautiful bay, it will be a valuable rendezvous for the British fishing-vessels in future seasons, but they do not appear yet to frequent it.

A boat's crew would be sufficient to prevent their being molested.

The cod fishery is good along the coast, but as the country is not inhabited it is only followed by a few small vessels from the neighboring provinces and the Magdalen Islands.

The harbor of Mingan is a very excellent one, and the fisheries in the neighborhood would, if followed up, be very valuable, while the great number of islands would be most advantageous for shelter.

Round the Magdalen Islands the fisheries have been very productive in former years, and the people are quite dependent on them.

The herring and mackerel fishery commences here in June, and the Americans begin to arrive at this time. A considerable number of vessels also arrive from the British provinces, and as the fishing is all carried on by nets in spring, the number laid down is enormous, especially in Pleasant Bay. The fish at this time are making for the close neighborhood of the shore to spawn, and the people seem surprised that the fishing is less productive every year, but it is only wonderful that any escape, and that they are not exterminated.

It would be greatly to the advantage of these islands, and to that of the fisheries generally, if the spring fishing were confined by law to the ground-fish (cod, &c.), and if the mackerel were only pursued during the fall of the year; by this means the fishery would revive, and a far greater quantity of fine fish would reward the labor than those of an inferior kind, now decreasing every season.

The herring would still be required for a supply of bait, but they are not nearly so important for commercial purposes as the mackerel, and would be well bestowed in that way.

The people of the islands do not generally complain of the Americans; on the contrary, they seem to receive them much more warmly than the people from the provinces. This is easily accounted for; the Americans employ a number of them, and pay them well, while they buy their little farm produce and also their fish, and bring them articles free of duty. The people from the provinces, on the contrary, leave nothing, and take much away.

These islands seem much in want of some kind of government. At present there is no law, except that administered by a few magistrates, who are more acknowledged as such by sufferance than by right. If they require to enforce the law, they have no one to carry it into effect by the apprehension of criminals (no one daring to act), while if they could arrest, there is no prison in the islands.

It does not seem expedient, where several conflicting interests annually meet, that this state of things should continue.

During the late season, the people came to an agreement against seining on the shores of the islands, but the magistrates appeared doubtful whether they could enforce even that very necessary regulation against the provincial and American vessels.

In Saint George's Bay, Newfoundland, the principal fishery is the herring, which commences toward the end of April and lasts about three weeks, during which time, this spring, the vast quantity of 21,000 barrels were caught and cured. This great fishery has the effect of making the people careless as to any other; and indeed, though the actual season lasts so short a time, the preparation for it is a work of considerable labor, for in many cases the people make their own barrels, and are employed for a long time after the "catch" in curing.

It is a very fortunate provision that this fishery is at a season while the weather is yet cold, for if it were not so, advantage could not be taken of the great quantity caught in so short a space of time.

I am informed that by herring alone an industrious man may realize from £50 to £70 sterling.

The cod fishery is little followed here, and scarcely at all for exportation. A great many eels are caught for winter use.

The salmon-fishing had not been good this season, and it is never very productive.

The law is very loosely administered, but on my visit everything was quiet and the people contented, in consequence, I presume, of a plentiful herring season.

Agriculture is more followed here every year. The short duration of the lucrative fishery, as well as the season of the year at which it is followed, is favorable to this.

Throughout the gulf there is no fishery so valuable as that on the Cape Breton shore, especially between Wolf Island and Port Hood, from about the first of October to the end of the season. At this time the mackerel, being very numerous and of the finest quality, draw to a point nearly all the fishing-vessels, both colonial and American.

The latter, this season, have been very persevering in their efforts to evade the treaty, and have run great risks for that purpose.

Immediately on arriving there I saw the necessity of placing a boat at Wolf Island; for, taking advantage of the liberal interpretation of the treaty of the British Government, the Americans were in the habit of anchoring, even in fine weather, for the night, close to the island, 100 sail at a time, and weighing the next morning (if no cruiser was near); of throwing their bait over and drifting off shore, keeping the fish attracted for a considerable distance, making the best of the opportunity that circumstances would admit, renewing this scheme each morning. A boat, however, from this sloop, in charge of Mr. Jenkins, mate, at once put a stop to it, and shelter under this island was no longer sought, to any extent, by them.

Finding themselves foiled by this and other boats, the American flag disappeared almost entirely about the 26th October, being at least a month earlier than in former seasons; another proof that in order to succeed the treaty must be evaded.

Full and free possession would at this time have been secured to the British colonial fishermen, which could not have failed to have been very lucrative, had it not been that a system of fraud and collusion was got up at some of the outports in Nova Scotia and Prince Edward Island, by which American vessels were supplied with the British flag and papers, the latter in most instances disguised with an ingenuity worthy of a better cause.

Having had so large a share in the execution of your orders in performing the duty of keeping the Americans off under the United States flag, I considered it at least as imperatively my duty to prevent their assuming the British flag to cover their depredations. Having observed the number of vessels under British colors increase greatly in the course of a few days, and it being apparent, from this and other indications, that fraud to a great extent was going on, I took advantage of the 13th, 14th, and 15th ultimo, of a large number of vessels anchoring in Port Hood to examine their papers, generally an easy matter, and one (especially where British vessels are concerned) requiring a very short space of time.

On boarding the vessels, however, I found, from the lax state of the administration of the customs laws in some of the provinces, that it was impossible to detect those really fraudulent among so many which were sailing (perhaps through carelessness) contrary to law, and the weather at the time being very stormy, aggravated my difficulty.

Under such circumstances, when the weather cleared up, on the 20th, having taken the description of each vessel, and the particulars of her illegal papers, I considered it right to release all except the Creole, now in the vice-admiralty court at Halifax, and two vessels without certificates of registry (afterward released).

I beg to annex a summary of the defects of the papers of the vessels detained, which will show the amount of difficulty I was involved in, and the cause of the length of the detention.

I consider it my duty to call your attention, respectfully but earnestly, to this abstract, which shows that fraud to an enormous extent is perpetrated, and that, from the almost total disregard of the several acts of Parliament for regulating the mercantile marine of Great Britain and the Colonies, especially at the outports, it is carried on with comparative impunity, and that it must be so until the correctness of the papers of vessels of real British ownership enables an officer to detect fraud, which is impossible under existing circumstances.

I have also to represent how beneficial it would be for the service if the Colonial armed vessels employed for the protection of the fisheries were instructed to assist Her Majesty's ships in the execution of the duty, a provision which in the case of the Canadian brigantine was attended with such beneficial results.

I cannot close this part of my report without mentioning my reasons for dwelling so much on the mackerel fishery.

Firstly. That fishery is the only cause of foreign encroachment in the part of the gulf in which Her Majesty's sloop has lately been stationed.

Secondly. The mackerel affords the best bait to our fisheries: and while the Americans have encroached, not only have they been deprived of it, but the cod-fisheries have been ruined by the offal thrown over on the ground.

Thirdly. The mackerel can alone be taken within the limit prescribed by the treaty, so that while the shore is protected, that fishery is a rich and exclusive privilege of the British colonist.

The preservation of the mackerel may therefore be considered the preservation of all the other fisheries.

It has been remarked, and with truth, that a number of the best colonial fishermen have hitherto preferred serving in United States vessels; and the reasons are obvious.

The United States vessels have fished, although contrary to treaty, close to the shore for years, almost without hindrance, and their masters have now great experience. They are superior vessels for the purpose, the capital of the owners being generally larger, and the bait, an article of value, being more plentiful, the "catch" is greater.

In each case, the men are paid on what is called the half-hand system; that is, each man has half his own "catch," paying for his proportion of the bait used. The American vessel is more successful, therefore the fisherman goes to her, and is paid in hard cash, the master buying his share, which is taken into market free of a heavy duty which, if serving in a provincial vessel, he would have indirectly to pay.

The remedy is simple, viz, to keep the Americans off, according to the treaty; the provincial vessel then becomes not only more, but alone successful, and it will be the interest of the experienced fisherman to return to his natural employer, in whose vessel he enjoys an exclusive privilege, more in value tenfold than the amount of duty which the United States vessel frees him from.

To Great Britain, in connection with her North American colonies, this suggests an important consideration, for it cannot be desirable that so many young men should be employed in United States vessels. And if they are, it cannot be supposed that their loyalty will not be shaken when they continually hear republicanism loudly applauded.

Again, it is obvious that if the British fisheries are protected, and a rich advantage secured to the colonist (though he be tainted by such pernicious intercourse), he knows when he becomes a citizen he loses it.

It is a matter of no consequence whether the United States fisherman comes in by treaty, contrary to treaty, or by the last means attempted, under false colors, if he does come in and take away the unbounded wealth which he has of late years been taking. The colonist feels that he has not the exclusive advantage which he ought to have, and thinks, as he has been heard to say, that if not protected he might as well have the advantage of a free United States market.

The effect on the man who looks to self-interest only is therefore clear; he does not gain by being a British subject, and has nothing to lose on becoming a citizen of the United States.

In short, I respectfully submit that the protection of the fisheries forms the closest bond of union between Great Britain and North America. I have been deeply impressed with this opinion during my intercourse with the people, and feel it a duty to represent it.

Before concluding, I beg leave to make a suggestion, which I believe, if carried out, would not only be the most efficient, but the most economical means of protecting the fisheries along the shores of the gulf.

The efficiency of boats has been proved in several instances during the late season, even to the extent of obliging the American vessels to give up attempting to fish near where a boat has been placed. The reason is, that it is in the light winds that the mackerel vessels are most successful, and if at that time a boat is near, an encroaching vessel must be captured.

I would therefore suggest, that from ten to twelve serviceable cutters or large whale-boats should be stationed at different points along the shores of the gulf. The proper positions for such boats could be at once pointed out by any officer who has once been employed on the service; and I have no hesitation in stating my belief that with twelve boats well manned, and in charge of officers possessing energy and zeal, the Americans might entirely be kept off all the fishing grounds of that part of the gulf on which the Devastation was lately stationed. A steam-vessel would then alone be required to go round and relieve the sick and supply provisions.

It may be thought that boats would be resisted, but I do not conceive it would be so, for within the limits evidence of it would always be at hand, and the interest of the crew is not sufficient to induce them to run the risk whatever that of the master may be.

If this plan were adopted, the men should be steady, and it would be advisable that they should have a small gratuity at the end of the season if their conduct deserved it.

Colonial grants would be well bestowed for this purpose.

Trusting that my experience during the late season, and the extreme importance with which I view the question of protection to the British fisheries, will be held to excuse my presuming to offer the remarks and suggestions contained in this letter.

I have, &c.,

C. Y. CAMPBELL,
Commander.

Vice-Admiral Sir G. F. SEYMOUR, K. C. B.,
Esq., Esq., Esq.

[Inclosure 2 in No. 20.]

Abstract of the state in which the papers of vessels under the British flag were found at Port Hood, between the 13th and 23d of October, 1852, as referred to in Commander Campbell's Report on the Fisheries in Gulf of St. Lawrence.

Vessels with masters' names not indorsed on certificate of registry	20
Vessels without any name on their stern	5
Vessels on the certificate of registry of which owners' names do not appear	2
Vessels having the name of master different on certificate of registry and clearance	7
Vessels without any fishing-certificate or clearance	9

Scarcely in one instance was the tonnage marked on main beam, in accordance with the act of Parliament.

C. Y. CAMPBELL,
Commander.

No. 21.

VICE-ADMIRALTY COURT OF NEW BRUNSWICK,
St. John, N. B., October 11, 1852.

The following is a list of vessels seized and prosecuted in this court for infraction of that part of the convention of 1818 between Great Britain and the United States of America, relating to the fisheries, during the period from the time of the convention to the present time :

Name of vessel.	Date of seizure.	Condemnation or restitution, with date.
Shallop L'Orient	June 26, 1822	Condemned, Sept. 14, 1822.
Schooner Gallion	July 18, 1824	Condemned, Aug. 16, 1824.
Schooner William	July 18, 1824	Condemned, Aug. 16, 1824.
Schooner Escape	Oct. 7, 1824	Condemned, Nov. 18, 1824.
Schooner Rover	Oct. 7, 1824	Condemned, Nov. 18, 1824.
Schooner Sea Flower	Oct. 7, 1824	Condemned, Nov. 18, 1824.
Schooner Coral	June 16, 1852	Condemned, July 22, 1852.

J. M. ROBINSON,

Registrar and Scribe of the Vice-Admiralty Court of New Brunswick.

No. 22.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble address of Your Majesty's legislative council and house of assembly of the Province of New Brunswick.

May it please Your Majesty :

We, Your Majesty's dutiful and loyal subjects of the legislative council and assembly of New Brunswick, beg leave to approach your majesty with renewed sentiments of profound respect, and with unabated attachment to Your Majesty's person and government :

We desire to express to Your Majesty the sincere and heartfelt gratitude of all classes of Your Majesty's faithful subjects in New Brunswick for the gracious attention given by Your Majesty to their complaints respecting the encroachments by citizens of the United States upon the extensive and valuable fisheries adjacent to the coasts of this prov-

ince, and for the efficient measures adopted by Your Majesty's Government to guard those fisheries during the past season from wanton aggression :

The fishermen of the United States, stimulated by a large bounty, and protected by a duty of twenty per cent. on British-caught fish, have been placed in the most favorable position both as regards their own and foreign markets, yet, not content with these advantages, they constantly encroach upon the coast fisheries of these North American colonies, any participation in which was expressly relinquished and renounced by the Convention of 1818.

In the commercial transactions between these provinces and the United States the latter possess other decided advantages. Their manufactures are admitted into the provinces at the same rates of duties as are charged on British merchandise. The colonial legislatures, contrary to their wishes and feelings, have been restricted from imposing discriminating duties. While the merchandise of the United States is admitted into this province at a duty of eight and a half per cent. *ad valorem*, the products of New Brunswick are subject, upon importation to the United States, to duties at an average of from twenty to thirty per cent.; while American ships freely trade between colony and colony, and from England to her distant possessions in Australasia and India, colonial vessels cannot pass from one American port to another, as from Boston to New York, or from the Atlantic ports of the United States to California or Oregon; while colonial ships cannot be sold in the United States or obtain registers there, vessels and steamers built in those States are sold in these colonies, and American-built steamers are at this moment plying on the inland waters of this province with British registers.

The manifestations of an enlarged and liberal policy by Your Majesty's Government have not been met in the same spirit by the Government of the United States; and we therefore earnestly entreat that Your Majesty will preserve inviolate the rights and privileges of your attached subjects in these provinces, as secured to them by existing treaties, and will not concede any further or greater privileges to foreign fishermen than they now enjoy without first granting your loyal subjects a hearing thereupon.

The protection granted by Your Majesty's vessels of war has this year enabled colonial fishermen to enjoy their shore fisheries undisturbed and in a profitable manner. We therefore humbly entreat that Your Majesty will be pleased to continue such protection as one of the greatest boons to the North American fisheries, because thereby they will be freed from foreign aggression, and may be prosecuted extensively with great benefit and advantage to Your Majesty's devoted subjects.

WILLIAM BLACK,

President of Legislative Council.

WILLIAM CRANE,

Speaker of the House of Assembly.

NOVEMBER 1, 1852.

No. 23.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble address of the house of assembly of the Province of Nova Scotia.

May it please Your Majesty :

We, Your Majesty's dutiful and loyal subjects, the representatives of your Majesty's faithful people of Nova Scotia, beg leave to approach the throne with the renewal of the tender of affectionate support to Your Majesty's person and government.

We have learned with deep interest that negotiations are pending between Your Majesty's Government and the Government of the United States, involving not only questions of reciprocal trade between the two countries, but the surrender of national and colonial rights of a very important character.

Warned by the experience of the past, and the results of treaty stipulations, in which the interests of British America have been seriously compromised, without the provincial governments and legislatures being consulted, the house of assembly pray that no treaty may be negotiated by Your Majesty which would surrender to foreigners the reserved fisheries on our sea-coasts, or any participation therein, without an opportunity being afforded to the government and legislature of Nova Scotia to consider and express our opinion upon its terms.

W. YOUNG,
Speaker.

HOUSE OF ASSEMBLY, *February 17, 1853.*

No. 24.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble address of the representatives of the people of Nova Scotia.

May it please Your Majesty :

We, Your Majesty's faithful and loyal subjects, the commons of Nova Scotia, with warm attachment to the government and person of Your Majesty, express our gratitude for the protection afforded to the fisheries of British America, and the regard given to colonial interests, which have enabled British subjects during the last year to enjoy their rights and privileges free from foreign aggression.

Inspired with confidence, we humbly solicit a continuance of such efficient protection as will maintain inviolate the exclusive enjoyment of those fisheries, the inherent right of the British people, an inexhaustible source of commerce, and a fostering nursery for the national marine of the British Empire.

Your Majesty's subjects in this part of your dominions are of opinion that the commerce of their country is supported chiefly by the fisheries, which constitute a source of incalculable wealth, and ought not to be participated in by any foreign power on any consideration whatever.

That notwithstanding the advantages conferred on the citizens of the United States by the generous policy evinced by Your Majesty, they

still adhere to their illiberal and protective system, which they sustain with unyielding tenacity.

Whilst the shipping of America, built, manned, and equipped in the United States, can be sold in the British colonial ports without duty, and obtain British registers, American citizens deny any corresponding privilege to Your Majesty's subjects. Whilst their vessels participate with British tonnage in the trade with Britain's colonies, supplying their productions and manufactures on the same terms as British, whilst they trade with the British North American colonies in the islands of the Pacific, a British vessel cannot load from New York or Boston for the other States of the republic, or trade from any American port to California or Texas.

Your Majesty's loyal subjects therefore pray Your Majesty to continue the protection which was extended to them last season, and by force to repel all foreign aggression on their reserved fishing-grounds—the exclusive enjoyment of which is solemnly renounced to the British by the Convention of 1818, between Your Majesty and the republican government; fully believing that the admission of foreigners to participation in that fishery would have a most disastrous effect, can be purchased by no equivalent, and would tend to weaken the confidence of Your Majesty's subjects in the policy of a government which does not protect your people in the enjoyment of their inalienable rights.

W. YOUNG,
Speaker.

HOUSE OF ASSEMBLY, *March 30, 1853.*

No. 25.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble address of the legislative council of Nova Scotia.

May it please Your Majesty:

The legislative council of Nova Scotia approach Your Majesty with sentiments of loyalty and attachment to your royal person and government, and beg to express their grateful sense of the benefit conferred upon the people of this province by the protection afforded to the fisheries on their coasts during the past year. The legislative council assure Your Majesty that the exclusive right to the enjoyment of these fisheries is esteemed by them a source of great wealth to the province, upon which its commerce largely depends; and they regard preservation of them from the aggression of foreigners as another instance of the deep interest felt by Your Majesty in its welfare.

Notwithstanding the recognition by treaty on the part of the United States of America of the exclusive right of Your Majesty's subjects to fish on the coast of the North American provinces, the citizens of that country have year after year encroached upon that right; and though the most liberal commercial policy is evinced by Your Majesty toward the republic, all attempts to induce them to abandon their protective system have been resisted, and they not only take fish out of our waters after having solemnly renounced the right to do so, but Your Majesty's subjects are met in the United States by almost prohibitory duties, while large bounties are extended to their own people.

The legislative council pray Your Majesty to continue to employ such a force as will prevent any encroachment on their fishing grounds, and secure to them the enjoyment of rights to which they are exclusively entitled.

MICHL. TOBIN,
President.

LEGISLATIVE COUNCIL CHAMBER, April 4, 1853.

No. 26.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble address of the inhabitants of the city and county of St. John, adopted at a public meeting regularly convened.

May it please Your Majesty :

We, Your Majesty's faithful and loyal subjects in the city and county of St. John, in the Province of New Brunswick, beg leave to approach Your Majesty with renewed assurances of our sincere devotion to Your Majesty's person and Government.

In common with all Your Majesty's loyal subjects in the North American colonies, we are deeply impressed with the present and prospective value of our coast fisheries to the present and future inhabitants thereof.

Viewing the inshore fisheries as the natural, inherent, and inalienable right of Your Majesty's subjects in the provinces, not to be conceded, alienated, or affected without their consent, we have learned with much anxiety, from the announcement in Your Majesty's speech to the Imperial Parliament, that negotiations are now pending between Your Majesty's Government and that of the United States upon the subject of the North American fisheries, the nature of which has not transpired.

Believing, as we do, that "as the value of a participation in our fisheries by the citizens of the United States would greatly exceed any concession that the United States Government can offer to the inhabitants of the British colonies," we humbly, but earnestly, entreat Your Majesty to refuse to entertain any proposition for a modification or alteration of the Treaty of 1818, unless such proposition shall embrace the full and entire question of reciprocal intercourse in commerce and navigation between Your Majesty's North American colonies and the United States, upon terms that will be just and reasonable; and that, before any treaty is agreed upon, Your Majesty will be graciously pleased to afford your loyal and faithful subjects in the provinces an opportunity of becoming acquainted with the terms proposed, and of laying their case before Your Majesty.

And as in duty bound will ever pray.

CHARLES JOHNSTON,
Chairman.

JANUARY, 1853.

No. 27.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The humble memorial of the inhabitants of the county of Northumberland, in the Province of New Brunswick, in British North America, most humbly sheweth :

That your memorialists approach Your Majesty with renewed assurance of their loyalty and attachment to Your Majesty's person and Government.

Your memorialists observe with deep anxiety, from Your Majesty's royal speech at the opening of Parliament, and the late message of the President of the neighboring republic to Congress, that negotiations are now pending between Your Majesty's Government and that of the United States, affecting the rights of fishery on these shores.

The coast fisheries hitherto enjoyed by the people of this province, spared to them by the Convention of 1818, although long an object of jealousy to, and frequently intruded upon by, the people of the United States, your memorialists have ever considered to be their exclusive and unalienable right, in common with their fellow-subjects of Your Majesty's Crown ; and they appreciate them accordingly.

That these fisheries have not heretofore been prosecuted to an extent commensurate with their importance, we pray Your Majesty not to ascribe to any distaste or unfitness on the part of the people of this province for the pursuit ; but rather to the sparseness of population and absence of capital incidental to a new country, as well as to the unhappy preference too long paid to the manufacture and export of timber. But as these obstacles have gradually disappeared, the prosecution of the fisheries has proportionally extended ; much capital is now embarked in it ; the people, at the cost of much time and labor, have just acquired the necessary skill and experience for its profitable conduct ; and already has it become an industrial pursuit of vital importance to the inhabitants of these shores. Your memorialists would further add their conviction that the time is not far distant when the inhabitants of this and the neighboring counties must look to the produce of these fisheries for their chief staple of export ; the question, therefore, of the alienation or preservation of these fisheries becomes to them one seriously affecting their future progress or decline as a commercial people.

Your memorialists would most humbly bring under Your Majesty's notice that the trade between this province and the United States of America has been conducted, for some years past, upon principles unfair and oppressive to your memorialists ; for while the produce and manufactures of that country have been admitted into this province at a moderate rate of duty, and in accordance with the policy of the Imperial Government upon equal term with those of the United Kingdom, our commodities have been met there by a high protecting tariff ; and while the ships of the United States are here permitted to be introduced to receive a British register, and enter at once into competition with our own, colonial ships are denied a market in the United States.

In view of these evils, your memorialists would humbly submit to Your Majesty that such a modification of the tariff and navigation laws of the United States as would place the trade between that country and these colonies on a footing of equality should be considered merely as an equitable arrangement, mutually beneficial, but by no means affording an adequate compensation for yielding up interests of such magni-

tude and national importance as the shore-fisheries of British America, which, when once alienated, may never be recovered.

Your memorialists would therefore most earnestly pray Your Majesty to consent to no alteration of the Convention of 1818 with the United States of America which would tend to deprive them of, or abridge their rights to, the shore-fisheries on this coast, until the terms upon which such alteration is proposed to be made be first submitted to this province for their concurrence.

And as in duty bound Your Majesty's memorialists will ever pray.

W. A. BLACK,

*High Sheriff of the County of Northumberland,
Chairman of the Meeting.*

NEWCASTLE, MIRAMICHI, January 5, 1853.

No. 28.

CONSULATE OF THE UNITED STATES,
Province of Nova Scotia, Pictou, October 28, 1852.

SIR: Since my return from Charlotte Town, where I had the honor of an interview with your excellency, my time has been so constantly employed in the discharge of official duties connected with the results of the late disastrous gale, so severely felt on the north side of Prince Edward Island, that I have not found time to make my acknowledgments to your excellency for the kind and courteous reception extended to me at the government-house, nor to furnish you with my views relative to some improvements which might be made by your excellency's government, thereby preventing a similar catastrophe to the one which has so lately befallen many of my countrymen; and at the same time on behalf of the Government of the United States, which I have the honor to represent, to thank you most feelingly for the promptness and energy displayed by your excellency in issuing proclamations, whereby the property of the poor shipwrecked mariner should be protected from pillage.

These various duties devolving on me, I now have the pleasure of discharging, but only in a brief and hurried manner.

The effect of the recent visitation of Providence, although most disastrous in its consequences, will yet result in much good.

In the first place, it has afforded the means of knowing the extent and value of fisheries on your coast, the number of vessels and men employed and the immense benefit which would result to the people within your jurisdiction, as well as those of the United States, if the fishermen were allowed unrestrained liberty to fish in any portion of your waters, and permitted to land for the purpose of curing and packing.

From remarks made by your excellency, I am satisfied it is a subject which has secured your most mature reflection and consideration, and that it would be a source of pride and pleasure to your excellency to carry into successful operation a measure fraught with so much interest to both countries.

2d. It has been satisfactorily proved, by the testimony of many of those who escaped from a watery grave in the late gales, that had there been beacon-lights upon the two extreme points of the coast, extending a distance of 150 miles, scarcely any lives would have been lost, and but a small amount of property been sacrificed. And I am satisfied, from the opinion expressed by your excellency, that the attention of your

government will be early called to the subject, and that but a brief period will elapse before the blessing of the hardy fishermen of New England, and your own industrious sons, will be gratefully returned for this most philanthropic effort to preserve life and property, and for which benefit every vessel should contribute its share of light-duty.

3rd. It has been the means of developing the capacity of many of your harbors, and exposing the dangers attending their entrance and the necessity of immediate steps being taken to place buoys in such prominent positions that the mariner would in perfect safety flee to them in case of necessity, with a knowledge that these guides would enable him to be sure of shelter and protection.

From the desire manifested by your excellency previous to my leaving Charlotte Town that I would freely express my views relative to the recent most melancholy disaster, and make such suggestions as might in my opinion have a tendency to prevent similar results, there is no occasion for my offering an apology for addressing you at this time.

I have, &c.,

B. N. NORTON,

United States Consul for Pictou Dependency.

His Excellency Sir A. BANNERMAN, &c., &c.

No. 29.

CHAMBER OF COMMERCE,

St. John's, Newfoundland, June 25, 1853.

SIR: I have the honor to receive and have laid before the Commercial Society your letter of the 21st instant, stating that his excellency the governor "will be glad to be enabled to convey to his grace, the Duke of Newcastle, the views and wishes of the society on the subject of the establishment of reciprocal free trade between this colony and the United States of America."

And I am directed to acquaint you, for the information of his excellency, that the society, having fully considered the matter, are of opinion, with reference to free trade with the United States, that as imports from that country are now admitted upon the same terms as from Great Britain and elsewhere, at a duty of about 5 per cent. (collected solely for the purpose of revenue), whilst the produce of our fisheries are subject to a duty of 20 per cent. on admission to the United States, it is desirable that in any commercial treaty entered into between the Government of the United States and Great Britain, the interests of this colony should be so far protected that goods imported from each country should be received at the same rate of duty.

That the views of the American Government should be obtained from our minister at Washington, in order that the society may more fully understand what they propose in reference to this colony, that the same may be more fully considered before any definite arrangement be entered into.

That the prosperity of Newfoundland depending on her fisheries, it would be impolitic and unwise to admit any foreign power to a participation therein further than has already unfortunately been done.

I have, &c.,

PETER McBRIDE,

President Chamber of Commerce.

Hon. JAMES CROWDY,
&c., &c., &c.

No. 30.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please Your Majesty :

We, Your Majesty's loyal subjects, the Commons of Newfoundland, in general assembly convened, beg leave to approach Your Majesty with sentiments of unswerving loyalty to Your Gracious Majesty's person and throne, to tender to Your Majesty our respectful and sincere acknowledgments for the protection afforded by the Imperial Government to the fisheries of this colony and Labrador, during the last year, and to pray that Your Gracious Majesty will be pleased to continue the same during the ensuing season.

May it please Your Majesty :

The illicit traffic in bait carried on between the inhabitants of the western part of this island and the French, has proved of serious injury to the fisheries generally, as the supply enables the French bankers to commence their voyage early in spring, and thereby prevent the fish from reaching our coasts. We therefore most earnestly beseech Your Majesty graciously to be pleased to cause an efficient war steamer to be placed in Burin during winter, so that, by being early on the coast, she may avert the evil of which we so greatly complain.

Passed the house of assembly, April 23d, 1853.

JOHN KENT, *Speaker.*

No. 31.

[Memorandum.]

VICE-ADMIRALTY COURT, *Prince Edward Island.*

The United States fishing schooner Union, Warren D. Bunker, master, was seized on the 20th day of July, 1852, by Her Majesty's schooner Telegraph, the Hon. Henry Weyland Chetwynd, commander, for fishing within the three-mile limit.

Vessel condemned on the 24th September of same year—the judge by interlocutory decree pronouncing “the said schooner Union to have been fishing contrary to the provisions of the act of Parliament made and passed in the fifty-ninth year of the reign of His late Majesty King George III, intituled ‘An act to make regulations with respect to the taking and curing of fish on certain parts of the coasts of Newfoundland, Labrador, and His Majesty's other possessions in North America, according to a convention made between His Majesty and the United States of America,’ and as such or otherwise subject and liable to forfeiture and condemnation, and condemned the said schooner, her tackle, apparel, and furniture, goods and merchandise found laden on board the said schooner at the time of her seizure, as forfeited to our Sovereign Lady the Queen accordingly.”

Appearance was filed for the defendants in this case, “but nevertheless under protest to the jurisdiction of this court.” Upon argument, the judge overruled the protest and decreed that the parties should appear absolutely. No appearance, however, was filed.

I cannot find from any papers in this case, at present in the registry of this court, that this vessel was ever interfered with by government officers for transshipping fish or purchasing supplies.

The schooner Florida, of Gloucester, United States, Edmund Pyne, master, was seized on the 3d day of August, 1852, by Her Majesty's schooner Telegraph, Lieut. the Hon. Henry Weyland Chetwynd, commander, for fishing within the three-mile limit.

Appearance filed for defendants in this case, but under protest to the jurisdiction of this court. Upon argument, the judge overruled the protest and decided that the defendants should appear absolutely.

The defendants' solicitor submitted and admitted the cause of the suit, and prayed for an early condemnation. Vessel condemned by consent, and decreed forfeited to Her Majesty, for the same reasons as in the case of the schooner Union.

I cannot find from any papers in the case, at present in the registry of this court, that this vessel was ever interfered with by government officers for transshipping fish or purchasing supplies.

The schooner Caroline Knight, of Newburyport, United States, Benjamin Small, master, was seized on the 11th day of September, 1852, by Commander Colin Yorke Campbell, of Her Majesty's steam-sloop Devastation, for fishing within the three-mile limit.

The schooner condemned by consent, and decreed forfeited to Her Majesty for violation of the act 59 George III, cap. 38.

It does not appear from any papers in this case, at present in the registry of this court, that this vessel was ever interfered with by government officers for transshipping fish or purchasing supplies.

Of date 15th August, 1853, the following minute of court appears :

Regina v. American fishing vessel Starlight.

Affidavits made before the judge in chambers by Colin Yorke Campbell, captain commanding Her Majesty's steam-sloop Devastation, John May, esq., master, and George Rathbone, esq., second lieutenant, and George Harris, esq., midshipman of the same.

No further entry in this case appears on the record of the court, and I presume therefore that the prosecution of the Starlight was abandoned.

(Signed)

CHARLES DESBRISAY,

Registrar.

No. 32.

[Extract of a speech of the Hon. Joseph Howe, from the Spectator, July 19, 1865.]

Let me now draw your attention for a moment to the value of these North American fisheries. You have behind and around you here, boundless prairies, which an all-bountiful Creator annually covers with rich harvests of wheat and corn. The ocean is our prairie, and it stretches away far and around us, and Almighty God, for the sustenance of man, annually replenishes it with fish in myriads that cannot be counted, having a commercial value that no man can estimate. The fecundity of the ocean may be estimated by the fact that the roes of thirty codfish annually replace all the fish that are taken by the British, French, and American fishermen on the Banks of Newfoundland. In like manner the schools of mackerel, herring, and of all other fish that swarm in the bays and trim around the shores are replaced year by year. These great storehouses of food can never be exhausted.

But it may be said, does not the free competition which now exists lower the prices? No. Codfish have never been higher in the markets

of the world than they were last summer. Herring are now selling in Baltimore for \$13 a barrel. Thirty years ago I used to buy No. 1 mackerel in Halifax for \$4 a barrel. They now cost \$18 a barrel, and I have seen them selling, since the Reciprocity Treaty was signed, for \$22 a barrel. The reason of this is that, relative to all other employments, fishing is a perilous and poor business, and that, with the progress of settlement and growth of population in all these great States and provinces, to say nothing of the increased consumption in Spain, the Mediterranean, the Brazils, and the West Indies, that all your fishermen and ours can catch will scarcely supply the demand. I placed before the committee a paper, signed by two American merchants carrying on trade in Prince Edward Island, which proves that under the treaty your mackerel fishery has flourished and expanded to an extent unexampled in its former history. Taking two years prior to the existence of the treaty, and contrasting them with the last two years, they show that your mackerel fishery has grown from 250 vessels, measuring 18,150 tons, valued at \$750,000, and manned by 2,750 men, and securing a catch worth \$850,000, to 600 vessels, measuring 54,000 tons, employing 9,000 men, and securing 315,000 barrels, worth \$4,567,500. So with the herring fishery it is equally prosperous. I have seen two American seine boats take 500 barrels of herring, at Baltimore prices worth \$6,500, on the coast of Labrador, in a summer afternoon. The net fishing is also profitable. The bank earns and the mill grinds while the banker and the miller sleep. The fisherman sets his net at night, and finds in the morning that kind Providence, without a miracle, except the "wealth of sea," that standing miracle, has loaded his nets at night with a liberal hand. These fisheries, sir, are sufficient for us all. The French, who are anxious to build up a powerful navy, maintain 10,000 men by their bounties in these North American waters, and it is most creditable to our fishermen, that in the face of these bounties and of yours, that they are able, by strict economy and hardy endurance, to wrestle for a share of these ocean treasures to maintain their families and increase their numbers.

A gentleman asked, But had we not the right to fish on the Banks of Newfoundland before the treaty?

MR. HOWE. Yes; but not in the Great Banks of Newfoundland and along the coast-lines where the people of Newfoundland, who frequent the Banks but little, catch all their codfish. Some of these bays are twenty or thirty miles in width, and deeply indent the island, being broken into numerous fiords or smaller bays, where fish are plenty. By the treaty, American fisherman can now use all these bays, as well as those upon the coasts of Canada, Nova Scotia, New Brunswick, and Prince Edward Island. The command of the inshore fisheries gives to your people the opportunity to supply themselves with bait, whether they resort to the Banks or fish around the coast.

I trust I have shown you, Mr. Chairman, that the fisheries are inexhaustible and of inestimable value; that free competition does not lower the prices, and that your fishermen and the French have special aids to stimulate their industry. But my great objection to the abrogation of the treaty is that it throws open again a wide field of controversy. Who can measure by the eye a mile, even upon the land? And how are your fisherman to measure accurately three marine miles at sea, even in fair weather? In a fog it is impossible to do so. And the naval officers who may be sent down to guard our mutual rights will be as much mystified and puzzled as they were before.

But it may be said that you gave us your inshore fisheries when we

gave you ours. You did, but they were of comparatively little value. This was the objection that we took to the treaty in Nova Scotia, in 1854. Let me illustrate: Suppose a farmer, living on a poor farm, exhausted by successive cropping, were to say to a neighbor having a rich soil in high cultivation, "Let us save fencing and throw our farms into one." That was your proposition, and it was accepted. Now mark the result—that while your vessels have swarmed in our waters for the last nine years, carrying off enormous values every year, we have never sent a vessel south during all that time, or caught a single cargo of fish on the coast or in the bays of the United States.

No. 33.

ROYAL ALFRED, AT BERMUDA,
November 18, 1869.

SIR: I beg to inclose, for the information of the lords commissioners of the Admiralty, the fishery reports from the officers commanding the Dart, Mullet, and Minstrel, which have been employed during the past season in the protection of the fisheries on the coast of New Brunswick, Nova Scotia, Prince Edward, and Cape Breton Islands.

2. The Royalist was dispatched also on this duty, but was recalled early in the season, and sent to re-enforce the squadron at the Bahamas, as reported at the time by my predecessor. The others were also withdrawn for some three or four weeks at the end of August and beginning of September, to attend upon his Royal Highness Prince Arthur, in his visit to the different ports of the Dominion.

3. The steamer Druid, belonging to the Dominion, has been also occasionally employed on the fisheries on the coast of Cape Breton Island, but as she has had to visit periodically the light-houses around Nova Scotia and New Brunswick, very little of her time could be devoted to the fisheries.

4. From the periodical reports of the officers I have extracted the following account of vessels boarded, distinguishing those which had taken out licenses from the Dominion Government, authorizing them to fish within three miles of the shore.

	Dart.	Mullet.	Minstrel.	Total.
Total number boarded.....	141	9	12	162
Number within three-mile limit warned once.....	113	8	10	131
Number within three-mile limit warned more than once.....	18	1	2	19
Licensed.....	10	9	2	12
Not licensed.....	131	9	10	150

5. It therein appears that out of 162 vessels boarded within the limits, only 12, or about 7 per cent., had licensed. It is also plain why this is so. When established the charge was fixed at half a dollar per ton, and a large proportion of vessels took out licenses the first year. Some, however, did not do so, and the fishermen soon discovered that there was little risk of interference or capture, as so few cruisers were employed, and no other efficacious measures were adopted to prevent infraction of the treaty by those not licensed. The fee was then raised to one dollar per ton, and has this year been further raised to two dollars a ton without any increase of vigilance, and the natural result has been that very few licenses have been taken out, and those in fact only

by vessels which, having received a warning, were liable to capture if found fishing again within the three-mile limit.

6. Moreover, in direct violation of the 1st article of the convention of 1818, American vessels are permitted to resort to the harbors not alone for shelter, repairing damages, or for wood and water, but in order to land and deposit their fish on bond, whence it is conveyed to the United States by a regular line of steamers.

7. So far as I am aware, the only measure adopted by the colonial authorities has been the employment of the steamer *Druid*, which, as I have already stated, could not have effected much, as she had other and important duties calling her elsewhere. She occupied also a very anomalous position in not being a man-of-war.

8. The result, therefore, is that the encroachments of American fishing-vessels are practically disregarded by the colonial authorities, and they are actually encouraged by the inhabitants, who derive large profits from supplying their wants at the various ports. Very few colonial vessels are engaged in fishing, owing to the almost prohibitory tariff imposed in the United States on fish imported in colonial vessels, and the colonial fishermen, therefore, in considerable numbers, man the American vessels.

9. The cruising of three or four of Her Majesty's ships to watch lines of coast of several hundred miles in extent can effect but little in preventing encroachment (especially as one warning must be given, and moreover it must be extremely difficult to determine correctly the distance at which a vessel boarded may be from the land), unless they are supplemented by more vigorous measures on the part of the colonial authorities and people, whose interests are, I apprehend, alone affected by this question.

10. I draw attention to the want of action on the part of the colonial authorities not as a matter of complaint, but because it is commonly stated that they are anxious and hope to force the Americans to a renewal of the Reciprocity Treaty, by confining them strictly to their fishing rights, but yet they leave them practically unmolested when they infringe them.

11. I transmit for their lordships' information a letter from the governor-general of the Dominion, inclosing one from Her Majesty's minister at Washington, respecting a threat, on the part of the American fishermen, to resist by arms any interference. A rumor to the same effect appears to have been current on the fishing grounds, but I should not attach any credit to the story. The fishermen know perfectly well the consideration they have received, much beyond what they are entitled to, and they must also be aware that such a proceeding would probably result in the withdrawal of the system of licenses and increased vigilance to prevent encroachment.

12. In conclusion, I would observe that as the American fishermen are all fully aware of the illegality of fishing within the three-mile limit, and of the means which are afforded them by the license system of obtaining the privilege of doing so, the order as to giving them one warning should be abandoned, and the public notice should be given before the next season commences that all vessels, without licenses, found fishing within the limit will be at once captured and sent in for adjudication.

I have, &c.,

G. G. WELLESLEY, *Vice-Admiral*.

THE SECRETARY TO THE ADMIRALTY.

P. S.—I have forwarded a copy of this letter and inclosures to the governor-general of Canada for the information of his government.

No. 34.

[Extract of a report from Commander Cochrane to Vice-Admiral Edward G. Fanshaive, Commander-in-Chief.]

HER MAJESTY'S GUNBOAT BRITOMART,
At Halifax, June 18, 1870.

Mr. Best, the fishing warden at Beaver Harbor, New Brunswick, informed me that he often saw twenty or thirty American vessels fishing; but he has no boat at his disposal or any means of preventing it, though he has occasionally been able to seize their nets when set very close to shore.

No. 35.

CONSULATE OF THE UNITED STATES OF AMERICA,
At Halifax, Nova Scotia, August 30, 1870.

SIR: I perceive it is stated in one of the morning papers of this city that an order has been transmitted from the Canadian authorities prohibiting American fishing-vessels from obtaining any supplies in the ports of the British North American Provinces.

If any such order has been received by your excellency, will you be kind enough to furnish me with a copy thereof?

I have the honor to be, sir, your obedient servant,

M. M. JACKSON,
United States Consul.

His Excellency Vice-Admiral
GEORGE GRENVILLE WELLESLEY, C. B., &c., &c.

No. 36.

ROYAL ALFRED, HALIFAX, August 31, 1870.

SIR: I have the honor to acknowledge the receipt of your letter of yesterday's date, and to inform you in reply that I have not seen the statement in the morning papers alluded to; and as such order would probably have been addressed by the Dominion Government to its own officers I can only suggest that an application should be made to the Dominion Government for the information required.

I have, &c.,

GEO. G. WELLESLEY,
Vice-Admiral.

His Honor JUDGE JACKSON,
United States Consul, Halifax.

No. 37.

CONSULATE OF THE UNITED STATES OF AMERICA,
Halifax, Nova Scotia, September 1, 1870.

SIR: I have the honor to acknowledge the receipt of your communication of yesterday, suggesting an application to the Dominion authorities for the information which I requested.

I addressed you under the impression that the Imperial and Dominion authorities were co-operating, and acting under the same orders, regulations, and instructions in reference to all matters connected with the protection of the inshore fisheries. As American fishermen are almost daily visiting this port on their way to the fishing banks, it becomes a matter of great importance to them to know whether any orders have been issued by your excellency, as the representative of the Imperial Government, to prevent them from getting such supplies as have been customary, both before and since the treaty of 1818, in all the ports of the British North American Provinces.

Since addressing you I have understood that the commanders of Her Majesty's vessels, acting under the authority of your excellency, have notified American fishermen bound to the fishing banks that they would not be permitted to procure ice or other supplies in any of the colonial ports, and that any attempt to procure such supplies would subject their vessels and cargoes to seizure and confiscation. As consul of the United States, I am frequently applied to by American citizens engaged in the deep-sea fisheries for information on this subject.

To enable me to give such information, I have respectfully to request you to furnish me with copies of any orders issued by your excellency in relation to supplies to American fishermen.

I have the honor to be, sir, your obedient servant,

M. M. JACKSON,
United States Consul.

His Excellency, Vice-Admiral GEO. GRENVILLE WELLESBY, C. B.,
Esq., &c.

No. 38.

ROYAL ALFRED,
At Halifax, September 3, 1870.

SIR: I have the honor to acknowledge the receipt of your letter of yesterday's date, in which you request me to furnish you with copies of any orders I have issued in relation to supplies to American fishermen; and in reply to state that copies of my instructions to officers under my orders were transmitted to Her Majesty's minister at Washington, and were by him communicated by the orders of Her Majesty's Government to the United States Secretary of State.

Although it is not within the scope of my authority to furnish you with these documents, I may state in general terms, which will probably be sufficient for the purpose you have in view, that the duty enjoined on the commanding officers of Her Majesty's ships is to prevent any infringement of the arrangement agreed on between the two governments in respect of the fisheries in the treaty of 1818.

That treaty expressly defines the purposes for which alone United States fishing-vessels are to be allowed to enter ports within certain limits. The words used are as follows: "Provided, however, that the American fishermen shall be admitted to enter such bays or harbors for the purpose of shelter and of repairing damages therein, of purchasing wood and of obtaining water, and for no other purpose whatever. But they shall be under such restrictions as may be necessary to prevent their taking, drying, and curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them."

It appears to me that the expression "for no other purpose whatever" excludes them from procuring ice, bait, and other supplies; and the offi-

cers have therefore, in my judgment, properly notified fishermen against any attempt to infringe the treaty, and by so doing also disobey the British and colonial laws in reference thereto, in which the very same terms are used.

I have, &c.,

GEO. G. WELLESLEY,
Vice-Admiral.

His Honor Judge JACKSON,
United States Consul, Halifax.

No. 39.

Captain Hardinge to Vice-Admiral Wellesley.

VALOROUS, HALIFAX, *September 17, 1870.*

SIR: Agreeably to article 3 of your instructions, dated 3d May last, I have the honor to make the following report:

Owing to the seizure of the schooner *S. G. Marshall*, on the 31st July, the ship has been much detained at Charlotte Town in prosecuting her to condemnation.

In consequence of the evidence obtained of various vessels in the employ of and belonging to Mr. J. C. Hall, an American citizen, doing business in Charlotte Town, being illegally registered, and wearing English colors, to enable them to prosecute the inshore fishery, my attention has been greatly given to the detection of these irregular vessels. The presence of a ship of war at Charlotte Town, I consider, would be of great assistance in exercising supervision and checking these frauds on the statutes.

This port, being on no fishing station, is rarely visited, and, in consequence, the officials, to whom it was my duty to apply, were unable to render me the assistance I required.

In exercising a supervision over the shipping here, which is much wanted owing to the class of persons who form the customs authorities, and who here are appointed solely from political reasons, the irregular vessels would in time be suppressed.

It must be remembered that these irregularly-owned vessels are fitted out to obtain their cargoes in a short space of time, *e. g.*, the *S. G. Marshall* had on board two seines, one of 200 fathoms long and 18 feet deep, the other 100 fathoms in length and 12 feet in depth. The cost of the first one was about 400*l.*, the smaller one about 200*l.* In addition she had four boats.

In evidence, the master stated that if he had remained where he was taken he would have filled his vessel in forty-eight hours.

With regard to the fishery on No. 6 station, I have, owing to the limited space of time actively employed, but little to record.

The cod-fishery was a good average catch from the Bay of Chaleur along the coast to Peter Point.

The mackerel fishery was hardly an average, if the American fishermen are to be believed. The English vessels made good catches off Bathurst and other places close to the shore where the fish schooled.

By this, I do not mean it to be inferred that the American fishermen do not fish inside the limit and share in all the advantages of the inshore fishery.

I have seen as many as thirteen vessels at one moment fishing close inshore, but of course the whole were outside the limit before they could be approached. The inhabitants of Port Daniel complained that, prior to this season, the Americans were in the habit of hauling their seines in the bay, greatly to the loss and impoverishment of the inhabitants.

The inhabitants of Gaspé Basin and the neighborhood complained of the behavior of an American, Mr. Ebenezer Marshall, of the schooner S. T. Marshall, last year. They stated that he hauled his large seines on Sandy Beach, forming the harbor, and had brought to land large numbers of young codfish, which were useless to him.

The spot always had been a favorite breeding-place for the cod, and they feared that its character would be totally changed, and great loss to them ensue, if that practice was pursued.

They also stated that they feared the mackerel would avoid the bay for a season if the seining was persisted in.

With regard to the best method of protecting the fisheries during the ensuing season, I beg to make this suggestion :

That in the Gulf of St. Lawrence the stations 4, 5, and 6 be placed under a senior officer, so that any one of the cruisers under the altered system might be able to refer any question or difficulty to him. The senior officer would then be able to clear up questions, and explain matters of a delicate character, on the spot. He also would be able to relieve the cruiser, in the event of a capture having been made by her, by receiving the necessary witnesses on board, instead of the capturing ship being kept off her station for a length of time.

The fact of being able to communicate on the spot with a superior immediately engaged in the same duty would naturally strengthen the position of those engaged in an arduous duty of the character for the first time, and lessen the isolation now experienced.

In my opinion, it requires a personal acquaintance with those engaged in the fisheries, and also a knowledge of the class of officials met with, to be able to detect the subtleties to which they have recourse in order to gain their ends.

With respect to the Dominion cruisers, and their fitness for the duty required of them, I am prompted to make the following remarks :

Of those which I have fallen in with, the *Ella T. Maclean* draws too much water to be a serviceable cruiser.

The *England* is too indifferent a sailer to be of much service.

I observe that I have omitted to mention that the master of the S. T. Marshall last year, and complained of to me, is the same Ebenezer Marshall in command of her when captured.

I have, &c.,

E. HARDINGE.

No. 40.

[Extract of a despatch from Captain Phillimore to Vice-Admiral Fanshawe.]

SPHINX, HALIFAX, *November 15, 1870.*

SIR : With reference to Article III of the fishery restrictions, I have to inform you that the most plentiful sorts of fish on the western coast of the Gulf of Saint Lawrence are salmon, cod, ling, mackerel, and herring ; and the best baits that are used for catching them are small

kinds of fish, which are easily obtained by dragging those parts of rivers which become small pools at low water.

Salmon, cod, and ling are found at the mouths of rivers where these boats are, and in about the same proportion of number.

Mackerel and herring naturally come into shallow water at certain seasons to spawn, and are then in the best condition for human food; but they can be enticed, and very easily, if along a bank, to more than three miles from the coast, and then caught there by a vessel standing out to sea, and throwing overboard large quantities of bait as she goes along.

These fish are cured and packed on board the fishing vessels directly they are caught, it being necessary to do so in order to preserve them.

As the nearest principal markets for the sale of fish are New York and Boston, and as there is a tax in the United States on fish landed from British vessels, but none from American, and as fish are more plentiful near the coast, it follows that the fishing business on this coast is most profitable when it can be carried on close to the shore, and under American colors. Also, as fishing is apparently most profitable under American colors, and there is an American law which prevents a British-built ship from ever being able to sail under American colors, it follows that the shipbuilders in the United States have a better market for their fishing schooners than the British. On the other hand, it is a disadvantage to the United States Government for vessels to fish under their flag, for they lose the tax which they would get were the fish to be landed at their seaports from British vessels instead of American.

The residents about the coast of the Gulf of St. Lawrence have informed me that their inshore fishing this season has been good, and that they attribute this in a great measure to the American fishing schooners having been kept off the coast. Large numbers of these schooners have been fishing in the Gulf of St. Lawrence this year, and have been frequently seen doing so within three miles of the coast, notwithstanding the precautions that have been taken to prevent them. These fishing schooners generally go about in fleets, and their crews are made up of a mixture of all nations, with but a few *bona fide* Americans among them. These men receive no wages, but a certain share of the proceeds of the sale of the fish caught during the

No. 41.

[Extract from a letter from Commander Knowles, of Her Majesty's ship *Lapwing* (No. 10 A), dated 7th November, 1870, addressed to Vice-Admiral Fawcshawe, commander-in-chief.]

PORT HOOD.

2. The inshore fishing in the vicinity of the port has by all accounts been far above the average, the mackerel coming in through the Gut of Canso about the commencement of June, when there was an immense catch in this harbor; they then went northward toward East Point, and off Sea-Wolf Island and Chettican.

The herring fishery here has been excellent; the summer herrings came in in July, the fall herrings for three nights in September, and I believe that as much as ten thousand barrels were caught off Henry Island and outside Smith's Island.

The cod fishery here has not been remarkable.

This port seems to be a great harbor of refuge for the American schooners ; about fifty of them were frequently at anchor at a time, and previous to the treaty large supplies were obtained from the storekeepers on shore, but owing to the constant presence of a man-of-war the traders now derive but little if any profit.

The general feeling here is that the abrogation of the license system and stringent manner in which the laws have been enforced have had the effect of greatly improving the catch of the inshore and coast fishermen.

N. B.—Although, as will have been observed, some of the foregoing correspondence appears in the form of extracts, the selections so made have been introduced in their present shape simply for the sake of brevity ; and to avoid wearying the attention of the Commissioners with matters irrelevant to the present inquiry.

APPENDIX I.

NEWFOUNDLAND,

St. John's, to wit:

JAMES S. HAYWARD, of St. John's, aforesaid, assistant collector of Her Majesty's customs, maketh oath and saith: That the statement hereto annexed, showing the quantity and value of the products therein referred to, exported and imported by the colony of Newfoundland, for the years therein stated, viz, eighteen hundred and fifty-one to eighteen hundred and seventy-six, and also that the statements hereto annexed, marked A and B, purporting to be a recapitulation of the imports from the United States and exports to the United States and other countries, for the years 1851 to the year 1876, inclusive, and a statement "showing the total and average imports and exports of fish and products of fish for the four years preceding the Reciprocity Treaty, the twelve years under the treaty, seven years after its abrogation, and three years under the Washington Treaty, respectively," have been carefully examined by this deponent, and that the said statements, to the best of this deponent's knowledge and belief, exhibit a true and correct account of the several matters therein set forth.

JAMES S. HAYWARD,
Assistant Collector.

Sworn before me at St. John's, aforesaid, this nineteenth day of July, A. D. 1877.

J. O. FRASER,
Commissioner of Affidavits.

Return showing the quantities and values of fish and products of fish imported from the United States of America, and exported to the United States and all other countries, from the colony of Newfoundland, during each year, from 1851 to 1876, inclusive.

APPENDIX J.

SPEECHES OF COUNSEL INCLUDING THE FINAL ARGUMENTS.

I.

At the fifth Conference held on the 31st of July, 1877, on the conclusion of the reading of the "Case of Her Majesty's Government"; the "Answer of the United States"; and the "Reply of Her Majesty's Government,"

Mr. THOMSON said: This, your excellency and your honors, is the "Case of Great Britain"; the "Answer of the United States" to this Case, and the reply. The issues are plain, and are not, I apprehend, to be misunderstood. I think I may not be presumptuous in saying on the part of Her Majesty's Government, that we feel these issues are trusted for adjudication and decision to able and impartial hands; and if it shall happen, as I hope it may, that the result of your deliberations in this Case may be the basis upon which future and more lasting negotiations may be entered into, and so a source of continued national and local irritation be entirely removed, then I think I may fairly say to your excellency and your honors, that you will have acquired no unenviable and no unimportant place in the history of your times; and I am quite satisfied that you will have earned by your labors the lasting gratitude of two great peoples.

II.

At the twenty-fifth conference held on the 28th day of August, 1877, Mr. TRESPOT, on behalf of the Government of the United States, made the following application:

Mr. President and gentlemen of the Commission: As the time is now approaching when the evidence in support of the British Case will be closed, and we will be requested to open the testimony in behalf of the United States, we would ask leave to make a slight change in the order of our proceeding as it has been at present arranged.

According to the present arrangement, it will be our duty to open our case in advance of the testimony by laying before you the general scheme of our argument and indicating the points upon which evidence will be submitted in its support.

The character of the testimony which has been now submitted in support of the British Case, and the tenor of that which we will offer (as may be inferred from the evidence of the two witnesses whom we were allowed to examine out of order) have impressed us with the conviction that a practical discussion of the real issues will be more certainly secured, and the time and patience of the Commission will be more wisely

economized, if we are allowed to submit such views as it may be our duty to maintain at the close instead of the advance of the examination of witnesses.

As we understand the wish of both governments to be that the whole discussion should be as frank and full as possible, it has occurred to us that you might be disposed to allow us to adopt such an arrangement as would in our judgment best enable us to lay before you a complete presentment of the opinions of the government we represent. And we feel more assured in that opinion as this privilege deprives counsel on the other side of no advantage which they now possess. For, beside the right to reply to the printed argument which they now have, we would of course expect that they would also be allowed the right of oral reply, if they desired to exercise it.

An opening speech is not necessary, as the counsel on the other side have shown, but it would be obviously improper to submit this Case without a careful review of the testimony which will have been offered on both sides; and this can be done with much more convenience and thoroughness by an oral speech than by a written argument. To say all that it may be our duty to say in a printed argument would be impossible, without swelling it into a volume of unreadable proportions.

It is our purpose to make the printed argument a complete but concise summary of the contention, a clear statement of the principles involved and the authorities referred to, accompanied by an analysis of the leading facts of the testimony. This we can do, so as to make it an efficient help to you in your own examinations of the case, if we are not compelled to overload it with all the discussion which the evidence and the case itself suggest, but which we could sufficiently dispose of in oral argument.

We would therefore request permission so to distribute the argument on our side as to have the opportunity of submitting our views orally, upon full comparison of all the testimony taken. It is no small inducement to make this request that we believe that upon the close of the testimony we will be able to dispense with much argument which we can scarcely avoid in the present imperfect condition of the testimony.

Respectfully,

RICHARD H. DANA,
WM. HENRY TRESCOT,
Counsel for United States.

Mr. FOSTER said: As the motion just made involves a departure from the course of procedure adopted by the Commission, to which I assented, it is proper that I should say a few words in reference to it. At the time the rules were adopted, the Commission certainly cannot forget the position in which I found myself placed. Contrary to my own expectations and to the expectations of my government, the Commissioners decided to allow the active participation in the conduct of the case of five counsel on behalf of the five maritime provinces. I came here expecting to meet only the Agent of the British Government, and suddenly found I was also to meet five leaders of the bar from the five provinces. I felt it important not to have five closing arguments against me. Now that there are counsel here to represent the United States as well as the British Government, it seems to me reasonable that such a modification of the rules should be made as will permit the services of the counsel who have been brought here in consequence of the decision of the Commission to be made available to the greatest extent. While I should have

been quite content to have discussed this matter in writing with the British Agent, finding that I had to meet five counsel, my government has been obliged to send counsel here, and it seems desirable that we should be able to use them in the most efficient way.

Then, again, the evidence has assumed a very wide range, and is manifestly going to be conflicting to the last degree upon some of the points, notably as to what proportion of the mackerel taken by the American fishermen in British waters is taken within three miles of the shore. On that subject there is going to be a very great conflict of evidence. I don't believe that such a question can be satisfactorily discussed either in advance of the reception of the testimony or in writing after it is all in. It involves so much detail, that the writing, if laid before you, would swell to a bulk that would be altogether unreasonable. I therefore very strongly concur in the application that has been made.

Mr. DOUTRE suggested that the British counsel should have time to consider the matter before replying.

Mr. FOSTER concurred, and said that was the reason the application and the grounds of it had been put in writing.

At the Conference held on Wednesday, August 28, 1877.

Mr. THOMSON. An application was yesterday made to the Commission. I was not present at the time, but I have seen the written proposition, and I understand that it was an application made to your excellency and your honors for the purpose of altering the rules. On behalf of Her Majesty's Government—I am also now speaking the mind of the minister of marine—I may say that these rules have been solemnly entered into. We have acted upon them from the commencement to the end so far as we have gone, but still we have no desire that our friends on the other side should be deprived of any right which they think they ought fairly to have in order to bring their cases before this tribunal. We, however, certainly deprecate any alteration of the rules; and we feel that we are just in this position. During all this time that we have been examining our witnesses, we did so under the idea that the rules would remain as they were engrossed. It is important, we think, in such an inquiry as this, that these rules should be rigidly adhered to, unless there be some very important reason why they should be deviated from. I confess, speaking for myself, that I hardly see the force of the reasons advanced in favor of the proposed change on behalf of the United States Government. They say that their arguments, if placed on paper, would be so bulky as to fill a large volume. Possibly that may be so; but still that is rather more complimentary to their powers of discursiveness than anything else; and they accompany this expression of opinion with the statement that they wish to be heard orally at great length. I presume that this will all be reported by the short-hand writers, and in the shape of a lengthy volume it will meet the eyes of the Commissioners; so I do not see how this bulky volume is in any way to be escaped. Nevertheless, as I said before, we are not desirous to object to our friends on the other side taking this course in order to fairly bring the merits of their case before the tribunal, if they so think fit. We, therefore, are willing that they shall, if they please, be heard orally at the close of the evidence on both sides; but we submit—and we trust that in this respect there can be no difference of opinion—that your excellency and your honors will not make any deviation from the rule which requires our friends on the opposite

side, at the close of their case, to file their written argument, if they intend at all so to do. We contend that it would be entirely at variance with the whole spirit with which this inquiry has been conducted that they should, after making their speech, call upon us, if we please to make a speech in answer, to make it, and that they then should file their written arguments. Such a course would wholly displace the position which we occupy before this tribunal. Great Britain stands here as the plaintiff, and the ordinary rule in courts of common law is this: That the plaintiff, after a short opening of his case, calls witnesses, as we have, and at the close of the plaintiff's case the defendant, after a short opening of his case, also calls witnesses; the respective counsel for the defendant and the plaintiff then make their closing arguments; after which the case is submitted to the jury by the judge. This is the course followed; and, therefore, while we are willing, if it is really thought necessary by my learned friends so to proceed, that they should have the right to close their case by arguments in writing, or verbally and in writing, yet if they close verbally and then wish to put in a written argument, that must be done at once; and we, if we so please, will then answer them verbally or in writing, as we like, or in both ways. I confess, speaking from the stand-point of counsel, that so far as I have a voice in the matter, I rather reluctantly agreed to this, because I think that these rules were formally framed; and, in reality, the proposition that the case should be conducted by written agreement came from the learned Agent of the United States, if I understand rightly, and we acceded to it, and entirely on that basis we have conducted the whole of our case. Still, I say again, that we will meet our friends half way.

Mr. TRESCOT. I suggest that my friend's proposition is an attempt at meeting by proceeding half-way in different directions; the trouble is that our half-ways do not meet at all. I am not sure that I understood my friend exactly, but as I understand him, he claims the right of two replies; that is, the right to reply to our oral argument and then the right to reply to the printed argument, to which we have no objection.

Mr. THOMSON. I said we would reply to your two arguments, oral and written.

Mr. TRESCOT. If you mean that we are to make an oral argument, and that if you do not want to make an oral argument you shall not be obliged to do so, I have no objection.

Mr. THOMPSON. I suppose that we will exercise our pleasure regarding that matter.

Mr. TRESCOT. If we make an oral argument, they have the right to reply. If, then, we give a printed argument, they have the same right to file a printed argument in reply; their relation to us in the case is preserved throughout. My friend refers to the character of the case, and taking into consideration not only the character of the case, but of the parties of the court before which we are, I may even venture to say of the counsel engaged, I do not think we ought to proceed in the spirit of a *nisi prius* trial. Your judgment certainly cannot be prejudiced by a full and frank discussion. Our purpose is to save time and labor. We propose orally to discuss this subject before you with a frankness and freedom that we cannot do in writing, and then to put in a printed summary, giving counsel on the other side the right to put in the final one. Surely my friend does not want us to adopt his suggestion because he wants to say something at the last moment to which we will not have opportunity to reply. There cannot be anything of a mystery in an

argument like this. We all now understand what are the issues which are before us. We only want to discuss them with perfect frankness and fullness, so that everything that is to be said on the case may be said. I want this case to be so argued, both in spirit and fact, that whatever the award may be, and whoever is called upon to submit to an adverse decision, they will be satisfied, having obtained the fullest possible hearing on the subject. I want to secure no advantage over my friends on the other side, and I do not believe that they desire to have any advantage over us; if they will allow me to borrow an illustration from the language of their witness, we do not wish to "lee-bow" them. But I think that my learned friend is sacrificing himself to a sort of technical superstition for the word "reply." In this case there is nothing mysterious, and no necessity exists in regard to having the last word. We are willing to lay our whole argument before the Commission, and then to let them reply to it, if they so wish; but if they do not choose to do it we do not intend to compel them to reply, and it is perfectly in their power to effect themselves what they propose by declining to reply to our oral argument and confining themselves to their final argument. I say frankly I would regret such a decision very much. We wish to know their case as they regard it, and without depriving them at all of their right to reply, to have a frank, full, straightforward and manly discussion of the whole question. I have always thought that the fairest manner for submitting a case is followed before our Supreme Court. Both parties put in their printed arguments, bringing them within the common knowledge of each party before the court, and then they are allowed to comment on these arguments as they please.

Mr. THOMSON. I agree with Mr. Trescot that this cause has not to be tried as one at *nisi prius*; we do not want *nisi prius* rules here, but we want the broad principle understood that Great Britain in this case is the plaintiff, and as such she is first to be heard and the last to be heard. A great advantage is obtained by the United States by hearing our case first, and for this very simple reason, during the whole time our evidence is being given before this Court they can be preparing their witnesses to meet it. There is always this advantage given to the defendant in every case. He has the privilege of hearing the plaintiff's testimony, and during the time the testimony is being given, he has the opportunity of preparing his answer. On the other hand, when the plaintiff comes to close the case, if there be an advantage in having the last word, the plaintiff has it. So the advantages are about balanced. A "frank" discussion, under the proposition submitted by the counsel for United States, simply means that the United States would get entirely the advantage in this cause. There is not the slightest desire on the part of the British Government or on the part of the Canadian government, represented here by the minister of marine, that one single fact should be kept back or forced out as against the United States; on the contrary, that they shall have the fullest opportunity of being heard; but we submit that not only the rules solemnly adopted by this tribunal, but the rules which govern the trial of ordinary causes, should not be departed from. We have given way a great deal, when we are willing to allow our learned friends who represent the United States to take the course they propose to this extent, that they shall make their oral speeches if they choose to do so, and if they choose, in addition, to put in a written argument, well and good, but they must do it at once, and that, if we please, we shall answer their written argument and speeches orally and by written argument, or by one of those modes only. We ought not to be asked to yield more.

Mr. DANA. Your excellency and your honors: From all the experience I have had in the trial of causes, where there has been examination of witnesses, it appears to me to be the best course to argue the facts of the case after the facts have been put in. Such is the practice in the United States, and I presume in Canada. This seems a simple proposition: that the time to argue upon the facts, to affect the minds of those who have to judge and determine, should be when it is fully ascertained what all the evidence is; and it is always dangerous, often inconvenient, and always illogical to argue upon supposed, assumed, supposititious, hypothetical testimony, which may never come before the Court.

I suppose your excellency and your honors understand my objection. It is to a rule which permits that when the plaintiff has put in all his evidence, and the witnesses have been cross-examined, the defendant's counsel may rise and state what he is instructed will be the testimony, what he supposes or assumes will be the testimony on his side, and then to make an argument upon that testimony, assumed and hypothetical as it is, and to contrast it with the testimony of the plaintiff, and deliver his mind fully and finally on the subject. This is dangerous and utterly unsatisfactory. Consequently in the United States, and I presume in the Dominion, the argument is made after it is known what the testimony is, because the plaintiff's counsel in an ordinary cause, or the counsel representing the Government here, may rise with full belief that it will be in his power to place the case in a certain position by his testimony, but it may turn out that he will be disappointed in his testimony, that the witnesses have not said all that he expected, and that the cross-examination reduced or altered the testimony. But there is another reason. When the defendant has put in his entire case there is the right of rebuttal possessed by the plaintiff, and the rebutting testimony may produce effects which the defendant's counsel had no reason to anticipate, and which, without directly contradicting his testimony, may place it in a new light. So I think every person will see, and I am quite sure this tribunal will see, it would be wasting time for us to attempt to impress by argument, comparison, and illustration, the effect of testimony which has not been put in. Now, when we speak of opening the case for the plaintiff or defendant, we do not mean arguing the case. On the contrary, an argument is not allowed by our practice in opening a case. All you can ever do in opening a case is to state very generally what kind of testimony you expect to produce, what you think will be the effect of it, and the positions of law to which that evidence is to be applied—mere signals of what is expected to be done. If in opening a case counsel attempts to say anything about the evidence put in on the other side, and argues on the character or effect of his own testimony, he is stopped, because he is arguing.

Now, if I recollect the rules of the Commission, there is a provision, not that the British counsel should argue the case upon supposed testimony, but that they should open their case and put in their testimony; then, not that we should argue upon their testimony and our supposed testimony, but that we should open our case by merely explaining what evidence is expected, and when all the testimony should be in, rebutting testimony included, then there was to be a complete printed argument on the testimony, the points of law, and everything connected with the case. The learned counsel for the Crown thought, wisely, no doubt, that it was not worth while to have an opening at all, and they did not make one. Now, your honors might have said, "We wish you would open your case, because we will better understand the testimony as it

comes in, and know how to apply it, and also the counsel of the United States will have a better opportunity to understand your case from the first, and be better able to cross-examine witnesses, and adopt what course they may see fit with better intelligence of your position." But the learned counsel for the British Government made no opening, and of that we made no complaint. Now, we are very much in the same position they were in then, only we have a much stronger reason than they had.

By this time, an opening, technically speaking, is not necessary. If the British counsel thought it was not necessary three weeks ago, it is much less necessary now, because this tribunal understands the main points taken on each side, and has a general view of the manner in which each side expects to meet them by testimony. As the counsel on the other side did not open the case, they would surely not think of maintaining that we should now open ours. We propose, as soon as they have concluded their evidence, to begin on our evidence. If this tribunal, or any member of it, should ask that, before we proceed to put in any testimony, we should make any explanation, we are quite ready to do it; or, if the counsel for the Crown should so desire, we are ready to do it. For ourselves, we do not propose to do so, but to go directly on with the testimony. We will then be on the same terms, neither side having opened, neither thinking an opening necessary or desirable. We shall then proceed with our testimony until it is completed; the rebuttal testimony will then be put in by the British counsel, and it is not until the rebuttal testimony is completed that this tribunal can be supposed to know on what facts it is to proceed. Now, do your honors think it is desirable to have an argument before you know on what facts you are to proceed? All the facts having been placed before the tribunal, then is the time to argue the question.

It may be said by the learned counsel that what I have so far stated is unnecessary, because they don't mean to compel us to open. But I think your honors will see it is well to understand in advance what is meant by an opening and an argument. When the whole of the evidence is before the tribunal, then comes the question, in what form can the counsel for the respective governments most beneficially to themselves, to their opponents, and, what is most important, to the tribunal that has the weighty responsibility of determining the case, present all the facts and the principles of law and policy to which they are applicable? Whatever mode will do that best is the one we ought to adopt. We, the Agent of the United States and, the two United States counsel, have made up our minds that it will be more satisfactory to the tribunal that has the judgment of the case, quite as fair to the opposite side, much more satisfactory to us, and more just to the United States, that the course which we propose should be taken. The only question is whether the course we propose should be adopted or the course proposed by the counsel for the Crown in amendment thereto. They seem to see that after the examination of witnesses and reading of affidavits, extending over a long period, an oral argument is advantageous; at all events they do not object to our making one. It is advantageous, because it can be done always with more effect. I do not mean more effect as respects the person who delivers the argument, but more effect on the course of justice, than a printed argument. When an oral argument is delivered, any member of the court who thinks the counsel is passing from a point without making it perfectly clear can ask for an explanation. We desire that this tribunal shall have an opportunity to ask, at any time during the argument, for an explanation, if any explanation is

needed. It is, moreover, a hardship to those who hand in a printed argument to be left in uncertainty as to whether further explanations may be necessary. I therefore think the experience of all engaged in ascertaining truth by means of witnesses and arguments shows that there should be an oral argument, if possible, on the testimony and such of the principles of law as are to be affected by it.

In this case it seems to be thought expedient also to have a printed argument. Perhaps it may be; but if it should be given up by both sides, we do not object. If there is an oral argument only and no printed argument, we shall be more careful in our oral argument to examine into all questions of law. If there is to be also a written argument, the oral argument would be confined more to the facts. Now, your honors, our suggestion is that we shall, as the defendant always does, when the evidence closes, argue the facts with such reference to principles as may be thought expedient. When that is done, it is the plaintiff's time to reply orally. The briefs are a different thing; the printed arguments are a different thing. In a great case like this—a question between the two greatest maritime powers of the world and intrusted to three gentlemen with absolute power over it—whatever will best tend to enable each side to understand the other fully, at the time when it is necessary to understand them, is for the benefit of justice. When we have made our oral argument, the counsel for the Crown will make their oral argument. If they choose to waive the privilege of making that oral argument, if they think their policy will be best subserved by making neither an opening nor a closing oral argument, which we cannot compel them to do, and by hearing all we can possibly say before their mouths are opened, and to have their only speeches made after our mouths are closed—if that is their view of policy, I should like to know whether the agent of the Crown here tacitly gives his consent to such a course of procedure; that is, that the American side shall be obliged to put in both its oral argument and its printed argument, when the other side has put in nothing, and then have an opportunity to close upon us without our knowing from their lips anything whatever. We have had what is called the British case and what is called the American case; but they are simply in the nature of pleadings. They do not go into the testimony, they do not argue the facts of the testimony, they do not state what the testimony is to be; they are of a general character, and in no sense arguments. I think this tribunal will agree with me on that point.

In regard to the amendment proposed by the other side, by which we will be compelled to put in our printed argument the moment we close our oral argument, I will suggest to your honors some objections to it. One objection is that we shall have to prepare our printed argument before we begin to speak. Would not that be a ridiculous position in which to place counsel? They would have to prepare and print a full argument, and then come into court and make an oral argument, and then hand in the printed argument. I hardly know how I could proceed with such an undertaking as that. But a stronger objection is this: They claim the right, under their amendment, to make an oral argument as well as a printed argument after we are through. So they are not going to open their mouths, and we shall not have the benefit of hearing anything from them in this case until our pieces are discharged and our ammunition exhausted. It is then the battle is to begin on the side of the Crown. Now, your honors will see that it comes right down to this: We propose that first an oral argument should be made on the testimony. Counsel on the other side agree that an oral argument on the testimony

is a good thing; at all events, they do not object that there is anything unreasonable in having the arguments on the facts postponed till the facts are known. The only question, then, is this: shall there be first an oral argument by the American side, and then an oral argument for the Crown, if the counsel for the Crown desire it, and then our printed argument to be followed by their printed reply; or shall we be compelled to put in both arguments before hearing anything from them?

The counsel for the Crown may rise and say they don't intend to make any oral argument, and thereby retain all the benefit of a policy of secrecy, and then it would be our duty to put in a printed argument. They can force us to this by simply declining to make an oral argument. Then they would come in with a printed argument which would be the final argument. Nothing we have proposed or can propose can prevent the counsel for the Crown having the closing words, because if our suggestion is adopted, first we will make an oral argument, then they may rise and say they do not wish to make one, then we must put in a printed argument, and then they will close with a printed argument; only they cannot get the advantage of refusing to make an oral argument at its proper time, and make it afterwards out of time. Their own proposition, on the other hand, is this: that they shall not be required to make an oral argument after we have closed ours, but shall have the right to transfer that oral argument from the stage immediately after ours, until the United States counsel have finished their oral argument and put in their printed final argument. Then the counsel for the Crown can argue orally on all the testimony, and in addition put in their printed argument. The result, therefore, your honors, would be that you yourselves would be placed under a disadvantage. You will hear our argument under a disadvantage; you will always be obliged to say to yourselves, "the American counsel have given us a printed argument, but we cannot expect to find in it adequate replies to arguments they never heard."

All the learned counsel on the side of the Crown have been able to say is, "We have submitted the case of Her Majesty's Government, and they have our case." I have reminded your honors what these cases are. Then as to the briefs. We put in a brief six weeks ago, and we were to have a brief from the counsel for the Crown, but we have not seen it yet, I suppose owing to the fault of the printers. That brief will not be a brief on our testimony; that, I suppose, I may assume.

Mr. FORD. Yes.

Mr. DANA. Therefore, as far as the facts are concerned, that brief can be of no use, and the original case of Her Majesty's Government will also be of no use to us. I hope your excellency and your honors will fully understand we consider an opportunity to argue the facts as of very great value to the United States, and we assume you consider it at all events your duty, how much value you may attach to it I cannot say, to give counsel the fullest opportunity to argue the facts with the knowledge of two things: First, what the facts are; and second, how our opponents propose to use and treat them.

Now, it seems to me that the most common justice requires that the result should not be that before we file our final printed argument, and leave this court and this part of the world, and return to our several homes, having done all we could do under the circumstances, we should not have heard by the ear, or read by the eye, one word that would explain to us what the counsel for the Crown think of our testimony or of their own, how they mean to use it, to what points they mean to apply it, what illustrations they mean to use. That will be our position if the proposal of the counsel for the Crown should be adopted. If we are

forced into that position by the counsel on the other side refusing to make an oral argument, we cannot help it; but I hope this tribunal will not give that course its sanction in advance, and so compel the result, that we must open everything and they nothing. The adoption of our proposal would be of very great advantage to us. I am not defending myself against a charge of trying to get an undue advantage, for under no possible construction of our proposed rule would it give us any advantage, except the opportunity to know fully what is the case on the other side, and if that is an advantage, it is a just advantage. But I wish to say that I am quite confident the learned counsel have not fully considered the position in which they place themselves, us, and the members of this court by the amendment they propose to-day. And it would give me great gratification to see them rise and withdraw it and say: "You may make your arguments on the facts orally when they are placed before the tribunal; we will then consider whether we wish to make an oral argument or not; if we do not, you will never know our views; if we do, you will get such knowledge as we see fit to disclose. Then you may put in your printed argument, and we will have the opportunity of putting in our printed closing argument, which ends all, unless the court should intervene and think the other side should have a reply, because some new points were made."

That power, of course, is possessed by the tribunal, and no doubt will be fairly administered. But I do not like to take my seat until I feel I have impressed on the Agent and learned counsel for the Crown the fact that, if we are compelled to make both our arguments before they are called upon to make any observations, and before we have heard what course they are going to take, it will be a very great disadvantage to us, especially when we consider they will be in possession of all we propose to say on the subject of the testimony and the facts. Now, the view which the learned counsel for the Crown may take of certain facts may be one that has not occurred to us. The illustrations they may furnish, and the manner in which they may deal with the various witnesses, are matters regarding which we have not the prescience absolutely to know. We have got, however, to make our oral argument without having this knowledge; but if our proposal is adopted we have at least the power of answering the other side in our printed argument. So it seems to me fair that before we put in our second argument we should have heard their first. I am quite sure this tribunal will feel, and never cease to feel, while you are discharging your present duties and afterward, if the amendment is adopted and the counsel of the United States compelled to deliver their arguments, written and oral, before the Crown had given us any idea of their views of the facts, how they mean to apply them to your honors' minds—that this, though fairly intended, is not fair, and you will say, "We find so much in the final argument of the counsel for the Crown on the testimony, which evidently was not foreseen by the counsel for the United States in making their argument, that, to give them an opportunity to reply, we must call them back."

We do not desire that, and your honors do not desire it. As the learned counsel on the other side do not object to our proposition in itself, but are willing to accept it upon a single condition, which condition would operate as I have shown, I trust your honors will say you cannot impose that condition upon us. I do not hesitate to say, although my learned friend, the Agent of the United States, is alone responsible for the course to be taken by the Government, we could not accept it and we would withdraw the proposal altogether. Then we would either

have to proceed with our testimony or make an argument in advance on hypothetical testimony. Therefore, the proposition of the Crown, unless forced upon us, which I have no idea will be done, will be declined by us, and we fall back on our own proposition. I need not remind your honors that it gives the counsel of the Crown the opportunity of declining to make an oral argument; nevertheless I think it would be in the interest, I will not say of counsel or of my own country, but of international justice, that they would let us know before we submit our final printed argument, what they propose to say about the facts of the case.

Mr. THOMSON. A great deal of Mr. Dana's argument, and it really was the chief argument, was not in reply to what I had to say in regard to the motion; in a great deal of what he said, I agree with him. I deprecate as he does arguing on hypothetical evidence. Such is not the practice in the United States or in our own courts. Who asks that the American counsel in this case shall argue on hypothetical evidence? Who asks that they shall be heard, either orally or on paper, on a mere hypothesis? Every fact and circumstance material to the case, both on the part of Her Majesty's Government and the United States, I assume, will have been presented before the counsel on the other side close their case. Then the counsel for the United States, as defendants in this case, will make their arguments, either orally or on paper, just as it seems best to them, supporting their own views of the case, and we, as counsel for Great Britain, will present to the court our arguments in answer to the arguments which they have adduced in support of their case. It was perfectly idle for Mr. Dana to have taken up so much time in arguing that they would be called on a mere hypothesis. Is it not idle to say to your excellency and honors, that you do not know what the case is about? Do we not all know what the points in issue are; do we not all see them? So well do the learned counsel see them that they absolutely declare they do not intend to open the case—that it is wholly unnecessary, as the court now understands every single view that is likely to be put forward. So they will understand, at the end of our case, every fact put forward by the British Government.

The points are salient and plain and are understood thoroughly by the Agents and counsel of Her Majesty and of the United States. How, then, can it be said there is any hypothesis at all? My learned friend (Mr. Dana) says I am asking that an amendment to the rules should be adopted. I am not. So far from that, the United States are coming in at this late stage of the proceedings and asking for an amendment of rules that were made in their present form, not merely by consent of, but I believe at the instance of the learned Agent of the United States. Can it, then, be said we are asking for any amendment to be made? They are asking as a favor that the court shall lay its hands on its own rules—rules made at the instance (and in the form they now are) of the American Agent. They are asking that as a favor, and at the instance of Her Majesty's Government, and with the consent of the minister of marine, I come forward and say on behalf of the two governments that they are quite willing to so far depart from these rules as to consent to an oral argument if the United States counsel think it is any advantage to have one, though the government I represent can see no such advantage.

I can understand that a jury may be led away from justice by specious arguments, but I apprehend that this tribunal will not be swayed by any such means, and that the epitomized statement of facts given by witnesses will have more effect than all the eloquence of the counsel on the other side. If the case is to be decided by the eloquence displayed in

the oral arguments, then I admit that Her Majesty's Government would stand at great disadvantage, but I do not think that eloquence will have a feather's weight in this case. I desire the court to understand distinctly that this is a motion made by the counsel of the United States to have the rules altered, and I come forward, for Her Majesty's Agent and the minister of marine, to state we are willing it shall be done as they wish, provided always they don't, in getting an inch, take an ell. They will have, if they think it is an advantage, the right to make a closing speech, but must immediately afterwards put in their closing printed argument. They are simply to support their own case. We are, then, simply called on to answer the case and argument in support of the speech they put forward, and nothing else. Not one principle of ordinary justice will be infringed or departed from. In conclusion, I must confess I cannot help feeling a little surprised at the manner in which Mr. Dana submitted the motion, for he put it in an almost threatening manner to the tribunal, that if it was not acceded to, the counsel for the United States would withdraw the proposition altogether. That is not the usual mode in which a favor is asked by counsel before a tribunal.

MR. FOSTER. I think I am entitled to a few words in reply. If the learned counsel (Mr. Thomson) had been present yesterday afternoon when I made the explanation which accompanied Mr. Trescott's motion, I think he would not have made the observations which he has made. This is what I said: When I came here I found myself met suddenly by five of the most eminent gentlemen who could be selected from the five maritime provinces, and, contrary to the expectations of myself and my government, they were to be admitted to take charge of this case, and they were assisted by a very eminent lawyer, now minister of marine, who is spoken of by counsel as having largely the conduct of this case. I alone, a stranger in a strange land, having no reason to suppose counsel would be brought here to assist me, found myself, I say, by the unexpected decision of the Commissioners, placed in such a position that, instead of meeting the British Agent, I had to meet the British Agent, the minister of marine, and five counsel. Now, to avoid five closing oral arguments against one, I was well content with the original arrangement of the rules. But the rules provided that they might be changed if in the course of proceedings the Commissioners saw fit to alter them; and as to our application being an application for a favor either from our opponents or the Commissioners, it is no such thing. It is an application to your sense of justice. Before a judicial tribunal there are no such things as favors. Decisions go upon the ground of right and justice, and especially so in regard to a treaty. Under the oath which the Commissioners have taken, equity and justice are made the standard of all their proceedings. Now, how are we placed? We have, in the first place, a much greater mass of testimony than I anticipated, or any of you anticipated, I presume. In the next place, we are on the eve of a much greater conflict of testimony than I anticipated; we see that very plainly. Then again, from prudential considerations, counsel on the other side saw fit not to open their case. It was a grievous disappointment to me; I could not help myself, as I saw at the time, and so said nothing. But it was a great disappointment to find they did not think fit in their opening to explain the views they intended to enunciate. As the testimony has gone forward for more than a month, it has become obvious to all of us that in a printed argument, prepared within ten days' time, and compressed within the necessary limits of a printed argument, we cannot examine this testimony, and cannot render the

tribunal the assistance they have a right to expect from counsel. It is, therefore, proposed that, instead of making opening oral arguments, which obviously would be quite inadequate, we should have the opportunity of making closing oral arguments, to be replied to by the British counsel, and then that the printed arguments should follow, giving them the reply then also.

Whatever we do, we are willing they should have the reply—the reply to our speeches, the reply to our writings. Is it possible that any arrangement could be fairer than that, or any arrangement more calculated to render your honors assistance in coming to a just and equitable conclusion? Now, I know my friend, the British Agent, does not mean to deal with this case so that batteries can be unmasked upon us at the last moment. I know the Commissioners will not allow such a course to be taken. Unless that is to be done, it is quite impossible that any unfair advantage would result to us, or that the British counsel would be in the least deprived of their admitted right to reply, which always belongs to the party on whom lies the burden of proof, by the course which we propose to follow. What we do desire is, that we should have the chance to explain our views fully before your honors orally; that we should then hear from counsel on the other side; and then that the printed summaries, which are to be placed in your hands to assist you, should be left with you when you go to make up your minds on this case. What do they lose by it? What can they lose by it? By omitting to make any oral arguments, as Mr. Dana has said, they can get the last word and unmask their batteries; but if printed arguments are to be made at all, does not common sense require that the printed arguments on both sides should follow the oral arguments on both sides? I put it to each member of the Commission, I put it my friend the British Agent, is not that the course which every human being knows will be most likely to lead to a thoroughly intelligent and just decision? If it was a matter of surprise; if we were before a jury, and a poor one; if it was one of those *nisi prius* trials, which we are sometimes concerned in, I could understand the policy of trying to have both oral and written arguments made against us after our mouths are closed forever; but I cannot understand it now. If the matter should be left as they desire to have it left, I venture to predict that either on our application, or more likely at your own request, we shall be called upon to reargue this case after the original arguments are supposed to be closed, for you will find in their final arguments, oral and written, matters which you will think common justice and fair play, for which Englishmen are said to be distinguished all the world over, require that we should have an opportunity to answer. They may close upon us orally, they may close upon us in writing, but as for their possessing the privilege of keeping their policy concealed till the last moment, I do not believe they really want it; I do not believe my friend the British Agent wants it; and if he does not want it, there is no conceivable objection to the adoption of the course we propose.

MR. DOUTRE. May it please your excellency and your honors: My learned friend, Mr. Dana, has spoken of the usages of the courts in different countries, and with those observations we might have agreed, until he came to claim a most extraordinary thing, and one which I am sure our learned and experienced adversaries never heard of being conceded in any country in the world—that the defendant should have the reply. My conviction is that there is no danger in challenging our friends to name any court in the world where the defendant has the right to reply. I think we would be far below the standard given to us in the compli-

ments of our learned friends if we did not see very clearly the course which they propose to follow. They would have the means of meeting everything we could state; and anything we might state after that, I don't conceive what it could amount to. It may strike persons not familiar with courts of justice that it is strange we should insist on having the last words, and our friends magnify that extraordinary desire on our part to point out that we have not to deal here with a jury, which might be misled by the elegance of some skillful lawyer, but that we have to deal with a far higher order of judges. This I admit. But I would like my learned friends to explain the strenuous efforts they are making to get that reply. It is nothing but such a demand that my learned friends are putting forward. Our American friends have been so extraordinarily lucky in all their international difficulties that they have arrived at the last degree of daring. We are living in hope that some time or other the balance in connection with international difficulties between England and the United States will turn on the right side. I do not know if we are in the way of reaching such fortunate result, but we live in that hope. Our learned friends on the other side pretend that they have been placed at a disadvantage from the fact that we did not, as they say, open our case. We did open our case. We opened through Mr. Thomson, who stated to the Commission that all he had to say was printed, cut, and dried, and ready to be read; that it set out the case in better language than he could have used in a speech, and that there was nothing to add to or take from it. I think this was the best opening that could have been made, otherwise our learned friends might have complained and said they expected to have obtained more detailed information about the case. But they felt it was a saving of time, and they have expressed the opinion to-day that it would have served no real interest to have gone any further than Mr. Thomson proceeded. Mr. Dana has complained that the brief which has been filed by the American agent has not yet received an answer. I think we are not bound to answer the brief. If we do so it will be merely out of courtesy to our friends. Our answer might come in our final written argument, and there is no reason whatever, and no right on the part of the counsel of the United States to demand to have it sooner than that. If we choose not to answer it even then, I question if we can be required to answer it; so that if we give an answer to their brief it will be a mere matter of courtesy, because we are not bound to do so.

MR. DANA. Do we understand there is to be no answer?

MR. DOUTRE. I do not say so. While I think we will file an answer, it will be done out of courtesy to the counsel for the United States. We have been told we are keeping masked batteries for the last moment. I would like to know where we would find ammunition to serve those batteries. Is not all our case in the documents filed, in the depositions of the witnesses, and in the affidavits? Can we bring anything more to bear? They are our ammunition; they are all here; our hands are empty, and we have no more to serve any masked batteries. The argument may be very plausible, that in a large question, involving two great countries, it is necessary that everything should be done which tends to enlighten the minds of the judges so that a just result may be secured; but that argument, your honors will understand, would be as good in every court in the world to obtain for the defendant the last words and change all the rules of judicial tribunals. Hon. Mr. Foster says he has been induced to agree to the demand now under discussion because when he saw he was going to be met, contrary to the expectation of his government, by five gentlemen, whose talents he magnifies for the oc-

easion, because it suits the purpose he has in view, he thought he would be under a disadvantage if the rule in question should be maintained. If we go back to the time when the rule was adopted it will be recollected that the five lawyers on behalf of the British case were then before the Commission. If they were not admitted, it was known for several weeks that the British Agent intended to be assisted by counsel; so the fact was fully before every one of us when the rules were adopted. Now we are asked to change these rules. So long as it is a matter of convenience and pure courtesy to the United States, we have no difficulty in acceding to their request, and in doing this we are acting within the terms of the written document under discussion, which says:

As we understand the wish of both governments to be that the whole discussion should be as frank and full as possible, it has occurred to us that you might be disposed to allow us to adopt such an arrangement as would, in our judgment, best enable us to lay before you a complete presentment of the opinions of the government we represent, and we feel more assured in that opinion as this privilege deprives counsel on the other side of no advantage which they now possess, for besides the right to reply to the printed argument, which they now have, we would, of course, expect that they would also be allowed the right of oral reply if they desired to exercise it.

So far this is perfectly correct, but it does not show their hands to us at all. We do not see their real object, for there is a masked battery.

Apparently a very simple alteration of the rule is asked for, and our friend Mr. Trescot thought yesterday that it was so unobjectionable that it would be immediately acceded to. Well, if this paper had stated the whole truth, and did not cover anything which is not mentioned, we should have accepted it immediately, as has already been stated by my brother counsel. But we suspected that this slight alteration conceded something, and we were not mistaken.

Mr. TRESHOT. What is it?

Mr. DOUTRE. I will explain it, certainly. Mr. Dana says, "You have a reply." Certainly we have the reply, but we might reply in eight months from this, and it would be just as good. Here is the practical result: if the proposition, which is not included in this paper, but which has been admitted verbally, were accepted, our learned friends would develop their case orally, and we would answer orally. They would then come with their printed statement. Now, is not this the reply? What would remain for us to say? What would be the value of that printed document which we could give afterward? What new aspect or *exposé* of our case could it contain? None whatever, so that virtually it gives our friends the reply, and that is the reason why they are insisting so strongly upon the change in the rule.

Mr. DANA. You take the objection that under our proposed rule you would not be able to put in anything new?

Mr. WEATHERBE. All you asked for was to substitute an oral for the written argument?

Mr. TRESHOT suggests that it would be better if he were now allowed to read the amendment which he proposes to submit.

Mr. WEATHERBE. It would have been better that we should have had it last evening.

Mr. TRESHOT. It is entirely in accordance with the paper which I read last evening.

SIR ALEXANDER GALT. We should have had the precise proposed alteration of the rule before us before hearing this argument.

Mr. TRESHOT. It is precisely the same as what was laid before the Commission. I will read it. The third rule reads this way:

The evidence brought forward in support of the British case must be closed within a period of six weeks after the case shall have been opened by the British counsel,

unless a further time shall be allowed by the Commissioners on application. The evidence brought forward in support of the United States counter case must be closed within a similar period after the opening of the United States case in answer, unless a further time be allowed by the Commissioners on application. But as soon as the evidence in support of the British case is closed that in support of the United States shall be commenced, and as soon as that is closed the evidence in reply shall be commenced. After which arguments shall be delivered on the part of the United States in writing within a period of ten days, unless a further time be allowed by the Commissioners on application, and arguments in closing on the British side shall be delivered in writing within a further period of ten days, unless a further time be allowed by the Commissioners on application. Then the case on either side shall be considered finally closed, unless the Commissioners shall direct further argument upon special points, the British Government having in such case the right of general reply, and the Commissioners shall at once proceed to consider their award. The periods thus allowed for hearing the evidence shall be without counting any days of adjournment that may be ordered by the Commissioners.

The amendment which we would move would be to insert after the words "the evidence in reply shall be commenced," the following: "When the whole evidence is concluded either side may, if desirous of doing so, address the Commission orally, the British Government having the right of reply."

Mr. DOUTRE. I understand this, but it is not the motion under discussion. I have read the principal part of that motion, and I say this, that, if we take this to mean what our friends had in their minds when they made their application, the only alteration that this rule would require would be this, "after which argument shall be delivered on the part of the United States, orally or in writing, within a period of ten days, unless further time be allowed by the Commissioners on application, and arguments in closing the British case shall be," etc.

Mr. TRESCOT. That is what Mr. Thomson proposes.

Mr. DOUTRE. Exactly; and this does not give any more. But there was in their minds more than this contains. We have it in their verbal explanations.

Mr. TRESCOT. So far as the construction of language goes, I have no objection to your putting any construction you please or drawing any inferences you choose from the language of the application that was made last night. But that the intention of that application and of the amendment we propose to-day were one and the same thing, there can be no doubt. When we filed that paper what was wanted was distinctly known, otherwise it would have been bad faith on our part, as we would have been asking for one thing and intending to get another. There was no possible doubt what the object of this was, as is evident from the fact Mr. Thomson suggested an amendment himself to counteract our object, showing that he had clearly in mind what object we had in view.

Mr. DOUTRE. My answer is that by reading this we suspected the object of this paper was something more than to change the time when our learned friends should address the Commission. It only meant that instead of doing so before adducing their evidence they would do so after the whole of the evidence had been brought in. The object that our friends have in view is very clear in the paper which has been read here to-day by Mr. Trescot, but it is not so in the paper which was presented yesterday, and we suspected this was an indirect way of securing that which is not known in any court in the civilized world, namely, that the defendants should have the reply. They would have twice the opportunity of discussing the matter, when they have no right to be heard more than once. Now, why is the reply given to the plaintiffs? Because up to that moment the position of the defendants is far more privileged. They have all the evidence of the plaintiffs in their hands,

and they know what they are themselves going to prove. The plaintiff does not know it. When we shall have closed our evidence, they will have the whole case in their hands, while we have only half of it. For that and other reasons the final reply is given to the plaintiff, and we object to our friends in this manner seeking to upset the rules which prevail in all courts of justice that ever existed.

Mr. DANA. I beg that you will not sit down without explaining how you lose the reply.

Mr. DOUTRE. We have a reply which is worth nothing; that is what I mean. The virtual and practical reply is in your hands. That is exactly the position. I think it is necessary, in order to preserve the harmony that has so far existed here, we should not introduce in this Commission a practice which has never existed in any court, that one of the counsel should pass over the head of his legal adversary in order to reach the suitor and ask him if he agrees to what his counsel proposes. Such a course as that would tend materially to impair the good relations which we all, I think, desire to cultivate.

Mr. TRESCOT. I have no intention of saying one word that could disturb the relations that exist between the counsel on either side, and I have no fear that anything could be said on either side that would have such a result. For that reason I don't object, as I perhaps might, to the application which I made yesterday being characterized as a masked request. When I read that document yesterday I had no earthly doubt that every man present knew what I wanted. So far from having any doubt about the matter, I may say that both the honorable Minister of Marine, who appears to be of counsel with the other side, and the Agent of the British Government, distinctly informed us that they would consent to this petition if we may call it such, provided we would take the proposition submitted by Mr. Thomson. Now there can be no doubt that when that proposal was made they understood what it was we wanted. We stated as distinctly that we declined to accept any such proposition, and that the course they pursued was one that could not meet our approval. All I am anxious to do now is to clear myself of the accusation, for such I think it is, of having submitted a paper which asked for one thing when I wanted the Commission to do another thing.

Sir ALEXANDER GALT. I do not think the Commission ever attributed such a design to you.

Mr. WEATHERBE. Will you read the part of the paper presented yesterday which says what you wanted the Commission to do?

Mr. TRESCOT. It is as follows: "As we understand the wish of both governments to be," &c. Now, what does that mean? What can it mean but that when we made an oral argument they would make an oral reply, and when we presented a printed argument their printed argument would be put in? I believe that the matter was so understood, and I have misunderstood the whole scope of the argument this morning if every gentleman who has addressed the court has not argued upon the request I made. The whole argument on the other side has been for the purpose of showing that we ought not to have what we asked for. Then how can I be told that the learned counsel did not understand what I wanted? I do not know what the practice may be here, but I have never been in a court in which, if there were several counsel on each side, they did not address the court alternately, so that each side might possess the argument of the other side.

Mr. WEATHERBE. That is not the practice in England.

Mr. TRESCOT. That may be. I only undertake to say what we want

and what we consider a fair course to all parties. But I am asked what is the use of such a reply? I answer, just such use as you choose to make of it. We only ask to know your case, and then having met it to the best of our ability, you can reply to our argument as you deem most judicious. Let me illustrate what I mean. You all recollect the testimony as to the Bay de Chaleur—that fishing was only prosecuted on its shores—that in “the cores of the bay,” to use the language of the witnesses, there was no fishing. Now, if this is so, practically the question of the headlands is put aside, for it makes no difference whether we come within the headland line or not. But suppose, in reply, we prove that there is fishing within the body of the bay more than three miles from either shore—how then? Recollect that up to this point, although we have been promised your brief on the headland question, we have not had it. Do you mean simply to discuss our testimony, or to maintain the doctrine of the headland line? Under your proposed arrangement we would have to make our argument without the slightest knowledge of what you intended to maintain. Whereas, under our arrangement, we would know exactly what you thought, and although we might attempt an answer, you would have the clear right to meet that answer by your final reply as you thought fit.

But I have no intention of prolonging this argument further. I think we have stated with sincere fairness what we mean, and that it is obvious that the right of final reply is preserved to the counsel on the other side. Their purpose is equally obvious to keep back in their discretion just as much of their case as they do not choose to give us the opportunity to reply to. If this Commission deems such reticence proper, we must accommodate our arguments to their decision, and be content with having said what we think justice required.

Hon. Mr. KELLOGG. I should like to say, with the permission of the other Commissioners, that I rather expected the motion would have been put in due form last night, but I hope that this delay or omission, which has given rise to a little misunderstanding, will not be a reason for exciting any feeling. I am anxious, for one, that in our proceedings we should observe the kind of conduct that we have observed so far, and I have no idea that any thought of getting any such advantage was entertained when the application was made last night.

I want to observe one thing further, with the leave of the other Commissioners, that in discussing these questions which have arisen, and which may still arise, we should observe due moderation, and not get into personal disputations with one another, but address the tribunal as the one which will settle the matter eventually.

Decision given by the Commissioners on the 1st day of September, 1877.

The Commissioners having considered the motion submitted by Messrs. Dana and Trescot, decided that—

Having due regard to the right of Her Majesty's Government to the general and final reply, the Commissioners cannot modify the rules in such a manner as might impair or diminish such right. Each party will, however, within the period fixed by the rules, be allowed to offer its concluding argument either orally or in writing, and if orally, it may be accompanied by a written résumé, or summary thereof, for the convenience of the Commissioners, such résumé or summary being furnished within the said period.

III.

At the conference held on the 5th of September, 1877.

Mr. Foster. I will read the motion that was presented on the 1st instant:

The Counsel and Agent of the United States ask the honorable Commissioners to rule declaring that it is not competent for this Commission to award any compensation for commercial intercourse between the two countries, and that the advantages resulting from the practice of purchasing bait, ice, supplies, &c., and from being allowed to tranship cargoes in British waters, do not constitute a foundation for award of compensation, and shall be wholly excluded from the consideration of this tribunal.

The object, may it please the Commission, of this motion is to obtain, if it be possible, and place on record, a decision declaring the limits of your jurisdiction, and thus to eliminate from the investigation matters which we believe to be immaterial and beyond the scope of the powers conferred upon you. The twenty-second Article of the Treaty of Washington is the charter under which we are acting, and this provides that—

Inasmuch as it is asserted by the Government of Her Britannic Majesty that the privileges accorded to the citizens of the United States under Article XVIII of this treaty, are of greater value than those accorded by Articles XIX and XXI of this treaty to the subjects of Her Britannic Majesty, and this assertion is not admitted by the Government of the United States, it is further agreed that Commissioners shall be appointed to determine, having regard to the privileges accorded by the United States to the subjects of Her Britannic Majesty, as stated in Articles XIX and XXI of this treaty, the amount of any compensation which, in their opinion, ought to be paid by the Government of the United States to the Government of Her Britannic Majesty in return for the privileges accorded to the citizens of the United States under Article XVIII of this treaty.

The subject of our investigation, then, is the amount of any compensation which ought to be paid by the United States to Her Majesty in return for the privileges accorded to the citizens of the United States, under Article 18 of the treaty, and that is all. The other articles referred to in this section, Articles 19 and 21, are set-offs or equivalents, received by Her Majesty's subjects for the concession made by Her Majesty's Government to United States citizens under Article 18. When we turn to Article 18 we find that the High Contracting Parties agreed as follows:

It is agreed by the High Contracting Parties that, in addition to the liberty secured to the United States fishermen by the Convention between Great Britain and the United States, signed at London on the 20th day of October, 1818, of taking, curing, and drying fish on certain coasts of the British North American Colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty for the term of years mentioned in Article XXXIII of this treaty to take fish of every kind, except shell-fish, on the sea coasts and shores, and in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and the colony of Prince Edward Island, and of the several islands thereto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts and shores and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish: provided that, in so doing, they do not interfere with the rights of private property, or with British fishermen, in the peaceable use of any part of the said coasts in their occupancy for the said purpose. It is understood that the above-mentioned liberty applies solely to the sea-fishery, and that the salmon and shad fisheries, and all other fisheries in rivers and the mouths of rivers, are hereby reserved exclusively for British fishermen.

The concession made to the citizens of the United States is the right to fish inshore without being excluded three miles from the shore, as they were excluded by the renunciation contained in the Treaty of 1818. It gives the further right to land on the coasts and shores and islands for the purpose of drying nets and curing fish, provided that in so doing they do not interfere with the rights of private property for British

fishermen having the peaceable use of any part of the said coasts in occupancy for the same purpose. The liberty of inshore fishing and that of landing on uninhabited and desert coasts, where no private rights or rights of private property will be interfered with, for the two purposes of drying their nets and curing their fish, are all the concessions which Article 18 contains. Now, as we understand it, the jurisdiction of this Commission extends to appraise these two privileges, and nothing more; but the British claim seeks compensation for various incidental advantages, and a variety of other considerations. The inhabitants of the United States traffic with the colonists. They buy ice of them; they buy of them fish for bait; and they buy of them other supplies. They have commercial intercourse with them; they sell to them small codfish better adapted for the British markets than those of the United States. They exchange flour, kerosene, and other necessities of life with the British fishermen, receiving in return bait and fish. For all these things compensation is demanded at your hands.

In addition to that, every description of damage that has been done or which may be done hereafter by our fishermen is made the foundation of claims for compensation. The treaty speaks of compensation to be awarded in return for privileges accorded to the citizens of the United States, while the case made and the evidence offered claims damages as well.

Have any of our fishing vessels lee-bowed—I believe that is the proper phrase—British fishing boats in former years, or are they likely to do it again? Are the fishing grounds hurt by gurry thrown into the water? Have families been alarmed by American fishermen on shore? Every description of injury and outrage, intentional or unintentional, great or small, going back to a period as far as human memory extends, is laid before you as ground for damages. The colonial governments have erected light-houses on their coasts at dangerous points, and the perils of navigation are thereby diminished; so they present an estimate of the cost and a list of the number of the light-houses, and gravely ask you to take these things into consideration in making up your award. Whatever has to do with fishing, or fishermen, or fishing vessels, directly or indirectly, nearly or remotely, is brought before you and made the foundation of a claim. The British case and its evidence seems to me to be a drag-net, more extensive than the purse seine of which we have heard so much, gathering in everything that can be thought of and laying it before you, if by any means, consciously or unconsciously, the amount of such award as you shall render may thereby be affected. Now it seems to us, under these circumstances, to be a plain duty to ascertain if we can, and to have recorded, exactly the grounds of your jurisdiction as in your judgment they exist. We understand, as I have said, that you are simply to determine the value of the inshore fisheries, and the value of the right of landing to cure fish and dry nets where this can be done without interfering with private property or British fishermen drying nets. From the beginning we have protested against any more extensive claim being made; this protest will be found distinctly and unequivocally made on page 8th of the "Answer," where it is said:

Suffice it now to observe that the claim of Great Britain to be compensated for allowing United States fishermen to buy bait and other supplies of British subjects has no semblance of foundation in the treaty, by which no near right of traffic is conceded.

And in the recapitulation at the close of the "Answer," the United States maintain that the various incidental and reciprocal advantages of the treaty, such as the privileges of trafficking and purchasing bait and other supplies, are not a subject of compensation, because the

Treaty of Washington confers no such rights on the inhabitants of the United States, who now enjoy them merely by sufferance, and who can at any time be deprived of them by the enforcement of existing laws or the re-enactment of former oppressive statutes. We say first, that you have no jurisdiction over such matters as a subject of compensation, because the treaty confers none upon you and nothing of the kind is denominated in the bond. We say secondly, that we have no vested rights under the treaty, regarding commercial intercourse of this description; and that as regards such intercourse, the inhabitants of the United States stand in the same relation to the subjects of Her Majesty as they did before this treaty was negotiated. These two points though running somewhat together are nevertheless distinct. And we base our contention upon the plain language of the treaty, in which not one word can be found relating to the right to buy or sell, to traffic or transfer cargoes; the whole language is limited to the privilege of the inshore fisheries, both in Article 18, where these privileges are conferred, and in Article 22, which provides for the appointment of this Commission. Of course, it is not necessary for me to call your attention to the fact that commissioners, arbitrators, referees, and every other description of tribunals, are limited in their powers by the terms of the instrument under which they act; and that if they include in any award, a thing upon which they are not authorized to decide, the entire award is thereby vitiated; and their whole action becomes *ultra vires*, and void. I cannot anticipate that there will be any denial of this plain proposition.

Now, the Commissioners will be pleased to observe, and our friends on the other side to take notice, that the United States utterly repudiate any obligation either to make compensation or pay damages for any of these matters; that they maintain, as they have from the first, that the question submitted here is solely and exclusively the adjustment of equivalents relating to the inshore fisheries; and that the United States will not be under the slightest obligation to submit to an award including anything more than these things. Turning to the treaty again, we find that there are commercial articles in it, but these are not articles with which this tribunal is concerned. From Article 26th to the 31st, inclusive, various commercial privileges are given to the citizens of the two countries. These articles relate to the navigation of the lakes, rivers, and canals, to the conveyance of goods transhipped in bond free of duty, to the carrying trade; and as to them the Treaty of Washington is a Reciprocity Treaty. As to these matters, that which is conceded on the one side is an equivalent for that which is conceded on the other, and the mutual concessions are the sole equivalents for each other. Indeed, who ever heard of a treaty of commercial reciprocity where a money payment, to be ascertained by arbitration, was to balance concessions granted by the one side to the other? It is enough to say that in these commercial clauses of the Treaty, as in all other commercial arrangements that have ever been made between the two countries, there is no stipulation for compensation. It may be well to inquire on what footing the commercial relations between the United States and Great Britain do rest. How have they stood for more than a generation past, for nearly a hundred years? My friend, Mr. Trescot, has investigated the treaties, and the result, as I understand it, is this: that the Commercial Convention of 1815, originally entered into for four years, was extended during ten years more by the Convention of 1818, and extended again indefinitely in 1827. The last clause of the second article of the Convention of 1815, after providing as to the duties to be levied on the products of each country, &c., and as to the commercial inter-

course between the United States and Her Majesty's subjects in Europe, states—

The intercourse between the United States and His Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights, with respect to such an intercourse.

Thus the commercial intercourse between the two countries is provided for by the Treaty of 1815, which, as I understand it, under its various extensions, is in force to-day. It refers back to former and pre-existing rights, to find which it is necessary to go still further back—to the Treaty of 1794, commonly known as Jay's Treaty. Turning to that we find that the third article deals with the special relations between the United States and the British North American Colonies. It might be supposed—and the argument perhaps might be correct, though I do not say whether this would be the case or not—that the war of 1812 abrogated the provisions of the Treaty of 1794, were it not that the Commercial Convention of 1815 referring to previous existing rights, quite manifestly, I think, treats as still in force the provisions of this article of the Treaty of 1794. I will not read the whole article, but it stipulates "that all goods and merchandise whose importation into His Majesty's said territories in America, shall not be entirely prohibited, may freely and for the purposes of commerce be carried into the same in the manner aforesaid by the citizens of the United States, and that such goods and merchandise shall be subject to no higher or other duties than are payable by His Majesty's subjects, on importing the same into the said territories; and in like manner, that the goods and merchandise whose importation into the United States shall not be wholly prohibited, may freely for the purposes of commerce be carried into the same by His Majesty's subjects, and that such goods and merchandise shall be subject to no higher or other duties than are payable by the citizens of the United States on importing the same in American vessels into the Atlantic ports of the said States; and"—mark this—"that all goods not prohibited from being exported from the said territories, respectively, may, in like manner, be carried out of the same by the two parties, respectively, on paying duty as aforesaid"; that is to say, as I understand it, the inhabitants of each country going for the purposes of commerce to the other country, may export its goods, so long as their exportation is not wholly prohibited, upon the same terms as to export duties as would be imposed on Her Majesty's subjects. Then the article after some other paragraphs closes thus: "As this article is intended to render, in a great degree, the local advantages of each party, common to both, and thereby to promote a disposition favorable to friendship and good neighborhood, it is agreed that the respective governments will mutually promote this amicable intercourse by causing speedy and impartial justice to be done, and necessary protection to be extended to all who may be concerned therein."

Gentlemen, such I understand to be the footing on which commercial intercourse stands between the two countries to-day, if there is any treaty that governs commerce between the British North American Provinces and the United States. And if this is not the case, the relations between the two countries stand upon that comity and commercial freedom which exist between all civilized countries. The effect of these provisions, to employ an illustration, is this: If the Government of Newfoundland chooses to prohibit its own people from exporting fish for bait, in which export, it is testified, they carry on a trade of £40,000 or £50,000 annually with St. Pierre, it can also, by the same law, prohibit United States

citizens from carrying away such articles, but not otherwise. As I understand the effect of this commercial clause, whatever may be exported from the British Provinces by anybody—by their own citizens, by Frenchmen, or by citizens of other nations at peace with them—may also be exported by citizens of the United States on the same terms, as to export duty, that apply to the rest of the world. If, then, Newfoundland sees fit to conclude that the sale of bait-fish—caplin, or herring, or squid—and ice is injurious to its interests, and therefore forbids their export altogether, that prohibition may extend to the citizens of the United States; but the citizens of the United States have there the same privileges with the rest of the world; they cannot be excluded from the right to buy and take bait out of the harbors of Newfoundland, unless the rest of the world is also so excluded. However, this is of remote consequence, and perhaps of no consequence, to the subject under discussion.

The material thing is this: Under the Treaty of Washington we cannot prevent such legislation. The Treaty of Washington confers upon us no right whatever to buy anything in Her Majesty's dominions. The Treaty of Washington is a treaty relating to fishing and to nothing else. I am aware of the ground taken in the reply filed by the British Agent. It is this:

Previous to the date of the Treaty of Washington, American fishermen were, by the 1st Article of the Convention, of 1818, admitted to enter the bays and harbors of His Britannic Majesty's dominions in America for the purpose of shelter and of purchasing wood and of obtaining water and *for no other purpose whatever*.

By the terms of Article 18 of the Treaty of Washington, United States fishermen were granted "permission to land upon the said coasts and shores and islands, and also upon the Magdalen Islands for the purpose of drying their nets and curing their fish."

The words "*for no other purpose whatever*" are studiously omitted by the framers of the last-named treaty, and the privilege, in common with the subjects of Her Britannic Majesty, to take fish and to land for fishing purposes, clearly includes the liberty to purchase bait and supplies, transship cargoes, &c., for which Her Majesty's Government contend it has a right to claim compensation.

Well, as the quotation stands, to my mind it would be a *non sequitur*, but when you turn to the 1st Article of the Convention of 1818, you find that under it the conclusion quoted is a renunciation accompanied by two provisos:

And the United States hereby renounce forever any liberty heretofore enjoyed or claimed by the inhabitants thereof to take, dry, or cure fish on or within three marine miles of any of the coasts, bays, creeks, or harbors of His Britannic Majesty's dominions in America, not included in the above-mentioned limits.

This was a renunciation of the right to fish inshore, and it is followed by this further proviso:

Provided, however, that the American fishermen shall be admitted to enter such bays or harbors for the purpose of shelter and of repairing damages therein, of purchasing wood, and of obtaining water, and *for no other purpose whatever*.

This coupled the renunciation of the inshore fishery with the proviso, that there may be resort to British waters for shelter and repairs, and for obtaining wood and water. Then it goes on to say:

But they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them.

Whenever American fishermen seek British ports for shelter, or go there to repair damages to their vessels, or for wood and water, they shall be under restrictions to prevent them from taking or curing fish therein. Now it was to remove those restrictions which prevented them from taking, drying, and curing fish, that the language framed in the 18th Article of the Treaty of Washington was adopted, which gives the

citizens of the United States liberty to take fish, and permission to land upon the said coasts and islands, and also on the Magdalen Islands for the purpose of drying nets and curing fish. You will observe that the United States renounced the right to the inshore fisheries in 1818, but these are regained by the provisions of the 18th Article of the Treaty of Washington. The United States retained the right of resorting to British ports for shelter, repairs, and purchasing wood and water, subject to such regulations as would prevent their citizens drying fish on the shore; and the object of this article is to add to the inshore fisheries the right to dry nets and cure fish on the shore, and this superadded right is limited to parts of the coast where it does not interfere with private property, or the similar rights of British fishermen. Now, what argument can be constructed from provisions like these to infer the creation of an affirmative commercial privilege or the right to purchase supplies and transship cargoes, I am at a loss to imagine. It seems to me that if I were required to maintain that under the right conceded to dry nets and cure fish on unoccupied and unowned shores and coasts, taking care not to interfere with British fishermen, couched in language like that, the United States had obtained a right to buy what the policy of the British Government might forbid to be sold, I should not have one word to say for myself. I cannot conceive how a commercial privilege can be founded upon that language, or how you can construct an argument upon that language in support of its existence. But, gentlemen, this is not to be decided by the strict language of the treaty alone. We know very well what the views of Great Britain on such subjects are, and we know what the policy of Her Majesty's Government was just before this treaty was entered into. On the 16th of February, 1871, Earl Kimberley wrote to Lord Lisgar as follows:

The exclusion of American fishermen from resorting to Canadian ports, except for the purpose of shelter, and of repairing damages therein, purchasing wood, and of obtaining water, might be warranted by the letter of the treaty of 1818, and by the terms of the Imperial Act 59, Geo. III. Chap. 38, but Her Majesty's Government feel bound to state that it seems to them an extreme measure inconsistent with the general policy of the empire, and they are disposed to concede this point to the United States Government under such restrictions as may be necessary to prevent smuggling, and to guard against any substantial invasion of the exclusive rights of fishing which may be reserved to British subjects.

A month later, on the 17th of March, 1871, another letter from Earl Kimberley to Lord Lisgar gives to the colonial authorities this admonition:

I think it right, however, to add that the responsibility of determining what is the true construction of a treaty made by Her Majesty with any foreign power must remain with Her Majesty's Government, and that the degree to which this country would make itself a party to the strict enforcement of treaty rights may depend not only on the liberal construction of the treaty, but on the moderation and reasonableness with which those rights are asserted.

In such a spirit, and with these views of commercial policy, the Treaty of Washington was negotiated; and can one believe that it was intended to have a valuation by arbitration of the mutual privileges of international commerce? Gentlemen, suppose that the Canadian representative on the Joint High Commission, when the 18th Article was under consideration, had proposed to amend it by adding in language something like this: and the said Commissioners shall further award such compensation as, in their judgment, the United States ought to pay for its citizens being allowed to buy ice, and herring, squid and caplin, of Canadians and Newfoundlanders, and for the further privilege of being allowed to furnish them with flour, and kerosene oil, and other articles of merchan-

dise in exchange for fish and ice, and for the further privilege of being allowed to sell them small codfish; suppose, I say, that an amendment in these or similar words had been suggested to the members of the High Joint Commission; fancy the air of well-bred surprise with which it would have been received by Earl Grey and Professor Bernard and others. Imagine England—free-trade England—which forced commercial intercourse upon China with cannon, asking for an arbitration to determine on what price England, that lives by selling, will trade with the inhabitants of other countries.

I venture to express the belief that the ground which has been taken here is not the ground that will be sustained by the English Government, and that my friend, the British Agent, will receive from Her Majesty's ministers the same instructions that I shall certainly receive from the President of the United States, viz, that at the time when the Treaty of Washington was negotiated no one dreamed that such claims as I have been referring to would be made, and that neither government can afford to insist upon or submit to anything of the kind, because it is contrary to the policy of the British Empire, and contrary to the spirit of civilization. If the language were at all equivocal these considerations would be decisive, but with the express limits to your authority laid down they hardly need to be asserted.

The next question is whether the motion that has been made should be decided by you at the present stage in your proceedings. We have brought it before you at the earliest convenient opportunity.

The case of the British Government was not orally opened, and in our pleadings we had interposed a denial of the existence of any such jurisdiction. If the matter had been discussed in an opening we might have replied to it, but as it was we could not. The case proceeded with the introduction of evidence: Now, if the evidence offered in support of these claims could have been objected to we should have interposed the objection that such evidence was inadmissible; but we could not do that, and why? Because the treaty expressly requires the Commission to receive such evidence as either government may choose to lay before it. To avoid the manifold inconvenience likely to result from discussing the admissibility of evidence, it was stipulated and we have allowed—I suppose with the approbation of the Commissioners—every piece of evidence to come in without objection. We conceived that we were under obligation to do so. We could not bring the question up earlier, and we bring it up now, just before our case commences, and say, that we ought to have it now decided; first, as a matter of great convenience, because the course of our evidence will be affected by your decision. There is much evidence which we shall be obliged to introduce, if we are to be called upon to waive the comparative advantages of mutual traffic, that would otherwise be dispensed with, and that we think ought to be dispensed with. Moreover, we maintain that we are entitled to have your decision now on grounds of precedent. A precisely similar question arose before the Geneva Arbitration. The United States made a claim for indirect or consequential damages. That claim appeared in the case of the United States, and its evidence which were filed on the 15th of December. The British case was filed at the same time, and on the 15th of the next April Lord Tenterden addressed this note to the Arbitrators:

GENEVA, April 15, 1872.

The undersigned, agent of Her Britannic Majesty, is instructed by Her Majesty's Government to state to Count Solopis, that, while presenting their Counter-Case, under the special reservation hereinafter mentioned, in reply to the Case which has been presented on the part of the United States, they find it incumbent upon them to inform the arbitrators that a misunderstanding has unfortunately arisen between Great Brit-

ain and the United States as to the nature and extent of the claims referred to the tribunal by the 1st Article of the Treaty of Washington.

This misunde standing relates to the claims for indirect losses put forward by the Government of the United States, under the several heads of—(1.) "The losses in the transfer of the American commercial marine to the British flag," (2.) "The enhanced payments of insurance," (3.) "The prolongation of the war, and the addition of a large sum to the cost of the war and the suppression of the rebellion." Which claims for indirect losses are not admitted by Her Majesty's Government to be within either the scope or the intention of the reference to arbitration.

Her Majesty's Government have been for sometime past, and still are, in correspondence with the Government of the United States upon this subject; and, as this correspondence has not been brought to a final issue, Her Majesty's Government being desirous (if possible) of proceeding with the reference as to the claims for direct losses, have thought it proper in the mean time to present to the Arbitrators their Counter-Case (which is strictly confined to the claims for direct losses), in the hope that, before the time limited by the 5th Article of the treaty, this unfortunate misunderstanding may be removed.

But Her Majesty's Government desire to intimate, and do hereby expressly and formally intimate and notify to the Arbitrators, that this Counter Case is presented without prejudice to the position assumed by Her Majesty's Government in the correspondence to which reference has been made, and under the express reservation of all Her Majesty's rights, in the event of a difference continuing to exist between the High Contracting Parties as to the scope and intention of the reference to Arbitration.

If circumstances should render it necessary for Her Majesty to cause any further communication to be addressed to the Arbitrators upon this subject, Her Majesty will direct that communication to be made at or before the time limited by the 5th Article of the treaty.

The undersigned, &c.

TENTERDEN.

Thereupon, after some further fruitless negotiations, the arbitrators, of their own motion, proceeded to decide and declare that the indirect claims made by the United States were not within the scope of the arbitration, thus removing all misunderstanding by a decision eliminating immaterial matters from the controversy. The decision was made and put on record exactly in the method which we ask you to pursue here. We say that we are entitled to have such a decision on the ground of precedent as well as of convenience; and we say further that we are entitled to have it on the ground of simple justice. No tribunal has ever been known to refuse to declare what, in its judgment, was the extent of its jurisdiction. To do so, and receive evidence applicable to the subject as to which its jurisdiction is controverted, and then to make a general decision, the result of which renders it impossible ever to ascertain whether the tribunal acted upon the assumption that it had or had not jurisdiction over the controverted part of the case, would be the extremity of injustice.

If an award were to be made under such circumstances, nobody ever would know whether it embraced the matter respecting which jurisdiction was denied or not. In illustration, I may mention the Geneva Arbitration. Suppose that it had gone forward without any declaration by the arbitrators that they excluded the indirect losses, and then suppose that a round sum had been awarded, would not Great Britain have had a right to assume that this round sum included the indirect claims to which it never meant to submit? So will it be here; unless there is placed upon record the ruling of the Commissioners as to this point, it never will be possible for us to know, or for the world to know, upon what ground you have proceeded—whether you believe that we are to pay for commercial intercourse or not. No one will know how this is unless upon our motion you decide one way or the other. For our assistance, then, in conducting the case, for convenience, and for the information of our respective governments, we ask you to make this decision, and it is entirely obvious that if no decision is made it must necessarily

be assumed that these controverted claims are by you deemed to be a just ground of award. We never can know the contrary, unless you say so; and, if you are to say so, we think that convenience and justice both require that you should say so at such an early day as to enable us to shape the conduct of our case in conformity with your decision.

Mr. THOMSON. I would like to know whether anything more is to be said on the subject by our learned friends opposite.

Mr. FOSTER. We understand that, as is the case in connection with every other motion, the party moving has the right, in this instance, to open and close the argument.

Mr. THOMSON. I make this observation simply because, in the course of the American Agent's remarks, he said that Mr. Trescot had given particular attention to the treaties, and hence I assumed that he was about to be followed by Mr. Trescot. It would be obviously unjust to the counsel acting on behalf of Her Majesty's Government if they should now be called upon to answer the argument that has been made without hearing all that is really to be said on the other side. I understand that the other side have an undoubted right to reply to anything which we may say, but if Mr. Trescot is afterwards to start a new argument, as I rather infer from Mr. Foster's remarks he will do, this might put another phase on the matter.

Mr. TRESBOT. As I understand the position taken by Mr. Foster, it is very plain, and stated with all the fullness and precision necessary. He takes the ground that the commercial relations between Great Britain and the United States stand either on ordinary international comity or upon treaty regulations. If upon the latter, then they rest upon the Treaty of 1794, the third permanent article of which did determine the commercial relations which were to exist between the United States and the British North American Colonies; because in 1815 the Commercial Convention, then adopted and extended in 1815 and 1827, renewed that article, even if it should be contended, as I think it never has been before by the British Government, that the permanent articles of the Treaty of 1794 were abrogated by the war of 1812. The negotiators of the Convention of 1815 took the third article of the Treaty of 1794 as a basis, but not being able to agree as to certain modifications, decided to omit the article and to declare that "the intercourse between the United States and His Britannic Majesty's possessions in the West Indies and on the Continent of North America shall not be affected by any of the provisions of this article, *i. e.*, the article of the Convention of 1815 in reference to the commercial relations between the United States and the possessions of His Britannic Majesty in Europe, *but each party shall remain in the complete possession of its right with respect to such intercourse,*" those rights being, as we contend, the old rights established by the Treaty of 1815. But the question has not a very important bearing upon our present contention, and has been suggested simply in reply to what we understand is to be one of the positions on the other side, viz, that if we deny that commercial privileges were granted by the Treaty of 1871, and are not, therefore, proper subjects of compensation in this award, then we have no right whatever to these commercial privileges; and I can say in reply to the very proper inquiry of my friend Mr. Thomson, that in any remarks I may make, that is the extent of the position which will be taken, but I do not expect to refer to the point at all.

Mr. THOMSON. In reference to the time at which this motion should be heard, in view of the arguments which the learned Agent of the United States has used, I shall not, on behalf of Her Majesty's Govern-

ment, call upon this Commission to say this is an improper time for that purpose. We have no objection that this application on the part of the counsel of the United States Government should be heard at length, and so they may be enabled to understand at all times, on all reasonable occasions, the exact ground upon which we stand. There is nothing unreasonable in the view which has been put forward by them in this respect. They are entitled to know whether the Commission is going to take the matter named in their notice of motion into consideration or not. We therefore have no objection that your excellency and your honors should determine this point at once, and we do not complain of the time at which the motion is made. I shall now come to the substance of the motion. The Agent of the United States has traveled out of the record, and has referred to light-houses and other matters not contained in this motion. He also alluded to the injuries which were committed on our coasts by the American fishermen, and he says that we have put them all forward in our case as subjects for compensation. I am not here now to consider the question whether we have done so or not; I at present only intend to discuss whether the matters included in this motion are matters coming within the jurisdiction of this court or not. I read the motion. It states:

The counsel and Agent of the United States ask the honorable Commissioners to rule declaring that it is not competent for this Commission to award any compensation for commercial intercourse between the two countries, and that the advantages resulting from the practice of purchasing bait, ice, supplies, &c. and from being allowed to transship cargoes in British waters, do not constitute any foundation for an award of compensation, and shall be wholly excluded from the consideration of this tribunal.

The tribunal will see that these are the words inviting discussion; and these I am here to answer, and nothing else. Satisfactory answers could be given to the other matters to which Mr. Foster has called attention, if this were the proper time to give them. As to the light-houses, for instance, it is quite obvious that these make the value of the fisheries themselves very much greater to the Americans than they would be otherwise; but I say again that I am not going to discuss that question now. If it should arise hereafter, I shall do so. We shall undoubtedly be obliged to discuss it eventually, at the end of the case; but the question now is, whether it falls within the jurisdiction of this tribunal to award to Great Britain any pecuniary compensation for the rights which the Americans have undoubtedly exercised since the Washington Treaty was negotiated, of coming into our waters and instead of taking bait with their own lines and nets, as by the terms of that treaty they have a right to do, purchasing it from our citizens; of buying ice here as well, and of getting supplies and transhipping their cargoes. It is said in the Reply of Her Majesty, page 8, I think, that these privileges are clearly incidental; that, looking at the whole scope and meaning of the treaty, it is clear that these are incidental privileges for which the American Government can afford to pay. The words of our reply, read by Mr. Foster, are these:

By the terms of Article 18 of the Treaty of Washington, United States fishermen were granted permission to land upon the said coasts, and shores, and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish. The words *for no other purpose whatever* are studiously omitted by the framers of the last-named treaty, and the privilege *in common* with the subjects of Her Britannic Majesty to take fish and to land for fishing purposes, clearly includes the liberty to purchase bait and supplies, transship cargoes, &c., for which Her Majesty's Government contend it has a right to claim compensation.

It is clear that these privileges were not enjoyed under the Convention of 1818, and it is equally evident that they are enjoyed under the Treaty of Washington.

Well, that is the argument which was put forward by Her Majesty's Government, but whether that argument commends itself to the judg-

ment of this tribunal or not is not for me to say, though to my mind it is a very strong and very forcible one. Referring to the wording of the treaty itself, and to the Convention of 1818, the first section of the latter states :

Whereas differences have arisen respecting the liberty claimed by the United States, for the inhabitants thereof, to take, dry, and cure fish on certain coasts, bays, harbors, and creeks of His Britannic Majesty's dominions in America, it is agreed between the high contracting parties, that the inhabitants of the said United States shall have forever, in common with the subjects of His Britannic Majesty, the liberty to take fish of every kind on that part of the southern coast of Newfoundland which extends from Cape Ray to the Rameau Islands, on the western and northern coast of Newfoundland, from the said Cape Ray to the Quirpon Islands, on the shores of the Magdalen Islands, and also on the coasts, bays, harbors, and creeks from Mount Joly, on the southern coast of Labrador, and to and through the straits of Belle Isle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson's Bay Company. And that the American fishermen shall also have liberty, forever, to dry and cure fish in any of the unsettled bays, harbors, and creeks of the southern part of the coast of Newfoundland hereabove described, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such portion so settled, without previous agreement for such purpose with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounce forever any liberty heretofore enjoyed or claimed by the inhabitants thereof, to take, dry, or cure fish, on or within three marine miles of any of the coasts, bays, creeks, or harbors of His Britannic Majesty's dominions in America, not included in the above-mentioned limits; provided, however, that the American fishermen shall be admitted to enter such bays or harbors for the purpose of shelter and of repairing damages therein, of purchasing wood and of obtaining water, and for no other purposes whatever. But they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them.

Now, in reference to the Washington Treaty, you will find this language used in the commencement of the 18th Article :

It is agreed by the High Contracting Parties that, in addition to the liberty secured to the United States fishermen by the Convention between Great Britain and the United States, signed at London on the 20th day of October, 1818, of taking, curing, and drying fish on certain coasts of the British North American Colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty, for the term of years mentioned in Article XXXIII of this treaty, to take fish of every kind, except shell fish, on the sea-coasts and shores, and in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and the Colony of Prince Edward Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts, and shores, and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish; provided that in so doing they do not interfere with the rights of private property, or with British fishermen, in the peaceable use of any part of the said coasts in their occupancy for the said purpose. It is understood that the above-mentioned liberty applies solely to the sea-fishery, and that the salmon and shad fisheries, and all other fisheries in the rivers and mouths of rivers are hereby reserved exclusively for British fishermen.

I call attention to the fact that, in this very Treaty of Washington, the framers have made as the basis of it, not only the Convention of 1818, but the 1st section of it, and in that section is contained the strong and positive declaration that the Americans shall have the right (and only that right) of coming into British waters for the purposes of obtaining shelter, repairing damages, and of securing wood and water, and *for no other purpose whatever*. I will now read Article 18 of the Washington Treaty, and the argument I wish to found upon it is this: That the High Contracting Parties, or rather the High Commissioners, had before them, when they framed that treaty, the Convention of 1818, the first article of which contains these words :

That the American fishermen shall be admitted to enter such bays or harbors for the purpose of shelter and of repairing damages therein, of purchasing wood, and of obtaining water, and *for no other purpose whatever*.

One would suppose that under ordinary circumstances it would have been sufficient to have stopped with the statement that they should be admitted "for the purpose of shelter, &c., and of obtaining water," but the framers of the Convention of 1818 were particular to add, "and for no other purpose whatever."

They not only so restricted the Americans by affirmative words, but also by negative words. The High Contracting Parties having this before them, gave the Americans the liberty of coming upon our shores to fish on equal terms with our fishermen, and to take bait, &c. To my mind, the High Commissioners considered that the framers of the Convention of 1818 deemed it necessary to insert the words, "and for no other purpose whatever," to make it absolutely certain that the Americans could only come in for shelter, repairs, wood, and water, and should enjoy no rights as incidental to that privilege, and that they purposely omitted those words in the Treaty of Washington. It may, therefore, be well supposed that if the Americans were to be restricted to the very letter of the treaty, the same negative words would have been used, and undoubtedly had those words been used in the treaty, there would be an end of the argument. If that had been the intention of the High Commissioners, they would have gone on in this treaty to state in Article 18:

It is agreed by the High Contracting Parties that, in addition to the liberty secured to the United States fishermen by the Convention between Great Britain and the United States, signed at London on the 20th day of October, 1818, of taking, curing, and drying fish on certain coasts of the British North American Colonies, therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty, for the term of years mentioned in Article XXXIII of this treaty, to take fish of every kind, except shell-fish, on the sea coasts and shores, and in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and the Colony of Prince Edward Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts, and shores, and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish, and *for no other purpose whatever.*

But these words were not used.

Now these are the words which the learned Agent of the United States, and the learned counsel who are associated with him, seek, in my judgment, to interpolate into this treaty. The framers of the Convention of 1818 were very cautious as to its wording; the framers of the Treaty of Washington had that convention before them, and it must, therefore, I think, be fairly assumed that if it had been the intention of either of the High Contracting Parties, in this instance, that the Americans should simply have the bare rights named in the treaty and nothing else, they would have followed the example set before them by the Convention of 1818 and used these strong negative words, "and for no other purpose whatever." I say that this argument is a fair and just one; of course its weight is to be determined by this tribunal. I am by no means putting it forward as a conclusive argument, but still the fact that they did not do so is of great weight in my mind, though to what extent its weight will effect the decision of this tribunal it is not for me to say, but it does appear to me to be a very strong argument indeed. Had it been intended to restrict the United States fishermen, and, to use the language of Mr. Foster, confine them merely to what was mentioned in the bond, the High Commissioners would have added, "and for no other purpose whatever"; and therefore their leaving that language out is open to the construction that the Americans were entitled to all the incidental advantages which that treaty would necessarily be understood to confer.

Is it not a rather extraordinary argument on the part of the United

States that this privilege of theirs related only to their right of coming in and fishing on equal terms with our citizens, and to landing and to drying their nets and curing their fish, and that the moment they had dried their nets and cured their fish they were forthwith to take to their boats and go back to their vessels, and that by landing for any other purpose whatever they are clearly liable for infraction of the provisions of this treaty? It is certainly a curious view which Mr. Foster presents with regard to their mode of bartering along the coast when he intimates that they land merely to exchange a gallon or two of kerosene oil or a barrel of flour for fish, and in effect declares—for this is the result of his argument—that for so doing the Americans are liable to punishment.

Mr. FOSTER. I said that they could be excluded by statute.

Mr. THOMSON. I will show you before I am through that these American fishermen can by no possibility whatever come into our waters without incurring the risk of forfeiture, if Mr. Foster's reading of this treaty be accepted as correct. This would be the result of his argument; if you confine them to the very terms of the bond, to use the language of Mr. Foster, then it is clear that if they land for the purpose of giving a barrel of flour in exchange for fish, or of purchasing fish, at that moment their vessels are liable to forfeiture. This is a strange construction to put upon the treaty, and these are the strange results which will necessarily follow if this tribunal adopt the view presented by the American Agent.

But there is another matter to be considered, and it is this: In 1854 the Reciprocity Treaty was passed, and under that treaty the Americans came in to fish on our coasts generally. They exercised the same rights as they do now, and no person then ever complained of them for buying bait under the terms of that treaty, though it did not in express terms authorize their purchase of bait or their getting supplies of any kind on our shores; still they did so. By a kind of common consensus of opinion, it was understood that they had a right to do so, and no person complained of it. And in view of the course which then was pursued, this treaty was framed. Mr. Foster has put this case: Suppose that when the Joint High Commissioners were sitting, the British representative had proposed that the value of the rights of transshipment, and of buying bait, and of having commercial intercourse with our people should be taken into consideration by this Tribunal, then, had this been the case, it would have been met by a well-bred shrug from the Earl of Ripon, and Professor Bernard. This may possibly be so; but I can say, I think it would have been very strange indeed if our Commissioners had said to the American Commissioners: Under the treaty which we propose you shall have the right to fish in our waters on equal terms with our fishermen, and have the right to land and cure your fish, and the right also to dry your nets on the land, but the moment that you take one step farther, the moment that you buy a pound of ice, and the moment that you presume to buy a single fish for the purpose of bait in our waters, and the moment you attempt to exercise any commercial privilege whatever, and above all, the moment you undertake to transship one single cargo, that moment your vessel will be forfeited, and the cargo as well. I think that if this had been stated, there would have been something more perhaps than a well-bred shrug from the American Commissioners. I think, therefore, it may fairly be contended, in view of the wording of the two treaties, that these are privileges, which it was intended that this Commission should take into consideration when they came to adjudicate respecting the value of our fisheries; and

after all, is not the value of our fisheries to these people, enhanced by the way in which they use them, and in which they generally have been using them—by coming into our harbors to purchase bait and ice? because it takes a long time to catch the bait for themselves, and they save time and money therefore—time and money being in such case equivalent terms—by buying their bait. And why is this not to all intents and purposes a privilege under this treaty? I fail to see that it is not. Why, when it is necessary to preserve bait in ice, and as has been shown by all the witnesses that the Americans cannot procure bait and ice except on our shores, should this not be considered an incidental right? It appears to me that this view must be taken. The argument put forward on behalf of the United States demanding a contrary construction is almost suicidal. Moreover I think I can establish that this latter view is not taken by the Americans on this subject. On page 467 of Mr. Sabine's report, the following language is used: "It is argued that if the liberty of landing on the shores of the Magdalen Islands"—your Excellency and your Honors will recollect that while the Americans have the right to fish around the Magdalen Islands, they have no right to land on these shores, though our evidence has shown that, as a rule, they have landed on these islands, both before and since the negotiation of this treaty, and have dragged their nets on the shore, and fished for bait in this way. Mr. Sabine states:

It is argued that, "if the liberty of landing on the shores of the Magdalen Islands had been intended to be conceded, such an important concession would have been the subject of express stipulation," &c., it may not be amiss to consider the suggestion. And I reply that if "a description of the inland extent of the shore over which" we may use nets and seines in catching the herring if necessary, it is equally necessary to define our rights of drying and curing the cod elsewhere, and as stipulated in the convention. Both are *shore* rights, and both are left without condition or limitation as to the quantity of beach and upland that may be appropriated by our fishermen. It was proclaimed in the House of Commons, more than two centuries ago, by Coke—that giant of the law—that "FREE FISHING" included "ALL ITS INCIDENTS." The thought may be useful to the Queen's advocate and Her Majesty's attorney-general when next they transmit an opinion across the Atlantic which is to affect their own reputation and the reputation of their country. The right to take fish "on the shores of the Magdalen Islands," without conditions annexed to the grant, whatever these profoundly ignorant advisers of the Crown of England may say to the contrary, includes, by its very nature and necessity, all the "incidents" of a "free fishery," and all the privileges in use by, and common among fishermen, and all the facilities and accommodations, on the land and on the sea, which conduce to the safety of the men employed in the fishery, and to an economical and advantageous prosecution of it.

Now, it may be said that this is not the opinion of a person entitled to weight, but, at all events, it had sufficient weight to induce the legislature of the United States to republish this report in a volume, which contains the sessional papers of the House of Representatives of the Forty-second Congress, second session. The legislature of the United States, therefore, thought it proper and of sufficient importance to publish it; and I believe that the report was published more than once. At all events, it is from their own state papers that I quote it. The language employed is very forcible. It is very often the case, when our friends across the border are arguing matters that nearly or closely affect them, they couch their arguments in strong and uncomplimentary language to those who differ from them; and so, of course, when Mr. Sabine writes, "that it would be well for those profoundly ignorant law-officers to govern themselves in future as to their opinions," &c., we can understand that language as being used, perhaps, in the American sense of the term, and certainly not in the offensive sense in which such words would be construed here or in England.

MR. FOSTER. It is used in the Pickwickian sense.

Mr. THOMSON. I was about to say so. I trust that it was employed in that sense. Here is a construction which the American nation can put forward as the true construction of this treaty for the purpose of obtaining the right to land on the Magdalen Islands, and the moment the shoe pinches on the other side, they want to have the strict letter of the law, and nothing else—they then do not wish to go a single step beyond that, though the moment when it becomes necessary to extend their rights, they want to obtain a liberal construction of its terms. I do not think myself that the United States can always claim to come before any tribunal and say that they have, where it suits their purpose to do so, been very liberal in their construction of treaties. In regard to this very treaty itself, your Excellency and your Honors are aware, that it certainly was an extraordinary construction on the part of the United States Government when a duty was by them placed on the tin packages in which free fish entered into the United States. I wish to show what necessarily would be the result if the United States contention in this matter were right; but before doing so, it may be proper for me to notice an argument which Mr. Foster drew from the Convention of 1815, to which he called your attention, and part of which he read. He says that inasmuch as the Convention referred to previous privileges, which the United States had abandoned as against Great Britain, and as those privileges must have been granted by the Treaty of 1794, that therefore the war of 1812 did not abrogate those privileges, and that this was a distinct admission on the part of Great Britain that the treaty mentioned was not abrogated, and that the privilege conferred by that treaty had been in no way interfered with. I altogether deny the conclusion he thus draws; but it is not now necessary for the purpose of my argument to answer that statement, further than to say that the mention of those privileges had reference to ordinary commercial relations existing between the traders of the two nations. These traders are a well-known class of persons. They are merchants and ship-owners, who send their ships to sea. These vessels have registers, clearances, manifests, &c., for the purpose of showing the nationality of their vessels, and these papers also show the voyage which the vessels have undertaken to prosecute—what they have on board and everything about them. If they are on a trading voyage, this states their object. But fishing-vessels have no such papers except registers. They come without clearances, and if I understand the question at all, they are a separate and distinct class of vessels, and as a separate and distinct class they have always been treated by both nations. The 1st section of the Convention of 1818 had reference to ordinary traders, and to them solely. Let it be admitted, for the sake of argument, that Mr. Foster is right in his construction of the effect of the language used in the Convention of 1815 to which he refers—though this I, in fact, utterly deny, but still admitting that the words to which he has directed attention in fact declared that the war of 1812 had no practical effect whatever upon the Treaty of 1794—supposing that this was so, what do we find? We find that in 1818 a distinct and separate treaty is framed, referring to this very class respecting whose rights your Excellency and your Honors are now sitting in judgment—the fishermen engaged in the prosecution of the fisheries of the United States. The Convention of 1818 was made altogether with reference to them; was it not? What does the 1st section of that Convention of 1818 say? It is this:

ART. 2. Whereas differences have arisen respecting the liberty claimed by the United States, for the inhabitants thereof, to take, dry, and cure fish, on certain coasts, bays, harbors, and creeks, of His Britannic Majesty's dominions in America, it is agreed be-

tween the High Contracting Parties that the inhabitants of the said United States shall have forever, in common with the subjects of His Britannic Majesty, the liberty to take fish of every kind on that part of the southern coast of Newfoundland which extends from Cape Ray to the Rameau Islands: on the western and northern coast of Newfoundland, from said Cape Ray to the Quipron Islands: on the shores of the Magdalen Islands, and also on the coasts, bays, harbors, and creeks from Mount Joly, on the southern coast of Labrador, to and through the Straits of Belleisle, and thence northwardly indefinitely along the coast, without, prejudice, however, to any of the exclusive rights of the Hudson's Bay Company. And that the American fishermen shall also have liberty, forever, to dry and cure fish in any of the unsettled bays, harbors, and creeks, of the southern part of the coast of Newfoundland hereabove described, and of the coast of Labrador: but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such portion so settled, without previous agreement for such purpose, with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounce forever any liberty heretofore enjoyed or claimed by the inhabitants thereof, to take, dry, or cure fish on or within three marine miles of any of the coasts, bays, creeks, or harbors of His Britannic Majesty's dominions in America, not included within the above-mentioned limits: *Provided, however*, That the American fishermen shall be permitted to enter such bays or harbors, for the purpose of shelter and of repairing damages therein, of purchasing wood, and of obtaining water, and for no other purpose whatever. But they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them.

Now, I want to say, may it please your excellency and your honors, I think it most extraordinary that the learned agent of the United States, and a man of his high standing and great ability, should take this matter up and distinctly assert that what took place in 1815 had the slightest bearing on the subsequent agreement which was made with reference to the particular class mentioned—the fishermen—between these two nations. I must confess I cannot see the slightest bearing it has on the Convention of 1818. I deny that the construction urged by the agent of the United States is correct; and if it were necessary to do so, I think I would be able to convince this tribunal that the contention of Mr. Foster is entirely erroneous. Still, I put it out of consideration altogether, as being in no way connected with the matter at present at issue. What have you to do with it? We stand here by the Treaty of 1818, which was a definite treaty affecting the fishermen of the United States and the fisheries on the shores of these provinces. By the terms of that treaty the fishing-vessels of the United States and their fishermen were prohibited from coming within three miles of our shores and of all our bays for any purpose whatever, with three exceptions, that is to say, they might resort to our harbors for the purpose of shelter in case of storms, to make repairs in case of necessity, and to procure wood and water, and if they went into these places for any other purpose whatever, their vessels were liable to forfeiture; yet though this was the case, as my learned friend on the other side well knows, they incurred that liability time and again. Vessel after vessel of theirs was condemned from the making of this treaty up to the present time, and has that treaty ever been abrogated? There is no pretense for saying that this is the case. That treaty stands in as much force to-day as it did in the year 1819, the year after which it was passed, with one exception only, except in so far as it is interfered with by the Treaty of Washington. Now, let me turn your attention to what the Treaty of Washington says on this point, because so far as any privileges were renounced by the United States in the Treaty of 1818 they have conferred on the United States by the Treaty of Washington. The 18th article of the Treaty of Washington declares—

ART. XVIII. It is agreed by the High Contracting Parties that, in addition to the liberty secured to the United States fishermen by the Convention between Great Britain and the United States, signed at London on the 20th day of October, 1818, of taking,

curing, and drying fish on certain coasts of the British North American colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty, for the term of years mentioned in Article XXXIII of this treaty, to take fish of every kind, except shell-fish, on the sea-coasts and shores, and in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and the colony of Prince Edward's Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts and shores and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish; provided, that in so doing they do not interfere with the rights of private property, or with British fishermen in the peaceable use of any part of the said coasts in their occupancy for the same purpose. It is understood that the above-mentioned liberty applies solely to the sea-fishery, and that the salmon and shad fisheries, and all other fisheries in rivers and the mouths of rivers, are hereby reserved exclusively for British fishermen.

The only privileges which the American fishermen had in British waters are received in the Convention of 1818; and as to all other privileges, they expressly excluded themselves by their renunciation forever. Now, in this treaty, Great Britain says it is expressly agreed by the High Contracting Parties that, in addition to the privileges which the Americans enjoy under the Convention of 1818—that is, in addition to the privileges which they have of fishing on the southern coast of Labrador, and on the shores of the Magdalen Islands, and around the shores of the Magdalen Islands—

The citizens of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty, for the term of years mentioned in Article XXXIII of this treaty, to take fish of every kind, except shell-fish, on the sea coasts and shores and in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and the colony of Prince Edward Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore.

Can anything be plainer than this? Whereas, before this treaty, Great Britain says to the United States, you could only fish around the Magdalen Islands, but not land on these islands; by this treaty however, all these restrictions are taken away from you; and in addition to that, the restrictions which were imposed preventing you from fishing within three miles of the shores of Nova Scotia, New Brunswick, Quebec, and Prince Edward Island, are removed, and besides the right of fishing there, you also have the right to land and dry your nets on these coasts. Is not that plain? The Convention of 1818 clearly stands untouched except in so far as it is restricted by the Treaty of 1871. Now, what follows from this, if the Agent of the United States is correct in his contention—and I presume that my learned friends opposite have weighed it carefully—this follows: these American fishermen having then, as I have shown, no right to enter our harbors by any commercial treaty, they are governed by the Convention of 1818; their rights are defined by that convention, and extended by the agreement and Treaty of 1871. This being the case, what have they a right to do if the contention of my learned friend on the other side is correct? They have a right, and that under this treaty, to fish within three miles of the shore in common with the inhabitants of these colonies, and there to take fish of every kind, shell-fish excepted, and to land for the purpose of drying their nets and curing their fish and nothing more; that is the "bond."

That is the bond, says Mr. Foster. That is all they have a right to do. If it is, then what follows? Then all other privileges save those of taking fish within three miles of the shore, landing on the coast for the purpose of drying nets and curing fish, are governed by the Convention of 1818. And if that is the case, then when they do enter for the purpose of purchasing bait, they enter for another purpose than that of obtaining wood and water, securing shelter, &c., and they become liable

to forfeiture. If they come in for the purpose of buying ice they are in the same predicament—they have not entered for the purpose of buying wood or obtaining shelter; they have come in for the purpose of buying ice, which is wholly foreign to the provisions of the Treaty of 1818. They could not under the Treaty of 1818 enter for that purpose and the position assumed by the learned Agent and counsel for the United States is that that privilege is not conferred by the Treaty of Washington. If so, they haven't got it, and every time they come in for other purposes than those mentioned in the Treaty of 1818 they are liable to forfeiture. The surprise with which I, as counsel, heard that contention will, I have no doubt, be only exceeded by that of the fishermen of the United States when they find that that is the construction placed on the treaty by the Government of the United States as represented by their Agent before this Commission. If this argument applies to buying bait and ice, a *fortiori*, it applies to the privilege that they now enjoy of landing and transshipping cargoes. Under the plain reading of the treaty, there is no doubt about it, and if it does not come within the incidental privileges, I admit that, as a lawyer, I cannot contend for one moment that the privilege of buying bait—or at all events of buying ice, whatever may be said about bait, as to which there may be a particular construction, to which I will refer presently—I admit frankly that I cannot see that the privileges of buying ice or of transshipping cargoes are conceded unless they are to be considered as necessarily incidental. If it is denied that they are conceded incidentally, then the moment a vessel lands for any of those purposes, a forfeiture is worked immediately.

There is just this distinction with reference to the taking of bait. It has been shown by numerous witnesses before this tribunal that these men come in and employ our fishermen to get bait for them, and then pay the fishermen for doing so. Now I wish to be distinctly understood upon this point. I submit, without a shadow of doubt—I don't think it will be controverted on the other side, at all events it will not be successfully controverted—that if those fishermen, having a right to come in and fish, as they undoubtedly have under the treaty, choose to hire men to catch bait for them, they are catching that bait themselves. There is a legal maxim put in old Latin, *qui facit per alium facit per se*—what a man does by an agent he does by himself. Therefore in all these instances where it has come out in evidence that they come in and get our fishermen to catch bait for them and pay them for doing so, in all such cases the act is that of the United States fishermen themselves. On the other hand, if the fishermen upon the coast keep large supplies of bait for the purpose of selling to such persons as come along, then under the construction of the treaty contended for by the learned Agent of the United States Government, whenever bait is purchased in that way, that is a purpose for which it is unlawful to enter our ports under the Treaty of 1818, and the act works a forfeiture of the vessel and cargo. That is a startling proposition.

In reference to bait there is another consideration I throw out. I do not know whether it will be dissented from or not by the learned counsel on the other side, but this treaty does give them this power, that they shall, in common with the subjects of Her Britannic Majesty, have the liberty, for the term of, &c., to take fish. May not buying fish be a *taking of fish* within the meaning of the treaty?

It does not say to *catch fish*. The words are not “to fish,” but “to take fish.” It simply uses the word “take.” The term is a wide one, and I am not by any means prepared to say that by a strict legal construction these people, finding the fish caught here, have not a right to take it from

the fishermen. I say that is possibly a fair construction of the treaty. In that case they do "take fish," and that is all. The contention on the other side, I suppose, will be to narrow that word "take" down to mean the actual taking of fish by the citizens of the United States from the water by means of nets and other appliances. If that be the construction, then it follows as a necessary consequence that in taking bait from our fishermen they infringe the Treaty of 1818. I wish to make myself distinctly understood on that point. By the Convention of 1818 the American fishermen could not enter our harbors at all except for the three purposes of obtaining shelter, to get wood and water, and to make repairs in case of necessity. Entrance for any other purpose was made illegal. Any privileges which they had under that convention remained. Any restrictions that they labored under after that convention still remained, except in so far as they have been removed by the Washington Treaty, and if the construction be true, as contended for by the learned Agent of the United States Government, then the restrictions as to landing for the purposes I have mentioned are not removed. The purchasing of bait and ice and the transshipping of cargoes are matters entirely outside of the treaty and unprovided for. Under the Treaty of 1818, vessels entering for any other purposes than the three provided for in that treaty can be taken. As was put forward in the American Answer, any law can be passed. An inhospitable law, they will say, by which the moment they do any of these acts they will become liable to forfeiture.

I do not presume that the remarks of the Agent of the United States, in which he speaks of instructions possibly coming from his government or from the Government of Great Britain, should be taken into consideration, or that they can properly be used as arguments to be addressed to this tribunal, because, as the learned Agent very properly says, the authority of this tribunal is contained in the treaty. If the treaty gives you authority you have sworn to decide this matter according to the very right of the matter, and I presume you will not be governed by any directions from either government. Nothing of that sort can be made use of as an argument, and you will determine the matter conscientiously, I have no doubt, upon the terms of the treaty itself. Now Her Majesty's Government does not object to your deciding in so many words that these things are not subjects of compensation, if that be the judgment of the court. I have advanced very feebly the views which I think ought to govern your decision upon the point, namely, that these are incidental privileges which may fairly be construed, in view of the way in which this treaty is framed, and as inseparable from the right given to the Americans under the Treaty of Washington. But I confess that I shall not be at all dissatisfied should this tribunal decide otherwise. If it be the desire of the American Government that this tribunal shall keep within the very letter, and disregard what I have argued is the spirit of the treaty, and determine just merely the value of the fisheries themselves, and of landing on the shores to dry nets, very well I have no objection and we will accept such a decision. But Her Majesty's Government wish it to be distinctly understood that that is not the view they have held or wish to be compelled to hold of this treaty. If, however, pressed as you are to determine the question in this way by the Government of the United States, and in view of the declaration you have made to determine it according to the very right of the matter, you can conscientiously arrive at the conclusion for which they ask, we shall not regret it at all.

Mr. DOUTRE. I would desire to add to what has been so well said by

my learned friend, that the interpretation which Her Majesty's Government has put upon the Washington Treaty has received the consecration of the whole time that the Reciprocity Treaty was in operation by the course of dealing between the two governments with reference to that treaty. The Reciprocity Treaty was in exactly the same terms as the Washington Treaty, and under it the Americans have been admitted to purchase bait, transship their cargoes, and do all those things mentioned in the motion. I think that this interpretation cannot be lightly set aside to adopt the construction now sought to be put upon the treaty by our learned friends on the other side. And to show that the several provinces have not been indifferent to these matters, I would refer the Commission to a petition sent to the Queen by the legislature of Newfoundland on the 23d of April, 1853, which is to be found on page 12 of the official correspondence which has been filed on our side.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

May it please Your Majesty:

We, Your Majesty's loyal subjects, the Commons of Newfoundland, in general assembly convened, beg leave to approach Your Majesty with sentiments of unswerving loyalty to Your Gracious Majesty's person and throne, to tender to Your Majesty our respectful and sincere acknowledgments for the protection afforded by the Imperial Government to the fisheries of this colony and Labrador during the last year, and to pray that Your Gracious Majesty will be pleased to continue the same during the ensuing season.

May it please Your Majesty:

The illicit traffic in bait carried on between the inhabitants of the western part of this island and the French has proved of serious injury to the fisheries generally, as the supply enables the French bankers to commence their voyage early in spring, and thereby prevent the fish from reaching our coasts. We, therefore, most earnestly beseech Your Majesty graciously to be pleased to cause an efficient war-steamer to be placed in Burin during winter, so that by being early on the coast she may avert the evil of which we so greatly complain.

Passed the House of Assembly April 23, 1853.

JOHN KENT, *Speaker*.

I think that every other province would have made the same complaint in a different shape, but I quote this to show that the provinces have never been indifferent to the matter of selling bait to the Americans by Canadian subjects.

This is about all that I wish to add to what has been said, except that I do not know if I have well understood Mr. Foster in reference to a class of argument which he has used. I repeat, I am not very certain that I have understood him well, that if the construction put by the American side upon this article were not admitted, the American Government might repudiate the award made by the Commission.

MR. FOSTER. O, no: I said that if the award included matters not submitted to the tribunal, the principles of law would render it void. I did not say what my government would do under any given circumstances, nor am I authorized to do so.

MR. DOUTRE. There is no authority to decide as to the legality of the award made by the Commissioners, there is no other right than might. However, if this argument had not been used I have nothing to add to what has been said by my learned friend. If it had been, I should have found it necessary to address some observations which are rendered needless by the fact that I have misunderstood my learned friend.

MR. WEATHERBE. Owing to our adherence, until quite recently, to the arrangement entered into to argue this morning a preliminary question, and considering the sudden determination of counsel on behalf of Her Majesty's Government to enter upon the main question, and con-

sidering also that we are to be followed by counsel of very great ability, I trust the imperfections of what few suggestions I have to offer may be excused. For my own part, I am much in favor of written argument before this tribunal whenever that is practicable. For example, it seems we quite misunderstood the learned agent and counsel for the United States, Mr. Foster. This may have occurred in other respects. Were written arguments to be submitted, and, after examination, replied to in writing, all that would be avoided. The other side will probably admit their written argument would have been different from what has fallen from their lips.

Mr. FOSTER. I hope it would be very much better.

Mr. WEATHERBE. And yet an advantage of oral discussion was very forcibly stated by Mr. Dana the other day—namely, the privilege of asking at the moment for explanation for obscure and ambiguous expressions; and hence, just now, in reply to my friend Mr. Doutré in regard to his interpretation—in which I must say I concurred—as to the declaration by the Agent of the United States of what his government would do in case of an adverse decision on the point under discussion, an explanation has followed. The words, as we took them, would certainly form an unjustifiable mode of argument.

Treaties between the United States and Great Britain have been referred to—the old treaties—and I have just examined the passages cited. But I understood the learned counsel to admit that the argument relative to these was too remote or of no consequence in relation to this discussion. (Mr. TRESCOT. That is correct.) So then I may pass over my notes on that subject.

Mr. Foster, representing the United States before this tribunal, says that a formal protest against the claim of Her Majesty's Government for these incidental advantages—the purchase of bait and supplies, transshipment and traffic—for which we are here claiming compensation under the Treaty of Washington, is to be found in the answer of the United States. He calls it a protest. I do find it in the Answer, but I find something more. I think this highly important. Of course this Answer on behalf of a great nation is carefully prepared to express the views of the United States. We all weigh well—we have never ceased to weigh well these words—and we have within the prescribed time, many weeks ago, prepared and filed our Reply. These are the words to which the Agent and counsel of the United States refer:

Suffice it now to be observed, that the claim of Great Britain to be compensated for allowing the United States fishermen to buy bait and other supplies of British subjects finds no semblance of foundation in the treaty, by which no right of traffic is conceded.

The answer does not stop there. It goes further:

The United States are not aware that the former inhospitable statutes have ever been repealed.

Neither does it stop here, but continues:

Their enforcement may be renewed at any moment.

Here are three distinct grounds taken by the United States in their formal answer to the case presented by Great Britain, and the claim for the right of bait, supplies, and transshipment, &c. First, there is no right to the enjoyment of these privileges secured by the treaty. Secondly, there are statutes unrepealed, by which it is rendered illegal to exercise these fishing privileges. Thirdly, such statutes may be enforced.

Therefore, we understand the contention of the United States to be not only that this claim for incidental advantages—the incidents follow-

ing necessarily, the right given in express terms by the treaty to take fish—not only do the United States say there is no semblance of authority for the tribunal to consider these things in awarding compensation, but that in point of fact these acts on the part of United States fishermen have been and are now illegally exercised on our shores. In dealing with that part of the United States Answer, which I have read, this is the language used in the Reply, printed and filed on behalf of Her Majesty's Government:

The advantages so explicitly set forth in the Case, of freedom to transship cargoes, outfit vessels, obtain ice, procure bait, and engage hands, &c., are not denied in the Answer. Nor is it denied that these privileges have been constantly enjoyed by American fishermen under the operation of the Treaty of Washington. Neither is the contention on the part of Her Majesty's Government that all these advantages are necessary to the successful pursuit of the inshore or outside fisheries attempted to be controverted. But it is alleged in the third section of the Answer that there are statutes in force, or which may be called into force, to prevent the enjoyment by American fishermen of these indispensable privileges.

Here in the Case prepared and filed and presented before this tribunal on behalf of Her Majesty it is alleged that these incidents are absolutely essential to the successful prosecution of the fishery, and that they are enjoyed under and by virtue of the acceptance of the Treaty of Washington. Here in the third section of the Answer presented before this Commission, to become matter of record and history, it is alleged that there are statutes now in existence or that may be called into force to preclude the enjoyment by the fishermen of the United States of these necessary incidental advantages. Substantially that is the only ground taken in the Answer, and I do not hesitate for a moment to say that, providing it is correct, it is a reasonable answer. If Great Britain may, after the award of this tribunal shall have been delivered—if the Government of Great Britain or Canada may afterwards call into force those statutes which we contend are at present suspended, and raise the question for the decision of the court of vice-admiralty here in Halifax, or elsewhere, as it has been formerly raised and settled here, and if the decision of such questions must necessarily lead to the confiscation of the vessels attempting to avail themselves of these supposed privileges, then this is certainly a matter of great concern to the United States, and a matter of great responsibility to those in whose hands her great interests are for the time committed. In this view I do not wonder that this answer is so much insisted on. In this view, if these results are imminent there is ground for careful deliberation. If these results are inevitable, this answer respecting the enforcement of statutes is a complete and full answer, and that far the cause is ended and the court is closed.

It is admitted, I suppose, that the fishermen of the United States sail from their own shores, enter these waters, and annually, monthly, daily, practically, enjoy these advantages since the Treaty of Washington. They never contended for a right to enjoy them previously. All the witnesses unite in saying that they have been shipping crews, purchasing and cutting and shipping ice, transshipping cargoes of mackerel—that they have been in the full and absolute enjoyment of every incident necessary to the successful prosecution of the fisheries. But it is now put forward and urged on the part of the government and nation of these foreign fishermen that they have enjoyed these privileges without the sanction of the treaty and in violation of the laws of the land, which could be at any moment enforced against them; that there was and is no semblance of authority to enjoy these rights under the Treaty of Washington; that they were and are exercised in the face of existing statutes and at the peril of the United States fishermen, and the risk of

loss of their vessels, property and earnings. If you will look at the treaty—the learned counsel says in effect—you will find its articles do not permit the transshipment of mackerel, or the hiring of crews, or obtaining ice and bait; that we may land and dry fish, but we cannot transship; that we can take fish out of the water and land them on deck, but we must stop there; and the treaty in no manner annuls the disabilities under which we labored, and none of the various things necessary to carry on the business of fishing is permitted; that you have statutes which you have enforced before, and which you can and will enforce again. This, then, is an important inquiry. I quite admit that much.

Is was on consideration of the importance of this question as regarded by the United States, as I understand—this is the view of counsel representing Her Majesty's Government—that it was considered quite reasonable a discussion should be entered upon, and it was decided not to resist the argument raised by the United States, whose agent and counsel claim the advantage to be obtained by reducing the compensation in this manner.

I understand the learned Agent and counsel, Mr. Foster, now to say that if an award should be made including any compensation for these advantages—I presume it is meant as well the enjoyment of them in the past as prospectively—Great Britain could not expect to receive payment for such award—that is, that they would not be paid. There is no kind of argument in this, and for my part I am at a loss to understand why it should be offered.

If Great Britain were obliged to admit that an award contained anything by which it appeared on its face to be *ultra vires*, the United States could not be called on for payment. But I submit to the learned Agent whether he would or ought to declare in the name of the great nation he represents that if an award were made, including compensation for the privileges already enjoyed, even although under misapprehension, the United States would repudiate that. They would hardly, I humbly submit, in the face of the world, repudiate payment of such a sum as might be awarded for those privileges of the past because the danger of confiscation had passed away. And we are safe in believing that if the United States were assured in any way that no proceedings would ever be taken, but the privileges in question could be secured throughout the continuance of the treaty to the fishermen of the United States, that nation would promptly pay any sum that might be awarded. Moreover, if this tribunal had the power; if authority had been delegated and were to be found in the treaty to set questions of this kind at rest, and in making their award of compensation if the Commissioners could secure these privileges—if not already secure—I think then, also, no objection would be taken to their being considered by the tribunal. But it is because it is contended that the enjoyment of these necessary incidents is insecure; because the power of the tribunal is limited; because the matter will, it is said, be left in a state of uncertainty hereafter; because questions may arise over which the government may have little control; because the international relations of the future are unforeseen and cannot be anticipated, that the claim to compensation is resisted. This seems to me to be the condition of the question, and this I gather and have observed in the Answer, from the first, is the manner in which the subject has been regarded by the Agent representing the United States. And so regarding it, an anxiety to prevent compensation incommensurate with the privileges understood to be settled and secure beyond all question seems perfectly reasonable.

But I think there are objections to attacking the claim set up here on

behalf of Her Majesty's Government in detail. A reason stated by the learned Agent of the United States for asking for the decision of this question now is that the matter should become a record of the Commission: and if the Commissioners come to the conclusion that the right to transship and obtain ice and bait and men and supplies for the fishery are necessary incidents to the right to "take fish," and arise therefore by necessary implication from the very terms of the treaty, and that they can be properly considered in making up the award, it should be known and read hereafter. And I can understand if an award were to be paid out of the United States Treasury, and in that sum was included an amount for these already specified rights, and if any doubts existed as to whether they were secured to the fishermen, those doubts should be set at rest upon such payment. It will, however, hardly be contended that this tribunal should be asked to give the grounds. It would be utterly impossible to give such grounds on each branch of the case. Take the argument of the counsel in relation to light-houses. The representative of the United States, it appears, now thinks that the evidence in regard to light-houses was irrelevant—that is to say, if we had no light-houses at all, our fisheries would be just as valuable as they are now, and that if we had ten times as many as we have, no compensation should be allowed in consequence of the efficiency of that service. I don't know how it may strike others, but it seems to me just as reasonable—with the exception already mentioned, about which I cannot conceive any cause of anxiety—that a motion should be made to obtain a decision in advance, for the information of the United States, as to whether that nation was, in paying for the use of Canadian fisheries, paying in any indirect way, and to what extent, for the support of the lights to guide the United States in common with British fishermen through the ocean storms. It is a matter entirely for the honorable Commissioners whether they are content to give their award piecemeal—whether they are to state prematurely the grounds—one ground to-day, another to-morrow—upon which their award is to be made.

It seems to me unfortunate that this question should not have been raised earlier. One thing will be admitted: If this question had been submitted at the outset—if this tribunal had undertaken to hear argument, and if the decision had been adverse to us, a very large amount of time would have been saved in the mode of submitting the testimony. We should have had this advantage, that we might have fortified our case on matters where the quantity of evidence is small. The learned counsel on the other side have listened to a large mass of testimony which they now say is irrelevant. Suppose it should be so decided, the United States is in this position—a large portion of time allotted to them will be saved. A great deal of time may be economised which otherwise would have been occupied in meeting claims supported in our case. Having succeeded in a matter of strict law, after our time has been occupied in submitting a very large mass of evidence on questions now sought to be excluded, the United States may now concentrate their testimony upon points which are held to be before the Commission, and at the close it will be contended that their evidence on these points greatly preponderates.

Mr. FOSTER. We will give you more time.

Mr. WEATHERBE. Well, we have pretty well arranged our programme, and I think it is highly undesirable that the time should be lengthened. I don't wish it to be inferred at all that it is intimated in the slightest degree that there was any such motive governing the selection of the time to make this motion.

The Answer of the United States, at pages 8 and 9, 14 and 15, 18 and 19, claims on the part of the United States consideration in estimating the amount to be awarded for Canada of the advantages arising to Canadians on the coast from the admission of United States fishermen into our waters. In effect the Commission is asked in this document first to estimate the value of the privileges accorded to the United States by the terms of the Treaty of Washington in giving up to them the fisheries, and then, although there is nothing whatever in the treaty to justify it, they are required to reduce that sum by deducting therefrom the value to a certain class residing on our shores of the right to trade with United States fishermen, including the supply of this very bait in question. The Commissioners will find on the pages mentioned very clear language to show how reasonably we can claim for the privileges now sought to be excluded.

MR. FOSTER. I don't believe you remember just the view we take of that. We say:

The benefits thus far alluded to are only indirectly and remotely within the scope and cognizance of this Commission. They are brought to its attention chiefly to refute the claim that it is an advantage to the United States to be able to enter the harbors of the provinces and traffic with the inhabitants.

I say it lies out of the case on both sides, and that is what our motion says.

MR. WEATHERBE. That is an admission that incidental privileges are within the scope and cognizance of the Commission. But there is other language which has been assigned to other counsel to cite. There are ample quotations from the arguments of Canadian statesmen, advocating remote and incidental privileges in Parliament, as arguments in favor of the adoption of the treaty. If the Agent and learned counsel for the United States succeed in this motion they do more than exclude from the consideration of the case compensation for the right of procuring bait and ice by purchase, and the other incidents to a successful prosecution of the fisheries. And as the Answer stands, evidence may be offered on other points, unless other motions follow the present, for excluding matter from the consideration of the Commission. I think it can be shown that if this matter is not within the jurisdiction of the Commission, and had not been so considered when the Answer was drawn up, a great modification of that Answer would have been made.

MR. FOSTER. It is quite capable of being very much improved if I had more time.

MR. WEATHERBE. I am, however, only turning the attention of the tribunal to the deliberate and solemn admissions and declarations of the Answer, which bind now and hereafter. Whatever may be the argument of the United States for the present moment, these must remain, and they point to the true intention to be gathered from the language of the Treaty of Washington, as understood by both of the great parties to that compact.

The simple question we are now discussing is this: whether certain things are to be taken into consideration as incidental to the mere act of taking fish out of the water. What I understand the argument of the United States to be now is, that by the Treaty of Washington the American fishermen have the right of taking fish out of British waters, and landing to dry their nets and cure their fish, and nothing else. The right to land to dry their nets and cure their fish they admit are subjects for compensation. But what does taking fish mean? It means taking them out of the water and landing them on the deck and nothing more, it is contended. We contend that by a fair and reasonable cou-

struction of the words, the United States have obtained the privilege of *carrying on the fishery*. Can it be doubted that this was the intention when the words were adopted. Are we asking for any strained construction by the tribunal? I think not.

By the Convention of 1818 the United States renounce, forever thereafter, the liberty to United States fishermen of fishing in certain British waters, or ever entering these waters, except for shelter and for wood and water. "*For no other purpose whatever*" is the sweeping language of the treaty. I presume we are to have very little difference of opinion as to the intention of the clause containing these words. That clause of the Convention of 1818 was fully considered by the Joint High Commission who framed the Treaty of Washington. What do those Commissioners say? That language has been cited. In addition to the liberty secured by that Convention, the privilege is granted of taking fish. The Treaty of Washington permits the liberty of taking fish and of landing to dry nets and cure fish. This tribunal is invited to decide that it is not competent for them to award anything in relation to the incidental and necessary requirements to carry on the fisheries.

Is it contended there there was an oversight in framing the Treaty of Washington? Is there an absence of words necessary to secure the full enjoyment of our fisheries to United States fishermen? Was that absence intentional? The learned counsel for the United States have not stated their views upon this point. Can it be possible that those who represented the United States in framing the Treaty of Washington intended the result which would follow the success of the present motion. Can it be possible both parties intended that result? If this is an oversight, who are to suffer? The compensation is to be reduced, we are told. But if the United States Treasury is to be saved, are the United States fishermen to suffer? Or is the award to be reduced for the want of privileges and the fishermen to continue illegally to enjoy all the privileges? This matter has not been fully explained. I must admit, if there has been an oversight here—if so great an error has occurred—the tribunal is powerless to correct the error or to grant full compensation.

But the learned Agent and counsel who support the motion did not state fully to the Commission—did not give to the Commission a full explanation this morning. The answer states the matter more fully than the application for the motion. The Commissioners are entitled to know fully and distinctly what view is taken by the United States. Nothing was said as to the statutes to be enforced against United States fisherman in case the motion should be successful. In that event it would be too late to deny the right to enforce the statute. This would be unfortunate for American fishermen, as it formerly was. Is the success of the motion to open old sores and awaken the very troubles the treaty was made to set at rest? There is no escape, it appears to me.

I submit that our construction is the reasonable, fair, and legitimate one. The words of the treaty are sufficient to secure all the privileges and preclude the enforcement of statutes. The words are sufficient to justify the awarding of full compensation. Our argument is that the right to "take fish" carries with it the right to prepare to fish, and the words are sufficient to secure to American fishermen those rights of which they were deprived until secured by treaty. We submit the matter with full confidence to this honorable Commission, regretting that any intimation should have been offered on the other side as to the improbability of payment of any award, unless the judgment of Commissioners should be favorable. I think I am obliged to admit on our side that we have no alternative; that for us, on this question of reducing

the amount of compensation, the decision, even if adverse, must prevail; and I beg to say I trust whatever it may be it will be accepted in the proper spirit.

Mr. WHITEWAY. I was rather taken by surprise when I learned but just now that the main question in this proposition was this day to be discussed, and not the preliminary question as to whether the main question should be argued at the present time, or as part of the final argument. I have now only a few observations to make in addition to those that have been so strongly put by the learned counsel who have preceded me. It seems to me that the position taken by the learned counsel on the opposite side to-day differs materially, and in fact is diametrically opposed to that taken by them in their answer. In their answer they not only allege on the part of the United States that they have a right to those incidental advantages which may accrue from the concession of a right to fish; but they go further, and they allege that they have a right to claim for the incidental benefits which may flow to the subjects of Her Britannic Majesty from traffic with American fishermen, and they allege this as a specific ground for the reduction of the amount claimed on behalf of Great Britain. Now, at page 13, part iv, of the answer, they say:

It is next proposed to consider the advantages derived by British subjects from the provisions of the Treaty of Washington.

In the first place, the admission of American fishermen into British waters is no detriment, but a positive advantage, to colonial fishermen; they catch more fish, make more money, and are improved in all their material circumstances by the presence of foreign fishermen. The large quantities of the best bait thrown over from American vessels attract myriads of fish, so that Canadians prefer to fish side by side with them; and when doing so make a larger catch than they otherwise could. The returns of the product of the British fisheries conclusively show that the presence of foreign fishermen cannot possibly have done them any injury.

Secondly. *The incidental benefits arising from traffic with American fishermen are of vital importance to the inhabitants of the British maritime provinces.*

The incidental benefits arising from traffic, therefore, are, according to the contention of our learned friends, to be taken into consideration, and to have weight with the Commissioners in reducing those damages which they may award to the British Government. Now, all that has been contended for on the part of Great Britain up to the present time is that the value of the incidental advantages which necessarily arise from the concession of the right to take fish within the three-mile limit, and to land for the purpose or curing, should be taken into consideration by the Commission.

On page 9 of the answer they say:

It is further important to bear in mind that the fishery claims of the Treaty of Washington have already been in formal operation during four years, one-third of the whole period of their continuance, while practically both fishing and commercial intercourse have been carried on *in conformity with the treaty* ever since it was signed, May 8, 1871.

Here they say that practically both fishing and commercial intercourse have been carried on in conformity with the treaty ever since 1871. Now, then, if you will turn to the same answer, page 13, they say:

The United States call upon the British Agent to produce, and upon the Commissioners to require at his hands, tangible evidence of the *actual practical value of the privilege of fishing, by Americans, in British territorial waters, as it has existed under the treaty for four years past, as it exists to-day, and as, judging of the future by the past, it may reasonably be expected to continue during the ensuing eight years embraced in the treaty.*

We have met their views, and given evidence of the actual practical value of the privilege of fishing and its incidents of commercial intercourse as actually carried on in conformity with the treaty.

Now, your excellency and your honors, it appears to me very unfor-

fortunate as regards our present position that this Commission did not sit immediately after the treaty was entered into. If it had sat—if the construction put upon the treaty was to the effect that the Commission had no jurisdiction to take into consideration the incidental advantages of which evidence has been given, then, as has been put by my learned friend, Mr. Thomson, no traffic would have taken place from American fishing-vessels coming into our harbors for the purpose of buying bait, for they would have been liable to be confiscated forthwith. But this treaty having existed four years, the fishermen of the United States and of Great Britain have solved practically the question of the construction of the treaty themselves. The fishermen of the United States have found it more to their convenience and speedy baiting to employ British fishermen to take bait for them, and, in some instances, to buy it from them, believing that the right of traffic was conceded by this treaty, and thence the traffic has arisen. No such traffic would have arisen had this question been determined at the outset in accordance with the views contended for by the counsel for the United States; but because that traffic has arisen, and the question has been solved by the people themselves, therefore they now say we are precluded from recovering any compensation for it. It has been shown here by clear, indisputable evidence that the Bank fisheries off the coasts of the Dominion and Newfoundland could not be carried on to advantage by American fishermen without obtaining the bait upon our coast, which they have done. It is admitted that this is a subject for consideration, and that this is a question they have to pay for; but now, forsooth, because this Commission has not sat, and four years have elapsed, and the fishermen of the two countries have practically solved the question for themselves, we are to be precluded from obtaining compensation for the advantages that would otherwise have to be paid for.

Again, in the Answer of the United States, at page 18, it is stated: "The benefits alluded to (that is, the incidental advantages) are only indirectly and remotely within the scope and cognizance of this Commission." Here my learned friends show that they were clearly of the opinion at the time they penned this answer that these were matters that were within the scope of the Commission, and within their jurisdiction. And without objection on their part, we have throughout the whole conduct of our case adduced evidence to support the position we now contend for.

MR. TRESCOT. What I have to say I shall say very briefly, for my purpose is rather to express my assent to what has been said than to add anything to what I consider the very complete argument of my colleague, Mr. Foster.

If I understand the British counsel correctly, they admit that the construction for which we contend is a fair construction. They seem to think that a broader and more liberal interpretation would be more in conformity with what they consider to be the spirit of this discussion, but all of them appear to admit that if we choose to stand on that language we have the right to do it, and they do not object that it should be enforced. They seem to think, however, that certain consequences would follow, of which they have apprehensions for us. That is our matter. The consequences that flow from the interpretation will be confined to us, and are matters we must look to. At present the only question is, whether we have the right to say to your honors that you are limited in your award to a certain and specific series of items. I think, honestly, we have drifted very far from the common-sense view of this case. As to the technical argument, if we are to go into it, it might be in-

sisted, first, that, under the Treaty of 1818, if a fisherman went into a colonial port and bought a load of coal for his cabin stove he violated the treaty, because it only gave him the right to go in and buy wood; or when a fisherman bought ice, he was only buying water in another shape, and therefore that, when he had a right to buy water, he had the right to buy ice. I do not, however, suppose that this is the kind of arguments your honors propose to consider. It appears to me that if we look at the history of this negotiation, we see with perfect distinctness what the Commission is intended to do. When the High Commission met, and the question of the fisheries came up, what was the condition of the facts? We were annoyed and worried to death by our fishermen not being allowed to go within three miles of the Canadian shore and by their being watched by cutters. The idea of not being allowed to buy bait, fish, and ice, which we had done ever since the fisheries existed, never crossed our minds. We knew what had been the established custom for over half a century, from the earliest existence of the fisheries. We read your advertisements offering all these things for sale as an inducement to come into your ports. We had the declaration of Her Majesty's Colonial Secretary, that whatever might be the technical right, he would not consent to colonial legislation which deprived us and you of this natural and profitable exchange, and we knew that in the extreme application of your laws, you had not attempted to confiscate or punish United States fishermen for such purchases. It never occurred to us that this was a question in discussion. What we wanted to do was to arrange the question as to the in-shore fisheries. That was the only question we were considering, and so far from raising any question about it, what is the instruction of the British Government to their negotiators? It was as follows:

The two chief questions are: As to whether the expression "three marine miles of any of the coasts, bays, creeks, or harbors of Her Britannic Majesty's dominions" should be taken to mean a limit of three miles from the coast-line or a limit of three miles from a line drawn from headland to headland; and whether the proviso that "the American fishermen shall be admitted to enter such bays or harbors for the purpose of shelter, and of repairing damages therein, of purchasing wood, and of obtaining water, and for no other purpose whatever," is intended to exclude American vessels from coming inshore to traffic, transship fish, purchase stores, hire seamen, &c.

Her Majesty's Government would be glad to learn that you were able to arrive at a conclusive understanding with the Commissioners of the United States upon the disputed interpretation of the Convention of 1818; but they fear that you will find it expedient that a settlement should be arrived at by some other means, in which case they will be prepared for the whole question of the relations between the United States and the British possessions in North America, as regards the fisheries, being referred for consideration and inquiry to an International Commission, on which two Commissioners, to be hereafter appointed, in consultation with the Government of the Dominion, should be the British representatives.

Now, what was that but an instruction not to trouble themselves with the very questions we are arguing here to-day, but to go and settle the question on some basis which would not involve any such discussion. And what did we do? We said: "The question is between two inshore fisheries. We think our inshore fishery is worth something; you think your inshore fishery is worth something. We give you leave to fish in ours, and we admit fish and fish-oil free of duty, and make the matter pretty much on equality. If that is not sufficient, take three honest-minded gentlemen and convince them that your fisheries are worth a great deal more than ours, and we will pay the difference;" and so we will, without any hesitation, if such shall be the award upon a full hearing of all that you have to say and all that we have to say. That is the whole question we have to decide. Take the fishery question as it

stands. If you will demonstrate and prove that when we go into the Gulf of St. Lawrence to fish, the privilege is worth a great deal more to us to be allowed to follow a school of mackerel inshore and catch them than is the privilege accorded to you to come into our inshore fisheries; if, after comparing our fisheries with yours, this tribunal entertains the honest opinion that an amount should be paid by the United States, the award will be paid, and no more words said about it. What is the use of importing into this subject difficulties and contentions of words which do not mean anything after all. The question is, whether the Canadian inshore fisheries are worth more to us than our inshore fisheries are to the Canadians, with the free import of fresh fish, and if, after the examination of witnesses, this tribunal holds that our inshore fisheries are worth a great deal more than the inshore fisheries of the Dominion, then we will not pay anything. But the question submitted to this tribunal is not one that requires a great deal of discussion about treaties or a very close examination of words. If we are to go into that examination, one of the first things to determine is, what sort of a treaty are we dealing with? Because if it is a commercial treaty, an exchange of commercial rights, it is one of the principles of diplomatic interpretation that cannot be contradicted, that runs through every modern reciprocity treaty, that commercial equivalents are absolute equivalents, and do not admit of money valuation by an additional money compensation. For instance, suppose England should make a treaty with France, and England should say: "We will admit your wines free of duty if you will admit certain classes of manufactures free of duty." The treaty then goes into operation. Suppose for some reason or other there were no French light wines drunk in England for ten years, and the French took a large quantity of English manufactured goods, at the end of ten years it might turn out that England had made several millions of dollars by that treaty, while France had made nothing. But you cannot make any calculation as to compensation; the whole point is that it is reciprocity—the right exchange. Just so is it in regard to the question of fisheries and their values. Suppose from the right to import fish into the United States the Canadians make \$500,000 a year, and from our right to import fish into the Dominion we do not make \$500, what has that to do with this question? The reciprocity, the right of exchange, is the principle. And this is why it is that all reciprocity treaties are temporary treaties; because the object of such treaties is regarding the general principle of free trade as beneficial to all people, to open the results of the industries of nations to each other.

The men who made the treaty may have miscalculated the industries affected by it. It may occur that on account of a want of adaptation on the part of the people or ignorance of the markets, the Reciprocity Treaty does not turn out advantageous, and therefore such a treaty is only made for a short term of years. But if it is a reciprocity treaty giving extended commercial facilities, you have to put every one as an equivalent against another. If you put the Washington Treaty on that footing, then our right to use your inshore fisheries is balanced by your right to use our inshore fisheries, and the advantages are equal. That is the only way in which you can deal with the question if you view the treaty as one of reciprocity. But if you consider the treaty as an exchange to a certain extent of properties, then I understand that you can apply another principle. For example, if I were to exchange with some one a farm in Prince Edward Island for a house in Halifax, and agreed to submit to a board of arbitration the question of the difference in value, that board could meet and ascertain the market value of the land and

house respectively and decide the question. But according to the theory of the British counsel, whenever we got before the board of arbitration Mr. Thomson would say: "Now, this house is valuable as a house, and it is also valuable as a base of operations, for if you did not have the house and there was bad weather you would have to stay out in it; consequently that point has to be taken into consideration." The reply would be, "When I bought the house I bought it for these things." So when we come to calculate the value of the fisheries, we expect that all these incidental advantages go along with the calculation.

Mr. THOMSON. That is what we are contending.

Mr. TRECOT. I beg your pardon; that is just what you do not do. You just make an elaborate calculation of the value of your fisheries as fisheries, then you add every conceivable incidental or consequential possible advantage, whether of the fisheries or our enterprise in the use of them, and add that estimate to the value. You contend that we shall pay for the house, and then pay you additionally for every use to which it is possible to put the house.

Mr. THOMSON. Do you admit that the value of the fisheries is enhanced by those advantages?

Mr. TRECOT. I do not. I do not believe that your alleged advantages are advantages at all. We can supply their places from our own resources as well and as cheaply. Now, with regard to the treaty itself there are only two points which I propose to submit to the Commission. I contend in the first place that if the interpretation for which the British counsel contend is true, viz, that by the Treaty of 1818 we were excluded from certain rights, and by the Treaty of 1871 we were admitted to them, then we must find out from what we were excluded by the Treaty of 1818 and to what we were admitted by the Treaty of 1871. I contend that the language of the Treaty of 1818 is explicit. (Quotes from convention).

Now, I hold that that limitation, that prohibitive permission to go into the harbors, was confined entirely to fishermen engaged in the inshore fishery. That treaty had no reference to any other fishery whatever. It was a treaty confined to inshore fishermen and inshore fisheries, and we agreed that we should be allowed to fish inshore at certain places, and if we would renounce the fishery within three miles at certain places we should enter the ports within those three-mile fisheries which we agreed to renounce, for the purpose of getting wood, water, &c. The limitation and permission go together, and are confined simply to those engaged in the three-mile fishery. I contend that to day, under that treaty, the bankers are not referred to, and they have the right to enter any port of Newfoundland and buy bait and ice and transship their cargoes without reference to that treaty. I insist that it is a treaty referring to a special class of people; that those people are not included who are excluded from the three-mile limit, and if they are not so included they have the right to go to any port and purchase the articles they require. In other words, while the British Government might say that none of the inshore fishermen should enter the harbors except for wood and water, yet the bankers from Newfoundland had a perfect right to go into port for any reason whatever, unless some commercial regulation between the United States and Great Britain forbade them. With regard to the construction that is to be placed upon the articles of the Treaty of 1871, Mr. Thomson seems very much surprised at the construction we have put upon it. Here is the arrangement. (Quotes from convention of 1818 and Treaty of 1871.)

Does that take away the prohibition? Surely if it had been intended to remove that prohibition it would have been stated. In addition to

your right to fish on certain coasts and enter certain harbors only for wood and water, that treaty says you shall have the right "to take fish of every kind, except shell fish, on the sea-coasts and shores and in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and the colony of Prince Edward Island and of the several islands thereto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts and shores and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish." "Drying their nets and curing their fish." That is all; that is the whole additional treaty privilege, and I can see no power of construction in this Commission by which it can add to treaty stipulation the foreign words "and buy ice, bait, supplies, and transship." And yet the British counsel admit that without these words our interpretation is indisputable. We had a certain right and certain limitations of that right by the Treaty of 1818, and the Treaty of 1871 says in addition we give you the further right to take, dry, and cure fish and nothing else. The reason is very obvious. It is very evident that when the treaty was drawn, for every advantage outside of that clause we were to be called on, according to the theory of the British counsel, to pay compensation. We never had been called on to pay for the privilege of buying bait and ice, and we had received no notice from the Colonial Government of any intention to make such claim, which was contrary to the whole policy of Great Britain and would not be sustained. Why should we have to pay for that privilege? We did not insert it in the treaty because we did not intend to pay for it; that is the reason it is not there.

I leave any further reply to the learned counsel who will follow me.

I am anxious as to your decision. I have not desired to conceal and I have not concealed the fact that the people and Government of the United States regard this claim of \$15,000,000 as too extravagant for serious consideration. I know at the same time that they sincerely wish for a final settlement of this irritating controversy. And therefore I earnestly hope that you will be able to reach a decision which will limit within reasonable proportions a claim which, as it stands, it is simply idle to discuss.

You start from a point we can never reach. A day or two ago, during the session, I happened to go into the Commission consulting-room and found on the table a copy of Isaak Walton's Complete Angler, a very fit book for the literary recreation of such an occasion. On the page which was turned down I found a reference to some South Sea Islanders, I believe, who had such a gigantic inshore fishery that "they made lumber of the fish-bones." I am afraid that the British counsel have been consulting this book as an authority.

Mr. DANA. May it please your excellency and your honors, the question now before the tribunal is, whether you have jurisdiction to ascertain and declare compensation because of American fishermen buying bait, ice, and supplies, and transshipping cargoes within British territory. Your jurisdiction, as has been well said, finds its charter in the Treaty of Washington. Without rereading the words which have been read, *usque ad nauseam*, I think I give truly the substance and meaning of them when I say that there having been mutual cessions relating to fisheries, and one side claiming that it has ceded more than it has received in value, it is agreed that your honors shall determine strictly this, whether Great Britain has ceded more valuable rights to the United States than the United States has ceded to Great Britain. Your honors are not to determine or to inquire what rights Great Britain has

permitted the United States to exercise independently of the treaty, however nearly they may be connected with the fisheries, and however important they may be to fishermen. It must be something which Great Britain has ceded by the Treaty of 1871, or you have nothing to do with it; whatever was done, at however great a loss to Great Britain, and however great a benefit to the United States, you have but to compare the two matters which have been ceded by each side in the Treaty of 1871, and find whether one is more valuable than another, and if so, how much more valuable. Therefore we are brought to this question: Does the Treaty of 1871 give to the United States the right to buy bait, ice, provisions, supplies for vessels, and to transship cargoes within British dominions? If the Treaty of Washington does give that to us, then it is an element for you to consider in making up your pecuniary calculation. If the Treaty of Washington does not give that to us, then I congratulate this high tribunal that it may put these matters entirely out of mind, and save many days of examination and cross-examination, and some perplexity of mind. Because your excellency and your honors will remember that if you are to fix a value upon them, that is, the value to the United States of the right to buy bait, ice, and provisions, and to transship cargoes, that will not be all you will have to do. You will have also to ascertain the value to the provinces of the corresponding right which they would have in the United States; and you will have still further difficulty, I think, to ascertain what benefit this American commerce is to British subjects, and deduct that.

The task before you would be a very undesirable one. Having ascertained the pecuniary value of these rights to the United States, your honors will have to ascertain the pecuniary value that British subjects derive from this common trade and barter, because we ought not to pay for the privilege of putting money into the hands of British subjects. We ought not to pay for the privilege of enfranchising a whole class of fishermen who have been held in practical serfdom by the merchants. It is an exceedingly difficult subject of computation, and one which, I think, you are persuaded already was never intended by the Governments of the United States and Great Britain to be submitted to your honors for decision. I say, then, the Treaty of Washington has not given us these rights. To what does the Treaty of Washington relate? Without the necessity of reading it to you, I can say that the language is in substance: Whereas, you have certain advantages given to you relating to the inshore fisheries, under the Treaty of 1818, in regard to catching fish, drying your nets, and curing your fish on certain shores, we will extend territorially these same privileges. And I have the honor to contend that the Treaty of Washington is simply *a territorial extension of certain specific rights*—the right to catch fish, dry nets, dry fish, and cure fish. The subject-matter of that part of the Treaty of Washington is the catching fish inshore, within the three-mile limit. Before the Treaty of Washington, this right of catching fish within three miles of shore, and of landing to dry and cure fish and dry nets, was confined to certain regions. In other places we could not fish or land within the three-mile limit. The Treaty of Washington extends territorially these rights over all British America, and there the Treaty of Washington ends, so far as the fisheries are concerned. There is not one word in it of the creation of new rights. It is a territorial extension of long-known specified rights.

It does not say that whereas by the Treaty of 1818 you renounced the right to fish within the three-mile limit, provided, however, that you can go in to buy wood and get water, we add to those rights the right to buy

ice, bait, and other supplies. If there had been the least intention by either party to extend the rights to new subjects it would certainly have been stated in the treaty. If, when the representatives of Great Britain and the United States had come together, the Joint High Commission had understood that we should not enter British American ports except those we were allowed to enter under the Treaty of 1818 for any purpose except for shelter, and to buy wood and water, and the British nation had proposed to add to these subjects so as to include the right to buy bait and ice and to transship cargoes, why inevitably they would have said so; inevitably the new rights would have been specifically included in the matters on which your honors were to base your calculations. England might have said to the United States (I deny the position, but England might have taken the position) that American fishermen have no right to enter our waters except under the Treaty of 1818, and then not to buy anything but wood and water, and now we are opening to them the great privilege of buying bait, ice, and supplies, and transshipping cargoes, which will add immensely to the value of their fisheries. The argument would have been made, which has been made here, in the form of questions put to expert witnesses: "Is not all that essential to American fisheries?" But, on the contrary, the treaty says nothing about it. We hear of it for the first time when the counsel of the British Government are getting up their case for damages. We immediately protest against it as something not included in the jurisdiction of this court, and our Agent, Mr. Foster, on page 32 of the Answer, distinctly states—

That the various incidental and reciprocal advantages of the treaty, such as the privileges of traffic, purchasing bait, and other supplies, are not the subject of compensation, because the Treaty of Washington confers no such rights on the inhabitants of the United States, who now enjoy them merely by sufferance, and who can at any time be deprived of them by the enforcement of existing laws or the re-enactment of former oppressive statutes. Moreover, the treaty does not provide for any possible compensation for such privileges; and they are far more important and valuable to the subjects of Her Majesty than to the inhabitants of the United States.

The passages which the British counsel have referred to as an argument that the Agent of the United States had admitted that those privileges came by treaty, all refer to something quite different. A passage on page 9 of the Answer of the United States has been quoted:

* * * While practically both fishing and commercial intercourse have been carried on in conformity with the treaty ever since it was signed, May 8, 1871.

That "commercial intercourse" means the free importation on each side of the articles of commerce, the only articles of commerce the treaty refers to, fish and fish-oil. On page 14, section 2 of the Answer, it is stated:

The incidental benefits arising from traffic with American fishermen are of vital importance to the inhabitants of the British maritime provinces.

These are benefits which the British people get from us, and they are said to be only incidental, and are only introduced as a set-off, if Great Britain claimed to have the right to receive compensation for the privilege of trading in bait, &c., with her people.

May it please your honors, it is clear to our minds that the Treaty of Washington does not give us those advantages. That subject has been elaborated by the Agent of the United States and by my learned friend (Mr. Trescott). In the first place it has been said in answer to that contention, or rather it has been suggested, for it was not said with earnestness as if the counsel for the Crown thought it was going to stand as an argument, that those were treaty gifts to the United States, and though

they could not be found in any treaty, yet they were necessarily implied in the Treaty of Washington. Take the Treaties of 1783, 1818, 1854, and 1871, and they are nowhere referred to according to any ordinary interpretation of language. The only argument I can perceive is this: You have enjoyed those rights. They do not belong to you by nature or by usage, and must therefore be treaty gifts; though we cannot find the language, yet they must have been conferred by the Treaty of 1871 and the Treaty of 1854. May it please this learned tribunal, we exercised all those rights and privileges before any treaty was made, except the old treaty which was abolished by the war of 1812. Almost the very last witness we had on the stand told your honors that before the Reciprocity Treaty was made we were buying bait in Newfoundland, and several witnesses from time to time have stated that it is a very ancient practice for us to buy bait and supplies and to trade with the people along the shore, not in merchandise as merchants, but to buy supplies of bait and pay the sellers in money or in trade as might be most convenient. Now, that is one of those natural trades that grow up in all countries; it is older than any treaty, it is older than civilized states or statutes. Fisheries have but one history. As soon as there are places peopled with inhabitants, fishermen go there. The whale-fishermen of the United States go to the various islands of the Pacific which are inhabited and get supplies. To be sure the whale fishery does not need bait, but the fishermen get supplies for their own support and to enable them to carry on the fishery, and they continue to do so until those islands come to be inhabited by more civilized people. So it is with the Greenland fisheries. Then come restrictions, more or less, sometimes by treaty and sometimes by local statutes, which the foreign governments feel themselves obliged to respect; if they do not it becomes a matter of diplomatic correspondence, and might be a cause of war.

The history of this matter is that the custom for fishermen to obtain supplies and bait from countries at various stages of civilization is most ancient, most natural, most necessary, most humane, and one for which no compensation has ever been asked by any civilized nation, because it is supposed to be for mutual benefit. It is for the benefit of the fishermen to get his supplies, but the islanders would not sell them unless they thought it was also beneficial to themselves. So statutes do not create the right, but only regulate it. So do treaties. They regulate and sometimes limit the rights, but they seldom if ever enlarge them. In looking at this subject your honors will find such has been the history of the fisheries on the northeast coast of America. The fishermen began, long before these islands were well settled, even before they had recognized governments upon them, to exercise all the privileges and rights which belong to fishermen in all parts of the world where they are not limited by statutes or treaties. It was a case altogether *sui generis*. Fishing is an *innocent passage* along the coast. It is an *innocent use*; and an *innocent use and transit* are always allowed. The French claimed and the British claimed the Newfoundland fisheries, and at last a treaty settled their claims. It did not give rights, but adjusted them. And so it was with us. While we were part of Great Britain, we had all the privileges of British subjects; but the British in Newfoundland had very few claims which were not contested, and some were entirely in the hands of the French. When we were severed from the Crown, the question arose whether there was any reason why we should not continue to fish where we had always fished. We did not seek to make any claim in regard to property in the islands; we did not

ask for any privilege not a fishing privilege. The question arose whether we had not still the right to fish as an innocent pursuit, even though within the limit of three miles; and the three-mile limit and what is meant was not then settled. We must, however, discuss this subject as if there had always been an exact law, from the times of Moses down, relating to the three-mile limit and what the powers were. All this has grown up within very recent times, and indeed there are very few persons now who know what is meant by it. It was long contended that the right of all States over the three miles was for fiscal purposes, and purposes of defense only, and as the subject has been very fully argued in a recent case in England, nothing can probably be added to the reasons given on each side. The matter continued in that position. We fished without reference, and thought we had the right to do it. We knew it did no harm. The fishermen are by the law of nations a peculiar class, having special privileges. Their status is different in time of war from that of a merchantman or man-of-war. Having this question of the three-mile limit to deal with, one which was long disputed between the United States and Great Britain, and one which was always looked upon as disputed, which had had a slow and steady growth for many years, and about which no one can dogmatize, they have endeavored to arrange it as best they could. Your honors will find that in the very first treaty, that of 1783, it is stated:

It is agreed that the people of the United States shall *continue to enjoy* unmolested the right to take fish of every kind on the Grand Bank and on all the other Banks of Newfoundland; also in the Gulf of Saint Lawrence, and at all other places in the sea where the inhabitants of both countries used at any time heretofore to fish.

That was looked upon as dealing with existing rights, the exact limitations of which must rest solely in agreement. It was not a gift, as the French gave Dunkirk to England, or as Mexico gave California to the United States. It was like an adjustment of disputed territory. The only question settled in the first treaty, that of 1783, was that we should fish as before; nothing was said about the three-mile line. When we come to the Treaty of 1818 we find it stated: "Whereas differences have arisen," &c.

By that treaty it is agreed that on certain parts of the coast we shall have the right to take fish, that on certain parts we shall have the right to dry and cure fish, and that at other parts we shall not have such rights. Then came the Treaty of 1854, which said nothing about any of those rights of which I am speaking, but merely dealt with the question of our right to fish within three miles, where we could exercise it and where not, and our right to cure and dry fish and to dry nets. In Article 18 of the Treaty of 1871 the question is taken up again in the same way.

It is agreed by the High Contracting Parties that in addition to the liberty secured to United States fishermen by the convention between the United States and Great Britain signed at London on the 20th October, 1818, for taking, curing, and drying fish on certain coasts of the British North American colonies therein named, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty, for the term of ten years mentioned in Article 33 of this treaty, to take fish of every kind, except shell-fish, on the sea coasts and shores, in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and colony of Prince Edward Island and the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts, shores, and islands, and also upon the Magdalens, for the purpose of drying their nets and curing their fish.

Then it is stated that whereas it is claimed that Great Britain thereby has given the United States more valuable fisheries than they had before, there is something to be paid. Now, if the treaty did not give

us the right to do so, how came we to be buying bait? Why, we have always done it. From the time there was a man there with bait to sell, there was an American to buy it from him. We have never asked for the right to buy bait. You cannot find a diplomatic letter anywhere in which we have complained that we were prohibited from buying bait. After the Treaty of 1854 had expired, it is true, the Canadians, who felt sore about the matter, undertook to say we should not buy any bait; that if we did, we would be punished therefor. They were immediately stopped by Great Britain, who, without saying in terms that the Americans had a right to buy bait by the Treaty of 1817 or irrespective of all treaties, declared it to be against the policy of the nation to prohibit it; and they stopped this petty persecution of American fishermen. I care not what line of reasoning induced the British Government to take that course with their Canadian subjects. I do not care whether they considered that the Treaty of 1818 gave it to us (I do not see how they could), or whether, as is more probable, they, being large-minded men, who had studied the subject, considered it something which, not being prohibited, belonged to us, and they did not intend to prohibit it.

Now, who are the men who buy the fish for bait? They are not the men who fish within the three-mile limitation. We do not buy bait here to catch mackerel. The bait we buy is for the Banks and deep-sea cod fishery. There is no pretense from any evidence that our mackerel fishermen come here to buy bait; it is only the Bank cod-fishermen who do so. I respectfully submit to this learned tribunal that it can have nothing to do with how the fishermen on the Banks see fit to employ themselves. The Treaties of 1818, 1854, and 1871 related solely to fishing within the three miles. The Treaty of 1783 *recognizes* the right of American fishermen to fish on the Banks, on the high seas, a right which had always belonged to American fishermen, never ceded to them by any treaty, but which they hold by the right of common humanity. These men come into Canadian ports to buy bait. What has this tribunal to do with them?

Have not American fishermen fishing on the high seas the right to run into British ports by comity, by the universal law of nations, if they are not specially excluded on some ground which the United States admits to be proper and right? Have they not the right to come in and buy bait and other necessities? Great Britain possesses the power to put any regulation on them it pleases, to require them to enter at the custom-house, to be searched to see whether they are merchants in disguise, and to levy duties upon them; but in the absence of a prohibition, there is no right to prevent those fishermen buying bait or supplies.

I next come to the question of shelter, repairs, purchasing ice and other articles, and transshipping cargoes. I do not propose to admit that we have not these rights, or that we are exercising them simply because we are not punished for doing so, or that because the Treaties of 1818 or 1871 have not given them to us, we do not possess them, and that it is within the power of the provinces to exclude us from them altogether. That depends upon considerations which are not necessary for us to take in view. If your honors should decide that you have no right to recognize, among the elements of compensation, those rights of which I speak; then if the colonies should pass a law which should punish every American fisherman from the Grand Banks or inshore fisheries who should buy bait or ice or refit is guilty of an offense, it would then be a question for Her Majesty's governor-general to determine whether that was not an imperial question, and, if so, to refer it to Her Majesty in council to determine. I have no fear that any such statute

would be passed, because the number of persons interested in that traffic with American fishermen is very great, and they are voters; they have even in Newfoundland broken their chains and become a sober and saving people since they came to have cash of their own, from their trading with Americans.

I doubt whether the Canadian Government will be encouraged, however strong may be the wave of politics, to meet the people of the various constituencies and insist on this American traffic being entirely cut off. If they do it, I doubt whether Great Britain would sanction it, and if Great Britain did allow it, then it becomes at once a question between the two governments. Is that a course fair and right, in accordance with the comity of nations, in accordance with practices which are earlier than when the first Disciples threw their nets into the sea of Galilee—is not such a course an interference with a right practiced from earliest times, and without good reason for the prohibition? You may put regulations on us so that our fishermen shall not be smugglers in disguise, and so that merchants shall not come in the disguise of fishermen: but to prohibit American fishermen from purchasing bait and supplies, not in case of necessity merely, but as part of the plan of their trade, and transshipping cargoes, would be a violation of the spirit which has governed the commercial relations between the two empires.

I would therefore present a summary of the matter thus: The only matter of dispute between Great Britain and the United States in the Treaty of 1783 related to the inshore fisheries, I mean the right to catch fish more or less near the British coast, and in addition to that to cure and dry fish. The Treaty of 1783 acknowledged the general right.

The Treaty of 1818 gave us certain places, which were named, where we could exercise those fishing rights, and stated certain places where we could not exercise them; but it did not undertake to deal with the commercial side of the fisheries question. The Treaty of 1854 was the same: it gave a general right to fish within these Dominions, and to land and dry them in certain places. The only question of late has been whether Great Britain has the right, without any treaty, to exclude us from three miles of the coast. That was Mr. Adams's famous argument with Earl Bathurst. We said in the Treaty of 1818 that, as a right, we no longer claimed it. That is the meaning of the treaty—that having claimed it as a right inherent in us, either because we did not lose it at the time of the Revolution, or from the nature of fisheries, or on some other ground, we no longer claimed it as a right which cannot be taken away from us but at the point of the bayonet. But while we say we will not go within the three miles to fish without permission, it must not be held that vessels cannot go there for shelter and repairs and for wood and water, but may be put under such regulations as will prevent us from doing anything further. It is entirely a matter for Great Britain to determine what regulations we should be placed under, in those respects, and she has seen fit to make none. The Statute 59, George III., passed to carry out the Treaty of 1818, prohibited fishing or preparing to fish in certain boundaries. A decision has been rendered in one province that buying bait was "preparing" to fish. In another province other a decision was rendered directly the way.

That, however, is a local matter altogether. The decision rendered in New Brunswick was that the prohibition of "preparing to fish" must apply only to those who intended to fish within the prohibited degree; that the buying of bait, whether it was a step in preparing to fish or not, was not an offense unless the fishing itself would be an offense. If an American bought bait here to go off to Greenland or to the Mediterranean to fish, it could not be considered an offense. Great Britain can-

not make a statute which would alter our rights under this treaty nor revive an old statute to do so. The learned judge was careful to say that he did not mean to apply his decision one step beyond the point of taking bait for the purpose of fishing within prescribed limits.

Sir ALEXANDER GALT. I desire to ask the learned counsel (Mr. Dana) if I understood him to say that no seizure or confiscation of American fishing-vessels took place before 1854. I think there were confiscations, and I should like to know whether those confiscations were confined to vessels catching fish and that alone, within the three-mile limit.

Mr. DANA. So far as I am concerned, I assume that there has been no condemnation for "buying bait."

Sir ALEXANDER GALT. I do not refer especially to the purchase of bait, but to anything except catching fish.

Mr. THOMSON. There have been several convictions for catching bait.

Mr. FOSTER. I never had my attention called to any conviction or attempted conviction, except for fishing inside, the case of the Nickerson, before Sir William Young, at Halifax, in 1870, and still later the decision in New Brunswick in the case of the White Fawn.

The first was the only case I have heard of in which there was a conviction for "preparing to fish."

Sir ALEXANDER GALT. I do not specially refer to "preparing to fish," because there are other offenses created by the statute.

Mr. FOSTER. I have here a list of vessels seized up to 14th December, 1870, and the following are entered as their offenses:

"Actively fishing; the men on board in the act of hauling in their lines." "At anchor preparing to fish, and a quantity of fresh-caught herring in the hold; taken on the spot, having been previously warned off." "Smuggling." "Fishing seven days in Gaspé Harbor, and preparing to fish at time of seizure." "At anchor; lines set, on which were six halibut." "Throwing out bait, and crew casting their fishing-lines." "Smuggling." "Having fished in the cove, and actually found with mackerel wet and dripping, and hooks baited with fresh bait; also fresh-fish blood and mackerel offals on deck." "Smuggling." "Having fished at Three Islands, Grand Manan." "Preparing to fish at Head Harbor, Campo Bello."

The last was the case in regard to preparing to fish, and where the learned judge discharged the vessel in opposition to the decision of Sir William Young in the case of the Nickerson.

Mr. THOMSON. In the case of the White Fawn, decided at St. John, the decision, as I understand it, is not in conflict with that of Sir William Young. Sir William Young condemned the Nickerson because it was fishing, or preparing to fish, within the prescribed limits. In the St. John case the libel was framed expressly for buying bait within the harbor, with the intention of fishing. It was shown that the fisherman had purchased bait, but evidence that he went in there with the intention of fishing was wanting.

Mr. THOMSON. The question is whether there has ever been a conviction of an American vessel for taking bait. I call your attention to the fact that the Java, Independence, Magnolia, and Hart were convicted in 1839 of being within the prescribed limits and cleaning fish on deck. In 1840 the Papineau, Alms, and Mary were seized and sold for purchasing bait on shore.

Mr. TRESCOT. The judgment went by default. There was no defense made.

THURSDAY, September 6.

The Conference met.

Argument resumed.

Mr. DANA. Mr. Foster will state the results of inquiries made respecting the condemnation of American vessels.

Mr. FOSTER. The substance of the facts, as we understand them, will be found in a dispatch from Judge Jackson to Hon. Bancroft Davis, dated March 11, 1871, which is as follows :

UNITED STATES CONSULATE AT HALIFAX, NOVA SCOTIA,
March 11, 1871.

SIR: I have the honor to inform you that, after examination and inquiry, I have not been able to find a single adjudicated case in this province which can be cited as legal authority, arising under the Treaty of 1818, which declares the right, either under the treaty or the statutes enacted for its enforcement, to confiscate American fishing-vessels for purchasing supplies in colonial ports.

The vessels referred to in a pamphlet (page 12) published at Ottawa, under the direction of the Canadian minister of marine and fisheries, entitled "A Review of President Grant's Message," as having been seized for a violation of the fishery laws, namely, the schooners Java, Independence, Magnolia, and Hart in 1839, and schooners Papineau and Mary in 1840, were condemned by the vice-admiralty court in default of the appearance of defendants upon ex-parte affidavits.

From the small sums for which the vessels sold, it is not improbable that they were bought in for the benefit of the owners.

Although it is stated in the affidavits on the files of the court that the masters of some of the vessels had purchased bait, yet it is specially noticeable that the charge made against the schooners Java, Independence, Magnolia, and Hart by the seizing-officer, Capt. J. W. E. Darby, as the ground of such seizure, was in the following language: "The deponent saith that he believes that the sole object of the masters of the said vessels was to procure fish, and that they were, at the time of their seizure, preparing to fish."

In the case of the schooners Papineau and Mary, seized in June, 1840, for a violation of the fishery laws, the same seizing-officer set forth in his affidavit, as the grounds of the seizure of these vessels, that the "deponent verily believed that the said vessels were frequenting the coast of this province for the purpose of fishing there and for no other purpose whatever."

The seizure and condemnation of these several vessels—four in 1839 and two in 1840—cited in the pamphlet referred to, in support of the unusual and extreme measures of last summer, in relation to American fishing-vessels, afford, as will be seen from the facts here stated, no legal justification for such measures, and cannot be regarded in any respect authoritative adjudications upon the points in controversy between the United States and Great Britain respecting the fisheries.

I have the honor to be, sir, your obedient servant,

M. M. JACKSON,
United States Consul.

HON. J. C. BANCROFT DAVIS,
Assistant Secretary of State, Washington, D. C.

Referring to the paper which was put in by the British counsel, on page 12 of document No. 31, there is a memorandum of all the vessels seized and condemned by the vice-admiralty court of Prince Edward Island, and it is stated at the end of each case: "I cannot find from any papers in this case, at present in the registry of this court, that this vessel was ever interfered with by government officers for transshipping fish or purchasing supplies." As to the New Brunswick cases, of which there is a statement at the top of page 10, document 21, I am not able to ascertain because we have not access to the papers. There were not many cases in New Brunswick; seven between 1822 and 1852. There is also at the foot of page 6, document No. 15, a record of the cases condemned at Halifax. Mr. J. S. D. Thompson has made a memorandum of each of those cases, and there is no case where a vessel was forfeited for buying bait or other supplies, or for transshipping cargo. The statement of 59 George III is the same in substance with the colonial statute. By that statute vessels are libeled and forfeited in the admiralty court for no other offense than that of being found fishing, or having fish on board, or preparing to fish. The fourth article imposes a penalty of £200, recoverable by action at common law, on a fisherman refusing to depart from the territorial waters when warned by the party authorized to do so. Among the Halifax cases it will appear that some are marked as restored, and two others at least were

restored upon payment of the expenses, namely, the Shetland and Eliza. The Washington was paid for; and in no instance, as I am informed, was there a condemnation for anything except fishing or preparing to fish; and acts indicative of preparing to fish are always shown to be some acts of immediate preparation, like having bait ready on board. Then we come in 1871 to Sir William Young's decision, where he forfeited a vessel for buying bait, holding that buying bait was a preparation to fish. That was the case of the Nickerson. The vessel was seized in 1871, and forfeited the following year. About the same time a similar case was tried in New Brunswick by Judge Hazen, who held the reverse of Sir William Young's decision. Judge Hazen held that the purchase of bait, unless it was proved to have been purchased to use in illegal fishing, was not a preparation to fish illegally, and that a vessel that came into Halifax or St. John to buy bait to fish on the Banks of Newfoundland, was not violating any treaty. It was always felt by the United States that the distinguished judge, Sir William Young, had overlooked the fact that in the case before him the vessel that bought the bait did not buy it to fish for mackerel in territorial waters, but on the coast of Newfoundland. There is that one authority for holding that it was contrary to law to come in here for cod and buy bait for outside fishing, and, so far as I am aware, there are only these two cases on the question, and opinions are equally balanced.

Mr. THOMSON. In the case of the White Fawn, tried by Judge Hazen, the vessel was libeled for taking bait in our waters, with the intention of fishing there. She was not charged with the offense against the treaty of purchasing bait within three miles of the shore, but she was distinctly charged with obtaining bait with the view of fishing there, and Judge Hazen held—and I apprehend properly held, for he is an able lawyer and sound judge—that the evidence did not support the allegation. The evidence probably showed that the intention was to take the vessel and fish on the Banks of Newfoundland, where it had no doubt a right to fish, and therefore the case failed, because while the offense was complete, the allegation did not support it.

Mr. FOSTER asked for further explanations.

Mr. THOMSON. What I say is this: that while this was a distinct offense under the treaty, and while the statute expressly covered that offense, and while a vessel could be libeled and condemned for buying bait on our shores, yet the framer of the libel had been pleased to frame it not simply for the offense of buying bait, which he might have done and had the vessel condemned, but for buying bait with the intention to fish in these waters, and he failed to prove the latter allegation.

Mr. FOSTER. Our answer to that contention would be that there is no statute. There is a statute to cover the cases of vessels fishing and preparing to fish:

II. *And be it further enacted*, That from and after the passing of this act it shall not be lawful for any person or persons, not being a natural-born subject of His Majesty, in any foreign ship, vessel, or boat, nor for any person in any ship, vessel, or boat, other than such as shall be navigated according to the laws of the United Kingdom of Great Britain and Ireland, to fish for, or to take, dry, or cure any fish of any kind whatever, within three marine miles of any coasts, bays, creeks, or harbors whatever, in any part of His Majesty's Dominions in America, not included within the limits specified and described in the first article of said convention, and hereinbefore recited: and that if any such foreign ship, vessel, or boat, or any persons on board thereof, shall be found fishing, or to have been fishing, or preparing to fish within such distance of such coasts, bays, creeks, or harbors, within such parts of His Majesty's Dominions in America out of the said limits as aforesaid, all such ships, vessels, and boats, together with their cargoes, and all guns, ammunition, tackle, apparel, furniture, and stores, shall be forfeited.

To come within the statute the fisherman must either be fishing or preparing to fish within three miles of the coast.

Mr. THOMSON. It is a question of construction. It is preparing to fish or fishing within these waters. The preparing to fish is a complete offense in itself, and it is by no means necessary to fish in these waters.

Mr. FOSTER. The expression is "within that distance." You think the "preparing to fish" is preparing to fish within the limits, or anywhere.

Sir ALEXANDER GALT. The reason I made the inquiry was with regard to the argument of the learned counsel (Mr. Dana), who was holding, as I understood him, that no interference had been made upon these fishing-grounds with American fishermen. It was because I was under the impression that the official correspondence would show that vessels had been seized and condemned that I made the inquiry.

Mr. DANA. After the long time given me yesterday I feel I ought to do no more than to give a summary of the points upon which I suppose this question will be determined. In the first place, then, this tribunal, in computing compensation, can only take into consideration the value of what is accorded to the United States by the Treaty of 1871, and by the eighteenth section of that treaty. Then the tribunal shall take into consideration the value of what is accorded to Great Britain by the nineteenth and twenty-first sections, debiting the United States with the value of what she gains under the eighteenth section, and crediting the United States with what she accords under the nineteenth and twenty-first sections. The court will perceive how very close and fine this arrangement was made.

This tribunal is not to ascertain what the United States possessed by treaty or otherwise in 1870, and charge us for what we have gained in addition thereto, by whatever means, or to draw general inferences from the whole treaty, what we may have got and Great Britain may have given, but your honors are to assess the value of specific liberties and rights accorded by the eighteenth section and charge them to the United States, and assess the pecuniary value of certain specific rights and privileges accorded in the nineteenth and twenty-first sections, and credit us with them.

Moreover, it must be something accorded to us in addition to what we had under the Treaty of 1818. Under that treaty the United States had the right to fish, and to land and dry nets, on certain portions of the coast of Newfoundland; on the shores of the Magdalen Islands; on the coasts, bays, harbors, and creeks in certain parts of Labrador; and to land and cure fish in any of the bays, &c., in Newfoundland and Labrador. The treaty of 1871 simply gives a territorial extension to those rights. It adds no new rights either in terms or by implication. No doubt this tribunal will be exceedingly careful not to assess compensation for any right or privilege which is not clearly so given, and which, after compensation has been assessed, may be matter of dispute between the two countries.

If there has been a want of clearness as to what has been conceded to Great Britain or conceded to us, neither side can expect to obtain compensation for matters left in doubt. No treaty ever made between the United States and Great Britain on the subject of the fisheries has noticed the purchasing of anything by the fishermen, except it be the Treaty of 1818, which says American fishermen shall have the right to *purchase* wood and *procure* water. I suppose the reason why the clause was inserted in that form was to show it was not intended that we should have the right to cut wood. If your honors will examine the treaties

from that of 1783 to that of 1871, you will find they never had for their scope or purpose any provisions regarding trading or purchasing, but related solely to the right to fish, and to use the shores for the purpose of drying and curing. In framing the Treaty of 1871 care was taken to name the rights. It gave the right to fish. What kind of fish? Not shell-fish, nor salmon, nor river fish. Care is taken also to describe for what purpose American fishermen may land. It is to dry nets, cure and dry fish. There is no reference to purchasing anything except in the Treaty of 1818, in regard to purchasing wood, and that subject has been intentionally left out of all treaties, or it would be more accurate to say that to include such matters in a treaty was never considered as apposite. The Treaty of 1871, as I have said, grants a territorial extension of specified, long-existing rights, and the only question in dispute between the United States and Great Britain has always been as to the territorial extent of the right of fishing.

The question arose, can we fish on the Grand Banks? England said "No," but she gave up that contention in 1783. Then England said that American fishermen could not fish within three miles of its coasts from a line drawn from headland to headland. Dispute arose again as to the correctness of that territorial designation, but the subject-matter was the drawing of fish from the sea. At last it became settled that we should not fish within the three miles unless with the consent of Great Britain expressed through a treaty or otherwise. Then occurred the question as to what constitutes three miles—three miles from what? Always the dispute was as to the territorial extent of a specified right, the right to fish, and all the treaties were made for that purpose. Incidentally there was always brought in the question of places, not being private property, where the fishermen could land for the purpose of drying nets and curing and drying fish. These were the subject-matters of every treaty, the occasion of every dispute, and these were all that were settled by the Treaty of Washington. Great Britain gave to the United States an extended territoriality, up to the very banks, up to high-water mark everywhere; and the United States gave the same extended territoriality to Great Britain, to fish in the United States northward of 39th parallel. Then there were certain extensions of territory for the curing and drying of fish. By Article 21 the United States gives to Great Britain, and she accords to us, the right of free trade, reciprocity, in fish and fish-oil. That is purely a commercial clause. It might have been made a treaty by itself. It has no connection with fishing or the curing and drying of fish. When your honors come to estimate the pecuniary valuation of the concessions on each side, we contend that the pecuniary value of that concession made by the United States to Great Britain, which is purely fiscal, is very great.

It is conceded by the British counsel, I believe, that those rights of which I speak were not given in the terms of the Treaty of Washington, and cannot be found there. The only argument on the side of the Crown—and I think I state it fairly and with its full force—is this: "You have those rights now; you did not have them before the treaty; therefore you must have got them by the treaty. You did not have them until 1854, and you possessed them from 1854 to 1866 under the Reciprocity Treaty. You did not have them during the interval. They were revived in 1871, and you have had them since. Their history shows they must have come by treaty." Instead of the word "have," I would substitute the word "exercise," and say we exercised those rights. We exercised them long before that period. Evidence has

been adduced before the Commission which has shown that those rights were exercised by the United States entirely irrespective of treaties.

Before the Treaty of 1854, when we had nothing but the Treaty of 1818 to stand upon, which, as a treaty, certainly did not give us any of those rights, we exercised them. We exercised them also irrespective of and never by virtue of the Treaty of 1854. We exercised them in the interval between 1866 and 1871, as we are exercising them now. The court will not be able to find any connection between the treaties and the exercise of those rights. They have never been exercised the more or the less by reason of any treaties. It is not incumbent upon us to show why we are in the exercise of those rights. It is rather a speculative inquiry on the part of the British counsel as to where we got them, or whether we have them at all. Suppose I were to concede that we had no right to buy bait or ice or supplies, or transship cargoes anywhere on these coasts, certainly that ends the argument, because we cannot be called upon to pay for something which we have not got. If the proper construction of the Treaty of 1818 is that fishermen have no right as fishermen and by the general law, irrespective of the consent of the Crown, to buy bait, ice, and supplies, and transship cargoes in British dominions, then I concede that, as regards American fishermen fishing within the three-mile limit, we have not those rights. Why are we, then, in the exercise of them? In that case, by the concession of the Crown. There is, however, no statute against fishermen buying bait, obtaining supplies, bartering or transshipping fish, if they comply with the fiscal regulations of the government regarding all trade and commerce. If a fisherman has violated no statute or rule respecting trade, commerce, and navigation in this realm, there is no statute which can condemn him, because he is a fisherman, for having bought bait and supplies and transshipped cargoes. So long as there is no statute prohibiting it, our fishermen have gone on exercising that privilege, not believing they were excluded from it by the Treaty of 1818, whether they were correct or not. It is in that view only that the facts regarding seizures are of any importance; but yet we may make our answer at once and say, whether we have the right to do those things or not, we do not pretend that it was given to us by the Treaty of 1871. Your honors will not be able to find it included under Article 18 of that treaty. But it is ever satisfactory to be able to account for all the surrounding circumstances of any question. It seems there was a statute passed in 1819, 59 George III, generally against foreign vessels which shall be found fishing, or be found having fished, or be found preparing to fish within the prescribed limits. The statute reaches before and after the act. It is not necessary that fishermen should be taken in the act of fishing. That would be a statute very difficult to interpret and very easy to evade, which required that fishermen should be taken in the act of fishing. So the statute says, if a foreign fisherman is found having fished, or in the act of fishing, or preparing for the act of fishing within the prescribed waters, he is to be treated as an offender. We see no objection to that statute. The preparing to fish is a step in the process of fishing.

But the true construction of that statute is of very little importance. Yet certainly it must be meant that the act prepared for must have been illegal, for it cannot be supposed for one moment that Great Britain intended to say that no foreign vessels, French or American, should come into the provinces and buy bait for the purpose of fishing off the Grand Banks or the coast of Greenland. If this province got a reputation for having some bait which certain kinds of fish off Greenland swallow with

eagerness, and a Danish vessel should come here and buy it in the market, complying with all the regulations of the market and fiscal laws, and then set sail for Greenland, surely that vessel could not be seized and condemned.

I have put the argument of the counsel for the Crown as strong as I could put it; they say you exercise that right now and you did not exercise it before. Our answer is simply that we have always exercised it, and that we have done it irrespective of the Treaty of 1854 or of the Treaty of 1878. We have never been interfered with in exercising it. There is no case of condemnation of a vessel for exercising that right; and if there had been a good many, it would have made no difference to your honors, because the judgments would have been simply the provincial interpretation of the treaty given *ex parte*, and it is certain that no act of Great Britain has ever sanctioned the position that the United States had not this right, irrespective of treaties. Then, as has been suggested by my colleagues—and I follow the suggestion merely—the whole correspondence between the governor-general and the head of the colonial office, and between the United States Government and the British Government, shows that Great Britain never intended that American fishermen should be excluded from the use of those liberties or rights, whatever be our claim to them, or whether we had them as of right or not. These privileges are those which fishermen have always exercised, and it has only been as population has increased and fiscal laws have become important and the inhabitants have become more apprehensive in regard to vessels hovering about the coast, that nations have enacted laws restricting persons in the exercise of those rights. The learned counsel in support of his argument cited *Phillimore, I*, page 224, *Kent's Commentaries*, vol. 1, pages 32 to 36; and *Wheaton's Int. Law* (Dana's ed.), sections 167, 169, and 170.

I have read these passages, Mr. Dana continued, not that they distinctly assert, or, indeed, that they take up the very question I am presenting before this tribunal, but they show the general principles upon which the great writers on international law—the governments themselves and the people—have acted with regard to fishermen and their rights, especially of supplying their wants from time to time in the ports and harbors of all countries. These rights have been recognized as incidental to the nature of man and the nature of the earth he occupies. However boastful we may be of ourselves, we are such feeble creatures that we cannot subsist many hours without food, shelter, and clothing, and fishermen and sailors must get these where they can. Laws respecting pure commerce, that is, the right to go with a cargo to sell and turn it into the great body of the property of the country, rest on other grounds; but the right to exercise the industry by which men live, as fishermen do by fishing, should be extended as far as possible, and originally had no limit. It passed within the category of those imperfect rights, such as innocent transit and innocent use of waters. These rights have been exercised for the reasons there assigned, which are deeper as well as older than all treaties, conventions, and statutes.

As the treaties stand, fishing is an innocent use of all the waters of the Dominion. Great Britain has never prohibited the exercise of those rights. She may find it expedient to do so, or the policy of the Dominion or perhaps some excited political feeling or hostility against the United States for some wrong, real or supposed, may lead it to do so; but it has never been done, and that is the reason why we have always been in the exercise of those rights. When the provincial government

undertook to exclude us from those privileges, they were taken to account at once, and their action was stopped by the British Government.

We are now brought to the last question, and that is, did we renounce those rights, the right to purchase bait, ice, supplies, and to transship, by clauses in the Treaty of 1818? For the purpose of this argument, I am perfectly indifferent which way your honors shall construe these clauses. The Government of the United States does not interpret them as a renunciation of these rights. I do not believe, I cannot believe, that the treaty had any such reference. But it is certain that nothing therein refers to the purchasing of cargoes of frozen herring, which has been often referred to before the Commission. That is a purely mercantile enterprise. A Boston vessel comes to this coast with a manifest, and equipped in every respect as a trader, though a fisherman at all other times, and after satisfying the custom-house authorities, she purchases a cargo of frozen herring, and proceeds with them to the Boston market. That is a commercial enterprise; it is not anything that is renounced by fishermen, as such, in the exercise of his rights to fish. Suppose a merchant at Newfoundland should take a fishing vessel not employed at that time, and load her with frozen herring, and send her to Boston, where, after she had been entered at the custom-house, and satisfied all the fiscal regulations, her cargo would be sold. Would any one pretend that her right to do that was derived from the treaty giving a right to fish within three miles of the American coast, and land and dry their nets? Certainly not. Therefore we may cut off at once all reference to that. If your honors shall say that by the Treaty of 1818 the United States did not renounce those rights, and did not notice them one way or another, that is sufficient for us. If your honors shall decide that so far as fishing within three miles is concerned, the United States renounced the right to purchase anything except wood, then we submit that the right of purchasing anything else has not been granted to us by the Treaty of 1871, and therefore we cannot be called upon to make any compensation.

We are satisfied that the United States are permitted by the British Government to do those acts, whether it be from comity, from regard to the necessities of fishermen, from policy, or from some other reason, I know not, and so long as we are not disturbed we are content. If we are disturbed, the question will then arise, not before this tribunal, but between the two nations, whether we are properly disturbed by Great Britain; and if we should come to the conclusion on both sides, that there being a dispute on that subject which should be properly settled, then it is to be hoped that the governments will find no difficulty in settling it; but this tribunal will discharge its entire duty when it declares that under Article 18 of the Washington Treaty no such rights or privileges are conceded to the United States.

MR. THOMSON. I do not propose to answer Mr. Dana's argument at present, but I will call the attention of the Commission to the fact that it was an original argument and not a reply. In view of the fact that there are a number of witnesses waiting to be examined, and the short time the Commission has to sit before it takes an adjournment, I do not propose now to offer any observations in reply to the learned counsel, but no doubt before the case is through, previous to that time, I will take occasion to answer the arguments.

MR. DANA said the announcement of the learned counsel seemed as if he assumed the right to make an indefinite adjournment of the hearing, and at some future day to reply to the arguments.

MR. THOMSON said he did not desire to interfere with an immediate

decision, and his remarks were made simply that Mr. Dana's argument might not be considered as having been passed on the part of the counsel for the Crown *sub silentio*.

Mr. FOSTER asked for an early decision on the motion.

The Commission retired to deliberate, and on their return the President read the following decision :

The Commission having considered the motion submitted by the Agent of the United States at the conference held on the 1st instant, decided—

That it is not within the competence of this tribunal to award compensation for commercial intercourse between the two countries, nor for the purchasing bait, ice, supplies, &c., &c., nor for the permission to transship cargoes in British waters.

Sir ALEXANDER T. GALT. Mr. President, as this Commission has been unanimous on this question, I desire, with the permission of my colleagues, but without committing them to the same line of argument which has convinced myself, to state the grounds upon which I feel it my duty to acquiesce in the decision. I listened with very great pleasure to the extremely able arguments made on both sides, and I find that the effect of the motion, and of the argument which has been given upon it, is to limit the power of this tribunal to certain specified points. This definition is undoubtedly important in its consequences. It eliminates from the consideration of the Commission an important part of the case submitted on behalf of Her Majesty's Government; and this is undoubtedly the case so far as this part forms a direct claim for compensation; but, at the same time, it has the further important effect that it defines and limits the rights conceded to the citizens of the United States under the Treaty of Washington. Now, I have not been insensible to the importance of the considerations that have been addressed to us by the counsel for the Crown in reference to the inconvenience that may arise from the decision at which this tribunal has arrived. I can foresee that, under certain circumstances, those inconveniences may become exceedingly great, but I cannot resist the position taken by the counsel of the United States in stating that, if such inconveniences arise, they are matters which properly fall within the control and judgment of the two governments, and not within that of this Commission. On the other hand, I cannot fail to see that, while this is admitted, a remote and contingent inconvenience, a very important difficulty, and one of a very serious character, would arise if from any cause this Commission were to exceed the powers which are given to the Commissioners under the Treaty of Washington.

The difficulty would at once arise that any award whatever which it made, be it good or bad, be it favorable to the one party or to the other, would have been vitiated by our having acted *ultra vires*. I do not find, either, that there would be any ready escape from such a position. The treaty affords no machinery by which this question in regard to the fisheries can be adjudicated upon if this Commission should, from any unfortunate cause, be allowed to lapse; therefore, with regard to the two inconveniences in question, the one which strikes at the root of the whole treaty is that which ought to weigh with me, if I were placed in such a position as to be obliged to weigh such inconveniences; but, as I shall state before I conclude, there are other and stronger considerations present to my mind. I have in common with my colleagues entered into a solemn obligation to decide judicially upon all questions coming before this tribunal, and I feel it incumbent upon me, therefore, to give every possible weight, every due weight, to whatever may be said on either side, and I certainly have hitherto endeavored to do so, and I have done so in this case. I shall endeavor to pursue the same course, acting under

the same considerations, in the future. At the same time, I confess to a great feeling of disappointment that such an important part of the question connected with the settlement of the fisheries dispute should apparently be removed, or partly removed, from the possible consideration and adjudication of this tribunal, and I am bound to say that my conviction of the intention of the parties to the Treaty of Washington is that this was not their purpose at the time.

I have listened with very great attention to the arguments presented on behalf of the United States, but I do not think that they have correctly stated the position of the two parties at the time when the Treaty of Washington was entered into. The history of this case begins, as has been stated by counsel, as far back as 1783, but by common consent the Convention of 1818 is the treaty by which the fishery rights of the two countries have subsisted. Under the Convention of 1818 certain things were forbidden to the United States fishermen, and the United States renounced the right to do anything except what they were permitted to do by the words of that treaty. They renounced forever any liberty of taking, drying, or curing fish, etc., "provided that the American fishermen shall be permitted to enter the said bays or harbors for the purpose of shelter, and of repairing damages therein, of purchasing wood and obtaining water, and for no other purpose whatever." By the imperial Act 59, George the Third, Chapter 38, and by several colonial statutes, restrictions and definitions were imposed or were established with regard to offenses arising from infringements of those privileges conferred upon American citizens, though it has not been shown that the seizures which took place prior to 1854 were for trading or for obtaining supplies, or for any other benefit referred to in the motion, still it is undoubted that arising out of this legislation great irritation arose between the two countries, and this resulted in the adoption of what is known as the Reciprocity Treaty in 1854. That the Reciprocity Treaty was understood to have removed all those restrictions is unquestionably shown to be the case, to my mind, by the action taken by Great Britain and the colonies when the treaty came into force.

Immediately afterward, all statutes which had operated against the American fishermen were suspended, and the greatest possible freedom of intercourse existed during the continuation of that treaty. At the termination of the Reciprocity Treaty, and in support of the view that it was supposed to have given those privileges, we find the whole of these enactments revived, and we also find that subsequently more stringent statutes were passed by the Dominion of Canada in this relation. Now, it is important in the history of this case to consider what effect was produced by those statutes; and we find in a most important public document, that is the annual message of President Grant to Congress, in 1879, that this legislation on the part of the colonies was made the subject of the gravest possible complaint. The President states that:

The course pursued by the Canadian authorities toward the fishermen of the United States during the last season has not been marked by a friendly feeling. By the first article of the Convention of 1818, between Great Britain and the United States, it was agreed that the inhabitants of the United States should have forever, in common with British subjects, the right of taking fish in certain waters therein defined. In the waters not included in the limits named in the convention, within three miles of parts of the British coast, it has been the custom for twenty years to give to intruding fishermen of the United States a reasonable warning of their violation of the technical rights of Great Britain. The Imperial Government is understood to have delegated the whole or a share of its jurisdiction or control of these inshore fishery-grounds to the colonial authority, known as the Dominion of Canada, and this semi-independent but irresponsible agent has exercised its delegated powers in an unfriendly way—vessels have been seized without notice or warning, in violation of the custom previously

prevailing, and have been taken into the colonial ports, their voyages broken up, and the vessels condemned. There is reason to believe that this unfriendly and vexatious treatment was designed to bear harshly upon the hardy fishermen of the United States, with a view to political effect upon the government.

That is not all. The President went further, and made a second complaint in this language :

The statutes of the Dominion of Canada assume a still broader and more untenable jurisdiction over the vessels of the United States; they authorize officers or persons to bring vessels hovering within three marine miles of any of the coasts, bays, creeks, or harbors of Canada into port, to search the cargo, to examine the master on oath touching the cargo and voyage, and to inflict upon him a heavy pecuniary penalty if true answers are not given, and if such a vessel is found preparing to fish within three marine miles of any of such coasts, bays, creeks, or harbors, without a license, or after the expiration of the period named in the last license granted to it, they provide that the vessel with her tackle, &c., shall be forfeited. It is not known that any condemnations have been made under this statute. Should the authorities of Canada attempt to enforce it it will become my duty to take such steps as may be necessary to protect the rights of the citizens of the United States.

The President further goes on to say :

It has been claimed by Her Majesty's officials that the fishing-vessels of the United States have no right to enter the open ports of the British possessions in North America, except for the purpose of shelter and repairing damages, of purchasing wood and obtaining water; that they have no right to enter at the British custom-houses, or to trade there, except for the purchase of wood or water, and that they must depart within twenty-four hours after notice to leave. It is not known that any seizure of a fishing-vessel carrying the flag of the United States has been made under this claim.

These were complaints which were made in the annual message of President Grant in 1870; and he concludes by suggesting to Congress the course that should be taken in reference to this matter, in the following words :

Anticipating that an attempt may possibly be made by the Canadian authorities in the coming season to repeat their unneighborly acts towards our fishermen, I recommend you to confer upon the Executive the power to suspend by proclamation the operation of the laws authorizing the transit of goods, wares, and merchandise in bond across the territory of the United States to Canada; and further, should such an extreme measure become necessary, to suspend the operation of any laws whereby the vessels of the Dominion of Canada are permitted to enter the waters of the United States.

It is, therefore, plainly evident that disagreements were in existence at that time with regard to the fisheries, and that the fear that they would produce serious complications between the two countries was present in the minds of the President and Government of the United States. Well, the history of the case goes on to show that these complaints made by President Grant were the foundation of the negotiations which led to the adoption of the Washington Treaty; and it is important to observe, on examining that treaty, that the means whereby President Grant proposed to Congress to insure the repeal of these so called unfriendly acts on the part of Canada, by repealing the bonded system, and by putting on other restrictions, which President Grant proposed to apply to that particular purpose, are, by the clauses of the Washington Treaty, dealt with for the term of that treaty in another way, and for other considerations; therefore, to my mind, it leaves me in this position, in endeavoring to interpret the intentions of the parties to the Washington Treaty, that it must necessarily have been supposed that, as in the case of the Reciprocity Treaty, so in the case of the Washington Treaty, the rights of traffic and of obtaining bait and supplies were conferred, being incidental to the fishing privilege. It could scarcely be otherwise, because in the case of the Reciprocity Treaty commercial advantages were the compensation which the United States offered to Great Britain for the concession of the privilege of fishing in

her waters; while, by the Washington Treaty, compensation in money, exclusively of the free admission of fish, is to be made the measure of the difference in value; therefore I quite believe that the intention of the parties to the treaty was to direct this tribunal to consider all the points relating to the fisheries, which have been set forth in the British case. But I am now met by the most authoritative statement as to what were the intentions of the parties to the treaty. There can be no stronger or better evidence of what the United States proposed to acquire under the Washington Treaty than the authoritative statement which has been made by their Agent before us here, and by their counsel. We are now distinctly told that it was not the intention of the United States, in any way, by that treaty, to provide for the continuation of these incidental privileges, and that the United States are prepared to take the whole responsibility, and to run all the risk of the re-enactment of the vexatious statutes, to which reference has been made.

I cannot resist the argument that has been put before me, in reference to the true, rigid, and strict interpretation of the clauses of the Treaty of Washington. I therefore cannot escape, by any known rule concerning the interpretation of treaties, from the conclusion that the contention offered by the Agent of the United States must be acquiesced in.

There is no escape from it. The responsibility is accepted by and must rest upon those who appeal to the strict words of the treaty as their justification. I therefore, while I regret that this tribunal does not find itself in a position to give full consideration to all the points that may be brought up on behalf of the Crown, as proof of the advantages which the United States derive from their admission to fish in British waters, still feel myself, under the obligation which I have incurred, required to assent to the decision which has been communicated to the Agents of the two governments by the president of this tribunal.

IV.

CLOSING ARGUMENT OF HON. DWIGHT FOSTER ON BEHALF OF THE UNITED STATES.

GENTLEMEN OF THE COMMISSION: It becomes my duty to open the discussion of this voluminous mass of evidence, which has occupied your attention through so many weeks. It is a satisfaction to know that many topics, as to which numerous witnesses testified, and over which much time has been consumed, have been eliminated from the investigation, so that they need not occupy the time of counsel in argument, as they are sure not to give any trouble to the Commissioners in arriving at their verdict. The decision of the Commission, made on the 6th of September, by which it was held not to be competent for this tribunal to award compensation for commercial intercourse between the two countries, or for purchasing bait, ice, supplies, &c., or for permission to transship cargoes in British waters, is based upon the principle—the obvious principle, perhaps, I may properly say—that no award can be made by this tribunal against the United States, except for rights which they acquire under the treaty; so that, for the period of twelve years, they belong to our citizens, and cannot be taken from them. For advantages conferred by the treaty, as vested rights, you are empowered to make an award, and for nothing else.

The question before you is whether the privileges accorded the citizens

of the United States by the Treaty of Washington are of greater value than those accorded to the subjects of Her Britannic Majesty; and if so, how much is the difference, in money? The concessions made by each government to the other in the treaty were freely and voluntarily made. If it should turn out (as I do not suppose it will) that in any respect the making of those concessions has been injurious to the subjects of Her Majesty, you are not on that account to render an award of damages against the United States. The two governments decided that they would grant certain privileges to the citizens of one and the subjects of the other. Whether those privileges may be detrimental to the party by whom they have been conceded is no concern of ours. That was disposed of when the treaty was made. Our case before this tribunal is a case, not of damages, but of an adjustment of equivalents between concessions freely made on the one side and on the other. It follows from this consideration, gentlemen, that all that part of the testimony which has been devoted to showing that possibly under certain circumstances American fishermen, either in the exercise of their treaty rights, or in trespassing beyond their rights, may have done injury to the fishing grounds, or to the people of the provinces, is wholly aside from the subject-matter submitted for your decision. The question whether throwing over gurry hurts fishing-grounds—the question whether vessels lee-bow boats—and all matters of that sort, which at an early period of the investigation loomed up occasionally, as if they might have some importance, may be dismissed from our minds; for, whether the claims made in that respect are well founded or not, no authority has been vested in this tribunal to make an award based upon any such grounds. That which you have been empowered to decide is the question, to what extent the citizens of the United States are gainers by having, for the term of twelve years, liberty to take fish on the shores and coasts of Her Majesty's dominions without being restricted to any distance from the land. It is the right of inshore fishing. In other words, the removal of a restriction by which our fishermen were forbidden to come within three miles of the shore for fishing purposes; and that is all. No rights to do anything upon the land are conferred upon the citizens of the United States, under this treaty, with the single exception of the right to dry nets and cure fish on the shores of the Magdalen Islands, if we did not possess that before; no right to land for the purpose of seining from the shore; no right to the "strand fishery," as it has been called; no right to do anything except, water-borne on our vessels, to go within the limits which had been previously forbidden.

When I commenced the investigation of this question I supposed that it was probable that an important question of international law would turn out to be involved in it, relative, of course, to the so-called headland question, which has been the subject of so much discussion between the two governments for a long series of years; but the evidence that has been introduced renders this question not of the slightest importance, and inasmuch as it is a question which you are not empowered, except incidentally, to decide, a question eminently proper to be passed upon between the governments directly, I presume you will rejoice with me in finding that it is not practically before us, and that we need not trouble ourselves concerning it. If it had appeared in this case that there was fishing carried on to any appreciable extent within the large bays, more than six miles wide at the headlands, and at a distance of more than three miles from the contour of the shores of those bays, the United States would have contended that their citizens, in common with all the rest of mankind, were entitled to fish in such great

bodies of water as long as they kept themselves more than three miles from the shore. In short, they would have contended, as it has been contended, in the brief filed in this case, that where the bays are more than six miles in width from headland to headland, they are to be treated in this respect, for fishing purposes, as parts of the open sea; but the evidence, as I said before, has eliminated all that matter from the inquiry. The only bodies of water as to which any such question can arise are, in the first place, the Bay of Fundy. Now, the right of American fishermen to enter and fish in that bay was decided by arbitration in the case of the schooner *Washington*, and Her Majesty's Government have uniformly acquiesced in that decision. So, as to that body of water, the rights of the citizens of the United States must be regarded as *res adjudicata*. In addition, however, it turns out that within the body of the Bay of Fundy there has not been any fishing more than three miles from the shore for a period of many years. One of the British witnesses said that it was forty years since the mackerel fishery ceased in the Bay of Fundy. At all events, there is no evidence in this case of fishing of any description in the body of the Bay of Fundy more than three miles from the shore, and this fact, in addition to the decision in the *Washington* case, disposes of that.

The next body of water is the Bay of Miramichi; as to which it will turn out by an inspection of the map on which the Commissioners, appointed under the Reciprocity Treaty, marked out the lines reserved from free fishing, on the ground that they were mouths of rivers, that the mouth of the river Miramichi comes almost down to the headlands of the bay. You will remember that the report of the Commission on the Reciprocity Treaty is referred to in the Treaty of Washington, and that the same places excluded by their decision remain excluded now. What is left? The narrow space below the point marked out as the mouth of the river Miramichi, and within the headlands of the bay, is so small that there can be no fishing there of any consequence, and no evidence of any fishing there at all has been introduced. So far as the Bay of Miramichi goes, therefore, I cannot see that the headland question need trouble you at all.

Then comes the Bay of Chaleurs, and in the Bay of Chaleurs whatever fishing has been found to exist seems to have been within three miles of the shores of the bay, in the body of the Bay of Chaleurs. I am not aware of any evidence of fishing, and it is very curious that this Bay of Chaleurs, about which there has been so much controversy heretofore, can be so summarily dismissed from the present investigation. I suppose that a great deal of factitious importance has been given to the Bay of Chaleurs from the custom among fishermen, and almost universal a generation ago, of which we have heard so much, to speak of the whole of the Gulf of St. Lawrence by that term. Over and over again, and particularly among the older witnesses, we have noticed that when they spoke of going to the Gulf of St. Lawrence, they spoke of it by the term "Bay of Chaleurs," but in the Bay of Chaleurs proper, in the body of the bay, I cannot find any evidence of any fishing at all. I think, therefore, that the Bay of Chaleurs may be dismissed from our consideration.

There are two or three other bodies of water as to which a possible theoretical question may be raised, but their names have not been introduced into the testimony on this occasion from first to last. The headland question, therefore, gentlemen, I believe may be dismissed as, for the purpose of this inquiry, wholly unimportant, and although I am not authorized to speak for my friend, the British Agent, and to say that

he concurs with me, yet I shall be very much surprised if I find any different views from those that I have expressed taken on the other side. If in argument other views should be brought forward, or if it should seem to your honors, in considering the subject, that the question has an importance which it has not in my view, then I can only refer you to the brief that has been filed, and insist upon the principles which the United States have heretofore maintained on that subject. For the present, I congratulate you, as I do myself, that no grave and vexed question of international law need trouble you in coming to a conclusion.

I think it is necessary to go somewhat, yet briefly, into the historical aspects of the fishery question, in order to see whether that which has been the subject of diplomatic controversy and of public feeling in the past is really the same thing which we have under discussion to-day. The question has been asked, and asked with some earnestness, by my friends on the other side, "If the inshore fisheries have the little importance which you say they have, why do your fishermen go to the Gulf of St. Lawrence at all?" And again it has been asked, "If the inshore fisheries are of such insignificant consequence, why is it that the fishermen and people of the United States have always manifested such a feverish anxiety on the subject?" Those questions deserve an answer, and unless an answer can be made, you undoubtedly will feel that there must be some unseen importance in this question, or there would not have been all the trouble with reference to it heretofore. Why do the fishermen of the United States come to the Gulf of St. Lawrence at all? Why should they not come here? What men on the face of the earth have a better right to plow with their keels the waters of the Gulf of St. Lawrence than the descendants of the fishermen of New England, to whose energy and bravery, a century and a quarter ago, it is chiefly owing that there is any Nova Scotia to day under the British flag? I am not going to dwell upon the history of the subject. It is well known that it was New England that saved to the Crown of England these maritime provinces; that to New England fishermen is due the fact that the flag of Great Britain flies on the citadel, and not the flag of France, to-day.

Early in the diplomatic history of this case we find that the Treaty of Paris in 1763 excluded French fishermen three leagues from the coast belonging to Great Britain in the Gulf of St. Lawrence and fifteen leagues from the island of Cape Breton. We find that the treaty with Spain in the same year contained a relinquishment of all Spanish fishing rights in the neighborhood of Newfoundland. The Crown of Spain expressly desisted from all pretensions to the right of fishing in the neighborhood of Newfoundland. Those are the two treaties of 1763—the Treaty of Paris with France and the treaty with Spain. Obviously, at that time, Great Britain claimed for herself exclusive sovereignty over the whole Gulf of St. Lawrence and over a large part of the adjacent seas. By the Treaty of Versailles, in 1783, substantially the same provisions of exclusion were made with reference to the French fishermen. Now, in that broad claim of jurisdiction over the adjacent seas, in the right asserted and maintained to have British subjects fish there exclusively, the fishermen of New England, as British subjects, shared. Undoubtedly, the pretensions that were yielded to by those treaties have long since disappeared. Nobody believes now that Great Britain has any exclusive jurisdiction over the Gulf of St. Lawrence or the Banks of Newfoundland, but at the time when the United States asserted their independence and when the treaty was formed between

the United States and Great Britain, such were the claims of England, and those claims had been acquiesced in by France and by Spain. That explains the reason why it was that the elder Adams said he would rather cut off his right hand than give up the fisheries at the time the treaty was formed, in 1783, and that explains the reason why, when his son, John Quincy Adams, was one of the Commissioners who negotiated the Treaty of Ghent, at the end of the war of 1812, he insisted so strenuously that nothing should be done to give away the rights of the citizens of the United States in these ocean fisheries. Those are the fisheries which existed in that day, and those alone. The mackerel fishery was unknown. It was the cod-fishery and the whale-fishery that called forth the eulogy of Burke over a hundred years ago. It was the cod-fishery and the whale-fishery for which the first and second Adams so strenuously contended; and, inasmuch as it was found impossible in the treaty at the end of the war of 1812 to come to any adjustment of the fishery question, all mention of it was omitted in the treaty. The treaty was made leaving each party to assert his claims at some future time. And so it stood; Great Britain having given notice that she did not intend to renew the rights and privileges conceded to the United States in the Treaty of 1783, and the United States giving notice that they regarded the privileges of the Treaty of 1783 as of a permanent character, and not terminated by the war of 1812; but no conclusion was arrived at between the parties. What followed? The best account of the controversy to be found is in a book called "The Fisheries and the Mississippi," which contains John Quincy Adams's letters on the subject of the Treaty of Ghent and the convention of 1818.

Mr. Adams in that book says that the year after peace was declared, British cruisers warned all American fishing-vessels not to approach within sixty miles from the coast of Newfoundland, and that it was in consequence of this that the negotiations were begun which led to the Convention of 1818; and the Convention of 1818, in the opinion of Mr. Adams, conceded to the United States all that they desired. He believed and asserted that Great Britain had claimed, and intended to claim, exclusive jurisdiction over the Gulf of Saint Lawrence and over the Banks of Newfoundland, and he considered and stated that the Treaty of 1818, in setting at rest forever those pretensions, obtained for the United States substantially what they desired. A passage is quoted in the reply of Her Majesty's Government to the United States Answer, from this book, in which Mr. Adams says: "The Newfoundland, Nova Scotia, Gulf of Saint Lawrence and Labrador fisheries, are in nature and in consideration both of their value and of the right to share in them *one* fishery. To be cut off from the enjoyment of that right would be to the people of Massachusetts similar in kind and comparable in degree with an interdict to the people of Georgia and Louisiana to cultivate cotton or sugar. To be cut off even from that portion of it which was within the exclusive British jurisdiction in the *strictest sense* within the Gulf of Saint Lawrence and on the coast of Labrador would have been like an interdict upon the people of Georgia or Louisiana to cultivate cotton or sugar in three-fourths of those respective States." But he goes on to speak of the warning off of American vessels sixty miles from Newfoundland, and then says: "It was this incident which led to the negotiations which terminated in the Convention of the 20th of October, 1818. In that instrument, the United States *renounced forever* that part of the fishing liberties which they had enjoyed or claimed in certain parts of the exclusive jurisdiction of the British Provinces, and within *three marine miles* of the shores. *This privilege, without being of*

much use to our fishermen, had been found very inconvenient to the British; and in return, we have acquired an enlarged liberty, both of fishing and drying fish, within other parts of the British jurisdiction forever."

Fishing for mackerel in ten fathoms of water off the bight of Prince Edward Island was not the thing then taken into consideration. There was no mackerel fishery till many years after. This controversy was caused by a claim on the one hand and a resistance on the other with reference to the ocean fisheries, to the cod fishery, the whale fishery, the deep-sea fishery, three leagues, fifteen leagues, sixty miles from the shore; and after the Convention of 1818 had been formed, if it had been construed as the British Government construe it to-day, there would have been no more controversy on the subject. The controversy that arose after the Convention of 1818 sprang from the unwarrantable and extravagant pretensions, not so much of Her Majesty's home government, as of the colonial authorities. In order to understand the importance that has been attributed to this subject, it is indispensably necessary that you should know what was claimed to be the interpretation of the Convention of 1818 down to a very recent day. The provincial authorities claimed, in the first place, to exclude United States vessels from navigating the Gut of Canso. Nobody makes that claim now. In the second place, they claimed the right to exclude them from fishing anywhere in the Bay of Fundy. That claim was insisted upon until, on arbitration, it was decided against Her Majesty's Government. Not only was the headland doctrine asserted as to the great bays, but, under its guise, the provincial authorities claimed the right to draw a straight line from East Point to North Cape of Prince Edward Island, and make the exclusion three miles from that point. I have had marked on the map annexed to the British Case two or three of the principal lines of exclusion as they were then insisted upon, that you may know what it was that our people regarded as important. The claim to treat East Point and North Cape as headlands, and to exclude us a distance of three miles from a line drawn between them, is a notion that has not departed from the popular mind to the present day.

The affidavits from Prince Edward Island were drawn upon the theory that that is the rule, and in two or three of them I have found it expressly stated, "that all the mackerel were caught within the three-mile line; that is to say, within a line three miles from a straight line drawn from East Point to North Cape." Now, those affidavits are all in answer to one set of questions, they are all upon one model, and it is quite obvious that they were all of them colored by that view of the three-mile limit, as two of them expressly say that they were. At all events, that was the claim that was made down to a very recent period. The claim also was made to exclude United States fishermen from Northumberland Strait. In the case of the *Argus*, seized by British cruisers, the ground of seizure was, that a line was to be drawn from Cape North to the northern line of Cow Bay in Cape Breton. It is marked there in red on the map. The evidence of that claim, which was the basis of the seizure of the *Argus*, is to be found in the correspondence between Mr. Everett and Lord Aberdeen on the subject. See Mr. Everett's letter to Lord Aberdeen, quoted from in the United States brief, on page 21. They likewise claimed to draw a line from Margaree to Cape St. George. You will find that down there. Those claims were not merely made on the quarter deck, but they were made, some of them, in diplomatic correspondence, some of them in resolutions of the Nova Scotia legislature. They were made, and they were insisted upon, and understanding this, I think you will be prepared to understand why it was that exclusion

from such limits was regarded as important to our fishermen. You will remember that one of our oldest witnesses, Ezra Turner, testified that the captain of the cruiser "told me what his orders were from Halifax, and he showed me his marks on the chart. I well recollect three marks. One was from Margaree to Cape St. George, and then a straight line from East Point to Cape St. George, and then another straight line from East Point to North Cape. The captain said, 'If you come within three miles of these lines, fishing, or attempting to fish, I will consider you a prize.'" And a committee of the Nova Scotia legislature, as late as 1851, in their report, say: "The American citizens, under the treaty, have no right, for the purposes of the fishery, to enter any part of the Bay of St. George, lying between the headlands formed by Cape George on the one side and Port Hood Island on the other."

Such were the claims made, and how were those claims enforced? They were enforced by the repeated seizure of our vessels, their detention until the fishing season was over, and then their release. It appears by the returns that have been made in how many instances our fishing-vessels were released without a trial after they had been detained until their voyages were ruined, and, as our skippers said in their testimony, it made no difference whether the seizure was lawful or unlawful, the voyage was spoilt, and the value of the vessel almost entirely destroyed. There were repeated instances of which you have testimony of cruisers levying black-mail upon skippers, taking a portion of their fish by way of tribute from them, and letting them go on their way.

Mr. THOMSON. Instead of seizing the whole?

Mr. FOSTER. Yes; instead of seizing the whole. No doubt the poor and ignorant skippers were thankful to escape from the lion's jaws with with so little loss as that. Let me give an instance: There is a letter from Mr. Forsyth, the United States Secretary of State, to Mr. Fox, the British minister at Washington, dated the 24th of July, 1859, in which Mr. Forsyth requests the good offices of Her Majesty's minister at Washington with the authorities at Halifax, to secure to a fisherman, too poor to contend in the admiralty court, the restoration of 10 barrels of herrings taken from him by the officer who had seized his vessel and withheld the herring after the vessel itself was released.

Well, what were the laws enacted to enforce these pretensions? A Nova Scotia statute of 1836, after providing for the forfeiture of any vessel found fishing, or preparing to fish, or to have been fishing within three miles of the coasts, bays, creeks, or harbors, and providing that if the master, or person in command, should not truly answer the questions put to him in examination by the boarding officer, he should forfeit the sum of £100, goes on to provide that if any goods shipped on the vessel were seized for any cause of forfeiture under this act, and any dispute arises whether they have been lawfully seized, the burden of proof to show the illegality of the seizure shall be on the owner or claimant of the goods, ship, or vessel, and not on the officer or person who shall seize and stop the same. The burden of proof to show that the seizure was unlawful was on the man whose schooner had been brought to by the guns of the cutter. He was to be taken into a foreign port, and there required affirmatively to make out that his vessel and its contents were not liable to forfeiture. If he attempted any defense, he was not permitted to do so until he had given sufficient security in the sum of £50 for the costs. He must commence no suit until he had given one calendar month's notice in writing of his intention to do so, in order that the seizing officer might make amends if he chose; and he must bring his suit within three months after the cause of action accrued, and if he

failed in the suit, treble costs were to be awarded against him; while, if he succeeded in the suit, and the presiding judge certified that there was probable cause for the seizure, he was to be entitled to no costs, and the officer making the seizure was not to be liable to any action. That act, only very slightly modified, but with most of its offensive provisions still retained, was found on the statutes of Nova Scotia as late as the year 1868, and I am not aware that it has been repealed to-day. The construction put upon it in this province was, that a man who came into a British harbor to buy bait with which to catch fish in the deep sea, was guilty of "preparing to fish," and that it was an offense under the act to prepare within British territorial waters to carry on a deep-sea fishery.

Such, gentlemen, was the condition of things which led the fishermen of the United States to attribute so much importance to the three-mile restriction. We know to-day that all this has passed away. We know that such pretensions are as unlikely ever to be repeated as they are sure never again to be submitted to. And why do I refer to them? Not, certainly, to revive any roots of bitterness; not, certainly, to complain of anything so long gone by; but because it is absolutely indispensable for you to understand the posture of this question historically, in order that you may be aware how different the question we are trying to-day is from the question which has had such importance heretofore.

If the three-mile limit off the bend of Prince Edward Island, and down by Margaree, where our fishermen sometimes fish a week or two in the autumn (and those are the two points to which almost all the evidence of inshore fishing in this case relates)—if the three-mile limit had been marked out by a line of buoys in those places, and our people could have fished where they had a right to, under the law of nations and the terms of the Convention of 1818, nobody would have heard any complaint. Certainly it is most unjust, after a question has had such a history as this—after the two nations have been brought to the very verge of war with each other in consequence of disputes based upon such claims as I have referred to—certainly, now that those claims are abandoned, it is most unjust to say to us, "Because you complained of these things, therefore you must have thought the right to catch mackerel in ten or fifteen fathoms of water, within three miles of the bight of the island, was of great national importance." We are not prepared to enter fairly into a discussion of the present question until it is perceived how different it is from the one to which I have been alluding. Of course our fishermen were alarmed and excited, and indignant, when the things were done to which I have referred. Of course it was true that if such claims were to be maintained they must abandon fishing in the Gulf of St. Lawrence altogether. And not only did they feel that there was an attempt, unjustly and unlawfully, to drive them out of a valuable fishery which had belonged to them and their forefathers ever since vessels came here at all, but there was also, with reference to it, a sense of wrong and outrage, and the fishermen of New England, like the rest of the people of New England, although long suffering and slow to wrath, have ever been found to be a race "who know their rights, and, knowing, dare maintain." But when these claims are abandoned, as they have been now, there remains simply the question, what is the value of fishing within three miles of the shore of the British territories? And this brings me to some of the immediate questions which we have to discuss.

In the first place, I suppose I may as well take up the case of Newfoundland. The case of Newfoundland, as I understand it, is almost

entirely eliminated from this controversy by the decision which was made on the 6th of September. The claim, as presented in Her Majesty's Case, is not one of compensation for fishing within the territorial waters of Newfoundland, but it is one of enjoying the privileges of commercial intercourse with the people of that island. Of territorial fishing in Newfoundland waters, there is hardly any evidence to be found since the first day of July, 1873, when the fishery clauses of the Treaty of Washington took effect, with one exception, that I will allude to hereafter. There is certainly no cod-fishing done by our people in the territorial waters of Newfoundland; none has been proved, and there is no probability that there ever will be during the period of the treaty or afterward. The American cod fishery is everywhere deep sea fishing. There is a little evidence of two localities in which a few halibut are said to have been taken in Newfoundland waters—one near Hermitage Bay, and one near Fortune Bay. But the same evidence that shows that it once existed shows that it had been exhausted and abandoned before the Treaty of Washington was made. Judge Bennet testified that—

The halibut-fishing on the Newfoundland coast is a very limited one, so far as I am aware. It is limited to the waters between Brunet Island in Fortune Bay and Pass Island in Hermitage Bay. It is conducted close inshore, and was a very prolific fishery for a number of years. Our local fishermen pursued it with hook and line. I think about eight years ago the Americans visited that place for the purpose of fishing, and they fished it very thoroughly. They fished early in the season, in the month of April, when halibut was in great demand in New York market. They carried them there fresh in ice, and I know they have pursued that fishery from that time to within the last few years. I believe they have about exhausted it now.

Another witness testified that some years ago the halibut fishery was pursued in that vicinity, but he went on to say that—

American fishermen do not now fish for halibut about Pass Island as they formerly did, because I believe that that fishery has been exhausted by the Americans. I know of no United States fishing-vessels fishing within three miles of the shore, except at and about Pass Island, as already stated.—(Affidavit of Philip Hubert, p. 54, British Affidavits.)

John Evans, p. 52, British Affidavits, says:

The halibut fishery, followed by the United States fishing-vessels about Pass Island, has been abandoned during late years. I have not heard of American fishing-vessels trying to catch fish on the Newfoundland inshore-fishery.

There has been a little evidence that occasionally, when our vessels go into harbors to purchase bait at night, some of the men will jig a few squid, when they are waiting to obtain bait.

All the evidence shows that they go there not to fish for bait, but to buy it. It shows also that when they are there for that purpose, the crews of the vessels are so much occupied in taking on board and stowing away the fish bought for bait that they have no time to engage much in fishing; but one or two witnesses have spoken of a little jigging for squid by one or two men when unoccupied at night. As to the rest, all the fishing in the territorial waters of Newfoundland is done by the inhabitants themselves.

The frozen-herring trade, which was the ground of compensation chiefly relied upon in the Newfoundland case, has been completely proved to be a commercial transaction. The concurrent testimony of the witnesses on both sides is, that American fishermen go there with money, they do not go there provided with the appliances for fishing, but with money and with goods. They go there to purchase and to trade, and when they leave Gloucester, they take out a permit to touch and trade, that they may have the privileges of trading-vessels. Perhaps it may be said that the arrangement under which this bait is

taken is substantially a fishing for it. I have heard that suggestion hinted at in the course of our discussions, but plainly, it seems to me, it cannot be sound. We pay for herring by the barrel, for squid and caplin by the hundred, and the inhabitants of the island will go out to sea as far as to the French Islands, there to meet American schooners, and to induce them to come to their particular localities that they may be the ones to catch the bait for them. It is true that the British Case expresses the apprehension that the frozen-herring trade may be lost to the inhabitants of Newfoundland in consequence of the provisions of the treaty. It is said that "it is not at all probable that, possessing the right to take the herring and caplin for themselves on all parts of the Newfoundland coast, the United States fishermen will continue to purchase bait as heretofore, and they will thus prevent the local fishermen, especially those of Fortune Bay, from engaging in a very lucrative employment, which formerly occupied them during a portion of the winter season, for the supply of the United States market." One of the British witnesses, Joseph Tierney, whose testimony is on page 371, in speaking of this matter of getting bait, says, in reply to the question, "How do you get that bait?" "Buy it from persons that go and catch it and sell it for so much a barrel. The American fishermen are not allowed to catch their own bait at all. Of course, they may jig their own squid around the vessel." And in reply to my question, "What would be done if they tried to catch bait?" the answer is, "They are pretty rough customers. I don't know what they would do." So it appears that American fishermen not only do not catch bait, but are not allowed to catch it. They buy the bait, and that, to my mind, is the end of the question. So far as the herring trade goes, we could not, if we were disposed to, carry it on successfully under the provisions of the treaty, for this herring trade is substantially a seining from the shore—a strand fishing, as it is called—and we have no right anywhere conferred by this treaty to go ashore and seine herring any more than we have to establish fish-traps. I remember brother Thomson and Professor Baird were at issue on the question whether we had a right to do this. Brother Thomson was clearly right and Professor Baird was mistaken. We have not acquired any right under the treaty to go ashore for any purpose anywhere on the British territories except to dry nets and cure fish. I do not think that I ought to spend more time over the case of Newfoundland than this, except to call your attention to the circumstance that, in return for these few squid jigged at night, the islanders obtain an annual remission of duties averaging upwards of \$50,000 a year.

We have been kindly furnished, in connection with the British affidavits upon page 128, Appendix A, with a statement showing the duties remitted upon exports from Newfoundland to the United States since the Treaty of Washington, and their annual average is made out to be \$50,940.45. I submit to the Commission whether we do not pay, upon any view of political economy, a thousand fold for all the squid that our people jig after dark.

Let it not, however, for a moment be supposed that because I took up the case of Newfoundland for convenience' sake, as it is presented separately, that I regard it as a distinct part of the case. The United States has made no treaty with the Island of Newfoundland, which has not yet hoisted the flag of the "Lone Star." When she does, perhaps we shall be happy to enter into treaty relations with her; but we know at present only Her Majesty's Government. We are dealing with the whole

aggregate of concessions, from the one side to the other, and Newfoundland comes in with the rest.

Leaving, then, the Island of Newfoundland, I come to the question of the value to the citizens of the United States of the concessions as to inshore fisheries in the territorial waters of the Dominion of Canada—that is, within three miles of the shore—for the five annual seasons past, and for seven years to come. In the first place, there is the right conceded to our fishermen to land in order to cure fish and dry nets—to land on unoccupied places, where they do not interfere with private property, nor with British fishermen exercising the same rights. In one of the oldest law reports, Popham's, an ancient sage of the law, Mr. Justice Doddridge remarks: "Fishermen, by the law of nations, may dry their nets on the land of any man." Without asserting that as a correct rule of law, I think I may safely assert that it has been the practice permitted under the comity of nations from the beginning of human history, and that no nation or people, no kingdom or country, has ever excluded fishermen from landing on barren and unoccupied shores and rocks to dry their nets and cure their fish. If it was proved that the fishermen of the United States did use privileges of this kind, under the provisions of the Treaty of Washington, to a greater extent than before, I hardly think that you would be able to find a current coin of the realm sufficiently small in which to estimate compensation for such a concession. But, in point of fact, the thing is not done; there is no evidence that it is done. On the contrary, the evidence is that this practice belonged to the primitive usages of a by-gone generation. Seventy, sixty, perhaps fifty years ago, when a little fishing vessel left Massachusetts Bay, it would sail to Newfoundland, and after catching a few fish, the skipper would moor his craft near the shore, land in a boat, and dry the fish on the rocks; and when he had collected a fare of fish, and filled his vessel, he would either return back home, or quite as frequently would sail on a commercial voyage to some foreign country, where he would dispose of the fish and take in a return cargo. But nothing of that sort has happened within the memory of any living man. It is something wholly disused, of no value whatever. And it must not be said that under this concession we acquire any right to fish from the shore, to haul nets from the shore, or to fish from rocks. Obviously, we do not. I agree entirely with the view of my brother Thomson, as manifested in his conversation with Professor Baird on that subject.

We come, then, to the inshore fishing. What is that? In the first place, there has been some attempt to show inshore halibut-fishing in the neighborhood of Cape Sable. It is very slight. It is contradicted by all our witnesses. No American fisherman can be found who has ever known of any halibut-fishing within three miles of the shore in that vicinity; and our fishermen all say that it is impossible that there should be halibut caught in any considerable quantities in any place where the waters are so shallow. There is also some evidence that up in the Gulf of St. Lawrence there was once a small local halibut fishery, but the same evidence that speaks of its existence there speaks of its discontinuance years ago. The last instance of a vessel going there to fish for halibut that has been made known to us is the one that Mr. Sylvanus Smith testifies about, where a vessel of his strayed up into the gulf, was captured, and was released, prior to the Treaty of Washington. As to the inshore halibut fishery, there has been no name of a vessel, except in one single instance, when a witness did give the name of the *Sarah C. Pyle* as a vessel that had fished for halibut in the vicinity of Cape Sable. We have an affidavit from the captain of that schooner,

Benjamin Swim, saying that he did not take any fish within many miles of Cape Sable. He says he has been engaged in cod-fishing since April of this year, and "has landed 150,000 pounds of halibut, and caught them all, both codfish and halibut, on Western Banks. The nearest to the shore that I have caught fish of any kind this year is, at least, 40 miles."—(Affidavit No. 242.)

So much for the inshore halibut fishery. I will, however, before leaving it, refer to the statement of one British witness, Thomas R. Pattilo, who testified that occasionally halibut may be caught inshore, as a boy may catch a codfish off the rocks; but, pursued as a business, halibut are caught in the sea, in deep water. "How deep do you say?" "The fishery is most successfully prosecuted in about 90 fathoms of water, and, later in the season, in as much as 150 fathoms."

So much for the inshore halibut fishery; and that brings me to the inshore cod fishery, as to which I am reminded of a chapter in an old history of Ireland that was entitled "On Snakes in Ireland," and the whole chapter was "There are no snakes in Ireland." So there is no inshore cod fishery pursued as a business by United States vessels anywhere. It is, like halibut-fishing, exclusively a deep-sea fishing. They caught a whale the other day in the harbor of Charlottetown, but I do not suppose our friends expect you to assess in this award against the United States any particular sum for the inshore whale fishery. There is no cod fishery or halibut fishery inshore, pursued by our vessels, any more than there is inshore whale fishery. We know and our witnesses know where our vessels go. If they go near the British shores at all they go to buy bait, and leave their money in payment for the bait. Will it be said that the cod fishery is indirectly to be paid for, because fresh bait must be used, and the cod fishery cannot profitably be pursued without fresh bait; and because we are hereafter to be deprived of the right to buy bait by laws expected to be passed, and then shall have to stop and catch it, so that by and by, when some new statutes have been enacted, and we have been cut off from commercial privileges, we may be forced to catch bait for cod-fishing in British territorial waters? I think it will be time enough to meet that question when it arises. Any attempt to cut us off from the commercial privileges that are allowed in times of peace by the comity of civilized nations to all at peace with them, would of course be adjusted between the two governments in the spirit that becomes two imperial and Christian powers. I do not think that, looking forward to some unknown time when some unknown law will be passed, we need anticipate that we are to be cut off from the privilege of buying bait, and therefore you should award compensation against us for the bait which we may at that time find occasion ourselves to catch. But if it is worth while to spend a single moment upon that, how thoroughly it has been disposed of by the evidence, which shows that this practice of going from the fishing grounds on the Banks into harbors to purchase bait is one attended with great loss of time, and with other incidental disadvantages, so that the owners of the vessels much prefer to have their fishermen stay on the Banks and use salt bait, and whatever else they can get there. Saint Pierre and Miquelon are free ports; commercial intercourse is permitted there; bait can be bought there; and, as the British witnesses have told us, the traffic for bait between Newfoundland and the French islands is so great, and such a full supply of bait is brought to the French islands, more than there is a demand for, that it is sometimes thrown overboard in quantities that almost fill up the harbor. That was the statement of one of the witnesses. I do not

think, therefore, that I need spend more time, either upon the cod-fishery, or the question of buying bait or procuring bait for cod-fishing.

What shall I say of the United States herring fishery, alleged to exist at Grand Manan and its vicinity? Three British witnesses testify to an annual catch of one million, or one and a half million dollars' worth by United States fishermen in that vicinity, all caught inshore. But these witnesses do not name a single vessel, or captain, or give the name of any place from which such vessels come, except to speak in general terms of the Gloucester fleet. These witnesses are McLean, McLeod, and McLaughlin. The fish alleged to be taken are chiefly herring. I shall not stop to read their evidence, or comment upon it in detail. They are contradicted by several witnesses, and by several depositions filed in the case, which you will find in the supplemental depositions lately printed; all of whom state, what we believe to be clearly true, that the herring trade by the United States vessels in the vicinity of Grand Manan is purely a commercial transaction; that our fishermen cannot afford the time to catch herring; that their crews are too large and their vessels too expensive to engage in catching so poor a fish as herring; that it is better for them to buy and pay for them, and that so they uniformly do. The members of the Gloucester firms who own and send out these vessels tell you that they go without nets, without the appliances to catch herring at all, but with large sums of money; they bring back the herring, and they leave the money behind them.

This question seems to me to be disposed of by the report of the Commissioner on the New Brunswick Fisheries for 1876.

Mr. Venning, the inspector of fisheries for New Brunswick, quotes in his report on Charlotte County (pp. 266 and 267), from Overseer Cunningham, of the Inner Bay. Some attempt was made to show that Overseer Cunningham, although the official appointed for the purpose, did not know much about it; but it will be observed that his statements, as well as those of Overseer Best (whose evidence is next quoted), are affirmed by Mr. Venning, the inspector of fisheries for New Brunswick, and inserted in his report under his sanction; and I think that with the minister of marine and fisheries, himself from New Brunswick, at the head of the department, erroneous statements on a subject relating to the fisheries of his own province were not likely to creep into official documents and remain there unobjected to. I think we must assume that these official statements are truer and more reliable than the accounts that come from witnesses. Overseer Cunningham says:

The winter herring fishery, I am sorry to say, shows a decrease from the yield of last year. This, I believe, is owing to the large quantity of nets, in fact miles of them, being set by United States fishermen all the way from Grand Manan to Lepreau, and far out in the bay, by the Wolves, sunk from 20 to 25 fathoms, which kept the fish from coming into this bay. In this view I am borne out by all the fishermen with whom I have conversed on the subject. Our fishermen who own vessels have now to go a distance of six to eight miles off shore before they can catch any. The poorer class of fishermen, who have nothing but small boats, made but a poor catch. However, during the winter months, there were caught and sold in a frozen state to United States vessels 1,200 barrels, at from \$4 to \$5 per barrel. The price being somewhat better than last year, helped to make up the deficiency in their catch.

Then he goes on to speak of the injurious effect of throwing over gurry, which, he says, is practiced by provincial fishermen as well as American, and says that, "as they are fishing far off shore a week at a time, this destructive practice can be followed with impunity and without detection." And Overseer Best speaks of the falling off in line fishing, but says that the yield of herring has exceeded that of the previous year, disagreeing with his friend, Overseer Cunningham. He

attributes the deficiency in line-fishing to the use of trawls. He goes on to say, "The catch was made chiefly in deep water this year, as far out as five to seven miles off the coast, and no line-fish have been taken within two miles, except haddock." He says:

The winter fishing was principally done in deep water. As rough weather prevailed most of the time, the fishermen found it very difficult to take care of their nets, a great many of which are lost. A large number of American vessels now frequent our coasts to engage in this fishery, and pay but little attention to our laws, which prohibit Sunday fishing and throwing over gurry. This I am powerless to prevent over a stretch of 20 miles of coast, on which from 60 to 100 vessels are engaged. A suitable vessel is necessary for this work, and she should cruise around among the fishing-grounds and see that the laws are respected by those who are participating in the benefits of our fisheries.

Of course, it is difficult to prove a negative; but ought not the British Agent to be required, upon a subject of such magnitude as this, to produce some more satisfactory evidence? If a large fleet of American vessels are year by year catching herring within three miles of land, among an equal body of British fishermen, within a limited space near Grand Manan, and if they are taking from a million to a million and a half dollars' worth a year, is it not possible for our friends the minister of marine and fisheries and the learned counsel both from New Brunswick to furnish the names of just one or two vessels, or one or two captains among the great number that are so engaged? A million to a million and a half dollars' worth is the estimate that they put upon the fishery. How many herring do you suppose it takes to come to a million or a million and a half dollars? It takes more than all the herring that are imported into the United States, by the statistics. Just in that little vicinity they say that a greater amount of such fish are taken than are imported into the United States. Now, if an operation of that enormous magnitude is going on, it does seem to me that somebody would know something more definite about it than has appeared in this evidence. Certainly there has been earnest zeal and the most indefatigable industry in the preparation of the British Case. Nobody doubts that. There has been every facility to procure evidence; and are we not entitled to require at the hands of Her Majesty's Government something that is more definite and tangible than has appeared on this subject? I have made all the inquiry in my power, and I cannot find out what the vessels are, who their captains are, from what ports they come, or to what markets they return. We know very well what the Gloucester herring-fleet is. It is a fleet that goes to buy herring; that buys it at Grand Manan; that buys it at the Magdalen Islands; that buys it in Newfoundland. But of any fleet that fishes for herring in the territorial waters of New Brunswick, after the utmost inquiry we can make, we remain totally ignorant.

There is another view of this subject which ought, it seems to me, to be decisive. Everybody admits that herring is one of the cheapest and poorest of fish, and that the former duty of a dollar a barrel, and five cents a box on smoked herring, would be absolutely prohibitory in the markets of the United States. Now, how much must these New Brunswick fishermen gain if they have as large a fishery as we have, and we have a fishery of a million and a half dollars in that vicinity? That is their statement; the British fishery is about equal to the American; the American is very near to one and a half million dollars a year in that vicinity; the British-caught fish go to the United States markets almost exclusively—I think one witness did say two-thirds; everybody else has spoken as if the herring-market was in the United States almost altogether. How many barrels of herring does it take to come to a million dollars?

We will let the other half million be supposed to consist of smoked herring in boxes. How many barrels of herring does it take? Why, it takes three or four hundred thousand. The herring sell for from two to four dollars a barrel. It takes 250,000, 300,000, or 400,000 barrels of herring, and a duty of a dollar is remitted upon each barrel, a duty which would exclude them from our market if it were reimposed. Is not that a sufficient compensation? If you believe that our people catch herring there to any considerable extent, is not that market from which these people derive, according to their own showing, so large sums of money, an equivalent? Remember, they say we catch a million to a million and a half dollars' worth; they say they catch as many; they say it nearly all goes to our market; the duty saved is a dollar a barrel; and, according to their own figures, they must be reaping a golden harvest. Happy fisherman of New Brunswick! By the statistics they earn four or five times as much as the fishermen of Prince Edward Island, and the witnesses say that they earn really two or three times as much as the statistics show. They are receiving from a million to a million and a half dollars for fish sold chiefly in the markets of the United States, and the saving in duty is several hundred thousand dollars. It is true that we cannot find imported into the United States any such quantity of herring; still that is the account that they give of it.

This brings me, gentlemen, to the question of the inshore mackerel fishery: that portion of the Case which seems to me, upon the evidence, to be the principal part, I might almost say the only part, requiring to be discussed. Your jurisdiction is to ascertain the value of those fisheries for a period of twelve years from July 1, 1873, to July 1, 1885.

Of those twelve years, five have already elapsed; one fishing-year has passed since the session of this Commission began. Inasmuch as the twelve years will terminate before the beginning of the fishing-year in the Gulf of St. Lawrence for 1885, it is precisely correct to say, that five years have elapsed and seven remain. It is of no consequence how valuable these fisheries have been at periods antecedent to the treaty, nor how valuable or valueless you may think they are likely to become after the treaty shall have expired. The twelve years' space of time limits your jurisdiction, and five-twelfths of that time is to be judged of by the testimony as to the past. The results of the five years are before you. As to the seven remaining years, the burden of proof is upon Her Majesty's Government to show what benefit the citizens of the United States may reasonably be expected to derive during that time from these fisheries. It will be for you to estimate the future by the past as well as you may be able.

This is purely a business question. Although it arises between two great governments, it is to be decided upon the same principles of evidence as if it were a claim between two men, as if it was a question how much each skipper that enters the Gulf of St. Lawrence to fish for mackerel ought to pay out of his own pocket. We are engaged in what the London Times has truly called a "great international lawsuit," and we are to be governed by the same rules of evidence that apply in all judicial tribunals, not, of course, by the technicalities of any particular system of law, but by those great general principles which prevail wherever, among civilized men, justice is administered. He who makes a claim is to prove his claim and the amount of it. This is not a question to be decided upon diplomatic considerations; it is a question of proof. Money is to be paid for value received, and he who claims the money is to show that the value has been received or will be. If there are extravagant expectations on the one side, that is no

reason for awarding a sum of money. If there is a belief on the other side that the results of the treaty are injurious to a great industry, which nearly all civilized nations have thought it worth while to foster by bounties, that is no argument against rendering compensation. Whatever benefit the citizens of the United States are proved to derive from the inshore mackerel fisheries, within three miles of the shore of the Gulf of St. Lawrence, for that you are to make an award, having regard to the offset, of which it will be my duty to speak at a later period. The inquiry divides itself into these two heads: First, What has been the value from July 1, 1873, down to the present time? and, second, What is it going to be hereafter? I invite your attention to the proof that is before you as to the value of the mackerel fishery since the treaty went into effect. And here I must deal with the question, What proportion of the mackerel is caught in territorial waters, viz, within three miles from the shore? A great mass of testimony has been adduced on both sides, and it might seem to be in irreconcilable conflict. But let us not be dismayed at this appearance. There are certain land-marks which cannot be changed, by a careful attention to which I think we may expect to arrive at a tolerably certain conclusion. In the first place, it has been proved, has it not, by a great body of evidence, that there is, and always has been, in the Gulf of St. Lawrence, a very extensive mackerel fishery clearly beyond British jurisdiction, as to which no new rights are derived by the citizens of the United States from the Treaty of Washington. It is true that the map filed in the British Case, and the original statement of that case, make no distinction between the inshore and the deep-sea mackerel fisheries. To look at this map, and to read the British Case, you would think that the old claims of exclusive jurisdiction throughout the gulf were still kept up, and that all the mackerel caught in the Gulf of St. Lawrence were, as one of the witnesses expressed himself, "British subjects." But we know perfectly well that a United States vessel, passing through the Gut of Canso to catch mackerel in the gulf, will find numerous places where, for many years, the fishing has been the best, where the fish are the largest, and where the catches are the greatest, wholly away from the shore. The map attached to the British Case tells this story, for all through the Gulf of St. Lawrence, the gentlemen who formed that map have put down the places where mackerel are caught; and if the map itself does not indicate that seven-eighths of the mackerel fishing-grounds must be clearly far away from the shore, I am very much mistaken. At the Magdalen Islands, where we have always had the right to fish as near as we pleased to the shore, the largest and the best mackerel are taken. At Bird Rocks, near the Magdalen Islands, where there is deep water close to the rocks, and where the mackerel are undoubtedly taken close inshore (within two or three miles of the Bird Rocks you will find the water to be twenty fathoms deep), all around the Magdalen Islands, the mackerel fishing is stated by the experts who prepared this map to be good the season through. Then we have the Bank Bradley, the Bank Miscou, the Orphan Bank, the Fisherman's Bank, and we have the fishing-ground of Pigeon Hill; all these grounds are far away from the shore, where there cannot be the least doubt that our fishermen have always had the right to fish, aside from any provisions of the present treaty. The most experienced and successful fishermen who have testified before you say that those have been places to which they have resorted, and that there they were most successful.

Look at the testimony of Andrew Leighton, whom we heard of from

the other side early as one of the most successful fishermen that ever was in the gulf. He speaks of the largest season's fishing any man ever had in the bay, 1,515 barrels. He says, "I got the mackerel the first trip at Orphan's and the Magdalens; the second trip at the Magdalens; the third trip at Fisherman's Bank; and I ran down to Margaree and got 215 barrels there, and went home." All the mackerel at Margaree, he says, were caught within two miles of the shore, within the admitted limits. Recall the evidence of Sylvanus Smith and Joseph Rowe, experienced and successful fishermen, who tell you that they cared little for the privilege of fishing within three miles of the land; that they did not believe that vessel-fishing could be prosecuted successfully there, because it required deeper water than is usually found within the distance of three miles to raise a body of mackerel sufficient for the fishermen on a vessel to take the fish profitably; that boat-fishing is a wholly distinct thing from vessel-fishing; that boats may anchor within three miles of the land and pick up a load in the course of a day, at one spot, where mackerel would be too few and too small for a vessel with fifteen men to fish to any advantage. Almost all the evidence in this case of fishing within three miles of the shore relates to the bend of Prince Edward Island and to the vicinity of Margaree. As to the bend of the island it appears, in the first place, that many of our fishermen regard it as a dangerous place, and shun it on that account, not daring to come as near the shore as within three miles, because in case of a gale blowing on shore their vessel would be likely to be wrecked. It appears, also, that even a large part of the boat-fishing there is carried on more than three miles from the shore. Undoubtedly many of the fishermen have testified to the contrary; many of the boat-fishermen from the island have testified that nearly all their fish were caught within three miles; still it does appear, by evidence that nobody can controvert, that a great part of the boat-fishing is more than three miles out. One of the witnesses from the island, James McDonald, says, in his deposition, that from the middle of September to the first of November not one barrel in five thousand is caught outside the limits, and he gives as a reason that the water will not permit fishing any distance from the shore because it is too rough. But it is perfectly obvious that a man who so testifies either is speaking of fishing in the very smallest kind of boats, little dories that are not fit to go off three miles from the shore, and, therefore, knows nothing of vessel or large boat fishing, or else that he is under the same delusion that appears in the testimony of two other witnesses to which I referred in another connection. McNeill, who, on page 42 of the British affidavits, describes the three-mile limit thus: "A line drawn between two points, taken three miles off the North Cape and East Point of this island;" and John A. McLeod, on page 228, who defines the three-mile limit as "a line drawn from points three miles off the headlands." When a witness comes here and testifies that after September not one barrel of mackerel in five thousand is taken outside of the three-mile limit because it is too rough to go so far out, he is either speaking of a little cockleshell of a boat that is never fit to go out more than one or two miles, or else he retains the old notion that the headland-line is to be measured from the two points, and that three miles outside that line (which would be something like twenty-five or thirty miles out from the deepest part of the bend of the island) is the territorial limit.

Mr. THOMSON. If you will read the other portion of his deposition, you will see that your statement is not quite fair.

Mr. FOSTER. "That the fish are nearly all caught close to the shore, the best fishing-ground being about one and one-half miles from the

shore. In October the boats sometimes go off more than three miles from land. Fully two-thirds of the mackerel are caught within three miles from the shore, and all are caught within what is known as the three-mile limit; that is, within a line drawn between two points taken three miles off the North Cape and east point of this island." (McNeill, p. 42.) We will have this evidence accurately, because I think it sheds considerable light on the subject. "That nine-tenths of our mackerel are caught within one and one-half miles from the shore, and I may say the whole of them are caught within three miles of the shore." (McLeod, p. 228.) Somewhere the expression "not one barrel in five thousand" occurs. It is in one of those affidavits; perhaps in the first one. I have read the passage, so as to do no injustice to the statement of the witness.

Mr. Hall testified that for a month before the day of his testimony, that is to say, after about the first week in September, no mackerel were caught within five or six miles of the shore; and he applied that statement to the specimen mackerel which were brought here for our inspection and our taste; and Mr. Myrick, from Rustico, told the same story. Moreover, all their witnesses, in speaking of the prosperity of the fishing business of the island, which has been dwelt upon and dilated upon so much, speak of the fact that not only are the boats becoming more numerous, but they build them larger every year—longer, deeper, and bigger boats—why? To go farther from the shore. So said Mr. Churchill. I call that a pretty decisive test of the question, what proportion of the mackerel is caught within three miles of the shore. What does Professor Hind say on that subject? In the report that has been furnished us, he says (page 90):

Mackerel-catching is a special industry, and requires sea-going vessels. The boat equipment so common throughout British American waters is wholly unsuited to the pursuit of the mackerel, which has been so largely carried on by the United States fishermen. Immense schools of mackerel are frequently left unmolested in the gulf and on the coasts of Newfoundland, in consequence of the fishermen being unprovided with suitable vessels and fishing gear. It is, however, a reserve for the future, which at no distant day will be utilized.

Then he goes on to remark that the use of the telegraph is likely to become of great value in connection with these fisheries.

Now, is there any explanation of these statements, except that the bulk of the mackerel are caught more than three miles off, in the body of the gulf? If it is a "special industry," to which boats are wholly unsuited, can it possibly be true that a great proportion of the fish is caught within three miles of the shore? How can you account for these statements of their scientific witness in his elaborate report, except by the fact that he knows that the mackerel fishery is so large a part of it, a fishery more than three miles off the coast, that it can profitably be pursued only in vessels?

There are two other things, that lie beyond the range of controversy, to which I wish to call your attention. In the first place, there is a statement made by the United States consul at Prince Edward Island, J. H. Sherman, back in 1864, in a communication to the Secretary of State at Washington, long before any question of compensation had arisen—a confidential communication to his own government, by a man who had every opportunity to observe and no motive to mislead. He was writing with reference to the value of the inshore fisheries, and the statement so perfectly corresponds with what I believe to be the real truth, that I desire to read it.

The Reciprocity Treaty seems to have been an unalloyed boon to the colony. The principal benefit that was expected to accrue to the United States by its operation

was from the removal of the restrictions upon our vessels engaged in the fisheries to a distance of three marine miles from the shore; but whatever advantage might have been anticipated from that cause has failed to be realized.

The number of vessels engaged in the fisheries on the shores of this colony has greatly diminished since the adoption of that treaty, so that it is now less than one-half the former number. The restriction to three marine miles from the shore (which we imposed upon ourselves under a former treaty) has, I am assured, but a few, if any advantages, as the best fish are caught outside of that distance, and the vessels are idle in less time, from the fact that the men are liable to no loss of time from idling on the shore.

Next take Appendix E of the British Case. Look at the report of the executive council of Prince Edward Island, made to the Ottawa Government in 1874, with reference to the preparation of this very case. They are undertaking to show how large a claim can be made in behalf of the inshore fisheries of the island, and what do they say (page 3, paragraph 8)?

From the 1st of July to the 1st of October is the mackerel season around our coasts, during which time the United States fishing-fleet pursues its work, and as it has been shown—

I do not know where it has been shown—

that in 1872 over one thousand sail of United States schooners, from 40 to 100 tons, were engaged in the mackerel fishery alone.

More than the whole number of the United States vessels licensed to pursue the mackerel and cod fisheries in that year; so that those statistics were large, and the gentlemen who prepared this statement were not indisposed to do full justice to their claims. They did not mean to understate the use made of the fisheries of the island nor the importance of them to the United States fishermen.

This fact, together with our experience in the collection of "light-money," now abolished, as well as from actual observation, a fair average of United States vessels fishing around our coast during the season referred to may be safely stated at three hundred sail, and as a season's work is usually about six hundred barrels per vessel, *we may fairly put down one-third of the catch as taken inside of the three-mile limit.*

Such was the extent of the claim of the Prince Edward Island Government with reference to the proportion of the inshore and off shore catch of mackerel when they began to prepare this case. After this, they may pile affidavits as high as they please, they can never do away with the effect of that statement. Those gentlemen know the truth. The rest of this paragraph goes on to estimate that \$5 a barrel is the net cost of the fish; but I will not go into that.

Mr. THOMSON. You will adopt that whole paragraph?

Mr. FOSTER. Hardly. I adopt the statement that, in the judgment of the executive council of the island, the strongest claim that they could make as to the proportion of mackerel taken within three miles of the shore was one-third.

But we have more evidence about this inshore fishery, for I am now trying to call your attention to those matters that lie outside the range of controversy, where you cannot say that the witnesses, under the pressure of excited feeling, are making extravagant statements. Let us see what the statement was in the debates upon the adoption of the treaty. Dr. Tupper, of Halifax, in giving an account of the state of the fisheries, says: "The member for West Durham stated that if Canada had continued the policy of exclusion, the American fisheries would very soon have utterly failed, and they would have been at our mercy. This was a great mistake. Last summer he went down in a steamer from Dalhousie to Pictou, and fell in with a fleet of thirty American fishing-vessels, which had averaged three hundred barrels of mackerel in three

weeks, and had never been within ten miles of the shore." I am inclined to concede, for the purposes of the argument, that of the mackerel caught by boats off the bend of Prince Edward Island, about one-third are taken within three miles of the shore. I believe it to be a very liberal estimate, and I have no idea that any such proportion was ever taken by a single United States vessel fishing in that vicinity. I have already alluded to the fact that the boat-fishing and the vessel-fishing are wholly different things, and to the necessity of a vessel being able to raise a great body of mackerel. Do you remember the testimony of Captain Hurlbert, pilot of the *Speedwell*, certainly one of the most intelligent and candid witnesses that has appeared here? He stated that you could not catch the mackerel in any quantities on board vessels off the bend of the island, because the water was not deep enough within three miles. Take the chart used by Professor Hind in connection with his testimony, and see within three miles of the shore how deep the water is. Ten to fifteen fathoms is the depth as far out as three miles. You will hardly find twenty fathoms of water anywhere within the three-mile zone. Captain Hurlbert gave, with great truth, the reason for his opinion, that there was not depth of water enough there to raise a body of mackerel necessary for profitable vessel-fishing. My brother Davies felt the force of that, and cross-examined him about the Magdalen Islands. I have been looking at the chart of the Magdalen Islands, and I have also considered the testimony as to the fishing in that vicinity. A great deal of the fishing at the Magdalen Islands is done more than three miles from the shore. The place where the best mackerel are taken, Bird Rocks, will be found to have twenty fathoms of water within the three-mile limit. And when you come to that locality, where I honestly believe a larger proportion of mackerel are caught within three miles than anywhere else—that is, off Margaree, in the autumn—you will find by the chart that the water there is deep, and that twenty fathoms is marked for quite a distance in a great many localities within three miles of the land. I have always understood the Byron Islands and the Bird Rocks to be a part of the Magdalen Islands, and they have always been so testified to by the witnesses. When they have spoken of the Magdalen Islands, they have included fishing in those two localities as within the Magdalen Islands fisheries. In speaking of localities, they name the Bird Rock, but they speak of it as part of the Magdalen Islands. That particular question of geography may deserve more attention hereafter. I cannot now pause to consider it.

Right here let me read from an early report on this subject of fishing inshore. Captain Fair, of Her Majesty's ship *Champion*, in 1839, says that he passed through a fleet of six or seven hundred American vessels in various positions, some within the headlands of the bays and some along the shores, but none within the three-miles interdiction. While cruising in the vicinity of Prince Edward Island, he states that there was not "a single case which called for our interference or where it was necessary to recommend caution; on the contrary, the Americans say that a privilege has been granted them, and that they will not abuse it." —(Sabine's Report on the Fisheries, page 410.)

There is something peculiar about this Prince Edward Island fishery and its relative proportion to the Nova Scotia fishery. As I said before, I am inclined to believe that the greatest proportion of mackerel caught anywhere inshore is caught off Margaree late in the autumn. The United States vessels, on their homeward voyage, make harbor at Port Hood, and lie there one or two weeks; while there, they do fish within three miles of Margaree Island; not between Margaree Island and the

mainland, but within three miles of the island shores; and just there is found water deep enough for vessel-fishing. Look at the chart, which fully explains to my mind the inshore fishing at this point. Margaree is a part of Nova Scotia, and Professor Hind says there is an immense boat-catch all along the outer coast of Nova Scotia, and estimates that of the Dominion mackerel catch Quebec furnishes 7 per cent. (he does not say where it comes from), Nova Scotia 80 per cent., New Brunswick 3 per cent., and Prince Edward Island 10 per cent. Considering the fact that the preponderance of the testimony in regard to the mackerel fishery comes from Prince Edward Island, is it not strange that it does not furnish more than 10 per cent. of the entire catch; that is, not more than 12 or 16,000 barrels of mackerel a year? But this accords with the report of J. C. Tache, deputy minister of agriculture (pages 43 and 44), which is the most intelligible report or statistical memoranda of the Canadian fisheries that I have found. It bears date 1876, and in narrow compass, is more intelligible to me, at least, than the separate statements which I am obliged to draw from the large volumes. Mr. Tache says that "the figures of the Fisheries' Report are a very great deal short of the real quantities caught every year, as regards cod and herring, although coming quite close to the catch of mackerel. The reason is, that it is specially from large commercial houses, which are principally exporters of fish, that the information is gathered by the fisheries officers; then it comes that mackerel, being principally obtained for exportation and held in bond by large dealers, is found almost adequately represented in these returns.

When I called Professor Hind's attention to these statements, and remarked to him that we had not heard much said about the places where mackerel were caught in Nova Scotia, he replied it was because there was an immense boat-catch on the coast. If there has been any evidence of United States vessels fishing for mackerel within three miles of the shores, or more than three miles from the shore of the outer coast of Nova Scotia, it has escaped my attention. There is no considerable evidence, I do not know but I might say no appreciable evidence of United States vessels fishing for mackerel off the coast of Nova Scotia (I am not now speaking of Margaree, but the coast of Nova Scotia). As to Cape Breton, very little evidence has been given except in reference to the waters in the neighborhood of Port Hood.

You will observe that this estimate of the Prince Edward Island fisheries, ten per cent., must be nearly correct. It is larger than the returns of exportation, a little larger than Mr. Hall's estimate, and I think if I say that from 12 to 15,000 barrels of mackerel are annually exported from Prince Edward Island, I shall do full justice to the average quantity of fish caught there. Now it does seem to me that there has been no evidence that can tend to lead you to suppose that the quantity taken by United States vessels in that neighborhood since the Treaty of Washington, five years ago, compares at all in magnitude with the quantity taken by the island vessels themselves.

There are some other topics connected with the mackerel catch to which I want to call your attention. Remember, gentlemen, always, that we hold this investigation down to the period of the treaty; and that you have no right to make any award against the United States for anything anterior to the first day of July, 1873, or subsequent to twelve years later than that.

Now, I wish to present some figures relative to the years that have elapsed since the fishery clauses of the Treaty of Washington took effect. I will begin with 1873. That year the Massachusetts inspection of

mackerel was 185,748 barrels; the Maine inspection was 22,193 barrels; the New Hampshire inspection was 2,398 barrels. (I am quoting now from Appendix O.) The total amount of the Massachusetts, Maine, and New Hampshire inspection, for the year 1873, is 210,339 barrels. That is the entire amount caught by United States vessels and boats around our shores, coasts, and in the Gulf of St. Lawrence. Whatever comes from our vessels appears in the inspection. During that year, we are favored with the returns from Port Mulgrave; and, allowing for a little natural spirit of exaggeration, which some might attribute to the patriotic feelings of the collector, and others to the disposition of American fishermen to tell as good stories of their catch as they can, we find the Port Mulgrave returns to be pretty accurate. They are a few per cent. in excess of the statistics of the catches, with which I have compared them to some extent; but still are tolerably accurate and fair returns for that year. They give 254 vessels, with an average catch of 348 sea-barrels and 313 packed barrels, aggregating 88,012 sea-barrels. Taking off ten per cent. for loss by packing, which accords with the current of the testimony—the Port Mulgrave inspector estimates the loss by packing to be $7\frac{1}{2}$ per cent., and he estimates 15 barrels off, but the current of the testimony makes it ten per cent.—the aggregate was 79,211 packed barrels. Of the 254 vessels, 131 came from Gloucester. Of these 254 vessels, 25 were lost that year, a loss of ten per cent. of all the United States vessels that were in the gulf. One-tenth part of all the vessels that came to the gulf that year were lost. That is the largest catch that our vessels have made since the treaty. Of that 79,211 barrels, which were caught by United States vessels in the Gulf of St. Lawrence, in the year 1873, what proportion are you prepared to assume was caught inshore? Is not a third a liberal estimate? Taking the Magdalen Islands, taking Bank Bradley, taking Orphan Bank, taking Miscou Bank, taking the Pigeon Hill grounds, taking the fishing off the bend of the island, that place where Captain Rowe said he always found the best and largest fish, inside of New London Head, 12 or 15 miles out—taking all these well-known localities into consideration, I ask whether there can be any doubt that it is a very liberal estimate, indeed, to say one-third was caught inshore? I do not think that all the mackerel taken by the United States vessels inshore, in all parts of the Gulf of St. Lawrence, averages an eighth or a tenth of the total catch, but I will assume for the moment one-third, the proportion which the Executive Council of Prince Edward Island thought a fair average for the shores of their island. That would make 26,404 barrels caught in British territorial waters in that year, the first year of the treaty. What were these mackerel worth? Mr. Hall tells you that he buys them landed on shore for \$3.75 a barrel. After they have been caught, after the time of the fishermen has been put into the business, he buys them for \$3.75 a barrel. If they are worth \$3.75 a barrel when they are caught, what proportion of that sum is it fair to call the right to fish for them worth? You may set your own figures on that. Call it one-half, one-third, or one-quarter. I should think it was somewhat extraordinary if the right to fish in a narrow zone three miles wide was worth any large portion of the value of the fish after they were caught and landed. But you may estimate that as you please. I will tell you how you will come out if you charge us with having caught a third of our fish inshore that year, and with the full value that Mr. Hall pays for them after they are caught. It is \$99.015.

That was the first year of the treaty, and there were imported into the United States from the British Provinces 90,889 barrels, on which

the duty of \$2 a barrel would amount to \$181,778. The value of the fish that our people caught is \$99,000, and the British fishermen gain in the remission of duties nearly \$182,000.

Look at it in another way. Does anybody doubt that, barrel for barrel, the right to import mackerel free of duty is worth more than the right to fish for them? Is not the right to carry into the United States market, after they are caught, a barrel of mackerel, worth as much as the right to fish for a barrel of mackerel off the bight of the island? Estimating it so, 90,889 barrels came in duty free, and there were caught in the gulf by American vessels, 79,211 barrels. That is the first year of the treaty, and by far the best year.

The next year, 1874, the Massachusetts inspection was 253,330 barrels. Since 1873 there has been no return from Maine. There is no general inspector, and the Secretary of State informs us that the local inspectors do not make any returns. I suppose that if you call the Maine catch 22,000 barrels, the same as the year before, you will do full justice to it, for the Maine mackerel fishery, according to the testimony, has obviously declined for years. The inspection in New Hampshire was 3,519 barrels. There was imported into the United States that year from the provinces, 89,693 barrels, on which there was saved a duty of \$179,386. That year the Port Mulgrave returns show 164 vessels to have been in the Gulf of Saint Lawrence, of which 98 came from Gloucester; 63,078½ sea-barrels, or 56,770 packed barrels, were taken. The Gloucester vessels caught 48,813 barrels. Take these 56,770 packed barrels as the aggregate catch in the year 1874 in the Gulf of Saint Lawrence, by United States vessels, and set them off against the 89,693 barrels imported into the United States, and where do you come out? Pursuing the same estimate, that one-third may have been caught inshore—an estimate which I insist is largely in excess of the fact—there would be 18,923 barrels caught inshore, which would be worth \$70,961, at Mr. Hall's prices; and you have \$70,961 as the value, after they are caught and landed, of the mackerel we took out of British territorial waters, to set against a saving of \$179,386 on American duties. That is the second year.

Now, come to 1875. That year the catch was small. The Massachusetts inspection was only 130,064; the New Hampshire inspection, 3,415 barrels. The provincial importation into the United States is 77,538 barrels. That fell off somewhat, but far less than the Massachusetts inspection, in proportion. The duty saved is \$155,076. Fifty-eight Gloucester vessels are found in the bay, as we ascertain from the Centennial book, and Mr. Hind, speaking of the mackerel fishery in 1875, and quoting his statistics from some reliable source, says, "the number of Gloucester vessels finding employment in the mackerel fishery in 1875 was 180. Of these, 93 made southern trips, 117 fished off shore, and 58 visited the Bay of St. Lawrence; 618 fares were received, 133 from the south, 425 from off shore, and 60 from the bay." (Hind's Report, pp. 88, 89.) Fifty-eight vessels from Gloucester made 60 trips.

Now, where are the Port Mulgrave returns for 1875? They were made, for we have extracted that fact. We have called for them. I am sure we have called often and loud enough for the Port Mulgrave returns of 1875 and 1876. Where are they? They are not produced, although the collector's affidavit is here, as well as the returns for 1877, which we obtained, and of which I shall speak hereafter. The inference from the keeping back of these returns is irresistible. Our friends on the other side knew that the concealment of these returns was conclusive evidence that they were much worse than those of the previous year, 1874; and

yet they preferred to submit to that inevitable inference rather than have the real fact appear. Rather than to have it really appear how much the 58 Gloucester vessels caught in the bay that year, they prefer to submit to the inference which must necessarily be drawn, which is this—and it is corroborated by the testimony of many of their witnesses—that that year the fishing in the bay was a total failure. I can throw a little more light on the result of the fishing in the bay that year. There were 58 vessels from Gloucester, which averaged a catch of 191 barrels, while 117 on the United States coast caught an average of 409 barrels. This comes from the statistics for the Centennial: 11,078 barrels of mackerel taken from the Gulf of St. Lawrence in 1875 is all that we know about. What more there were our friends will not tell us, because the aggregate of 11,078 barrels caught by 58 vessels, averaging 191 barrels a vessel, is so much better result than the Port Mulgrave returns would show, that they prefer to keep the returns back. I think, gentlemen, that this argument from the official evidence in your possession is one that, under the circumstances, you must expect to have drawn. That year, so far as we know, only 11,078 barrels of mackerel came out of the gulf; but double it. You will observe that more than half of the vessels have come from Gloucester every year. The previous year, there were 98 out of 164. Let us double the number of vessels that came from Gloucester. Suppose that there were as many vessels came from other places, and that they did as well. The result would give you 23,156 barrels. Take the actual result of the Gloucester vessels; suppose as many more came from other places, when we know that the previous year a majority came from Gloucester, (I want to be careful in this, for I think it is important), and about 23,000 barrels of mackerel were taken out of the Gulf of St. Lawrence in the year 1875, against an importation of 77,538 barrels into the United States from the provinces, on which a duty was saved of \$155,076.

In the year 1876, by the official statement, which was lost, 27 trips were returned to the custom-house as being made by Gloucester vessels to the Gulf of St. Lawrence. I cannot verify that; it depends merely upon memory. We have not had the Port Mulgrave returns. I give my friends leave to put them in now, if they will do so, or give us an opportunity to examine them. I invite them to put them in now if they think I am overstating the result. There were 27 Gloucester vessels (I may be in error about this; it is mere memory) came to the gulf in 1876. The Massachusetts inspection was 225,941 barrels; the New Hampshire inspection was 5,351 barrels. The United States importation was 76,538 barrels. Duty saved, \$153,076. To be sure, they will say that 1875 and 1876 were poor years. They were poor years—no doubt about that—but average them with 1873 and 1874 and see if the result is in the least favorable; see if they are able to show any considerable benefit derived by our people from inshore fishing, or anything which compares with the saving in respect to duty that they make.

When we began this investigation nearly every witness that was examined was asked whether the prospects for the present year were not very good; whether it was not likely to be an admirable mackerel year in the gulf, and they said "Yes." They said the gulf was full of mackerel. Somehow or other that impression got abroad, and our vessels came down here in greater numbers than before for several years. One witness has seen 50 or 75 vessels there. I think 76 came from Gloucester. There may have been 100 there in all. You will recollect that one witness said the traders in Canso telegraphed how fine the prospects were, with a view probably to increase their custom; but they did ex-

pect that the fishing in the Gulf of St. Lawrence was to be better than it had been for a long time. Let us see what has happened this year. We have a part of the Port Mulgrave returns; down to the 25th of September, 1877. There is another page or half a page which our friends have not furnished us. I invite them to put that in now. I would like it very much. But so much as we were able to extract produced the following result: 60 vessels; 8,365½ barrels; an average of 139½ sea-barrels or 125 packed barrels; and one of our affidavits says that the fish on one vessel were all bought. The John Wesley got 190 barrels, very much over the average, and the witness said he went to the gulf, could not catch any mackerel, and thought he would buy some of the boatmen. But 125 packed barrels is the average catch, and 8,365½ is the total number of barrels. Now, multiply that by the value of the mackerel after they are landed and see what is the result. It is about \$31,370.

I will not stop to do that sum accurately, because it is too small; but I will call your attention to the results of the importation this year. The importations into Boston, to October 1, from Nova Scotia and New Brunswick, were 36,576 barrels; from Prince Edward Island, 14,549½ barrels; in all, 51,125½ barrels, which would amount in duty saved to \$102,251, up to the 1st of October. It is not strictly evidence, and if my friends object to it, it may be stricken out; but here is the last report of the Boston Fish Bureau, that came yesterday, which gives later results. Up to November 2, there had been 77,617 barrels imported into Boston from the provinces, more than double the amount that was imported in 1876, up to the same time; so that, while there has been this great falling off in the vessel fishery in the gulf—it is a total failure to-day—there has been double the catch by boats, and double the catch by the Provincial fishermen. They have saved \$155,234 of duty as against something like \$30,000 worth of fish, when they are caught. It may be said that these returns will not represent the average, but we had a witness here, the skipper of the schooner Eliza Poor, Captain William A. Dickie, who testified on page 264 of the American evidence, that he had 118 sea-barrels, or 106 packed barrels. He was one of those men who happened into Halifax, on his schooner, and upon cross-examination it was drawn from him by Brother Doutre, that Mr. Murray, the collector at Mulgrave, told him that he had an average or more than an average of the catch of the United States fleet. He saw fifty United States vessels in the gulf. In the absence of more complete returns, that is the best account I am able to give of the condition of the mackerel fishery in the Gulf of St. Lawrence since the Treaty of Washington was enacted.

I might confirm this by calling your attention to the testimony of witnesses from the other fishing towns in Massachusetts, Provincetown, Wellfleet, and other places, showing how the number of their vessels has decreased, and that the business is being abandoned, so far as the Gulf of St. Lawrence goes. Whatever is left of it is concentrated in Gloucester, and there its amount is insignificant.

I have spoken incidentally of the amount of duties saved upon the Provincial catch. On the subject of duties I propose to speak separately by and by; but I do not wish to leave this branch of the subject without calling your attention to what strikes me as evidence so convincing that it admits of no answer. We have shown you how, under the operation of the Treaty of Washington, or for natural causes, the mackerel fishery of the United States vessels in the Gulf of St. Lawrence has been dwindling down; that hardly any profitable voyages have been made to the gulf since the treaty. Certainly there has been no year when the

fishing of our vessels in the gulf has not been a loss to the fishermen. Let me call your attention to the fisheries of the provinces. In 1869, Mr. Venning, in making his fishery report, after speaking of the falling off in the mackerel catch, went on to say: "This may be accounted for chiefly by stating that a large proportion of our best mackerel catchers ship on board American vessels on shares, and take their fish to market in those vessels, and thus evade the duty; but after selling their fish, for the most part return home with the money."

The Hon. S. Campbell, of Nova Scotia, in the debate on the Reciprocity Treaty, says:

Under the operation of the system that had prevailed since the repeal of the treaty of 1854, the fishermen of Nova Scotia had, to a large extent, become the fishermen of the United States. They had been forced to abandon their vessels and homes in Nova Scotia and ship to American ports, there to become engaged in aiding the commercial enterprises of that country. It was a melancholy feature to see thousands of young and hardy fishermen compelled to leave their native land to embark in the pursuits of a foreign country, and drain their own land of that aid and strength which their presence would have secured.

Mr. James R. McLean, one of our witnesses, was asked whether the condition of things was not largely due to want of capital, and he said:

It was owing to this reason: We had to pay \$2 a barrel duty on the mackerel we sent to the United States, and the men would not stay in the Island vessels when they saw that the Americans were allowed to come and fish side by side with the British vessels, and catch an equal share of fish; of course, this was the result. The fishermen consequently went on the American vessels; our best men did so, and some of the very best fishermen and smartest captains among the Americans are from Prince Edward Island and Nova Scotia.

Captain Chivirie, the first and favorite witness called on the British side, says:

Q. What class of men are the sailors and fishermen employed among the Americans?—A. I would say that, for the last fifteen years, two-thirds of them have been foreigners.

Q. What do you mean by the term "foreigners"?—A. That they are Nova Scotians, and that they come pretty much from all parts of the world. Their fishermen are picked pretty much out of all nations.

Q. If the Americans were excluded from our fishing privileges, what do you think these men would do?—A. They would return to their native home and carry on fishing there.

Q. Have many of them come back?—A. O, yes. We have a number of Island men who have returned. A large number have done so. A great many come home for the winter and go back to the States in the spring; but during the past two years many of this class have come down to remain. This year I do not know of more than a dozen, out of three hundred in my neighborhood, who have gone back. They get boats and fish along the coast, because they find there is more money to be secured by this plan of operations. The fisheries being better, the general impression is that they are all making towards home to fish on their own coast.

James F. White says in his affidavit, put in on the British side:

The number of boats fishing here has trebled in the last three years. The reason of this increase is that other business is depressed, and fishermen from the United States, Newfoundland, New Brunswick, and Nova Scotia are coming here to settle, attracted by the good fishing, so that we are now able to get crews to man our boats, which formerly we were unable to do. Another reason is that the year 1875 was a very good year, and owing to the successful prosecution of the fishing that year, people's attention was turned to the business, and they were incited to go into it.

And another of their men, Meddie Gallant, says in his affidavit:

In the last five years, the number of boats engaged in fishing in the above distances has at least doubled. At this run alone there has been a very great increase. Eight years ago there were only eight boats belonging to this run, now there are forty-five. The boats are twice as good in material, fishing outfit, in sailing, in equipment, in rigging, and in every way, as they were five years ago. There is a great deal more money invested in fishing now than there was. Nearly every one is now going into the business about here. The boats, large and small together, take crews of about three men each. That is, besides the men employed at the stages about the fish, who are a considerable number.

So then, while the mackerel-fishing of our vessels in the gulf has been diminishing, theirs has been largely increasing. What! all this, and money too! Is it not enough that two, three, or four times as much fish is taken by them as before the treaty? Is it not enough that they are prosperous, that those who have left them are returning home, and everybody is going into the business? Can they claim that they are losers by the Treaty of Washington? Is it not plain that they have, in consequence of its provisions, entered upon a career of unprecedented prosperity?

At this point Mr. Foster suspended his argument, and the Commission adjourned until Tuesday, at noon.

TUESDAY, *November 6, 1877.*

The Commission met, according to adjournment, and Mr. Foster resumed his argument.

GENTLEMEN OF THE COMMISSION: At the adjournment yesterday, I had been giving some description of the quantity of the mackerel fishing since the Treaty of Washington by American vessels in the Gulf of St. Lawrence and in the vicinity of British waters. For the years 1873 and 1874, I am content to rest upon the information derived from the Port Mulgrave statistics. With reference to the subsequent years, 1875, 1876, and 1877, there are one or two pieces of evidence to which I ought, perhaps, specifically to refer. Your attention has already been called to the fact that the Magdalen Islands and the Banks in the body of the Gulf of St. Lawrence, of which Professor Hind says there are many not put down on the chart ("wherever you find banks," he says, "there you expect to find mackerel"), have been the principal fishing grounds of the United States vessels for many years. The disastrous results of the great gale of 1873, in which a large number of United States vessels were lost, and in which more than twenty Gloucester vessels went ashore on the Magdalen Islands, show where, at that time, the principal part of the mackerel fleet was fishing. In 1876, the report of the Commissioner of Fisheries for the Dominion speaks of the number of vessels that year found at the Magdalen Islands. He says, "About one hundred foreign vessels were engaged fishing this season around the Magdalen Islands, but out of that number I do not calculate that there were more than fifty engaged mackerel fishing, and, according to the best information received, their catch was very moderate."

We have also the statement of one of the Prince Edward Island witnesses, George Mackenzie, on page 132 of the British evidence, who, after describing the gradual decrease of the American fishery by vessels, says, "There has not been for seven years a good vessel mackerel fishery, and for the last two years it has been growing worse and worse." He estimates the number of the United States vessels seen off the island at about fifty. We have also the testimony of Dr. Fortin on the subject, who spent a number of weeks this year, during the height of the fishing season, in an expedition after affidavits, that took him all around the gulf, where he could not have failed to see whatever American vessels were fishing there. He says he "may have seen about 25 mackereling and sailing about," and that he heard at the Magdalen Islands there were seventy. According to the best information that I can obtain, that is not far from correct. Joseph Tierney, of Souris, says that there were twenty or thirty at Georgetown, fifteen or twenty at Souris, and he should think when he left home there were seventy-five. Ronald Mac-

donald, of East Point, says that he has not seen more than thirty sail this year at one time together; that last year he saw as many as a dozen and perhaps fifteen or twenty sail at a time. The number has diminished very much, he says, for the last five or six years, until this year.

Now, gentlemen, this is the record of the five years during which United States fishermen, under the provisions of the Treaty of Washington, have derived whatever advantages they could obtain from the inshore fisheries. I have heard the suggestion made that it would have been better if this Commission had met in 1872, because there might have then been evidence introduced with reference to the whole twelve years of the Treaty of Washington; and I have even heard it said that it would have been fair to estimate the value of the privilege for the twelve years according to the appearance at that time. That is to say, that it would have been fairer to estimate by conjecture than by proof, by anticipation than by actual results. It seems to me, on the contrary, gentlemen, that the fairer way would have been either to have the value of this privilege reckoned up at the end of each fishing year, when it could be seen what had actually been done, or to have postponed the determination of the question until the experience of the whole twelve years, as matter of evidence, could be laid before the Commission.

What shall we say of the prospects of the ensuing seven years? What reason is there to believe that the business will suddenly be revolutionized; that there will be a return to the extraordinary prosperity, the great number of fish, and the large catches that are said to have been drawn from the gulf twenty-five, twenty, fifteen years ago? We were told that the time for the revolution had come already when we met here, but the result proves that the present season has been one of the worst for our fishermen. What chance can you see that a state of things will ensue that will make the privilege any more valuable for the seven years to come than it has been for the five years already passed? Have you any right to assume that it is to be better without evidence? Have you any right, when you are obliged to judge of the future by the past, to go back to a remote past, instead of taking the experience of recent years? Would it be just for you to do so? This Commission, of course, does not sit here to be generous with the money of the Government of the United States, but simply to value in money what the citizens of the United States have under the treaty received, and are proved to be about to receive. It is, therefore, to be a matter of proof, of just such proof as you would require if you were assessing a charge upon each fishing-vessel, either as it entered the gulf or as it returned with its mackerel.

We think there have been, heretofore, quite good standards by which to estimate the values of the inshore fisheries. For four years a system of licenses was enforced. In the year 1866 the license-fee charged was only fifty cents a ton, except at Prince Edward Island, where it seems to have been sixty cents a ton. In 1867 it was raised to a dollar a ton, and \$1.20 at Prince Edward Island. In 1868 it was two dollars a ton, and \$2.40 at Prince Edward Island. The reason for the additional price on the island I do not know, but it is not, perhaps, of much consequence. Our fishermen told you that the motive that induced them to take out these licenses was twofold. In the first place, they desired to be free from danger of molestation. In the next place they did not desire, when there was an opportunity to catch fish within three miles of the shore, to be debarred from doing so; and if the license-fee had remained at the moderate price originally charged no doubt all of our vessels would have continued to pay the license as they did the first year. Three hun-

dred and fifty-four was the number of licenses the first year; but when the price was raised to a dollar a ton, half the number of vessels found it expedient to keep where they had always been allowed to go; to fish remote from the shore; even to avoid doubtful localities; to keep many miles out on the banks rather than pay a sum that would amount, on the average, to \$70 a trip; and when the price was raised to two dollars a ton hardly any of the vessels were willing to pay it. The reason why they would not pay it was not that they were contumacious and defiant. They were in a region where they were liable to be treated with great severity, and where they had experienced, as they thought, very hostile and aggressive treatment. They desired peace; they desired freedom. They did not wish to be in a condition of anxiety. Neither the captains of the vessels on the sea, nor the owners of the vessels at home, had any desire to feel anxiety and apprehension. The simple reason why they did pay when it was fifty cents a ton and ceased to pay when it became one dollar or two dollars a ton, was that the price exceeded, in their judgment, the value of the privilege. There were not mackerel enough taken within the inshore zone to make it worth their while to give so much for it. Whatever risk they were subjected to, whatever inconvenience they were subjected to from being driven off the shore, they preferred to undergo. If a license to fish inshore was not worth a dollar a ton in 1868 and 1869, in the halcyon days of the mackerel fishery, can anybody suppose it really is worth as much as that now? But fix the price of the license fee as high as you please. Go to this question as a question of computation, on business principles, pencil in hand; estimate how much per ton it is worth, or how much per vessel it is worth, and see to what result you are brought by the figures. Nobody thinks that for some years past there have been in the Gulf of St. Lawrence three hundred vessels from the United States fishing for mackerel. The average tonnage is put by no one at over 70 tons. That is about the average of Gloucester tonnage, and the vessels that come from Gloucester are larger than those that come from other places. Three hundred vessels, at \$70 a vessel, \$21,000 per annum. Put whatever you please per ton, and state the account; debit the United States with that, and see what the result is when you come to consider the duties. If it is called two dollars a ton, the highest price ever charged, it will be about \$42,000 a year.

Is there any prospect whatever that the mackerel fishery for American vessels in the Gulf of St. Lawrence will ever become prosperous? In order that it should do so, there must concur three things, of no one of which is there any present probability. In the first place, there must be much poorer fishing off the coast of the United States than usual, for as things have been there for some years past, until the present year, the fishing for mackerel was so much more profitable than it had ever been in the Gulf of St. Lawrence that there was no temptation for our vessels to desert our own shores; and off the shores of the United States seining can be pursued, which never has been successfully followed in the gulf. Seining mackerel is about the only really profitable mode of taking the fish, as a business out of which money can be made to any considerable amount. The days for hook-and-line fishing have passed away, and seining is the method by which the fish must be taken if money is to be made. That has never yet been done, and is not likely to be done, in the gulf. The bottom is too rough; the water is too shallow. The expedient that we were told at the beginning of the bearing had been adopted turns out to be impracticable, for shallow seines alarm and frighten away the fish. The seines are not made shallow to

accommodate themselves to the waters of the gulf. Year by year they are made longer and deeper, that a school of fish may be more successfully enveloped by them. Then there must also be much better fishing in the gulf than has existed for several years past. It has been going down in value every year since the treaty went into effect. It has got down to an average by the Port Mulgrave returns (I mean by the portion of the returns which we have) of 125 barrels a vessel this year, and, according to the verbal statement of the collector of Port Mulgrave, 108 barrels is quite up to the average. If any one takes the trouble to go through the returns we have put into the case and analyze them, it will appear that 108 barrels is quite as large as the average this year. Some vessels have come out of the gulf with nothing at all, and some with hardly anything at all. In the next place, in order to induce American vessels to go for mackerel to the Gulf of St. Lawrence in any considerable numbers, mackerel must have an active market at remunerative prices. There must be a different state of things in the United States in that respect from what has existed for many years past, for, by all accounts, the demand has been declining and the consumption has been diminishing for ten years past.

Without stopping to read at length the testimony on that point, there are two or three of the British witnesses who in a short compass state the truth, and to their testimony I wish to call your attention. Mr. Harrington, of Halifax, page 420, says, in answer to the question, "There has not been as much demand for mackerel from the United States for the last five years as formerly?" "Not so great." And in reply to the question, "There must be an abundant supply at home, I suppose?" he says, "I should say so, unless the people are using other articles of food." Mr. Noble, another Halifax witness, page 420, being asked the same question, says, "I think for the past two years the demand for mackerel has been quite as good as before." Mr. Hickson, of Bathurst, is asked this question, "Fresh fish are very rapidly taking the place of salt mackerel in the market, and the importance of salt mackerel and other cured fish is diminishing more and more every year. Is not this the case?" His answer is, "That is my experience in my district." "And owing to the extension of the railroad system and the use of ice-cars, pickled, salt, and smoked fish will steadily become of less consequence?" "Certainly." Mr. James W. Bigelow, of Wolfville, Nova Scotia, on page 223 of the British evidence, states very emphatically the practical condition of the business. He says, "The same remark applies not only to cod-fishing, but to all branches of the fishery; within the past ten years the consumers have been using fresh instead of salt fish. The salt-fish business on the continent is virtually at an end." He is sorry to say that he states this from practical knowledge of this business. He then goes on to say that fish is supplied to the great markets of the United States "from Gloucester, Portland, and New York; but from Boston principally." "And the fish is sent where?" "To every point West, all over the Union; the fish is principally boxed in ice." Then he goes on to state that if the arrangements of the Treaty of Washington should become permanent, instead of being limited to a term of twelve years, with the new railroad communication with this city that has been already opened, the result will be to make Halifax the great fish-business center of the continent; that the vessels will come in here with their fresh fish instead of of going to Gloucester or Boston or New York; that a great business, a great city, will be built up here; and he says that, notwithstanding the treaty is liable to terminate in seven years, he is expecting to put his own money into the business, and es-

establish himself in the fresh-fish business here. Our own witnesses—the witnesses for the United States—have given a fuller and more detailed explanation of this change that has taken place in the markets. It requires no explanation to satisfy any person, with the ordinary organs of taste, that one who can get fresh fish will not eat salt mackerel. Everybody knows that. *Crede experto*. Our witnesses tell you that fresh fish is sent as far as the Mississippi, and west of the Mississippi, in as great abundance as is to be found on the seaboard. It is just as easy to have fresh fish at Chicago and Saint Louis, and at any of the cities lying on the railroad lines one or two hundred miles west of the Mississippi, as it is to have fresh fish in Boston or Philadelphia. It is only a question of paying the increased price of transportation. Salt fish has to be transported there also, and it costs as much to transport the salt fish as the fresh fish. The result is, that people will not and do not eat salt fish nearly as much as formerly. Then there is a great supply of lake herring—a kind of white-fish—from the northern lakes. The quantity is so great that the statistics of it are almost appalling, although they come from the most authentic sources. This lake herring being sold at the same price as the inferior grades of mackerel—being sold often lower than the cheapest mackerel can be afforded—is taken in preference to it. People find it more agreeable.

At the South, where once there was a large mackerel demand usually, there has grown up an immense mullet business, both fresh and cured, that has taken the place of salt mackerel there. And so it has come to pass that there is a very limited demand in a few large hotels for that kind of salt mackerel which is the best, the No. 1 fat mackerel—a demand that would not take up, at the usual price in the market, \$20 a barrel, more than from five to ten thousand barrels all over the country, while, if you go down to the poorer grades of mackerel, few will buy them until they get as low as from \$7 to \$8 a barrel. I am not going over the testimony of Proctor, Pew, Sylvanus Smith, and our other witnesses on this subject, because what they have said must be fresh in the minds of all of you. It comes to this: people will not eat the mackerel unless they can buy it at a very low price. It comes into competition, not with other kinds of fish alone, but with every description of cheap food, and its price can never be raised above the average price of other staples in the market of equivalent food-value.

If it is to be impossible to dispose of considerable quantities of these fish until the price is brought down to about \$8 a barrel on the average, what inducement will there be to come, at great expense, to the Gulf of St. Lawrence, to have such results as for years past have followed from voyages here? The truth, gentlemen, is simply this: whether it is a privilege to you not to see United States vessels here, or whether their presence here has some incidental benefit connected with it, you are going to find for years to come that they will not be here. The people in the Strait of Canso who want to sell their supplies, will find them not there to buy supplies, and the unhappy fishermen who suffer so much from having them in the neighborhood of the island will be exempt from all such evil consequences hereafter. Once in two or three years, if there appears to be a chance of a great supply here, and if there happens to be a great failure on our own coast, a few of our vessels will run up in midsummer to try the experiment. But as to a large fleet of United States vessels fishing for mackerel in the Gulf of St. Lawrence, there is no immediate prospect that such will ever be the duty years ago fishing for mackerel died out in the Bay of Fundy—according to the witnesses many years ago mackerel were ex-

tremely abundant in the waters in the vicinity around Newfoundland. They have disappeared from all of those places, though, strange to say one schooner did get a trip of mackerel in a Newfoundland bay this summer, off the French coast, so that we are not obliged to pay for it in the award of this Commission; it was in waters where we had a right to fish before the Treaty of Washington. But this business, notoriously precarious, where no man can foretell the results of a voyage, or the results of a season, will pretty much pass away, so far as it is pursued by United States vessels. They will run out on our own coast; they will catch what they can and carry them to market fresh, and what cannot be sold fresh they will pickle. They will, when prospects are good, make occasional voyages here, but as for coming in great numbers, there is no probability that they will ever do it again. Our friends in Nova Scotia and upon the island are going to have the local fishery to themselves; I hope that it will prove profitable to them; I have no doubt it will prove reasonably profitable to them, because they, living on the coast, at home, can pursue it under greater advantages than the men of Massachusetts can. They are very welcome to all the profits they are to make out of it, and they are very welcome, if they are not ungenerous in their exactions from us, to all the advantages they derive from sending the fish that they take in their boats or vessels in Nova Scotia and Prince Edward Island to our markets, all they can make by selling them there. I am sure no one will grudge them.

I come now to a branch of this case which it seems to me ought to decide it, whatever valuation, however extreme, may be put upon the quantity of mackerel caught by our vessels in the territorial waters of the provinces. I mean the duty question; the value of the remission of duties in the markets of the United States to the people of the Dominion. We have laid the statistics before you, and we find that in 1874 there was \$335,181 saved upon mackerel and herring, and \$20,000 more saved upon fish-oil. There was, therefore, \$355,972 saved in 1874. In 1875 there was a saving of \$375,991 and some cents; in 1876, \$353,242. I get these figures by adding to the results of table No. 4, which shows the importation of fish, the results of table No. 10, which shows the fish oil. The statistics are Mr. Hill's. In table No. 5 you will find the quantities of mackerel and herring. The dutiable value of mackerel was two dollars a barrel; of herring, one dollar a barrel, and of smoked herring, five cents a box.

We are met here with the statement that the consumer pays the duties; and our friends on the other side seem to think that there is a law of political economy as inexorable as the law of gravitation, according to which, when a man has produced a particular article which he offers for sale, and a tax is imposed on that article, he is sure to get enough more out of the man to whom he sells the article to reimburse the tax. That is the theory, and we have heard it from their witnesses—"the consumer pays the duties"—as if they had been trained in it as an adage of political economy. But, gentlemen, I should not be afraid to discuss that question as applicable to mackerel and herring and the cured fish that come from the Dominion of Canada into the United States before any school of political economists that ever existed in the world. I do not care with what principles you start, principles of free trade or principles of protection, it seems to me that it can be proved to demonstration that this is a case where the duties fall upon those who catch the fish in the Dominion, and not upon the people of the United States who buy and eat them. The very treaty under which you are acting requires you to have regard to the value of the free market, ordains that in mak-

ing up your award you shall take it into account. And are you, upon any theories of political economy, to disregard what the treaty says you shall have regard to? Why, nobody ever heard the proposition advanced, until we came here to try this case, that free access to the markets of the United States was anything but a most enormous advantage to the people of these provinces.

Let us look at the history of the negotiations between the two governments on the subject. As early as 1845 (some years before the negotiations with reference to the Reciprocity Treaty), when the Earl of Aberdeen announced to Mr. Everett, as a matter of great liberality, that our fishermen were no longer to be driven out of the Bay of Fundy, he went on to say that, in communicating the liberal intentions of Her Majesty's Government, he desired to call Mr. Everett's attention to the fact that the produce of the labor of the British colonial fishermen was at the present moment excluded, by prohibitory duties on the part of the United States, from the markets of that country; and he submitted that the moment when the British Government made a liberal concession to the United States might well be deemed favorable for a kindred concession on the part of the United States to the British trade, by a reduction of the duties which operated so prejudicially to the interests of British colonial fishermen. That was the view of the home government long before any reciprocity treaty had been agitated, thirty-two years ago. The letter of Lord Aberdeen bears date March 10, 1845.

In 1850, a communication took place between Mr. Everett, then Secretary of State, through the British minister at Washington, in which Lord Elgin made the offer to which I referred in my Case, which I then understood to be an unequivocal offer to exchange free fish for free fishing, without regard to other trade relations. I found that, so far as that particular letter went, I was in error, and corrected the error. Subsequently, I found that Mr. Everett himself, two years later, had the same impression, for in a letter that he wrote, as Secretary of State, to the President, in 1853, before the Reciprocity Treaty, he says:

It has been perceived with satisfaction that the Government of Her Britannic Majesty is prepared to enter into an arrangement for the admission of the fishing-vessels of the United States to a full participation in the public fisheries on the coasts and shores of the provinces (with the exception, perhaps, at present, of Newfoundland), and in the right of drying and curing fish on shore, on condition of the admission duty free into the markets of the United States of the products of the colonial fisheries; similar privileges, on the like condition, to be reciprocally enjoyed by British subjects on the coasts and shores of the United States. Such an arrangement, the Secretary has reason to believe, would be acceptable to the fishing interests of the United States. (Thirty-second Congress, second session, Senate Ex. Doc. 34.)

The latter part of that letter contains a reference to general reciprocity, and shows the anxiety of the British authorities to have more extensive reciprocal arrangements made.

MR. KELLOGG. What is the date of Lord Elgin's letter?

MR. FOSTER. The letter of Lord Elgin is dated June 24, 1851. The letter which I just read from Mr. Everett to the President was in 1853. So that it seems that Mr. Everett then understood, as I did, that the offer was a specific one, and that the Government of Great Britain was at that time disposed to exchange the right of inshore fishing for the admission of fish into the United States duty free. It is not particularly important, at a date so remote, how the fact really was. I refer to it only to show the great importance attached at that early day—an importance which has continued to be attached from that time to the present—by the home government as well as the colonial government, to free access to the markets of the United States.

Coming down to the date of the Reciprocity Treaty, we find in every direction, whatever public document we refer to of any of the provinces, the same story told: That during the Reciprocity Treaty, they built up a great fish business, unknown to them before; that at the end of the Reciprocity Treaty, a duty of two dollars a barrel on mackerel, and one dollar a barrel on herring, excluded them from the markets of the United States and crushed out that branch of industry. At the risk of making myself tedious, I must read you some passages on that subject.

Here is what Mr. Peter Mitchell, the former minister of marine and fisheries, says, in 1869, in his "Return of all licenses granted to American fishermen," printed by order of Parliament, at Ottawa:

These excessive duties bear with peculiar hardship on our fishing industry, and particularly that of Nova Scotia and Prince Edward Island—the fishermen and dealers in those provinces being forced into competition, in United States markets, under serious disadvantages, side by side with the American free catch taken out of our own waters.

Yes, "*taken out of their own waters.*" I am not afraid of the words. If the consumer pays the duties, it would not make any difference out of what waters the fish were taken, which brought on competition, would it? I am discussing now the proposition that there is a law of political economy, of universal application, and particularly applicable to the mackerel which go from the provinces to Boston, by which whatever tax is imposed in the United States is forthwith added to the price and has to be paid by the man who eats the mackerel in the States, and it makes no difference where the competition arises from. Mr. Mitchell's statement, therefore, is absolutely to the purpose. He continues:

At the same time, other producers are subject to equally heavy charges on the agricultural, mineral, and other natural products of the United Provinces.

The direct extent to which such prohibitory duties affect the fishery interests of these provinces may be stated in a few words. During the year 1866, for example, the several provinces have paid in gold, as custom duty on provincial-caught fish exported to the United States, about \$220,000.

This amount was paid by the provinces in 1866, the year after the Reciprocity Treaty ended. Then, in a note, he says:

More forcibly to illustrate the unequal operation of the present system, suffice it to instance the following cases: A British vessel of 71 tons, built and equipped last season at St. John, N. B., costing \$4,800, expressly for the mackerel fishery in the Gulf of St. Lawrence and Bay of Chaleurs, took 600 barrels of fish, which sold in Halifax and Boston for \$6,000. After paying expenses (including \$9.86 in gold for customs) a profit of \$1,200 accrued to the owners. An American vessel from Newburyport, Mass., of 46 tons burden, took a license at Port Mulgrave, N. S., paying \$46. The whole cost of vessel and voyage was \$3,200 or \$2,400, Halifax currency. She fished 910 barrels of mackerel, which sold in Boston for \$13,000, about \$9,110 in gold, leaving a profit of \$6,710.

After speaking of the question of raising the license fee to higher figures, Mr. Mitchell continues (p. 6):

It is recommended that the rate be \$2 per ton, the mackerel fishery being that in which Americans chiefly engage, and as mackerel is the principal fish marketed in the United States by Canadians, on which the tax is \$2 per barrel, this rate amounts to a charge of but 20 cents per barrel, still leaving them an advantage of \$1.80 on each barrel, besides the drawback allowed on salt.

Did Mr. Peter Mitchell think that the \$2 a barrel duty was got back by the fishermen of the provinces? During the session of the Joint High Commission at Washington, when the American Commissioners made an offer to purchase the inshore fisheries in perpetuity, which was not coupled with any offer of free admission to our markets, the British Commissioners replied "that the offer was, as they thought, wholly inadequate, and that no arrangement would be acceptable of which the admission into the United States, free of duty, of fish, the production

of the British fisheries, did not form a part." And after the Treaty of Washington had been ratified, Earl Kimberly wrote to Lord Lisgar: "It cannot be denied that it is most important to the colonial fishermen to obtain free access to the American markets for their fish and fish-oil."

You can explain the language of these statements only upon the theory that they knew and understood that the duty was necessarily a tax upon the fish production of the provinces. How idle to have made observations of the kind that I have been reading except upon that plain hypothesis!

In the debates on the ratification of the treaty it was said by Sir John A. Macdonald that—

The only market for the Canadian No. 1 mackerel in the world is the United States. That is our only market, and we are practically excluded from it by the present duty. The consequence of that duty is that our fishermen are at the mercy of the American fishermen. They are made the hewers of wood and drawers of water for the Americans. They are obliged to sell their fish at the Americans' own price. The American fishermen purchase their fish at a nominal value and control the American market. The great profits of the trade are handed over to the American fishermen or the American merchants engaged in the trade, and they profit to the loss of our own industry and our own people.

And here let me call your attention to a striking fact, that from the beginning to the end of these negotiations the people of the maritime provinces, who own the inshore fisheries, have been the people who have been most anxious on any terms to have the duties removed in the United States markets. It was said in this debate by some one (I do not remember the name of the speaker) that "it is harsh and cruel for the people of Ontario, for the sake of forcing a general reciprocity treaty, to injure the fishing interests of the provinces by preventing them from getting a free market in the United States."

A gentleman from Halifax—Mr. Power—who is said to have devoted his whole life to the business, and to understand all about it, tells the story in a more practical way:

In the spring of each year some forty or fifty vessels resorted to the Magdalen Islands for herring, and he had known the number to be greater. These vessels carried an average of 200 barrels each; so that the quantity taken was generally in the neighborhood of 50,000 barrels. During the existence of the Reciprocity Treaty no United States vessels went after these fish. All the vessels engaged in that fishery belonged to some one of the provinces now forming this Dominion. Since the abrogation of the treaty and the imposition of the duty of \$1 per barrel by the United States the case had become entirely changed. Vessels still went there, but they were nearly all American. Now, under this treaty, we would get that important branch of trade back again.

You will remember that I said yesterday, gentlemen, that herring—a fish so poor and so cheap that American vessels cannot afford to engage in the fishery, it is far more advantageous for them to purchase than to catch—would be, by a duty of \$1 a barrel, entirely excluded from the markets of the United States, and it seems that such was the result in the interval between the termination of the Reciprocity Treaty and the ratification of the Treaty of Washington. See how Mr. Power deals with this question of whether the consumer pays the duty:

He had heard it said that the consumer paid the duty. Now, whilst this might be the case with some articles, it was not so with the article of our fish. In our case, in this business, our fishermen fished side by side with their American rivals, both carrying the proceeds of their catch to the same market, where our men had to contend against the free fish of the American fishermen. Let him illustrate this: An American and a provincial vessel took 500 barrels of mackerel each; both vessels were confined to the same market, where they sold at the same price. One had to pay a duty of \$1,000, while the other had not to do so. Who, then, paid the \$1,000? Most certainly not the purchaser or consumer, but the poor, hard worked fishermen of this Dominion—for this \$1,000 was deducted from his account of sales. Those who contend that in this case the consumer paid the duty ought to be able to show that if the duty were taken off in the United States the selling price there would be reduced by

the amount of the duty. There was nothing in the nature or existing circumstances of the trade to cause any person who understands to believe that this would be the case; and, therefore, it would be seen that at present our fishermen labored under disadvantages which made it almost impossible for them to compete with their rivals in the United States, and that the removal of the duty, as proposed by this treaty, would be a great boon, and enable them to do a good business where they now were but struggling or doing a losing trade.

And the next speaker, after depicting in glowing terms just the condition of prosperity that the island of Prince Edward is enjoying now, as a result sure to follow from the ratification of the treaty, goes on to say that no men can compete with the provincial fishermen on equal terms, because their fishing is at their own door, and asserts that only an equal participation in the markets of the United States is necessary to give them the monopoly of the whole business.

Another speaker tells the story of the fleet of Nova Scotia fishing-vessels built up under the Reciprocity Treaty, which were forced to abandon the fishing business when the Reciprocity Treaty ended and a duty was put upon fish. Somewhere I have seen it stated that vessels were left unfinished on the stocks when the Reciprocity Treaty terminated, because, being in process of construction, to engage in the fishing business, their owners did not know what else to do with them.

Are we to be told that these men were all mistaken—that the consumer paid the duty all along—that no benefit was realized to the provincial fishermen from it? Why, even the Reply to the British Case concedes that when the duty existed some portion of it was paid by the provincial fishermen. It is to be remembered, too, gentlemen, that in considering this question of what is gained by free markets, you are not merely to take into account what in fact has been gained by the change, but the people of these provinces have acquired, for a term of twelve years, a vested right to bring all descriptions of fish, fresh or salt, and fish-oil, into our markets. Before the expiration of that time the existing duties might have been increased in amount; duties might have been put upon fresh fish; there was nothing to prevent this, and there was every reason to anticipate that if a harsh and hostile course had been pursued towards American fishermen, with reference to the inshore fisheries, there would have been duties, more extensive and higher than ever before, put upon every description of fish or fish-product that could possibly go to the United States. They gained, therefore, our markets for a fixed term of years, as a matter of vested right. How much their industry has been developed by it, their own witnesses tell us.

Now, gentlemen, if you could consider this as a purely practical business question between man and man, laying aside all other considerations—a question to be decided, pencil in hand, by figures—does anybody in the world doubt which is the greatest gainer by this bargain, the people of this Dominion having the free markets of the United States, or a few Gloucester fishermen catching mackerel within three miles of the shore, in the bend of the island, or for a week or two off Margaree? Those are the two things.

But I am not afraid, gentlemen, to discuss this question upon abstract grounds of political economy. I said there was no school of political economy according to which there was any such rule as that the consumer paid the duties. I must trouble you with a few extracts from books on that subject, wearisome as such reading is. Here is what Andrew Hamilton said, one of the disciples of Adam Smith, as long ago as 1791:

If all merchants traded with the same rate of duty they experience the same general advantages and disadvantages; but if the rate of a tax was unequal, the inequality unavoidably operated as a discouragement to those whom the higher tax affected

If one merchant was charged two shillings for the same species and quantity of goods on which another was charged only one shilling, it was evident that he who paid the highest duty must either lose the market, or smuggle, or sell his goods at an inferior profit. In other words, the difference in the rate of the tax would fall on the merchant liable to the highest duty and in cases of competition would always drive him out of the market. (p. 187.)

Then he goes on to say, on a subsequent page :

We may suppose a tax to be laid on in a department where, in the progress of wealth, profits were about to be lowered. If this tax was just equal to the reduction of the rate of profit that was about to take place, then common rivalry would induce the dealers to pay the tax and yet sell their goods as heretofore. (p. 217.)

He says further, on page 242:

Let us suppose a brewer to have one thousand barrels of strong ale upon hand. That a tax of one shilling per barrel is laid upon the ale, and that he may raise the price just so much to his customers, because they will readily pay the tax rather than want the ale. In this case, the brewer would be directly relieved from the tax. But if, on the other hand, he found after advancing the tax he could not raise the price of his ale above what it was formerly, and yet was under a necessity of disposing of it, though this may drive him from the market or unite brewers to stint the supply, so as to bring up the price, on some future occasion, yet in the mean time the trader would suffer; nor would he immediately derive, by any of his ordinary transactions, an effectual relief from the loss he had thus sustained by paying the tax. When, therefore, a trader advances a tax upon a great quantity of goods, he can receive no effectual relief from such a tax, but in a rise of the price of the article, adequate to the tax which he has advanced. * * *

It follows that all speculations whose object is to show on what fixed fund or class taxes must fall are vain and unsatisfactory, and will be generally disproved (as they almost always have been) by experience. (p. 257.)

A dealer who can evade such a tax will soon possess a monopoly if the tax is paid by his competitors. It will be to him a kind of bounty for carrying on his business, and this must drive his competitors either to evade the tax also or to relinquish the employment. (p. 288.)

I am almost disposed to hand to the reporters the extracts, rather than trouble you to read them; and yet I feel it my duty to press this subject, because, if I am right in it, it is decisive.

SIR ALEX. GALT. I think you had better read them.

MR. FOSTER. Mill says, and he is the apostle of free trade, in volume 2 of his "Political Economy," page 113:

If the north bank of the Thames possessed an advantage over the south bank in the production of shoes, no shoes would be produced on the south side; the shoemakers would remove themselves and their capitals to the north bank, or would have established themselves there originally, for, being competitors in the same market with those on the north side, they could not compensate themselves for their disadvantage at the expense of the consumer; the amount of it would fall entirely on their profits, and they would not long content themselves with a smaller profit, when by simply crossing a river they could increase it.

Apply that statement to the evidence in this case, and remember how, when the Reciprocity Treaty ended, the fishermen of Nova Scotia and Prince Edward Island took refuge on board United States vessels, for the purpose, as one of the official documents that I read from yesterday says, of evading the duty. It might be a curious question, if it were important enough to dwell upon it, whether, in assessing against the United States the value of the privilege of fishing inshore, you were or were not to take into account the fact, that half of the people who fish on shares in United States vessels are subjects of Her Majesty, and having disposed of their half of the fish, having paid half of the fish for the privilege of using the vessel and its equipment, they sell the other half of the fish, and bring the proceeds home; and whether it is a just claim against the United States if British subjects go in United States vessels, to require the United States to pay money because they do so.

Mill says in another passage, in volume 2, page 397 :

We may suppose two islands, which, being alike in extent, in natural fertility, and industrial advancement, have up to a certain time been equal in population and capital, and have had equal rentals, and the same price of corn. Let us imagine a tithe imposed in one of these islands, but not in the other. There will be immediately a difference in the price of corn, and therefore, probably, in profits.

I am almost through with this tediousness, but there is a good Scotch book on political economy, by John McDonald, of Edinburgh, published in 1871—and we have always had sound political economy from Scotland—from which I must read a few lines :

In the third place [McDonald says, on page 351], it may be possible to impose custom duties which will permanently be paid, either wholly or partly, not by the consumers but by the importers or producers. Assume that we draw our stock of sugar from a country engaged in the growth of sugar, and capable of selling it with profit to us some shillings cheaper than any other country can, the former will of course sell the sugars to us at a price slightly below what would attract other competitors. Impose a duty of some shillings a cwt., without altogether destroying the peculiar advantages of the trade, while we will pay no dearer for our sugar, the importers will pay the tax at the expense of their profits. If we add to these considerations the difficulty of ascertaining the actual incidence of many such taxes, distrust of sharp contrasts between direct and indirect taxes will be inspired.

Customs duties sometimes fall on the importer, not on the consumer. And if this were a common occurrence, it might seriously impair the doctrine that protective duties are the taxing of the home consumer for the sake of the home producer. But this incidence is confined to the following rare circumstances : If the sole market open to the importer of the staple goods of one country is the country imposing the duties. Secondly, if the other market open to him was so distant or otherwise disadvantageous that it would be preferable to pay the tax ; or, thirdly, if the only available place for procuring commodities of vital moment to the importing country, was the country imposing the duty. Wherever the profits are such as to admit of a diminution without falling below the usual rate, it may be possible for a country to tax the foreigner (p. 393).

I was interested some years ago in an article that I found translated from the *Revue de Deux Mondes* of the 15th of October, 1869, on "Protection and Free Trade," by a gentleman of the name of Louis Alby. I do not know who he is, but on pages 40 and 41, of the pamphlet, he not only states the doctrine, but he illustrates it :

The free-traders believe—and this is the foundation of their doctrine—that when the import duty on an article of foreign merchandise is reduced, this reduction of taxes will at once cause an equal diminution in the price of the merchandise in the market and an equal saving to the purchaser. In theory this consequence is just, in practice it never takes place. If the reduction is considerable, a part, and that far the smallest, profits the consumer ; the larger portion is divided between the foreign producer and the several intermediaries. If the reduction is small, these last entirely absorb it, and the real consumer, he who makes the article undergo its last transformation, is in no wise benefited. The real consumer of wheat is neither the miller nor the baker, but he who eats the bread. The real consumer of wool is neither the draper nor the tailor, but he who wears and uses the clothes.

This discrepancy between the variations of custom-house duties and the selling prices cannot be denied, and since the commercial treaty the experiment has been tried. All prohibitions have been removed and all duties reduced ; but what article is there the price of which has been sensibly lowered for consumption ? When economists demanded the free importation of foreign cattle, they hoped to see the price of meat lowered, and for the same reason the agriculturists resisted with all their strength.

As soon as the duties were removed, the graziers from the northern and eastern departments hastened to the market on the other side of the frontier ; but the sellers were on their guard and held firm, and, competition assisting them, prices rose instead of falling. All the advantage of the reduction of duty was for foreign raisers of cattle, and meat is dearer than ever. The same result followed in reference to the wools of Algiers ; and on this point I can give the opinion of the head of one of the oldest houses in Marseilles, an enemy, moreover, to protection, like all the merchants of seaport towns : "When the duties on Algerian wools were removed," he said to me, "we supposed that this would cause wool to sell cheaper in France, but the contrary happened. There was more eagerness for purchasing in Africa ; there was more competition, and the difference in the duties was employed in paying more for the wool to make sure of

getting it. *It is not, then, the French manufacturer who has profited by the removal of duties ; it is the Arab alone.*" Thus the interest of the consumer, about which so much noise is made, far from being the principal element in the question, only plays a secondary part, since the reduction in the tariff only profits him in a small measure.

Now, we are in a condition to understand precisely the meaning of what one of our witnesses said, Mr. Pew, that the price of mackerel to the man who bought one mackerel at a time and ate it had not changed for ten years; that it was a very small purchase; that the grocer who sold it to him would not lessen the price if mackerel went down, and would not raise the price if mackerel went up; that it kept to him uniform; so that, after all, the question has been a question where the greater or less profit accrued to parties who handled the mackerel.

If ever there was a case where it was impossible to transfer a duty once paid by a man who catches fish and brings it to market so that its incidence would fall on the consumer, it is the one we are dealing with. Why so? You cannot raise the price of mackerel very much, because its consumption stops when you get above \$8 or \$10, at the highest, a barrel. People will not eat it in larger quantities unless they are induced to do it because it is the cheapest procurable food. That is one reason why the duty cannot be put on to the price. There is another reason why it cannot be added to the price—a perfectly conclusive one; and that is that not more than one fourth or a less part of the supply (it has been assumed in the question as one-fourth) is imported and subject to the duty. I do not care what fraction it is, whether one-third, one-fourth, or one-fifth, not more than a small fraction of the mackerel that is in the markets of the United States at any time comes from the provinces; and in order to get the price up to a point that will reimburse the provincial fisherman who has paid a duty you must raise the price of all the mackerel in the market, must you not? That is perfectly plain. If there are between three and four hundred thousand barrels of mackerel in the United States, and thirty, forty, fifty, sixty, seventy, eighty, or a hundred thousand of them are taxed \$2 a barrel, do you think it is going to be possible to raise, by the tax on the provincial catch, the price of the whole production in the market? If that could be done it might come out of the consumer, and then it would be a benefit to our fishermen and an injury in the end to our consumers. But it cannot be done. The price cannot be raised. The fraction is not large enough to produce any perceptible influences upon it. So the result has always been, and they know that it was so before and must be so again, that such a duty cuts down their profits to the quick. It cuts them down so that the business must be abandoned, and take away the United States market, as you would take it away if a higher tariff was imposed, and the fishing business of the provinces would gradually die out of existence. It is not a case—let me repeat it, because there has been so much apparent sincerity in the belief that that tax would come out of the consumer—it is not the case of a tax put upon the whole of the commodity, or the greater part of the commodity, but it is a tax put upon the smaller part of the commodity in the only market to which both producers are confined; and you might just as well say, if two men made watches, one here and one in Boston, which were just exactly alike, and their watches were both to be sold in Boston, that you could put a tax of twenty-five or fifty per cent. on the importation of the Halifax watch into Boston and then raise the price.

The only instance in which the imposition of a tax upon a part of the production of an article results in raising the price of the whole, is where the demand is active, where the supply is inadequate, and where

there is no equivalent that can be introduced in the place of the taxed article. It might just as well be said that a wood lot ten miles from town is worth as much as a wood lot five miles from town. Wood will sell for a certain price, and the man who is the farthest off, and who has the greatest expense in hauling the wood to market, is the man who gets the least profit.

It was estimated in the debates on the Treaty of Washington that the tax on mackerel at that time amounted to fifty per cent. It was truly stated to be a prohibitory duty. You will remember that Mr. Hall has also given you a practical view of this subject. Mr. Hall, Mr. Myrick, and Mr. Churchill located on Prince Edward Island. To be sure it is their misfortune not yet to be naturalized British subjects. Detract whatever you choose from the weight of their evidence because they are Americans, but give to it as much as its intrinsic candor and reasonableness require at your hands. What do these gentlemen tell you of their practical condition? Mr. Hall says that when the duties were put on, at first, the people on the island were helped by a good catch, a good quality, and by a short catch in the United States, and by the condition of the currency, but when they began to feel the full effect of the imposition of the duties they were ruined. His partner confirms the same story. Mr. Churchill, the other man, whose business it is to hire by the month the fishermen of the island, and pay them wages, says he could not afford to hire the men if a duty was put up on the fish. Do you suppose he could? The fish landed on the shore of Prince Edward Island are worth \$3.75 a barrel; that is what they are sold for there. The fishermen earn for catching them from \$15 to \$25 a month. Put a tax of \$2 on to \$3.75 worth of mackerel and can there be any doubt of the result?

If this subject interests you, or if it seems to you to have a bearing upon the result, I invite your careful attention to the testimony of Hall, Myrick, and Churchill. Do they not know what the result of putting a tariff upon their mackerel would be? Do not the people of Prince Edward Island know? If they have been stimulated to a transient, delusive belief that they may in some way get the control of the markets of the United States for the eighty or ninety thousand barrels which, at the utmost, is produced in the provinces and put the price up as high as ever they please, do you think that that delusion will be dissipated, and that their eyes will be most painfully opened, if it ever comes to pass that a duty shall be reimposed?

It may be said that this question of duties is a question of commercial intercourse, and that it is for the benefit of all mankind that there should be free commercial intercourse, no matter whether one side gains and the other side loses or not; no matter where the preponderance of advantage is, we believe in untrammelled commercial intercourse among the whole human family. I am not at all disposed to quarrel with that doctrine. But that is not the case we are trying here. We are trying a case under a treaty where there has been an exchange of free fish against free fishery, and you are to say on which side the preponderance of benefits lies. We have no right, then, to indulge theories as to universal freedom of trade, because we are bound by a charter under which we are acting. You are to have regard to this question, so the treaty says. Everybody has had regard to it since it first began to be agitated in both countries. Statesmen, public writers, business men—they have all considered it of the utmost consequence, and certainly this Commission, enjoined in the treaty to have regard to it, are not going to disregard it and leave it out of consideration.

Now, am I not right in saying that the whole value of whatever fish we catch in the territorial waters of these provinces, when landed on the shores of the provinces, or landed on the decks of our vessels, is of far less pecuniary magnitude than the direct pecuniary gain resulting from free importation into our markets? And that is a gain that is constantly increasing. Twice as large a quantity has gone from Nova Scotia and Prince Edward Island to Boston this year as went last year up to the same date, and, making a moderate allowance for the vicissitudes of the business, and for one year being a little worse than another, there has been a continued development of the fishing business and fishing interests of these provinces; and what has it sprung from? Do not these gentlemen understand the sources of their own prosperity? Do they not know when they speak of the business having developed that it is the market that has developed the business? They cannot eat their mackerel; they have too good taste to desire to eat them, apparently, after they are salted. The only place where they are able to dispose of them is in the United States. There is no evidence that the price of the fish has been lowered to the consumer by the circumstance that any more comes from the provinces than did formerly, when the duty was imposed upon it. The price to the actual consumer has remained the same. If it could be shown that there has been a trifling reduction to the consumer, is that of any consequence compared with this direct and overwhelming advantage which the provincials gain? Why, it is not only in this fish business that the control of the United States markets bears with such tremendous power upon the productions of the Dominion. In 1850, when the subject of reciprocity was being discussed, Mr. Crampton, then British minister at Washington, requested Hon. William Hamilton Merritt, a Canadian of distinction, to prepare a memorandum on the subject, which I have here before me. He is speaking of the effect of duties in the United States on Canadian products generally. He says:

The imports from Canada since 1847 have in no instance affected the market in New York. The consumer does not obtain a reduction of prices; the duty is paid by the grower, as shown by the comparative prices on each side of the boundary, which have averaged in proportion to the amount of duty exacted.

The Canadians, in their fishing industry, as I have said over and over again, have very great natural advantages over the fishermen of the United States in the cheapness with which they can build their vessels and hire their crews, and the cheapness of all the necessaries of life. This increased cheapness is virtually a bounty upon the Canadian fisheries. It gives them the effect of a bounty as compared with United States fishermen. While there was a duty upon imported fish in the United States it counteracted that indirect bounty. Now that the duty has been taken away, this immense development of the fishing interests of the provinces, of which they are so proud, and of which they have said so much, has taken place, and out of this salt-mackerel business it seems to me that they are quite sure eventually to drive the American fishermen. Everybody is going into the business, in Prince Edward Island, as their witnesses say. Out of three hundred fishermen from one port who used to be in our vessels, and who have returned, hardly twelve are going back to the United States. They are going to have a monopoly of this branch of the fishing industry. It has been of great value to them; it will continue hereafter to be of greater value to them; and it is a value that no vicissitudes in the business are likely to take from them, because there is a certain quantity of mackerel which they will be able to catch near home which they can afford to sell in the mar-

kets of the United States at low prices, and from which they cannot fail to derive a very great and permanent advantage.

Gentlemen of the Commission, I have tried to make a business speech on a business question, and I shall spare my own voice and your patience any peroration. I hope I have established to your satisfaction that the exchange of the right to the inshore fisheries for the free markets of the United States leaves the preponderance of benefits and advantages largely on the side of the Canadians. Such certainly is the belief of the Government and people of the United States. A declaration to that effect, that is, a declaration that no money award ought to be made, in our opinion is required by the evidence, and by every consideration of justice. If this be so, the consequences are immaterial to us, but I cannot refrain from saying that, though such a result might cause a little transient disappointment to a few individuals, it would, in my judgment, tend more than anything else to establish the permanent relations between the United States and the Dominion of Canada on a footing of justice and peace, friendship and commercial prosperity. We are neighbors in geographical position, we are sprung from the same common origin, we speak the same language, have inherited the same literature, to a large extent have common traditions and history; we live under very similar laws and free institutions; we are two great, free, energetic, prosperous countries, which cannot help respecting each other, and though the surface may be occasionally for a short time ruffled to a trifling degree, yet in the depths of the hearts of the people of each country they entertain for each other a sincere and profound good will.

V.

CLOSING ARGUMENT OF HON. WILLIAM H. TRESCOT, ON BEHALF OF THE UNITED STATES.

MR. PRESIDENT AND GENTLEMEN OF THE COMMISSION: I am very glad that in this controversy there is one point upon which we are all agreed, and that is, the importance of settling it, of having a source of constant irritation dried up forever, or, better still, if it be possible, of having it converted into a spring of mutual and perpetual benefit. Whatever, therefore, may be the direct practical result of this investigation, we shall have achieved no small or inconsiderable thing, if we have learned at its close to appreciate each other's rights and interests fairly, justly, and kindly.

The best way to secure that end is to speak on both sides with entire candor, to state our respective views as clearly and as strongly as we can, and then to leave it to the impartial judgment of the Commission to balance our calculations, compare our pretensions, and estimate at their true value the claims which we have submitted, only asking them to remember that they do not sit here as arbitrators to compromise rival interests, but as the appraisers of certain values, as the judges of the correctness of certain facts and figures.

I conceive it to be the duty of every one participating in this investigation to do all he can to aid the Commission in reaching an agreement, and that you will arrive at some sound and satisfactory conclusion, I sincerely hope; for, during the whole of our examination, I confess I have never looked up at the picture of His Majesty George III, which hangs behind the president's chair, without feeling that it is not credit-

able that two great and kindred nations should, to-day, be still angrily discussing a question which he thought he had finally settled with Franklin and Adams, with Jay and Laurens, an hundred years ago, when he recognized the independence of the United States, with all its consequences.

You have been told, and with truth, by the representatives of both contestants, that the Treaty of 1871 is the charter of your authority. To ascertain, therefore, the extent of the powers which have been given and the character of the duties which have been imposed, we must go to the Treaty of Washington. But we cannot go to that treaty alone. The Treaty of 1871 is but one phase of the fishery-negotiations. It was a marked change from the condition of things in 1866; that was a change from the condition of things in 1854; that again was a large departure from the Convention of 1818, and that convention was in itself a very great change from the Treaty of 1783.

It is simply impossible to understand the meaning of the Treaty of 1871 correctly without reference to the history of those negotiations, and the positions which have been taken, and which have been abandoned or maintained by the respective governments.

And the British case, as filed, distinctly recognizes this necessity, not only in the elaborate history of those negotiations with which it prefaces its argument, but in the central assumption of its formal contention, viz, that the Treaty of 1818 is part and parcel of the Treaty of 1871.

These negotiations, fortunately, lie within a compact and manageable compass, and it is possible, I think, briefly and clearly to develop their history and sequence.

The Treaty of 1783, the Convention of 1818, the Reciprocity Treaty of 1854, and the Treaty of Washington of 1871, are landmarks in our navigation over these rather troubled waters. If I may borrow a figure from our subject, I will endeavor, in my argument, to keep well within the three mile limit, not to run between headland and headland, unless I am driven by extraordinary stress of weather, and even then I shall not enter and delay in every port that lines the coast for shelter, food, or fuel, unless the persuasive rhetoric of my friend from Prince Edward Island should detain me in the magnificent harbors of Mulpeque and Casumpeque, or my friend from Newfoundland should toll me with "fresh squid" into the happy and prosperous regions of Fortune Bay.

But before I go into the discussion of these treaties, I wish to ask your consideration to some observations on the general meaning and proper interpretation of the Treaty of 1871, in order that they may be out of the way of the main argument. And first I will ask you to carry with you throughout the discussion a fact so obvious that I would not have referred to it at all had not the whole argument of the British Case entirely ignored it. That fact is simply that this Convention, and the treaty upon which it is founded, are transactions between the United States on the one side and Great Britain on the other. Let me ask your attention to the twenty-second article of the Treaty of 1871:

Inasmuch as it is asserted by the *Government of Her Britannic Majesty* that the privileges accorded to the citizens of the United States under Article XVIII of this treaty are of greater value than those accorded by Articles XIX and XXI of this treaty to the *subjects of Her Britannic Majesty*, and this assertion is not admitted by the Government of the United States, it is further agreed that Commissioners shall be appointed to determine, having regard to the privileges accorded by the United States to the *subjects of Her Britannic Majesty*, as stated in Articles XIX and XXI of this treaty, the amount of compensation," &c., &c.

Now, who are the subjects of Her Britannic Majesty? Are they only the inhabitants of the Dominion of Canada? The fishermen of the

maritime provinces? The boatmen of the bend of Prince Edward Island? The herring and squid catchers of Newfoundland? We have been told in prose and poetry that the dominion of Her Britannic Majesty is one on which the sun never sets, and it is to the subjects of this dominion, in its widest extent, that we have given the privileges granted by the United States in this treaty. And I ask if, in equalizing this privilege, the *value* of the privilege is one of the elements of your calculation, is not the *extent* to which those privileges are opened an equal subject of valuation?

I know what my friends will say. They will say, of course, "It is obvious that it is neither possible nor probable that any of the subjects of Her Britannic Majesty will use these privileges except the inhabitants of the Dominion. Well, I do not know that my friends have the right to assume any such ground, after the brilliant exhibition of their closing testimony. Do you not recollect what the confidential scientific adviser of the gentlemen on the other side told you, that the time was coming, had come, when the fishing industry of the world would be a common fishery to the whole world; when a skipper would go out of harbor with an orographic chart of the coast in one hand, and a thermometer in the other, to measure the variations of zone-temperature; when he would, day by day, learn the condition of the controversy between the Labrador Arctic current and the Gulf stream; when, by a system of telegraph and signal stations, there would be a new meaning given to the Scripture, "Deep calleth unto deep"; that Labrador would speak to Newfoundland, and Newfoundland to Nova Scotia, and Nova Scotia to Cape Cod; and that wherever the fishes were, there would the fishermen of the world be gathered together! I cannot accept that prophecy in all its fullness. I know it has been said very often that fish diet is a wonderful stimulant to the mental powers. I think since we have been discussing this case, we have found that mackerel, especially, has a most wonderful effect upon the arithmetical faculties of the intellect; that it stimulates the imagination until it sets all the powers of calculation at defiance; and I am satisfied that the princely fortune that was supposed to have been made by the boy in the Arabian fable out of his basket of eggs, which were unfortunately destroyed before he realized it, is nothing compared with the profits that my friend from Prince Edward Island, through cross examination, can develop from an ordinary catch of four hundred barrels of mackerel. I presume that my friends will not allow me to assume, even upon their own testimony, that this millennial fishery will be in perfect working order until the Treaty of 1871 has expired, and they will therefore insist that it is neither possible nor probable that any of the subjects of Her Britannic Majesty, except the inhabitants of the Dominion, can ever use these privileges. Suppose I grant that, what then? I find in the British Case a very elaborate statement of a very sound principle, page 34:

It is possible, and even probable, that the United States fishermen may avail themselves of the privilege of fishing in Newfoundland inshore waters to a much larger extent than they do at present; but even if they should do so, it would not relieve them from the obligation of making the just payment for a right which they have acquired, subject to the condition of making that payment. The case may not be inaptly illustrated by the somewhat analogous one of a tenancy of shooting or fishing privileges; it is not because the tenant fails to exercise the rights which he has acquired by virtue of his lease that the proprietor should be debarred from the recovery of his rent.

I think it will take more than the very large ability and ingenuity of the British counsel to show any difference between the two cases. If the American fisherman is bound to pay for the inshore fisheries of Newfoundland, which he does not use, on the principle of tenancy, why

should not the British subject pay for the inshore United States fisheries which he does not use?

Mr. THOMSON. I understand you admit the principle.

Mr. TRESCOT. I am using it as a reply to this argument. I am going to show you that my argument is based on yours; and I contend, therefore, on the very principle that you state.

"It is not because the tenant fails to exercise the rights which he has acquired by virtue of his lease that the proprietor should be debarred from the recovery of his rent." On this principle, we claim that all the subjects of Her Britannic Majesty are tenants, under the treaty, and must pay for the privilege whether they use it or not; and you are bound to take that into consideration in establishing the value of the privileges exchanged.

Further, if this is a treaty between Great Britain and the United States, it cannot be converted into a treaty between the United States and Canada. This Commission cannot alter it or supplement it. Certain specified provisions in the treaty it can execute, but it cannot amend its errors or correct its faults. If in that treaty the British Government has compromised or endangered the interests of the colonies, much as it is to be regretted, you have no power to undo the work; it is a matter with which the Commission has nothing to do.

Upon the negotiation of the Treaty of 1871, the most correct and influential representative of public opinion in England, the London Times, used the following language:

We watched with some uneasiness the repeated splutters of bad feeling between the fishermen of New England and the people of the maritime provinces, because we could never be certain that an ugly accident might not some day force us, much against our will, to become the champions of a quarrel we could only half approve. It is very easy, therefore, to understand with what motives our ministers suggested a Commission, and with what readiness they yielded to the hint that it should be allowed to settle all subjects of difference between the two countries. Lord Derby has repeatedly blamed their eagerness, and the American Government could not but be sensible of the advantage they obtained when the Commissioners arrived at Washington, bound to come to some settlement on the points in dispute. It is true that one of the Commissioners was the prime minister of Canada; but against this circumstance must be set the facts that the other four approached their work from an English point of view, that the Commissioners, as a body, were instructed from day to day, and, we may almost say, from hour to hour, by the English Cabinet, and their work was done with an eye to the approval of the English people. It was inevitable that the result of their labors should not satisfy the inhabitants of the Dominion. We are far from saying that the Commissioners did not do their best for Canadian interests, as they understood them; but it was not in human nature for them or their instructions to be to Canada what they are to England; and, as the treaty was conceived for the purpose of removing the present and contingent liabilities of England, it was agreed upon as soon as it was believed that these liabilities were settled.

If this is so, then surely this Commission was not appointed to correct "the inevitable" results of the treaty which created it.

The colonial authorities recognized this view. When that treaty was formed, Earl Kimberley, writing to the colonial governor, made this statement, in a paragraph which is not too long to read, for I do not mean to trouble you with a great many quotations. It is a statement of the secretary of state for the colonies to the Governor-General, dated "Downing street, 17th June, 1871," and published at Ottawa:

The Canadian Government itself took the initiative in suggesting that a joint British and American commission should be appointed, with a view to settle the disputes which had arisen as to the interpretation of the Treaty of 1818. But it was certain that, however desirable it might be, in default of any complete settlement, to appoint such a commission, the causes of the difficulty lay deeper than any question of interpretation, and the mere discussion of such points as the correct definition of bays could not lead to a really friendly agreement with the United States. It was necessary, therefore, to endeavor to find an equivalent which the United States might be willing

to give in return for the fishing privileges, and which Great Britain, having regard both to the imperial and colonial interest, could properly accept. Her Majesty's Government are well aware that the arrangement which would have been most agreeable to Canada was the conclusion of a treaty similar to the Reciprocity Treaty of 1854, and a proposal to this effect was pressed upon the United States Commissioners, as you will find in the 36th protocol of the conferences. This proposal was, however, declined, the United States Commissioners stating that they could hold out no hope that the Congress of the United States would give its consent to such a tariff amendment as was proposed, or to any extended plan of reciprocal free admission of the products of the two countries. The United States Commissioners did, indeed, propose that coal, salt, and fish should be reciprocally admitted free, and lumber after the 1st of July, 1874; but it is evident that, looked at as a tariff arrangement, this was a most inadequate offer, as will be seen at once when it is compared with the long list of articles admitted free under the Reciprocity Treaty. Moreover, it is obvious, from the frank avowal of the United States Commissioners, that they only made this offer because one branch of Congress had recently more than once expressed itself in favor of the abolition of duties on coal and salt, and because Congress had partially removed the duty from lumber, and the tendency of legislation in the United States was toward the reduction of taxation and of duties, so that to have ceded the fishery rights in return for these concessions, would have been to exchange them for commercial arrangements which, there is every reason to believe, may before long be made without any such cession, to the mutual advantage of both the Dominion and the United States; and Her Majesty's Government are bound to add that while, in deference to obtain a renewal in principle of the Reciprocity Treaty, they are convinced the establishment of free trade between the Dominion and the United States is not likely to be promoted by making admission to the fisheries dependent upon the conclusion of such a treaty; and that the repeal by Congress of duties upon Canadian produce, on the ground that a protective tariff is injurious to the countries which imposes it, would place the commercial relations of the two countries on a far more secure and lasting basis than the stipulations of a convention framed upon a system of reciprocity. Looking, therefore, to all the circumstances, Her Majesty's Government found it their duty to deal separately with the fisheries, and to endeavor to find some other equivalent; and the reciprocal concession of free fishery, with free import of fish and fish-oil, together with the payment of such a sum of money as may fairly represent the excess of value of the Colonial over the American concession, seems to them to be an equitable solution of the difficulty.

It is perfectly true that the right of fishing on the United States coasts, conceded under Article XIX, is far less valuable than the right of fishing in colonial waters, conceded under Article XVIII to the United States; but, on the other hand, it cannot be denied that it is most important to the colonial fishermen to obtain free access to the American market for their fish and for fish-oil; and the balance of advantage on the side of the United States will be duly redressed by the Arbitrators under Article XXII. In some respects a direct money-payment is perhaps a more distinct recognition of the rights of the colonies than a tariff concession, and there does not seem to be any difference in principle between the admission of American fishermen for a term of years, in consideration of the payment of a sum of money in gross, and their admission under the system of licenses, calculated at so many dollars per ton, which was adopted by the colonial government for several years after the termination of the Reciprocity Treaty. In the latter case, it must be observed, the use of the fisheries was granted without any tariff concessions whatever on the part of the United States, even as to the importation of fish.

Canada could not reasonably expect that this country should, for an indefinite period, incur the constant risk of serious misunderstanding with the United States, imperiling, perhaps, the peace of the whole Empire, in order to endeavor to force the American Government to change its commercial policy; and Her Majesty's Government are confident that when the treaty is considered as a whole the Canadian people will see that their interests have been carefully borne in mind, and that the advantages which they will derive from its provisions are commensurate with the concessions which they are called upon to make. There cannot be a question as to the great importance to Canada of the right to convey goods in bond through the United States, which has been secured to her by Article XXIX; and the free navigation of Lake Michigan, under Article XXVIII, and the power of transshipping goods, under Article XXX, are valuable privileges which must not be overlooked in forming an estimate of the advantages which Canada will obtain. Her Majesty's Government have no doubt that the Canadian Government will readily secure to the citizens of the United States, in accordance with Article XXVII, the use of the Canadian canals, as by the liberal policy of the Dominion these canals are already opened to them on equal terms with British subjects; and they would urge upon the Dominion Parliament and the legislature of New Brunswick that it will be most advisable to make arrangement as to duty on lumber floated down the St. John River, upon which the execution of Article XXX, as to the transshipment of goods, is made contingent.

That is the view he took of that treaty. What was the view that the Canadian Government took of it? On page 47 of this same pamphlet will be found the reply of a committee of the Privy Council to that letter of the Earl of Kimberley, in which will be found this statement:

When the Canadian Government took the initiative of suggesting the appointment of a joint British and American Commission, they never contemplated the surrender of their territorial rights, and they had no reason to suppose that Her Majesty's Government entertained the sentiments expressed by the Earl of Kimberley in his recent despatch. Had such sentiments been expressed to the delegate appointed by the Canadian Government to confer with his lordship a few months before the appointment of the Commission, it would at least have been in their power to have remonstrated against the cession of the inshore fisheries, and it would moreover have prevented any member of the Canadian Government from acting as a member of the Joint High Commission, unless on the clear understanding that no such cession should be embodied in the treaty without their consent. The expediency of the cession of a common right to the inshore fisheries has been defended, on the ground that such a sacrifice on the part of Canada should be made in the interests of peace. The committee of the Privy Council, as they have already observed, would have been prepared to recommend any necessary concession for so desirable an object, but they must remind the Earl of Kimberley that the original proposition of Sir Edward Thornton, as appears by his letter of 26th January, was that a friendly and complete understanding should be come to between the two governments, as to the extent of the rights which belong to the citizens of the United States and Her Majesty's subjects respectively, with reference to the fisheries on the coasts of Her Majesty's possessions in North America.

Then there is a continuation of the argument.

Mr. THOMSON. Won't you read it?

Mr. TRESCOT. I will read it if you wish.

Mr. THOMSON. I would like to hear it, if it is not too much trouble to you.

Mr. TRESCOT. I will read it with great pleasure, although it does not bear upon the point I desire to present.

In his reply dated 30th January last, Mr. Secretary Fish informs Sir Edward Thornton that the President instructs him to say that "he shares with her Majesty's Government the appreciation of the importance of a friendly and complete understanding between the two governments with reference to the subjects specially suggested for the consideration of the proposed Joint High Commission." In accordance with the explicit understanding, thus arrived at between the two governments, Earl Granville issued instructions to Her Majesty's High Commission, which, in the opinion of the Committee of the Privy Council, covered the whole ground of controversy. The United States had never pretended to claim a right on the part of their citizens to fish within three marine miles of the coasts and bays, according to their limited definition of the latter term, and although the right to enjoy the use of the inshore fisheries might fairly have been made the subject of negotiation, with the view of ascertaining whether any proper equivalents could be found for such a concession, the United States was precluded by the original correspondence from insisting on it as a condition of the treaty. The abandonment of the exclusive right to the inshore fisheries without adequate compensation—mark that—the abandonment of the exclusive right to the inshore fisheries without adequate compensation was not therefore necessary in order to come to a satisfactory understanding on the points really at issue. The Committee of the Privy Council forbear from entering into a controversial discussion as to the expediency of trying to influence the United States to adopt a more liberal commercial policy. They must, however, disclaim most emphatically the imputation of desiring to impair the peace of the whole empire in order to force the American Government to change its commercial policy. They have for a considerable time back ceased to urge the United States to alter their commercial policy; but they are of opinion that when Canada is asked to surrender her inshore fisheries to foreigners, she is fairly entitled to name the proper equivalent.

I need not go any further. You can read it if you wish. Then, of course, Lord Kimberley replied to that communication. The reply it is not worth while to read. The Privy Council then replied to his strictures upon their opinion, and their communication is the point to which I wish to come.

In the course of the negotiations the United States Commissioners had offered as an equivalent for the rights of fishery to admit Canadian coal and salt, free of duty, and

lumber, after the 1st of July, 1874. This was deemed, both by the Imperial and Canadian Governments, an inadequate offer, and a counter proposition was made by the British Commissioners that lumber should be admitted free immediately, and that in consideration of the continued exclusion of cereals, live-stock, and other articles admitted under the treaty of 1854, a sum of money should be paid to Canada. The United States Commissioners not only refused the counter proposition, but withdrew their former offer, substituting one which the committee of council infer from the Earl of Kimberley's dispatch, was, in the opinion of Her Majesty's Government, more favorable to Canada than that which had been rejected as inadequate. Wide, however, as are the differences of opinion on this continent regarding the treaty, there is but one opinion on the point under consideration. It is clear that the United States preferred paying a sum of money to the concession of commercial advantages to Canada, and the committee of council feel assured that there is not a single member of the Canadian Parliament who would not have much preferred the rejected proposition to that which was finally adopted.

The committee of council cannot, with the Earl of Kimberley's dispatch before them, continue to affirm that Her Majesty's Government are of opinion that the cession of the fishery rights was made for an inadequate consideration, but they regret that they are themselves of a different opinion.

While still adhering to their expressed opinions as to the fishery articles of the Treaty of Washington, they are yet most anxious to meet the views of Her Majesty's Government, and to be placed in a position to propose the necessary legislative measures, and they will therefore proceed to make a suggestion which they earnestly hope may receive a favorable response.

The adoption of the principle of money payment in satisfaction of the expenses incurred by the Fenian raids would not only be of no assistance with reference to the treaty, but might lead to some complications. It is not improbable that differences of opinion would arise in the discussion of the details of those claims between the two governments which might lead to mutual dissatisfaction. Again, such a solution of the question would necessitate a discussion in the Imperial Parliament, in the course of which opinions might be expressed by members which might irritate the people of Canada, and might moreover encourage the Fenian leaders in the United States, who have not ceased their agitation.

There is, in the opinion of the committee of council, a mode by which their hands might be so materially strengthened that they would be enabled not only to abandon all claims on account of the Fenian raids, but likewise to propose, with a fair prospect of success, the measures necessary to give effect to those clauses in the Treaty of Washington which require the concurrence of the Dominion Parliament. That mode is by an imperial guarantee to a portion of the loan which it will be necessary for Canada to raise in order to procure the construction of certain important public works which will be highly beneficial to the United Kingdom as well as to Canada.

Now, I ask if, in the face of that official demand for a guarantee of that loan in compensation for the sacrifice of the fisheries, which demand was recognized as just, and granted by the British Government, it is possible to claim that those interests were not sacrifices which were compensated, or whether any construction is just, which, isolating the articles of this treaty, and converting it into a separate negotiation, determines that there were certain Imperial advantages gained by the British Government in return for the sacrifice of those fisheries, and then claims that that compensation should be made part and parcel of the consideration in a case like this? I beg you to understand distinctly that I do not contend that this Commission is not bound to equalize the two exchanges which have been committed to them. That is their duty. But I mean to say that, in making that equalization, they are bound to consider nothing but the specific value of the articles exchanged, and that the question whether or not equalization is compensation for any sacrifices made by the treaty is one with which they have nothing to do; the question which is submitted to them is the value, and nothing else, of the two exchanges. It is not the duty, nor is it within the power of this Commission, as the British counsel seem to suppose, to make the treaty of 1871 an equal treaty, but simply to equalize a specific exchange of values under a special provision of that treaty. It is precisely, as far as you are concerned, as if, instead of the exchange of fishing privileges, that treaty had proposed an exchange of territory. For instance, if that

treaty had proposed the exchange of Maine and Manitoba, and the United States had maintained that the value of Maine was much larger than Manitoba, and referred it to you to equalize the exchange. It is very manifest that to New England, for instance, it might not only be disadvantageous, but very dangerous; but the only question for you to consider would be the relative value of the two pieces of territory. So here, I do not care what the consequences may be. It may be that when you have equalized these privileges so as to make the exchange of privileges precisely even, that then the consequences of the exchange of fisheries might be the destruction of all the fisheries of Prince Edward Island, the entire destruction of the fishing industry of the maritime provinces. But that is a matter with which you have nothing to do. This is a consequence of the treaty, and not a consequence of the difference in value between the two articles of exchange which you are called upon to appraise.

The same principle would lead to this result also, that with the consequential profit or loss of the fisheries you have nothing to do. You have a right to measure the value of the fisheries as they are, and what they are, but you have no right to put into that estimate a calculation of the enterprise, industry, skill, and capital which the American puts into the fishery; that is, brains and money and experience, which is entirely foreign to the fishery, as a fishery. It is free to be employed anywhere else, and you have no right to calculate that. The fish in the water have a certain value, but the skill and capital and enterprise which are required to take them out does not belong to the fishery, as fishery; and it is not a matter that you have any right to take into calculation. Take, for example, the extraordinary principle that is stated in the British Case, on page 34:

A participation by fishermen of the United States in the freedom of these waters must, notwithstanding their wonderfully reproductive capacity, tell materially on the local catch, and, while affording to the United States fishermen a profitable employment, must seriously interfere with local success.

Is that a principle of calculation which you can only apply to a case like this? Was there ever a case of such absolute forgetfulness of that homely old proverb, over which every one of us has painfully stumbled in his walk through life, that "you cannot eat your cake and have it too"? Why, take that favorite and apt illustration of the British Case, a tenancy for shooting. If I exchanged a grouse moor in Scotland for a pheasant preserve in England, and my friend, Her British Majesty's Agent, was arbitrator to equalize their values, what would he think of the claim that the grouse moor was the more valuable, because I used a breech-loader, carried two keepers with extra guns, shot over dogs costing 100 guineas apiece, and bagged a hundred brace, where the other sportsman stuck to the old muzzle-loader, carried no keeper, shot over an untrained pointer, and only bagged twenty-five brace, or to the still more extraordinary complaint, that the freedom of the moor, notwithstanding its wonderful reproductive capacity, must tell materially on the local shooting, and while affording the lessee profitable and pleasant employment, "must seriously interfere" with the pot-shooting of the boys of the lessor's family? And this is just precisely the argument that our friends have made. They undertake, not to decide the value of the fishery, but they undertake to put into arbitration here what we do with mackerel-fishing in the bend of Prince Edward Island, but we are to pay for every dollar of capital and industry we employ, and for the men

employed, and the result of that combination is the money to which they are entitled.

So also with the consequential damages, with regard to the destruction of fish, trawling, seining, and all those things with which you have nothing to do. I think I can reply to the whole of that by a very pithy sentence, uttered by one of your citizens, who was very famous, the late Joseph Howe, in a speech made in my country in regard to the fisheries here. He said, "As for the destruction of the fisheries, when one thought that the roes of thirty cod supply all the waste of the American, British, and colonial fisheries, it was not worth while to discuss that question"; and I do not think it is, either. Because all those arguments apply to the treaty. They are very good reasons why the exchange never should have been made at all, why American fishermen never should have been admitted at all, why the treaty should never have been made; but they are arguments which cannot be employed in the consideration of the question submitted to you—the value of the fishery.

And now, with regard to this question of consequences, there is but one other illustration to which I will refer, and I will be done. I find, at the close of the British testimony, an elaborate exhibit of 166 lights, fog-whistles, and humane establishments used by United States fishermen on the coast of the Dominion, estimated to have cost in erection, from the Sambro light-house, built in 1758, to the present day, \$832,138, and for annual maintenance, \$268,197. I scarcely know whether to consider this serious; but there it is, and there it has been placed, either as the foundation for a claim, or to produce an effect. Now, if this Dominion has no commerce, if no ships bear precious freight upon the dangerous water of the gulf, or hazard valuable cargoes in the straits which connect it with the ocean, if no traffic traverses the imperial river which connects the Atlantic with the great lakes, if this fabulous fishery, of which we have heard so much, is carried on only in boats so small that they dare not venture out of sight of land, and the fishermen need no other guiding and protecting light than the light streaming from their own cabin-windows on shore; if, in short, this Dominion, as it is proudly called, owes nothing to the protection of its commerce and the safety of its seamen, if these humane establishments are not the free institutions of a wise and provident government, but charitable institutions, to be supported by the subscriptions of those who use them, then the Government of the Dominion can collect its \$200,000 by levying light-dues upon every vessel which seeks shelter in its harbors or brings wealth into its ports. But, if, in the present age of civilization, when a common humanity is binding the nations of the world together every day by mutual interests, mutual cares, and privileges equally shared, the Dominion repeals her light-dues, in obedience to the common feeling of the whole world, with what justice can that government ask you, by a forced construction of this treaty, to reimpose this duty, in its most exorbitant proportions and its most odious form, upon us, and upon us alone?

But that is not, perhaps, the question I should ask you. I should ask, and I do ask, where do you find, in Article 18 of the treaty, among the advantages which the Treaty of 1871 gives us, and authorizes you to value, any such "advantage" as the use of light-houses and fog-whistles? And if you decided, and properly decided, that you could not take into consideration the advantages of commercial intercourse, purchasing bait and supplies, and the privilege of transshipping, because they were not given by the treaty, identified as they were with

the use of the fishery, how can you be asked even to take this preposterous claim into consideration? If the principle laid down by the British Case (p. 13) is true, "It is submitted, that in order to estimate the advantages thereby derived, respectively, by subjects of the United States and of Great Britain, the following basis is the only one which it is possible to adopt, under the terms of the first portion of Article 18 of the Treaty of Washington of 1871, viz, that the value of the privileges granted to each country, respectively, by Articles 18, 19, and 21, of that Treaty, *which were not enjoyed under the 1st Article of the Convention of the 20th October, 1818*, is that which the Commission is constituted to determine"; if this principle of interpretation be true, how can such a demand be made until it is shown that, under the 1st Article of the Convention of 1818, the privilege of using the light-houses and fog-whistles, that is, the privilege of seeing a light or hearing a sound, was not enjoyed? Illiberal, unjust, and narrow as was the policy of that Convention, it has not yet been charged with so grievous an offense against humanity. It might stop our fishing, but it did not assume to stop our sight and hearing at the three-mile limit.

And in leaving this question of "consequences," I may say, in justification of the length with which I have dwelt on it, that this "consequential"—I might almost say "inconsequential"—reasoning pervades the whole British Case, and infects the whole cross-examination of counsel on the other side. The effort has been studiously made to create an atmosphere in with the uncertain and doubtful advantages of the treaty would loom out so largely as to deceive the inexperienced eye as to the exorbitant value that was sought to be attached to them.

I have but one other consideration to suggest before I come to the history of this question, and it is this: If you will examine the treaties, you will find that everywhere it is the "United States fishermen," the "inhabitants of the United States," the citizens of the United States who are prohibited from taking part in the fishery within the three-mile limit. Now, I say—remember, I am not talking about local legislation on the other side at all, I am talking about treaties—I say, there is nothing in any treaty which would forbid a Nova Scotian or a Prince Edward Island citizen from going to Gloucester, hiring an American vessel with an American register and coming within the three-mile limit and fishing—nothing at all. If such a vessel be manned by a crew half citizens of the United States and half Nova Scotians, who are fishing on shares, recollect, and who take the profits of their own catches, where is the difference? The United States citizen may violate the law, but are the citizens of Nova Scotia doing so? They are not the "inhabitants" or "fishermen of the United States" excluded from fishing within the three-mile limit. Take the analogy suggested by the British Case. Suppose, for instance, there was a law forbidding shooting in the Dominion altogether by any one not a citizen, might not a citizen of the United States lend a gun to a citizen of the Dominion who wanted to shoot game and pay him for the game that he shot? It comes to this, that when Nova Scotia fishermen fish in an American vessel within the three-mile limit, always supposing that they engage in the business on shares, they are simply using an instrument lawfully under the treaty, that the American part of the crew are using unlawfully—that is all. I do not press this legal view, because it is one which, one of these days, will have to be taken up and decided; I simply say that that is common-sense opinion, that if, out of 5,000 fishermen, 2,500 are British subjects, and fishing in American vessels, taking their own catches, making their own profits, in that case you cannot in equity

and justice consider that as part of the privilege given to the fishermen or inhabitants of the United States. I am glad I am furnishing my friends something to think of, even if it amuses them.

Mr. THOMSON. You are.

Mr. TRESCOT. I thought I was. The three points which I make, are these :

1. That in valuing the exchange of privilege, the *extent* to which the privilege is offered is a fair subject of calculation, and that a privilege opened to "all British subjects" is a larger and more valuable privilege than one restricted to only the British subjects resident in the Dominion.

2. That in valuing the exchange of privilege, only the direct value can be estimated, and *the consequences* to either party cannot be taken into account.

3. That so far as British subjects participate in the inshore fishery in United States vessels upon shares, their fishery is in no sense the fishing or fishermen of inhabitants of the United States.

With regard to the history of these treaties, there are two subjects in that connection which I do not propose to discuss at all. One is the headland question. I consider that the statement made by my distinguished colleague who preceded me has really taken that question out of this discussion. I do not understand that there is any claim made here that any portion of this award is to be assessed for the privilege of coming within the headlands. As to the exceedingly interesting and very able brief, submitted for the other side, I am not disposed to quarrel with it. At any rate, I shall not undertake to go into any argument upon it. It refers entirely to the question of territorial right, and the question of extent of jurisdiction—questions with which the United States has nothing to do. They have never been raised by our government, and probably never will be, because our claim to fish within the three-mile limit is no more an interference with territorial and jurisdictional rights of Great Britain than a right of way through a park would be an interference with the ownership of the property, or a right to cut timber in a forest would be an interference with the fee-simple in the soil.

Mr. THOMSON. Do you mean to say there would be no interference there?

Mr. FOSTER. Certainly not. It would be simply a servitude. You do not mean to say that my right to go through your farm interferes with the fee-simple of the property?

Mr. THOMSON. It does not take away the fee-simple, but it interferes with my enjoyment of the property.

Mr. TRESCOT. That is another question, because compensation may be found and given. I simply say that it does not interfere with the territorial or jurisdiction right. That is the view I take of it, at any rate, and I think I can sustain it, if it ever becomes necessary.

Then, with regard to the character of the Convention of 1818. I wish to put on record here my profound conviction that, by every rule of diplomatic interpretation and by every established precedent, the Convention of 1818 was abrogated by the Treaty of 1854, and that when that treaty was ended, in 1866, the United States and Great Britain were relegated to the Treaty of 1783 as the regulator of their rights. That proposition I will maintain whenever the proper time arrives. But certainly I am not at liberty to take that ground here at all, and for this reason: that by the action of the two governments and by the formal incorporation, so to speak, of the Treaty of 1818 in the Treaty of 1871, that treaty is made the practical rule of decision in this case; consequently, we have noth-

ing to do with that, except to say this: that the Treaty of 1818 depends for its validity and its existence upon the headland question; that the two stand or fall together; because the Convention of 1818 was a relinquishment of certain rights upon certain conditions, and if those conditions are not understood in the same sense by the parties to the contract, the contract ends or is to be submitted to arbitration. If, then, the treaty of 1871 should end, with nothing else to supply its place, it would be absolutely necessary either that the headland question should be settled or the Convention of 1818 should be considered as annulled.

I cannot enter into the history of the treaties as fully as I could wish.* The subject is not only one of great historical interest, but in certain contingencies would be of direct consequence. It cannot, however, be treated briefly, or without traveling too far from the immediate question at issue. I will, therefore, only summarize those conclusions which are relevant to the present investigation.

And I refer to them in this connection because, underlying the whole British Case, just like the consequential argument to which I have already referred, there runs the assumption that in all these transactions the policy of the United States has been one of encroachment and invasion, while the conduct of Great Britain has been that of generous concession. Never was there an assumption more entirely the reverse of historical truth.

The Treaty of 1783 ascertains and defines what were the original relations of the parties to this controversy. I need not read its provisions, but I do not think I will be contradicted when I say that they were simply the recognition of absolute and equal rights. The separation of the Colonies rendered necessary not only their recognition, but the definite and precise adjustment of their territories and possessions; and among the latter was recognized and described, not as a grant or concession, but as an existing right, the use of the fisheries, not only as they had been used, but as they ever should be used by British subjects. Reserving the territorial and jurisdictional rights on the adjacent shores to the owners of the land, the fisheries, the right to use the waters for the purpose of fishing, was made a joint possession.

At that time the only parties in interest were the citizens of the United States and the British owners of a few fishing settlements along the coasts. The parties who are now the real complainants were not then even in existence. Speak of encroachments! Encroachments upon whom? Why, in those days, where was Newfoundland, who comes here to-day as an independent sovereignty and invests her distinguished representative with a measure of ambassadorial authority? Not even a colony—a fishing settlement, owned by a British corporation, governed without law by any naval officer who happened to be on the coast with a marine spike in one hand and the articles of war in the other; no Englishman allowed to make a home on the island, and the number of women permitted to reside there limited, so as to prevent the growth

* The British Case, referring to the Treaty of 1783, says: "The rights conceded to the United States fishermen under this treaty were by no means so great as those which, as British subjects, they had enjoyed previous to the war of Independence; for they were not allowed to land to dry and cure their fish in any part of Newfoundland, and only in those parts of Nova Scotia, the Magdalen Islands, and Labrador, where no British settlement had been or might be formed, expressly excluding Cape Breton, Prince Edward Island, and other places." There is no express exclusion of Cape Breton and Prince Edward Island in the treaty. Both were acquired by the Treaty of 1763, and were formally annexed to Nova Scotia. It was not until 1770 that Prince Edward Island had a separate government as an experiment, and a very poor experiment it turned out to be. To the American negotiators of 1783, Nova Scotia included both Cape Breton and Prince Edward Island.

of a native population. Where was Prince Edward Island, which speaks to-day through a premier and assembly? Why, in the early years of the Revolution, an American skipper, not then having the fear of the three-mile limit before his eyes, entered that famous bend, of which we have heard so much, fishing for men instead of mackerel, and he caught the governor and the executive council—a catch which, I am sure, my friend on the other side will admit to be all “number ones”—and carried them to General Washington, who, not knowing what use to put them to, treated them as our witnesses have told us the fishermen treat young cod, threw them back into the water, and told them to swim home again. Why, the very names with which we have become so familiar in the last months—Tignish and Paspebiac, Margaree and Chetticamp, Sciminac and Scatterie—had not then risen from the obscurity of a vulgar geography, to shine in the annals of international discussion. There was then no venerable Nestor of Dominion politics, to whose experienced sagacity the interests of an empire might be safely intrusted; there were no learned and dignified queen’s counsel to be drawn up in imposing contrast to the humble advocates who address you from this side of the table. There was no minister of marine, with one hundred and sixty-five fog-whistles at his command, ready to blow a blast of triumph all along the coast upon the receipt of this award. There were no rights to invade, and the maritime provinces and the Dominion came into existence subject to the conditions of national life which that treaty created. When they did come into these waters they found us there.

Our rights and the character of our rights, under the Treaty of 1783, were never questioned or disputed for over a quarter of a century, not until the war of 1812, and then the question was made only as an effort of diplomatic *finesse* . The Treaty of 1783 had given to British subjects the right of navigation on the Mississippi River, under the belief that the boundary line between the two countries touched the sources of that river. By 1814 it was discovered that this was not so, and as the right to use the territory of the United States to reach the river had not been given, the right to use the river was not available. Then was invented the theory that the war of 1812 abrogated the Treaty of 1783, and by it the British Government were enabled to propose to renew the fishery articles, if we would remodel and make effective the article as to the Mississippi. We denied the theory. I will not, of course, trouble you with any detailed account of the negotiations. The correspondence between Mr. Adams and Lord Bathurst and the negotiations of the Treaty of Ghent are matters of familiar history.

The question thus raised was left unsettled, both governments maintaining their positions until the Convention of 1818. Two things are evident from that convention. First, that our right, as we maintained it, to the inshore fisheries was recognized, because Great Britain accepted from us the relinquishment of a portion of it, and by accepting what we gave recognized our right to give. Second, that we relinquished this right because our fishing was at that time entirely a deep-sea fishing, and because the settlement of the coasts of the maritime provinces and the development of local colonial fisheries, anticipated in the Treaty of 1783, were now being realized. That convention was a friendly and liberal concession on the part of the United States, and when we are required to-day to pay for the restoration of the former condition, we are simply made to pay for our own liberality. For what are the Treaties of 1854, and 1871 but a restoration of the conditions of the Treaty

of 1783, accompanied by that freer commercial intercourse which the interests and the intelligence of both countries demand.

I had proposed to trace the negotiations from 1818 to 1854 and thence to the protocol and Treaty of 1871. But these latter were somewhat fully discussed in the argument upon the motion formerly made on behalf of the United States, and my colleague has fully explained to you how and by what agencies the restrictions of the Convention of 1818 became so odious to our people.

I need not do more than refer you to the instructions of the British Government to the negotiators of the Treaty of Washington, and recognise, as I do most gladly, the wisdom and liberality of their spirit, and I now turn to the practical question which that treaty submits to your decision.

I come now to the questions which that Treaty of 1871 raises, and they are simply these: What is the difference in value gained by us and the advantages gained by you; that is to say, what is the difference in value between the right to fish within the three-mile limit, on one side, and the right to fish on the United States shores, on the other, coupled with the right to send fish and fish-oil to the United States market free of duty.

With regard to the fisheries. The fisheries with which the Treaty of 1871 is concerned are the cod, the herring, the mackerel, the hake, the haddock, and halibut fisheries, within the three-mile limit. For the purposes of this argument there will be, I think, a general agreement that we can dismiss the hake, haddock, and halibut fisheries. It is admitted, also, that the cod fishery is essentially a deep-sea fishery, and does not, therefore, come within the scope of your examination, especially as the question of bait and supplies, which alone connected it with this discussion, has been eliminated by your former decision.

We have left, then, only the herring fishery and the mackerel fishery. As to the herring fishery, I shall say but very few words. The herring fishery on the shores of the Magdalen Islands we claim of right—a few scattering catches elsewhere are not appreciable enough to talk about; and we have, therefore, only the herring fisheries of Newfoundland and Grand Manan. The former is essentially a frozen-herring business, and I do not believe there exists a question that this business, both at Newfoundland and Grand Manan, is entirely a mercantile business, a commercial transaction, a buying and selling, not a fishing. The testimony on this subject is complete, and is confirmed by Mr. Babson, the collector of the port of Gloucester, who has told you that the Gloucester fleet, the largest factors in this business, take out licenses to touch and trade, when they go for frozen herrings, thus establishing the character of their mercantile voyage.

The only open question, then, as to the herring fishery, is the fishery for smoked and pickled herring at Grand Manan, and in the Bay of Fundy, from Latite to Lepreaux, and whether that is conducted by United States fishermen within the three-mile limit; a question, it seems to me, very much narrowed when you come to consider that from Eastport, in Maine, to Campobello is only a mile and a half, and from Eastport to Grand Manan is only six or seven miles.

Mr. THOMSON. Twelve or fourteen miles.

Mr. TRESCOT. Not according to the statement of the witnesses. But call it ten miles; still it leaves a very small margin to make an estimate upon. I will not dwell upon that. The open question is whether there is fishing at Grand Manan that is participated in by American fisher-

men within the three-mile limit, and what advantages they derive from it, and what element that will make in the calculation of the award.

The testimony lies in a very small compass. There are three or four witnesses on either side. You saw and heard them; and I am very willing to leave that whole Grand Manan business to you without one word of comment upon the testimony, except to ask you one simple question, as plain, practical, business men. Were you compelled tomorrow to invest money in the herring fishery of Grand Manan and the adjoining mainland and islands, to whom would you go for information, upon whose judgment would you rely; upon Mr. McLean, who estimates the value of that Lilliputian fishery at \$3,000,000 annually, one-half of which is the unlawful plunder of United States fishermen—a fishery which, according to his estimate, would require, instead of the few unknown vessels which cannot be named, a fleet which could not sail from any port without being registered, and making it more than one-third of all the fisheries of the United States, of all the fisheries of the Dominion, and everywhere recognized; or would you go to Mr. McLaughlin, the keeper of one of those 165 light-houses, for which we are to pay, and fish-warden, who says it is his duty to make inquiries of every fisherman of his catch, but who adds that every fisherman of whom he inquired deliberately lied to him, in order to evade the school-tax, and who then proceeds to fill out the returns from his inner consciousness of what the returns ought to be, and makes that return double his own official return to the minister of marine? Would you not go to the very men whom we have placed on the stand; men who, and whose fathers have, for sixty years been engaged in purchasing all these fish, furnishing supplies to all these fishermen, directing and controlling the whole business, and whose fortunes have been made and preserved by their precise and complete knowledge of the value and condition of this very fishery.

And now as to the mackerel fishery. There are two singular facts connected with it. The first is, that valuable as it is represented to be, lying, as it is claimed to do, within an almost closed sea, the mackerel fishery of the gulf has been until within a few years the industry of strangers. It has not attracted native capital, it has not stimulated native enterprise, it has not developed native ports and harbors, while you claim and complain that it has built up Gloucester into established wealth and prosperity, and supplies, to a large degree, a great food-market of the United States. I find the following remarks in a report of Commander Cochran to Vice-Admiral Seymour in 1851:

The curious circumstance that about one thousand sail of American schooners find it very remunerative to pursue the herring and mackerel fisheries on the shores of our northern provinces, while the inhabitants scarcely take any, does indeed appear strange, and apparently is to be accounted for by the fact that the colonists are wanting in capital and energy. The Jersey merchants, who may be said to possess the whole labor market, do not turn their attention to these branches. The business of the Jersey houses is generally, I believe, with one exception, carried on by agents: these persons receive instructions from their employers to devote their whole time and energy to the catching and curing of cod. Such constant attention to one subject appears at least to engender a perfect apathy respecting other branches of their trade. They are all aware, I believe fully aware, of the advantages to be derived from catching the herring and mackerel, when these come in shoals within a few yards of their doors, but still nothing is done.

Commercial relations of long standing, never having engaged in the trade before, possible want of the knowledge of the markets, and the alleged want of skill among the fishermen of the method of catching and curing of these fish, together with the twenty per cent. duty on English fish in America, may tend to induce the Jersey houses not to enter into these branches. Added to all these reasons the capital of the principals is, I am informed, in most instances small. It will probably be difficult to find about the Bay of Chaleurs and Gaspé any fishermen not engaged by some one of

the numerous Jersey houses, and it may be said that a new branch of industry would much interfere with the cod-fishery, but so lucrative a trade as the herring and mackerel one would prove would enable higher wages to be given than are done for cod. In fact, I believe that very small, if any, wages are given at all, the money due to the fisherman for his summer labor being absorbed in food and clothing for himself and family, repairs of boats and fishing-gear, almost always deeply in debt in the spring, or at any rate sufficiently so to insure his labor for the ensuing summer, and so more persons would be induced to resort here the summer season.—(Confidential Official Correspondence, pp. 4 and 5.)

This is precisely the testimony of the Gaspé witnesses who were put upon the stand. The great Jersey houses, which do represent the capital, enterprise, experience, and skill of the country, do not touch the mackerel fisheries. As they did a quarter of a century ago, so they do to-day: they abandon, neglect utterly what has been called the California of the coast, and make and maintain their fortunes by giving up mackerel-fishing, and confining their attention exclusively to cod-fishing.

The other fact which strikes me is this: that whatever development there has been—and it has been chiefly, if not entirely, on Prince Edward Island—has come since 1854, and has grown larger and richer under the Reciprocity Treaty. In 1852, the legislative council and assembly of Prince Edward Island, in colonial parliament assembled, declared that “the citizens of the United States have an advantage over the subjects of Your Majesty on this island which prevents all successful competition, as our own fish caught on our own shores by strangers are carried into their ports by themselves, while we are excluded by high protective tariff.”—(Confidential Official Correspondence, page 5.)

From 1854, two years only after this declaration, there was a large and prosperous development of the Prince Edward shore fishery. This point has been insisted on and reiterated over and over again by the British witnesses. And yet we are asked now to pay \$15,000,000 for the twelve years' use of the very privileges given by that treaty under which this prosperity was developed; for, as far as the fishing articles and the fisheries are concerned, the provisions and privileges of the Treaty of 1871 are almost identical with the treaty of 1854, the treaty under which this fishery which now demands \$15,000,000 compensation, was, I may almost say, created.

Passing by these topics, however, let me ask you to consider the difference in the character of the testimony upon which the two cases rest. I do not mean to institute any comparison between the veracity of the witnesses, or to imply that one has more than another deviated from the truth. But I can best illustrate what I do mean by asking the same question I did as to the herring-fishing.

If you wished to invest in mackerel, would you trust the rambling stories of the most honest of skippers or the most industrious of boat-fishers against the experience and the books of men like Proctor, Sylvanus Smith, Hall, Myrick, and Pew? Would you feel safe in buying when they refused to buy? Would you be disposed to hold when you saw them selling? And here lies the whole difference between us. Ours is the estimate of the capitalist; theirs the estimate of the laborer. Let me take another illustration. Suppose that, instead of estimating the relative value of these fisheries, you were called on to estimate the relative value of the cotton crops of Georgia and Mississippi. Would it enter your minds to go into remote corners of these great States and gather together 83 small farmers, planting on poor lands, without artificial manure, without capital to hire labor, and draw your inference of production from their experience, although every word of it were true? Would you go to a few great planters and judge of the returns of cotton-

planting from the results of lavish expenditure? No. You would go to Savannah and Mobile, to Charleston and New York, to the offices of the factors, to the counting-houses of the great buyers, to the receipts of the railroads, to the freight-lists of the steamers. I may safely say that there is no great industry, the costs and profits of which can be ascertained by such partial individual inquiry. I am willing to admit perfect honesty of intention on the part of the individuals; but they never can understand how small a portion of a great result is the product of their local contribution; and just as a small farmer in all sincerity measures the crop of grain or cotton that feeds and clothes the world from the experience of his few acres; so the boat-fishermen of Prince Edward measures the mackerel-catch of the gulf by the contents of his boat, and imagines the few sail he sees in the offing of his harbor to be a huge fleet that is stealing his treasure. I mean no disrespect to very excellent people, but as I have heard their testimony, I would not but recall the humble address of the legislative council and house of assembly of Nova Scotia "to the Queen's most Excellent Majesty," in March, 1838, in which the fishermen of Prince Edward and the Magdalen Islands are tersely described as "a well-intentioned, but secluded and uninformed, portion of Your Majesty's subjects."

Let me call your attention to another important point of difference between their testimony and ours. Theirs is the affirmative in this contention. They must prove their allegation. What is their allegation? They allege that the catch of mackerel by American fishermen within the three-mile limit is of more pecuniary value to us than the right to fish in the same limits in United States waters, with the additional right to send in fish and fish-oil free, is to them. We say, prove it. Now, there can be but two ways of furnishing such proof. Either the British counsel must produce the evidence of a positive catch of value sufficient to sustain the allegation, or they must prove such a habit of successful fishing by Americans within the limits as justifies their inference of a proportion of such value.

They have not attempted to do the first. Nowhere in their evidence have they shown so many barrels of mackerel positively caught within the three-mile limit, and said, "There is the number, and here is the value for which we are entitled to be paid." If all the mackerel that have been sworn to by every witness as caught within the limit—not what he has heard has been caught, or thinks has been caught, but knows from his personal knowledge—be added together, it would not make \$100,000. Their value would be utterly inappreciable compared with the amount claimed.

They have adopted the other course, and by it they must stand or fall. They have put on the stand (leaving out Newfoundland) about fifty witnesses, who swore that they in United States ships caught mackerel within the limits; and they claim that this fact proves "the habit" of fishing within the limits. In reply, we put on an equal number of witnesses, who prove that they caught habitually good fares in the bay, without fishing within the three-mile limit. "Granted," they say, "but this only proves that your fifty witnesses did not fish within the three-mile limit." That is true; but is it not equally true that their testimony only proves that their witnesses, and those alone, fished within the limits, and leaves the question simply, whether they caught enough to justify an award? To go a step further, you must prove "the habit" of United States fishermen. But how can you prove a habit with equal testimony for and against it? It is exactly like what all lawyers and business men know as proving "commercial usage." In the absence of

statute law, if you wanted to prove "commercial usage" at Amsterdam or New York, as to what days of grace were allowed on commercial paper, what would you do? Examine the merchants of these cities as to "the habit" of commercial people. Now, if fifty merchants swore that one day was allowed, and another fifty swore three days were allowed, you might not know whether it was one or three, but you would know that you had not proved any "habit." Just so, if fifty fishermen of a fishing-fleet swore that it was "the habit" of the fleet to fish inshore, and fifty swore that it was "the habit" never to fish inshore, you might not know which to believe; but supposing, what in this case will not be disputed, that the witnesses were of equal veracity, you would certainly know that you had not proved "the habit."

You will see, therefore, that the burden of proof is on our friends. They must prove their catch equal in value to the award they claim. If they cannot do that, and undertake to prove "habit," then they must do—what they have not done—prove it by an overwhelming majority of witnesses. With equal testimony, their proof fails.

And now, with such testimony, let us take up the mackerel fishery. Before you can fix the relative value of American or British interest in this industry, you must ascertain what it is. Before you can say how it is to be divided, you must know what you are to divide. Fortunately, we are agreed that there is but one market for all mackerel, whether caught on the United States shores or in the Gulf of St. Lawrence, and that is the United States. No statement has gone beyond the estimate of a supply from all the fisheries of more than 400,000 barrels. In fact, that is considerably above the average supply. Then no statement has gone beyond an average of \$10 per barrel as the price. That makes \$4,000,000. Next, I think I am safe in saying that the consent of the most competent witnesses has fixed 400 barrels as the limit below which a vessel must not fall in order to make a saving trip. If that be so, the supply of 400,000 barrels represents one thousand profitable trips. That is not catches making large amounts of money, but catches that did not lose. What, then, is the average value of a profitable trip? Take the estimates of Mr. Sylvanus Smith, Mr. Proctor, and Mr. Pew, and see what profits you can make out of even such a trip. I am taking a large result from these calculations when I take Mr. Smith's estimate of \$220, where the owner runs the vessel, and that will give you from the 400,000 barrels a resultant profit of \$220,000. And in this calculation I have not attempted to separate the gulf catch from the United States shore catch, or to determine what portion of the gulf catch was made within the three-mile limit. Take the largest estimate that has been made by anybody; call the gulf catch a third of the whole; say \$75,000, to avoid the fractions; and then consider half of that caught within three miles, and you have \$36,000 annually, or \$432,000 in twelve years, for the privilege of making which you ask over one million annually, or \$15,000,000 for the twelve years. But even with this result, this is an exaggerated, a very exaggerated estimate of the value of the mackerel fishery, because it assumes the highest catch ever known as the average. Now, there are two facts upon which all the testimony agrees: 1. The variable character of the mackerel fishery. 2. The steady diminution of the supply from the gulf as compared with the supply from the United States shores. If these be taken into calculation, what margin is left for an award, especially when it is remembered that this award is for twelve years, and, in the opinion of those most experienced, the variation in the mackerel catch passes from its minimum to its maximum every seven years; giving, therefore, in this period but one maxi-

4
mum year in return for the payment. Upon these two facts we can rest. I do not care to go through the testimony that you have had before you. I did make one or two tabular statements, but I do not think it worth while to trouble you with them. The general results you can get at as well as I did. You know the general run of the testimony. You know whether I am saying what is fairly and reasonably accurate. Our contention is that we have proved these points conclusively, and taking them as the basis, there is no margin whatever left for an award on account of profits accruing to the United States from the privilege of inshore fishing.

But there is another fact not stated in any of the evidence, but which is clearly proven by the whole of it; and it is this: The mackerel market is a speculative market; its profit represents simply a commercial venture, and not the profit to the fisherman. In other words, a barrel of mackerel salted, packed, and sold, produces a result in which the profit of the fisherman makes but a small part. Take the statement of Mr. Hall, that he purchases regularly from the fishermen of Prince Edward Island their mackerel at \$3.75 per barrel. Now, whatever Mr. Hall sells that barrel of mackerel for above and beyond \$3.75 represents capital, labor, skill, with which the fishery, as a fishery, has no concern. Between the fish in the water and the fish in the market there is as much difference as there is between a pound of cotton in the field and a pound of cotton manufactured; and you would have as much right to estimate the value of a cotton plantation by the value of the cloth and yarn into which its production has been manufactured, as you have to value the fisheries by the value of the manufactured fish which are sold.

Suppose that Mr. Hall, or a combination of Mr. Hall's, should purchase the whole mackerel catch at \$3.75, and then hold for such a rise in price as they might force. This speculation might make Mr. Hall a millionaire or a bankrupt, but would any man in his senses consider the result, be it profit or loss, as representing the value of the mackerel fishery?

So little, indeed, does the value of fish enter into the market value of the mackerel, that you have this statement from Mr. Pew, the largest and longest established fish-merchant on this continent: "No. 1 bay mackerel in the fall were bought by us at \$22.50, and piled away over winter, and I think the next May and June they sold down as low as \$4, \$5, and \$6 a barrel—the same fish; and I think that shore mackerel, which had sold as high as \$24, were then sold for about the same price."

Would the mackerel market of that year have afforded you any fair criterion by which to appraise the mackerel fishery of that year? What interest had the mackerel fishermen in this speculative variation of the market price? And you have the further and uncontradicted testimony of more than one competent witness that when the mackerel catch of 1870 was, with one exception, the largest ever known, prices were maintained at a higher point than in years of very small catch.

Upon this state of facts, proven by such competent witnesses as Proctor, Sylvanus Smith, Myrick, Hall, and Pew, I submit that in estimating the value of the fishery you can only take the value of the raw material—that is, the fish as taken by the fisherman and by him sold to the merchant; and even then the price he receives represents, besides the value of the raw material, his time, his labor, his living, and his skill. For throughout this argument you must not forget that the British Government gives us nothing. For the freedom from duty, and the right to fish in United States waters, it gives us the privilege only of using our own capital, enterprise, and industry within certain limits. It cannot secure us, and does not offer to secure us, a single fish. It

cannot control the waters or the inhabitants thereof. It cannot guarantee that in the twelve years of the treaty the catch in the gulf will be even tolerable, and, indeed, for the five years that have already run it has been pure loss. And yet the British Case demands that we should pay not only for the little we do catch, but for all that, under other circumstances, we might catch; and not only that, but that we should pay for all the fish that the British fishermen do not catch!

We contend, then, that we have proved that the mackerel fishery of the gulf is so variable that it offers no certainty of profit; that the use of the gulf fishery has diminished steadily; that in the gulf there is no evidence of any habitual fishing within the three-mile limit; that an equal number of experienced and competent fishermen prove that they do not fish at all inside the limits, and that the development of the United States coast fishery has offered, and is offering, a more profitable field for the industry and capital of United States fishermen, while the supply of fish from the lakes and the transport of fresh fish far into the interior is superseding the use of salted mackerel as an article of food; and therefore there is no ground in any advantage offered by the Treaty of 1871 upon which to rest a money award.

We now go further and maintain that if in this condition of the mackerel fishery you can find any basis for such award, then the advantages offered to the subjects of Her Britannic Majesty by the United States in the same treaty are a complete offset.

These advantages consist, first, in the right to share the shore fisheries of the United States. It will not do to assert, as the British Case does, that "their modes of fishing for menhaden and other bait are furthermore such as to exclude strangers from participating in them without exceeding the terms of the treaty; and even without this difficulty it must be apparent that such extensive native enterprises would bar competition and suffice to insure the virtual exclusion of foreigners." (Page 29.)

These, as they stand, are mere assertions, unsupported by any proof. The treaty provision is the highest law of the land, and no local legislation can prevent the exercise of the privileges it confers. The competition of native enterprise is just what the United States fishermen meet in British waters; and that the native enterprise is more extensive on the United States shores, only proves that there is an industry which better rewards the enterprise. It is like all treaty privileges—one, the use of which depends upon those who take it, and if, when given and taken in exchange, the parties taken do not choose to use it, this refusal cannot deprive it of its value.

2. The second advantage given to Her Britannic Majesty's subjects is the right to export into the United States fish and fish-oil free of duty. The estimate which we have submitted as to the value of this privilege is that it is worth about \$350,000 annually.

This has not been denied, but I am concerned with the principle, not the amount. To this offset the British counsel object, upon the ground that the duty taken off the British producer reduces the price to the American consumer, and is therefore a benefit to the latter to the same extent, for, if imposed, the consumer would have to pay. Into the politico-economical argument I shall not enter. You have heard enough of it in the cross-examinations, where counsel and witnesses gave you their opinions; and our view of the case has been placed before you with great clearness and force by the learned counsel who preceded me. Upon that question, I have but two remarks to make, and I do not think either can be controverted:

1. If it be assumed, as a general principle, that the consumer pays the duty, it is equally true that he does not pay the whole of it. For to assume any such position would be to strike out all possibility of profit. Take an illustration: A merchant imports 1,000 yards of broadcloth, which, adding all costs and duties, he can sell at a profit at \$6 a yard. Now add a duty of \$2 a yard. He cannot sell his customer at \$8 a yard; he must divide the rise in price, and, while he adds the duty, he must diminish the profit. Except in case of articles of luxury, such as rare books, jewels, costly wines, scientific instruments, works of art, the increase of duty cannot, and never has been, imposed entirely upon the consumer.

2. If this be true, then you must ascertain what is the proportion of increase in price of mackerel consequent upon the duty which is paid by the consumer, before you can say what he, the consumer, gains by the removal. There has been no attempt to do this on the part of counsel. Our most experienced witnesses testify that the additional duty of \$2 would raise the price of mackerel about fifty cents a barrel, which would leave \$1.50 to be paid by the producer. I do not undertake to say whether this is right or wrong, for I am discussing the principle, not the amount. The question is an insoluble one. You have been told by competent witnesses, and after a fortnight's preparation for rebuttal they have not been contradicted, that the mackerel market is a speculative one; that in one year the speculative price has varied from \$22 to \$4, while for ten years the price to the daily consumer has scarcely varied at all; that the price depends much upon the catch; and yet that in the year of the largest catch the price has not gone down; and that being food for poor people, there is a price which when reached, with duty or without duty, the consumption is immediately reduced; and, added to all this, that the competition of fresh fish is fast driving it out of use. With all these conditions to be ascertained first, who can ever say what proportion of duty is paid by the producer and what by the consumer, or if any is paid by the latter?

I do not believe it is possible to do it, but if it were possible to do it you cannot make it an offset. If you undertake to make an offset of it let us know what it is. We state our account. We take this statement and we say, "In the year 1874 the duty remitted was \$355,972." Now, what are you going to set off against that?—an opinion, a theory, a belief, a speculation to weigh it down with? If you are going to set off dollars against that, tell us how many dollars in 1874 you are going to set off against that. How are you going to find out? How can you ever tell us? But if the gentlemen's theory is right, they have not converted it into a practical theory that you can apply. If they will undertake to tell us, "In 1874 and 1875 we will show you a reduction of price in mackerel to a certain number of consumers to the amount of \$200,000 or \$250,000," strike the balance. But you cannot strike the balance with an opinion. Before they can make this claim they must submit that statement to us. But I do not intend to dwell upon that, for this reason. The principle that I hold ought to be applied to the solution of this question is this: that it is one with which, under the treaty, you have nothing on earth to do. If our friends on the other side could show, dollar for dollar, that every dollar of the \$355,000 remitted by the renewal of the duty was \$355,000 to the benefit of the American consumers, you could not reckon it.

Now, let us look at the treaty:

ARTICLE XXII. Inasmuch as it is asserted by the Government of Her Britannic Majesty that the privileges accorded to the citizens of the United States, under Article XVIII of

this treaty, are of greater value than those accorded by Articles XIX and XXI of this treaty to the subjects of Her Britannic Majesty, and this assertion is not admitted by the Government of the United States, it is further agreed that Commissioners shall be appointed to determine, having regard to the privileges accorded by the United States to the subjects of Her Britannic Majesty, as stated in Articles XIX and XXI of this treaty, the amount of any compensation which, in their opinion, ought to be paid by the Government of the United States to the Government of Her Britannic Majesty, in return for the privileges accorded to the citizens of the United States under Article XVIII.

Now, under this treaty there stands before you to-day a balance, on one arm of which hangs the 18th Article of the Treaty of 1871, and on the other the 19th and 21st Articles. You cannot add to either scale one scruple, one pennyweight, which the treaty has not put there. You cannot transfer weights from one to the other. You can only look at the index and see whether the register shows that one is heavier than the other, and how much heavier. What are the advantages conferred by the 18th Article of the Treaty of 1871 on the citizens of the United States?

It is agreed by the High Contracting Party, that in addition to the liberty secured to the United States fishermen by the Convention between Great Britain and the United States, signed at London on the 20th day of October, 1818, of taking, curing, and drying fish on certain coasts of the British North American Colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of Her Britannic Majesty, the liberty, for the term of years mentioned in Article XXXIII of this treaty, to take fish of every kind, except shell-fish, on the sea-coasts and shores, and in the bays, harbors, and creeks of the Provinces of Quebec, Nova Scotia, and New Brunswick, and the Colony of Prince Edward Island and of the several islands thereunto adjacent, without being restricted to any distance from the shore, with permission to land upon the said coasts and shores and islands, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish.

That is the only advantage which is given to us by the 18th Article of the treaty, and it is the only advantage so given to us, the value of which you have any right to estimate. I am perfectly willing to admit a set-off of this kind, which is provided for apparently. It is agreed in Article XXI that for the term of years mentioned in Article XXXIII of this treaty, fish-oil and fish of all kinds (except fish of the inland lakes and of the rivers falling into them, and except fish preserved in oil), being the produce of the fisheries of the United States or of the Dominion of Canada or of Prince Edward Island, shall be admitted into each country, respectively, free of duty.

Now, if against the \$350,000 of duty remitted upon fish and fish-oil imported from the Dominion into the United States, you can set off any duty on fish and fish-oil imported from the United States into Canada, you will have the right to do it; but that is the extreme limit to which, under the words of that treaty, you have a right to go. It is nothing whatever to you whether the advantage to us is great or small of the remission of that duty. It is a positive advantage to the citizens of the Dominion: it is given to them as an advantage, and in return for it they have given us a right to do one thing and nothing else, and under that treaty you have no right to value any other advantage against us.

I have now stated, as concisely as I have been able, the scope of our argument—the principles which we think ought to be applied to the solution of this question. As to the facts, you will judge them by the impression the witnesses have made upon yourselves, and not by any representations of the impressions they have made upon us. And we fully and gratefully recognize that you have followed the testimony with patient and intelligent attention.

It seems to me (and this I would say rather to our friends on the other side than to you) that at the end of this long investigation, the true character of the case is not difficult to see. For a century the re-

lations of the two countries on this question have been steadily improving. We have passed from the jealous and restrictive policy of the Convention of 1818 to the free and liberal system of the Treaty of 1854, and, with good sense and good temper, it is impossible that we should ever go backward. The old feuds and bitternesses that sprang from the Revolution have long since died out between the two great nations, and in fact, for Great Britain, the original party in these negotiations, has been substituted a nation of neighbors and kinsmen, a nation working with us in the wise and prosperous government of this vast continent, which is our joint possession; a nation, I may add, without presumption or offense, whose existence and whose growth is one of the direct consequences of our own creation, and whose future prosperity is bound up with our own. In the Treaty of 1871 we have reached a settlement which it depends upon your decision to make the foundation of a firm and lasting union. Putting aside for the moment the technical pleadings and testimony, what is the complaint and claim of the Dominion? It is that where they have made of the fishery a common property, opened what they consider a valuable industry to the free use of both countries, they are not met in the same spirit, and other industries, to them of equal or greater value, are not opened by us with the same friendly liberality. I can find no answer to this complaint, no reply to this demand, but that furnished by the British Case, your own claim to receive a money compensation in the place of what you think we ought to have given. If a money compensation is recompense—if these unequal advantages, as you call them, can be equalized by a money payment, carefully, closely, but adequately estimated—then we have bought the right to the inshore fisheries, and we can do what we will with our own. Then we owe no obligation to liberality of sentiment or community of interest; then we are bound to no moderation in the use of our privilege, and if purse-seining and trawling and gurry-poison and eager competition destroy your fishing, as you say they will, we have paid the damages beforehand; and when at the end of twelve years we count the cost, and find that we have paid exorbitantly for that which was profitless, do you think we will be ready to renew the trade, and where and how will we recover the loss?

No. I believe that this treaty as it stands executed to-day, interpreted in the broad and liberal spirit in which it was conceived, is, whether you regard the interests of the maritime provinces or the wider interests of the whole Dominion, a greater advantage in the present and a larger promise in the future than any money-award which may belittle the large liberality of its provisions. As it stands it means certain progress. The thorough investigation which these interests have now for the first time received, a few years, a few months of kindly feeling and common interest will supply all its deficiencies and correct all its imperfections.

And, therefore, do I most sincerely hope that your decision will leave it so, free to do its own good work, and then we who have striven together, not, I am glad to say, either unkindly or ungenerously, to reach some just conclusion, will find in the future which that treaty contains the wisest solution, and we shall live to see all possible differences which may have disturbed the natural relations of the two countries, not remotely but in the to-morrow of living history, not metaphorically but literally, "in the deep bosom of the ocean buried."

VI.

CLOSING ARGUMENT OF HON. RICHARD H. DANA, JR., ON BEHALF OF THE UNITED STATES.

FRIDAY, November 9, 1877.

May it please Your Excellency and Your Honors :

Certainly, in the discharge of our respective duties on this high occasion, we are met under most favorable auspices. Our tribunal is one of our own selection. The two parties to the question, Great Britain and the United States of America, have each chosen its representative upon the Board : and, as to the President and Umpire of the Tribunal, while the treaty obliged us, by reason of the lapse of time, to refer the appointment to the representative of a foreign power at London, yet it is well known that the appointment was made in conformity with the expressed wish of those governments, who found, as the head of this court, one with character so elevated and accomplishments so rare that they had no difficulty in agreeing upon him themselves.

We have been fortunate, gentlemen of the Commission, that no misfortune, no serious accident, in the long period of three months that so many gentlemen have been together, has fallen upon us. The shadow of death has not crossed our path, nor that of any of ours at a distance, nor even has sickness visited us in any perilous manner. We have been sustained all the while by the extreme hospitality and kindness of the people of this city, who have done everything to make our stay here as agreeable as possible, and to breathe away any feeling we might have had at the beginning that there might be any antagonism which would be felt beyond the legitimate contests of the profession. The kindest feeling and harmony prevail among us all. Your legislature of this province has set apart for our use this beautiful hall, and while my friend and associate, Mr. Trescot, saw, in the presence of the portrait of His Majesty, which looks down upon us from the walls, an encouragement for the settlement of the matter confided to us, because that king supposed it settled more than a hundred years ago, I confess that the presence of that image has been to me throughout interesting and almost painful. It was the year that he ascended to the throne that the French were finally driven from North America and that it all became *British America*, from the southern coast of Georgia up to the North Pole, and all these islands and peninsulas which form the Gulf of St. Lawrence passed under his scepter. And what a spectacle for him to look down upon now, after a hundred years ! A quiet assembly of gentlemen, without any parade or ostentation, without an armed soldier at the gate or door, settling the vexed question of the fisheries which, in former times and under other auspices, would have been cause enough for war.

And settling them between whom ? Between his old thirteen colonies, now become a republic of forty millions of people, bounded by seas and zones, and his own empire, its scepter still held in his own line, by the daughter of his own son, more extended, and counting an immensely larger population than when he left it, showing us not only the magnitude, and increase, and greatness of the republic, but the stability, the security and the dignity of the British Crown. Yes, gentlemen of the Commission, when he ascended the throne, and before that, when his grandfather, whose portrait also adorns these walls, sat upon the throne of England, this whole region was a field of contest between France and Great Britain. It was not then British North America. Which should

hold them, with these islands and peninsulas and these fisheries, adjacent to and about them, depended upon the issue of war, and wars one after another; but Great Britain, holding certain possessions here, claimed them, and made large claims, according to the spirit of that day, covering the Banks of Newfoundland, and the other banks, and the whole deep-sea fishery out of sight of land, and also up to the very shores and within hailing distance of them, without any regard to a geographical limit of three miles, which is a very modern invention. That contest was waged, and the rights in these islands and these fisheries settled by the united arms of Great Britain and of New England, and largely, most largely, of Massachusetts. Why, Louisburg, on Cape Breton, held by the French, was supposed to be the most important and commanding station, and to have more influence than any other upon the destinies of this part of the country. And, Mr. President, it was a force of between three and four thousand Massachusetts men, under Pepperell, and a few hundred from the colonies, with two hundred and ten vessels, that sailed to Louisburg, invested and took it for the British Crown, in trust for the British Crown and her colonies. Gridley, who laid out the fortifications at Bunker Hill, and Prescott, who defended them, were in the expedition against Louisburg. And wherever there was war between France and England for the possession of this continent, or any part of it, or these islands and these fisheries, the militia and volunteers of Massachusetts fought side by side with the regulars of Great Britain. They fought under Wolfe at Quebec, under Amherst and Lord Howe at Ticonderoga; and, even at the confluence of the Alleghany and Monongahela, Washington commanded under Braddock. We followed the British arms wherever they followed the French arms. The soldiers of Massachusetts, following them to the sickly sugar islands of the West Indies, lay side by side on cots in the same fever-hospitals and were buried in the same graves.

And if any of you shall visit the old country again, and your footsteps may lead you to Westminster Hall, you will find there a monument to Lord Howe, the brother of Admiral Howe, who fell at Ticonderoga, erected to his memory by the Province of Massachusetts; and there let it stand, an emblem of the fraternity and unity of the olden times and a proof that it was together, by our joint arms and our joint enterprise, blood and treasure, that all these provinces, and all the rights appertaining and connected therewith, were secured to the Crown and the colonies. Yes, gentlemen of the Commission, every one of the charters of Massachusetts gave her a right to fish in these northwestern waters, and they, you will observe, were irrespective of her geographical position. None of them watered her shores, but they were the result of the common toil, treasure and blood of the colonies and of the Crown, and they were always conceded to the colonies by the Crown. The last Massachusetts charter granted by the Crown is in these words—it assures to Massachusetts “the right to use and enjoy the trade of fishing on the coast of New England, and all the seas thereto adjoining, or arms of said seas, where they have been wont to fish.” The test was the habit of the people; “where they had,” in the good old Saxon English, “been wont to fish.” It did not depend on geographical lines. They had no idea then of limiting the colonies to three miles, and giving them a general right on the seas, but whatever right Great Britain had here she secured to the colonies to the last.

I may as well present here, gentlemen of the Commission, as at any other time, my view respecting this subject of the right of deep-sea fishery. The right to fish in the sea is in its nature not real, as the common

law has it, nor immovable, as named by the civil law, but personal. It is a liberty. It is a franchise or a faculty. It is not property pertaining to or connected with the land. It is incorporeal; it is aboriginal. The right of fishing, dropping line or net into the sea, to draw from it the means of sustenance, is as old as the human race, and the limits that have been set about it have been set about it in recent and modern times, and wherever the fisherman is excluded, a reason for excluding him should always be given. I speak of the deep-sea fishermen, following the free-swimming fish through the sea, not of the crustaceous animals or any of those that connect themselves with the soil under the sea or adjacent to the sea, nor do I speak of any fishing which requires possession of the land or any touching or troubling the bottom of the sea; I speak of the deep-sea fishermen who sail over the high seas pursuing the free-swimming fish of the high seas. Against them, it is a question not of admission, but of exclusion. These fish are not property. Nobody owns them. They come we know not whence, and go we know not whither. The men of science have been before us, and fishermen have been before us, and they do not agree about it. Professor Baird, in a very striking passage, gave it as his opinion that these fish retire in the winter to deep sea or to the deep mud beneath the sea, and become unseen and unknown, and in the spring they invade this great continent as an army, the left wing foremost, touching the Southern States first and last the northern parts of the British colonies. Others think they go to the South and come back in lines and invade this country; but, at all events, they are more like those birds of prey and game which retire to the South in the winter, and appear again and darken the sky as they go to the North. They are no man's property; they belong, by right of nature, to those who take them, and every man may take them who can. It is a totally distinct question whether, in taking them, he is trespassing upon private property, the land or park of any other individual holder. "The final cause," as the philosophers say, of the existence of the sea-fish is, that they shall be caught by man and made an object of food by man. It is an innocent use of the high seas, that use which I have described. More than that, it is a meritorious use. The fisherman who drops his line into the sea creates a value for the use of mankind, and, therefore, his work is meritorious. It is, in the words of Burke, "wealth drawn from the sea," but it was not wealth until it was drawn from the sea.

Now, these fishermen should not be excluded except from necessity, some kind of necessity, and I am willing to put at stake whatever little reputation I may have as a person acquainted with the jurisprudence of nations (and the less reputation, the more important to me) to maintain this proposition, that the deep-sea fisherman, pursuing the free-swimming fish of the ocean with his net, or his leaded line, not touching shores or troubling the bottom of the sea, is no trespasser, though he approach within three miles of a coast, by any established, recognized law of all nations. It may possibly cross the minds of some of this tribunal, that perhaps that is not of very great importance to us here, but from the reflection I have been able to give to this case (and I have had time enough, surely) it seems to me that it is. I wish it to be fully understood, what is the nature of that exclusive right for the withdrawing of which we are asked to make a money compensation? What is its nature, its history, and its object? The treaty between Great Britain and France of 1839, which provides for a right of exclusive fishery by the British on the British side of the channel, and by the French on the French side of the channel, and measures the bays by a ten-mile line, is entirely a matter of contract between the two nations. The treaty be-

gins by saying, not that each nation acknowledges in the other the right of exclusive fishery within three miles of the coast; nothing of the kind. It begins by saying, "*It is agreed between the two nations that Great Britain shall have exclusive fishery within three miles of the British coast, and that the French shall have exclusive fishery within three miles of the French coast,*" and then it is further agreed that the bays shall be measured by a ten-mile line. All arbitrary alike, all resting on agreement alike, without one word which indicates that the law of nations any more gives an exclusive right to these fisheries by the British for three miles, than it does to measure the bays by ten miles. In the time of Queen Elizabeth this matter seemed to be pretty well understood in England. Her Majesty sent a commission, if I recollect right, an embassy, to Denmark, on the subject of adjusting the relations between the two countries, and among the instructions given the ambassadors were these:

And you shall further declare that the lawe of nations alloweth of fishing in the sea everywhere; as also of using ports and coasts of princes in amitie for traffique and avoidinge danger of tempests; so that if our men be barred thereof, it should be by some contract. We acknowledge none of that nature; but rather, of conformity with the lawe of nations in these respects, as declaring the same for the removing of all clayme and doubt; so that it is manifest, by denying of this fishing, and much more, for spoyling our subjects for this respect, we have been injured against the lawe of nations, expressely declared by contract as in the aforesaid treaties, and the King's own letters of '85.

And for the asking of licence (your honors will be pleased to observe that the Danish statute required the English to pay licenses for fishing in certain parts of said sea close to the shore), if our predecessors yielded thereunto, it was more than by lawe of nations was due; yielded, perhaps, upon some special consideration, yet, growing out of use, it remained due by the lawe of nations, what was otherwise due before all contract; wherefore, by omitting licence, it cannot be concluded, in any case, that the right of fishing, due by the lawe of nations, faileth; but rather, that the omitting to require licence might be contrarie to the contract, yf any such had been in force.

Sometime, in speech, *Denmark* claymeth proprietie in that sea, as lying between *Norway* and *Island*—both sides in the dominions of oure loving brother the King, supposing thereby that for the proprietie of a whole sea, it is sufficient to have the banks on both sides; as in rivers. Whereunto you may answere, that though proprietie of sea, in some small distance from the coast, maie yeild some oversight and jurisdiction, yet use not princes to forbid passage or fishing, as is well seen in our seas of England.

Though possession of the land close to the sea, says this remarkable letter of instructions, "may yield some oversight and jurisdiction, yet use not princes to forbid passage or fishing, as is seen by our law of England." There is much more to the same effect. So that whatever claim of jurisdiction over the sea a neighboring nation might make, whatever claim to property in the soil under the sea she might make, it was not the usage of princes to forbid passage, innocent passage, or the fishing and catching of the free-swimming fish, wherever they might be upon the high seas.

I wish, particularly, to impress upon your honors that all the North British colonies were in possession and enjoyment of the liberty of fishing over all the Northwestern Atlantic, its gulfs, and bays. There is no word indicating the existence of either of these two things, a three-mile line of exclusion or attaching a right of fishing to the geographical position of the colony. No, gentlemen, the Massachusetts fisherman who dropped his leaded line by the side of the steep coast of Labrador, or within hail of the shore of the Magdalen Islands, did it by precisely the same right that he fished in Massachusetts Bay, off Cape Cod, or Cape Ann. Nobody knew any difference in the foundation, or the test of the rights, in those days. It was a common heritage, not dependent upon political geography. As I have said, it was conquered by the common toil, blood, and treasure, and held as a common right and pos-

session. "Be it so," your honors may say, "but could not Great Britain take it from her colonies?" Well, the greatest philosopher who gave his life to statesmanship, Edmund Burke, said: "That is a question which can better be discussed in the schools, where alone it can be discussed with safety." He compared it with the question of the right to shear wolves. He was not disposed, perhaps, to deny the right in the abstract, but as a servant of the Crown he could not advise the Crown to try that kind of experiment. I recollect that when, before our civil war, an ardent and enthusiastic admirer of slavery said on the floor of Congress that capital ought to own labor, and that we had made a great mistake in New England that the capitalist did not own the men who worked in the factories and the men who followed the sea, Mr. Quincy replied by an anecdote respecting the bounty which the State of Maine gave for every wolf's head. A man was asked why he did not raise a flock of wolves for the bounty; he said it would turn out, he was afraid, to be a hard flock to tend. And the wisest men in Great Britain—and I can say this in the presence of gentlemen who are almost all British subjects now, without fear of giving offense—the wisest men of Great Britain thought it was an attempt which had better not be made. But the act of March, 1775, urged by the obstinacy of George III and his adherence to worn-out traditions, was passed. After a conflict with the colonies on the subject of the stamp-act and the tea-tax, that fatal act was passed, aimed at home rule, self-government, and the trade of the New England people—or rather, I should say, in the first instance, of Massachusetts, because it was Massachusetts over which the contest was waged during the early part of our struggle—and attempting to undo all we had been doing for one hundred and fifty years; to revolutionize our entire political system, and instead of leaving us what we had enjoyed for that time, home rule, to substitute a government at St. James or St. Stephen's. Among other things, they provided that we should be deprived of our right in the fisheries. The statute acknowledged the existence of it, but Massachusetts was to be deprived of her right by the act of Parliament.

Then came the debate, fiercer than ever, "Can Parliament take from us this right?" Well, it rested upon the assumption that all the grants the charters vested in us were held at the discretion of Parliament, and if Parliament could take away our fisheries, she could take away our landmarks, she could take Boston and Salem, which had been granted to us under the same charter that the fisheries had been granted; and when that act was passed, Burke, and Fox, and Sheridan, and Barré, and others, our friends in the British Parliament, called it a simple provocation to rebellion. Burke said, "it is a great penal bill which passed sentence on the trade and sustenance of America." New England refused obedience; the other colonies assisted her, and we always treated it as void. Then came the war, and what was the effect of that on our title? Why, may it please you, gentlemen, I do not deny that war has an effect, but not the kind of effect which has been contended for by the British Government and by counsel. I agree that war puts at hazard, not only every right of a nation, but the existence of the nation. There are boundary lines before war, and they are good against neutrals, and good between one another, unless something else happens; but the boundary lines and everything they have are put at stake by the war. If one party entirely conquers the other, it has a right to decide upon the future existence of the other nation and all its rights; and when our ancestors pledged their "lives, fortunes, and sacred honor" to maintain all their rights, including this right against the demands of

Parliament, I agree that they put this right, as they put their lives, at hazard; but, fortunately for us, the war did not turn out a conquest of any of our rights. At the close of the war, the Treaty of 1783 was made. Now, at the time when the Treaty of 1783 was made, Great Britain did not claim to have conquered America, or to have taken from us by military force any of our rights, and the consequence was that in framing the Treaty of 1783, while they altered, by common consent, some of the division lines, none by right of conquest, they declared that the people of the United States shall "continue to enjoy unmolested the right to take fish of every kind on the British Banks, and all other Banks of Newfoundland; also in the Gulf of St. Lawrence, and all other places in the sea where the inhabitants of both countries used at any time heretofore to fish." What could be stronger than that? It was an acknowledgment of a continued right possessed long before. And if any question of its construction arose, it appealed to what they had been heretofore accustomed to do; "where the inhabitants of both countries used at any time heretofore to fish."

How was it construed by British statesmen? Is there any doubt about it? I take it my brethren of the colonial bar will consider Lord Loughborough good authority. He said these words in the House of Lords respecting the fishery clause of the treaty: "*The fisheries were not conceded, but recognized as a right inherent in the Americans, which, though no longer British subjects, they are to continue to enjoy unmolested.*" The same thing, substantially, was said by Lord North, who had been, we are told now by his biographers, the unwilling, but certainly the subservient, instrument in the hands of his king for trying to deprive us of this as well as our other rights. We then did continue to enjoy them, as we had from 1620 down. We had as much right to them as the British Crown, because it was our bow and our spear that helped to conquer them. Then came the war of 1812, and we had enjoyed the fisheries freely, without geographical limit, down to that time. The war of 1812 certainly did not result in the conquest of America, either maritime or upon the land. It was fought out in a manly way between two strong people, without any very decided result; but after the war, in 1814, about the time we were making the treaty of peace at Ghent, that memorable correspondence took place between John Quincy Adams and Earl Bathurst, in which Earl Bathurst took this extraordinary position, that a war terminates all treaties. He took that position without limitation. Mr. Adams said, "Then it puts an end to our independence."

"No," was Earl Bathurst's answer; "your independence does not rest upon the treaty. The treaty acknowledged your independence as a fact, and that fact continues. No treaty now can take it from you; no treaty is needed to secure it to you; but so far as it was a treaty—I mean, so far as any right rested upon it as a treaty gift, or treaty stipulation, the war put an end to the treaty." Mr. Adams's answer was twofold; first, he denied the position. He took the ground, which all statesmen and jurists take to-day, that a war does not, *ipso facto*, terminate a treaty. It depends upon the results of the war; it depends upon the nature of the treaty; it depends upon its language and terms. Each case is *sui generis*. Whether any war—I mean the entering into war, the fact that the two nations are at war—terminates a treaty, depends upon these questions. The treaty is put at hazard, like all other things. The termination of the war may terminate all treaties by a new treaty, or by conquest; but the fact that there is war, which is the only proposition, does not terminate any treaty, necessarily. Then Mr. Adams further says: "Our right does not rest upon the treaty. The treaty of 1783

did not give us this right. We always had it. We continued to enjoy these rights without geographical limitation, and it was conceded that we did so by the Treaty of 1783, and we no more depend upon a treaty gift of 1783 for the right to these fisheries than we depend upon it for the enjoyment of our right to our independence." Of course, the gentlemen of the Commission are familiar with that correspondence, and I will go no further with it. The whole subject is followed up with a great deal of ability in that remarkable book which has been lying upon the table: I mean John Quincy Adams's book on "*The Fisheries and the Mississippi*," in connection with the Treaty of Ghent, and his reply to Mr. Jonathan Russell.

Well, the parties could not agree, and it went on in that way until 1818, and then came a compromise, and nothing but a compromise. The introduction to the Treaty of 1818 says: "Whereas differences have arisen respecting the liberty claimed by the United States and inhabitants thereof to take, dry, and cure fish in certain coasts, harbors, creeks, and bays of His Majesty's dominions in America, it is agreed between the High Contracting Parties"—it is all based upon "differences." Now, the position of the two parties was this: the people of the United States said, "We own these fisheries just as much to-day as we did the day that we declared war." Great Britain did not declare war, nor did she make a conquest. The declaration of war was from Washington, from the Congress of the United States, and it ended by a treaty which said nothing about fisheries, leaving us where we were. The ground taken by the United States was that the fisheries, irrespective of the three-mile limit, or anything else, belonged to us still. Great Britain said, "No; you lost them"; not by war, because Earl Bathurst is careful to say that the war did not deprive us of the fisheries, but the war ended the treaty, and the fisheries were appended solely to the treaty, and when the treaty was removed, away went the fisheries. Now, it is a singular thing in examining this treaty to find that there is nothing said about our right to take fish on the Banks, in the Gulf of St. Lawrence, and in the deep sea. The treaty of 1783 referred to that among other things, and it is well known that Great Britain claimed more than a jurisdiction over the fisheries. It claimed general jurisdiction and authority over the high seas, to which it appended no particular limit, and the claim admitted no limit. You were told by my learned associate, Judge Foster, a few days ago, that they arrested one of our vessels at a distance of sixty miles from the shore, claiming that we were within the King's chambers. Nothing is said in that treaty upon the subject. It is an implied concession that all those rights belong to the United States, with which England would not undertake after that ever to interfere. And then we stood in this position: that we had used the fisheries, though we did not border upon the seas, from 1620 to 1818, in one and the same manner, under one and the same right, and if the general dominion of the seas was shifted, it was still subject to the American right and liberty to fish.

I shall say nothing in this discussion about the right to land on shores for the purpose of drying nets and curing fish. That was a very antique idea. It has quite passed out now, fortunately, for your provinces are becoming well settled, and no right ever existed to land and dry fish where a private right is interfered with. There is no evidence to show that we ever practiced that right or cared anything about it. It was put in the treaty to follow the language of the old treaties, for whatever it might be worth.

Your honors will also observe that until 1830 the mackerel fisheries

were unknown. There was no fishery but the cod fishery. The cod fisheries were all the parties had in mind in making the Treaty of 1818, and to this day, as you have observed from some of the witnesses, "Fishing," by the common speech of Gloucester, fishing means, *ex vi termini*, cod-fishing is one thing and "mackereling" is another. In Mr. Adams's pamphlet, on the 23d page, he speaks of it as a "fishery," or in other words, cod fishery, and in 1818 the question was of the right of England to exclude. Now for the first time the doctrine respecting the three-mile line had begun to show itself in international law. Great Britain availed herself of it contrary to the instructions given by Queen Elizabeth—a very wise princess, certainly surrounded by very wise counselors; availed herself of it to set up a claim to exclude the deep-sea fishermen, though they did not touch the land or disturb the bottom of the sea for a distance of three miles out. We denied that there was any such right by international law, certainly none by treaty, and certainly none could be set up against us, who own the right to fish. But England was a powerful nation. She fought us in 1812 and 1814 with one hand—I acknowledge it, though it may be against the pride of American citizens—while she was fighting all Europe with the other, but she was now at peace. Both nations felt strong; both nations were taking breath after a hard conflict, and it was determined that there should be an adjustment, and there was an adjustment, and it was this: Great Britain tacitly waived all claim to exclude us from the high seas and from the King's chambers, except harbors and bays. She expressly waived all right to exclude us from the coasts of Labrador from Mount Joly, northward and eastward indefinitely through those tumbling mountains of ice, where we had always pursued our gigantic game. She expressly withheld all claim to exclude us from the Magdalen Islands and from the southern, western, and northern shores of Newfoundland; and as to all the rest of the Bay of St. Lawrence and the coasts of Nova Scotia and New Brunswick, we agreed to her right to exclude us. So that it stood thus: that, under that treaty, and only under that treaty, we admitted that Great Britain might exclude us for a distance of three miles from fishing in all the rest of her possessions in British North America, except those where it was expressly stipulated she should not attempt to do it. So she had a right to exclude us from the three-mile line from the shores of Cape Breton, Prince Edward Island, Nova Scotia, a portion of Newfoundland, and New Brunswick, and what has now become the Province of Quebec, while she could not exclude us from the coast of Labrador, the Magdalen Islands, and the rest of Newfoundland. There was the compromise. We got all that was then thought useful, with the right of fishing, with the right to dry nets and cure fish wherever private property was not involved. The Treaty of 1818 lasted until 1854—thirty-six years. So we went on under that compromise, with a portion of our ancient rights secured and another portion suspended, and nothing more.

Great changes took place in that time. The mackerel fishery rose into importance. You honors have had before you the interesting spectacle of an old man who thinks that he was the first man who went from Massachusetts into this gulf and fished for mackerel, in 1827, or thereabouts. He probably was. But mackerel fishing did not become a trade or business until considerably after 1830, and the catch of mackerel became important to us as well as to the colonies.

But there were great difficulties attending the exercise of this claim of exclusion—very great difficulties. There always have been, there always must be, and I prayst here always shall be such, until there be

free fishing as well as free trade in fish. We had upon the stand Captain Hardinge, of Her Majesty's Navy, now or formerly, who had taken an active part in superintending these fisheries, and driving off the Americans. He was asked whether the maintenance of this marine police was not expensive. He said that it was expensive in the extreme, that it cost £100,000—I believe that was the sum named. He did not know the amount, but his language was quite strong as to the expensiveness of excluding the Americans from these grounds, of maintaining these cruisers. But it also brought about difficulties between Great Britain and her provinces. The provincial authorities, on the 12th of April, 1866, after this time (but they acted throughout with the same purpose and the same spirit) undertook to say that every bay should be a British private bay which was not more than ten miles in width; following no pretence of international law, but the special treaty between Great Britain and France; and afterward they gave out licenses for a nominal sum, as they said, for the purpose of obtaining a recognition of their right. They did not care, they said then, how much the Americans fished within the three miles, but they wished them to pay a "nominal sum for a license," as a recognition of the right. Well, the "nominal sum" was 50 cents a ton; but by and by the colonial parliament thought that nothing would be a "nominal sum" unless it was \$1 a ton, and at last they considered that the best possible "nominal sum" was \$2.

But Her Majesty's Government took a very different view of that subject, and wherever there has been an attempt to exclude American fishermen from the three-mile line, there has been a burden of expense on Great Britain, a conflict between the Colonial Department at London and the Provincial authorities here, Great Britain always taking the side of moderation, and the Provincial Parliaments the side of extreme claim and extreme persecution. Then there was a difficulty in settling the three-mile line. What is three miles? It cannot be measured out, as upon the land. It is not staked out or buoyed out. It depends upon the eye-sight and judgment of interested men, acting under every possible disadvantage. A few of the earlier witnesses called by my learned friends for the Crown undertook to say that there was no difficulty in ascertaining the three-mile line, but I happened to know better, and we called other witnesses, and at last nobody pretended that there was not great difficulty. Why, for a person upon a vessel at sea to determine the distance from shore, everything depends upon the height of the land he is looking at. If it is very high, it will seem very much nearer than if it is low and sandy. The state of the atmosphere affects it extremely. A mountain-side on the shore may appear so near in the forenoon that you feel that you can almost touch it with your finger's ends, while in the afternoon it is remote and shadowy, too far altogether for an expedition with an ordinary day's walk to reach it. Now, every honest mariner knows that is so, and knows there is great difficulty in determining whether a vessel is or is not within three miles of the shore, when she is fishing. But there is, further, another difficulty. "Three miles from the shore"—what shore? When the shore is a straight or curved line, it is not difficult to measure it; but the moment you come to bays, gulfs, and harbors, then what is the shore? The headland question then arose, and the Provincial officials told us—the Provinces by their acts, and the proper officers by their proclamations, and the officers of their cutters, steam or sail—told our fishermen upon their quarter-decks—that "the shore" meant a line drawn from headland to headland, and they undertook to draw a line from the North Cape to the East Cape of Prince Edward Island and to say that "the shore"

meant three miles from that line; and then they fenced off the Straits of Northumberland; they drew another line from St. George's to the Island of Cape Breton; they drew their headland lines wherever fancy or interest led them. And not only is it true that they drew them at pleasure, but they made a most extreme use of that. We did not suffer so much from the regular navy, but the Provincial officers, wearing for the first time in their lives shoulder-straps and put in command of a vessel, "dressed in a little brief authority, played such fantastic tricks before high heaven" as might at any moment, but that it was averted by good fortune, have plunged the two countries into war. Why, that conflict between Pattillo and Bigelow amused us at the time, but I think your honors were struck with the fact that, as Pattillo escaped, was pursued, and the shots fired by his pursuers passed through his sail and tore away part of his mast and entered the hull, if they had shed a drop of American blood, it might "the multitudinous seas incarnadine" in war. Why, people do not go to war solely for interest, but for honor, and every one felt relieved, drew a freer breath, when he learned that no such fatal result followed. None of us would like to take the risk of having an American vessel within the three miles or without the three miles, but supposed to be within it, or actually within it for an innocent purpose, attacked by a British cutter, or attacked because she was within certain headlands, and blood shed in the encounter. Now, Great Britain felt that, and felt it more than the Provinces did, because she had not the same deep interest to blind her to the importance of the subject.

The results of the seizures were very bad. In the case of the *White Fawn*, tried before the judge at New Brunswick, he says, "This fact has not been accounted for, that so long a time has elapsed from the time of the seizure until the case was brought into court"; so that, although he discharged the ship as innocent, the crew were dispersed, the voyage was broken up, and no answer was made to that pertinent inquiry of his honor. It was a very common thing to hold vessels seized until it became immaterial to the owners, almost, whether they were finally released or finally convicted. My learned friend, Judge Foster, laid before your honors a Nova Scotia statute of 1836 (I confess I have not read it; I looked for it, but was not able to find it), in which he said there was a provision that if, in case of capture, an American seaman, fisherman, or master did not make true answers, he forfeited £100; that the onus, the burden of proof, to show that the vessel was not subject to capture was upon the owner, not upon the captor; that before the owner could contest the question with the man who seized his vessel, he must file a bond of £60 for costs; he could bring no suit against his captor until one month's notice, giving the captor an opportunity, as it is said, to obtain evidence, but, as a practical lawyer, I should add, giving him also an opportunity to escape and to conceal his property; finding treble costs in case the American was convicted; and also providing that the simple judicial signature, declaring that there was probable cause for the seizure, prevented any action or suit whatever.

Now, these were strong penal measures, unknown to anything but criminal law, and even stronger than the laws of war; because if in high war a vessel is seized and released, the owner of the vessel may sue the commander of the ship, though he bears the colors of Great Britain or of the United States; he may sue him in the courts of his own country without giving him any previous notice, without giving any previous bond, and no certificate of probable cause from the court will prevent the trying of the suit. I know it is true that if the court which tries

the suit decides that there was probable cause, the captain of the cruiser is not to be condemned, but the owner has a right to arrest and try him before a competent court. But all these rights were brushed away by the legislature of Nova Scotia—always supposing that Judge Foster was right in his statement of the character of that law.

Nor is that all, by any means. There was a further difficulty. No one could know what would become of us when we got into court. There was a conflict of legal decisions. One vessel might go free, when under the same circumstances another vessel might be condemned. The Treaty of 1818 did not allow us to go within three miles of certain shores, except for the purposes of shelter and getting wood or supplies, and prohibited fishing within three miles. An act of the 59th of George III was the act intended to execute that treaty. That act provided that "if any such foreign vessel is found fishing, or preparing to fish, or to have been fishing, in British waters, within three miles of the coast, such vessel, her tackle, &c., and cargo, shall be forfeited." That was the language of the statute of George III and of the Dominion statutes. Is it not plain enough—it seems to me, it has seemed so to all Americans, I think—that that statute was aimed, as the treaty was, against fishing within three miles? But in one court the learned judge who presides over it—a man of learning and ability, recognized in America and in the provinces, therefore giving his decision the greater weight—decided, first, that the buying of bait was a preparing to fish. We had supposed that the statute meant "for fishing within three miles, you will be condemned," and in order that it should not be required that a man should be caught in the very act of drawing up fish (which would be almost impossible), it was extended by saying, "or caught, having fished or preparing to fish"—such acts as heaving his vessel to, preparing his lines, throwing them out, and the like. The learned court decided, first, that buying bait, and buying it on shore, was "preparing to fish," within the meaning of the statute. If an American skipper went into a shop, leaned over the counter, and bargained with a man who had bait to sell on shore, he was "preparing to fish," and, as he certainly was within three miles of the shore, his preparation was made within three miles; and it was apparently utterly immaterial whether he intended to violate the provision of the treaty by fishing within three miles of the shore, so long as he was preparing, within three miles, to fish anywhere in the deep sea, on the Banks of Newfoundland, or in American waters. Then came the decision of another learned judge in New Brunswick (they were both in 1871), who said that buying bait was not the "preparing to fish" at which the statute was aimed; and, further, that it was essential to prove that the fishing intended was to be within three miles of the shore. There was a conflict of decisions, and we did not know where we stood.

Another effect of this restriction was, that it brought down upon the Dominion fishermen the statute of the United States, laying a duty of two dollars a barrel upon every barrel of mackerel, and one dollar a barrel upon every barrel of herring. That statute was—and I shall presently have the honor to cite the evidence upon that point, that I may not be supposed to rely upon assertion—that statute was, in substance, prohibitory. The result was, that it killed all the vessel fishing of these provinces. They had no longer seamen who went to sea in ships. A shore fishery sprung up for the use of the people themselves, and was gradually somewhat extended—I mean a boat fishery around the shores. But, as I shall cite authorities to show, as I hope that your honors already believe, the first effect was to draw away from these provinces the en-

terprising and skilled fishermen who had fished in their vessels and sent their catches to the American market. It drew them away to the American vessels, where they were able, as members of American crews, to take their fish into market free of duty.

There was, at the same time, a desire growing on both sides for reciprocity of trade, and it became apparent that there could be no peace between these countries until this attempt at exclusion by imaginary lines, always to be matters of dispute, was given up—until we came back to our ancient rights and position. It was more expensive to Great Britain than to us. It made more disturbance in the relations between Great Britain and her provinces than it did between Great Britain and ourselves; but it put every man's life in peril; it put the results of every man's labor in peril; and for what? For the imaginary right to exclude a deep-sea fisherman from dropping his hook or his net into the water for the free-swimming fish, that have no habitat, that are the property of nobody, but which are created to be caught by fishermen. So at last it was determined to provide a treaty by which all this matter should be set aside, and we should fall back upon our own early condition.

Now, your honors will allow me a word, and I hope you will not think it out of place—it is an interesting subject; I do not think it is quite out of place, and I will not be long upon it—on the nature of this right which England claimed in 1818, to exclude us from the three miles, by virtue of some supposed principle of international law. I have stated my opinion upon it; but your honors will be pleased to observe, that on that, as upon the subject of headlands, on an essential part of it, without which it can never be put in execution, there is no fixed international law. I have taken pains to study the subject; have examined it carefully since I came here, and I think I have examined most of the authorities. I do not find one who pledges himself to the three-mile line. It is always “three miles,” or “the cannon-shot.” Now, “the cannon-shot” is the more scientific, though not the more practical, mode of determining the question, because it was the length of the arm of the nation bordering upon the sea, and she could exercise her rights so far as the length of her arm could be extended. That was the cannon-shot, and that, at that time, was about three miles. It is now many more miles. We soon began to find out that it would not do to rest it upon the cannon-shot. It is best to have something certain. But international writers have arrived at no further stage than this, to say that it is “three miles, or the cannon-shot.” When they are called upon to determine what are the rights of bordering nations, they say, “to the extent of three miles, or the cannon shot.” But upon the question, “How is the three-mile line to be determined?” we find everything utterly afloat and undecided. My purpose in making these remarks is, in part, to show your honors what a precarious position a state holds which undertakes to set up this right of exclusion and to put it in execution. The international law makes no attempt to define what is “coast.” We know well enough what a straight coast is, and what a curved coast is; but the moment they come to bays, harbors, gulfs, and seas, they are utterly afloat—as much as the sea-weed that is swimming up and down their channels. They make no attempt to define it, either by distance or by political or natural geography. They say at once, “It is difficult, where there are seas and bays.” Names will not help us. The Bay of Bengal is not national property; it is not the King's chamber; nor is the Bay of Biscay, nor the Gulf of Saint Lawrence, nor the Gulf of Mexico. Names will not help us. An inlet of the sea may be called a “bay,” and it may be two miles wide at its entrance; or it may be called a “bay,”

and it may take a month's passage in an old-fashioned sailing vessel to sail from one headland to the other. What is to be done about it? If there is to be a three-mile line from the coast, the natural result is, that that three-mile line should follow the bays. The result then would be that a bay more than six miles wide was an international bay; one six miles wide, or less, was a territorial bay. That is the natural result. Well, nations do not seem to have been contented with this. France has made a treaty with England saying that anything less than ten miles wide shall be a territorial bay.

The difficulties on that subject are inherent, and, to my mind, they are insuperable. England claimed to exclude us from fishing in the Bay of Fundy, and it was left to referees, of whom Mr. Joshua Bates was umpire, and they decided that the Bay of Fundy was not a territorial bay of Great Britain, but a part of the high seas. This decision was put partly upon its width; but the real ground was, that one of the assumed headlands belonged to the United States, and it was necessary to pass the headland in order to get to one of the towns of the United States. For these special reasons, the Bay of Fundy, whatever its width, was held to be a public and international bay.

Then look at Bristol Channel. That question came up in the case of *Queen v. Cunningham*. A crime was committed by Cunningham in the Bristol Channel, more than three miles from the shore of Glamorganshire, on the north side, and more than three miles from Devonshire and Somersetshire, on the south side. Cunningham was indicted for a crime committed in Glamorganshire. The place where the vessel lay was high up in the channel, somewhere about 90 miles from its mouth, and yet not as far up as the river Severn. The question was, whether that was a part of the realm of Great Britain, so that a man could be indicted for a crime committed there. Now, there is a great deal of wisdom in the decision made in that case. The court say, substantially, that each case is a case *sui generis*. It depends upon its own circumstances. Englishmen and Welshmen had always inhabited both banks of the Bristol Channel. Though more than ten miles in width at its entrance, it still flowed up into the heart of Great Britain; houses, farms, towns, factories, churches, court-houses, jails—everything on its banks; and it seemed a preposterous idea, and I admit it, that in time of war two foreign ships could sail up that Bristol Channel and fight out their battle to their own content, on the ground that they did not go within three miles of the shore. I think it would have been preposterous to say that a foreign vessel could have sailed up the center of that channel, and defied the fleets and armies of Great Britain, and all her custom-house cutters, on the ground that she was flying the American or the French flag, and the deck was a part of the soil under that flag. Well, it was a question of political geography, not of natural geography. It was a question of its own circumstances. It was decided to be a part of the realm of Great Britain. I do not know that anybody can object to the decision.

The *Franconia* case, which attracted so much attention a short time ago, did not raise this question, but it is of some importance for us to remember. There there was no question of headlands. It was a straight line of coast, and the vessel was within three miles of the shore. But what was the ship doing? She was beating her way down the English Channel against the sea and wind, and she made her stretches toward the English shore, coming as near as safety permitted, and then to the French shore. She was in innocent use of both shores. She was not a trespasser because she tacked within three miles of the British shore

It was a necessity, so long as that channel was open to commerce. The question which arose was this: A crime having been committed on board of that ship while she was within three miles of the British coast, was it committed within the body of the county? Was it committed within the realm, so that an English sheriff could arrest the man, an English grand jury indict him, an English jury convict him, under English law, he being a foreigner on board a foreign vessel, bound from one foreign port to another, while perhaps the law of his own country was entirely different? Well, it was extraordinary to see how the common-law lawyers were put to their wits' end to make anything out of that statement. The thorough-bred common-law lawyers were the men who did not understand it; it was others, who sat upon the bench, who understood it better; and at last, by a majority of one, it was most happily decided that the man had not committed an offense within a British county, and he was released. That case turned not on a question of natural geography, nor on a question of political geography. It raised the issue: What is the nature of the authority that a neighboring nation can exercise within the three-mile limit?

I am naturally led to the question: "Does fishing go with the three-mile line?" I have the honor to say to this tribunal that there is no decision to that effect, though I admit that there is a great deal of loose language in that direction. I do not raise any question respecting those fish that adhere to the soil or to the ground under the sea. But on what does that three-mile jurisdiction rest, and what is the nature of it? I suppose we can go no further than this, that it rests upon the necessities of the bordering nation; the necessity of preserving its own peace and safety and of executing its own laws. I do not think that there is any other test. Then the question may arise, and does, whether, in the absence of any attempt by statute or treaty to prohibit a foreign vessel from following with the line or the seine and net the free swimming fish within that belt, that act makes a man a trespasser by any established law of nations? I am confident it does not. That, may it please the tribunal, is the nature of this three-mile exclusion, for the relinquishment of which Great Britain asks us to make pecuniary compensation. It is one of some importance to her, a cause of constant trouble, and, as I shall show you—as has been shown you already by my predecessors—of very little pecuniary value to England in sharing it with us, or to us in obtaining it, but a very dangerous instrument for two nations to play with.

I would say one word here about the decision in the privy council in 1877 respecting the territorial rights in Conception Bay. I have read it over, and though I have very great respect for the common-law lawyer Mr. Blackburn, who was called upon to pronounce upon a question entirely novel to him, I believe that if your honors think it at all worth while to look over this opinion, in which he undertakes to say that Conception Bay is an interior bay of Newfoundland, and not public waters, although it is some fifteen or more miles wide, you will find that he makes this statement, which is conclusive, that an act of Parliament is binding upon him, whether the act of Parliament be in conformity with international law or not. But it is not binding upon you, nor is the decision. But there is nothing in the act of Parliament which speaks upon that subject. It is the act 59 George III, intended to carry out the Treaty of 1818, and for punishing persons who are fishing within the bays; and he infers from that, by one single jump, without any authority whatever of judicial decision or legislative language, that it

must have meant to include such bays as the bay in question. (Direct United States Cable Company *vs.* Anglo-American Telegraph Company, English Law Reports, Appeal Cases, part 2, p. 394.)

This state of things brought us to the Treaty of 1854, commonly called the Reciprocity Treaty. The great feature of that treaty, the only one we care about now, is, that it put us back into our original condition. It acknowledged our general right. It made no attempt to exclude us from fishing anywhere within the Gulf of St. Lawrence, and it allowed no geographical limits. And from 1854 to 1866 we continued to enjoy and use the free fishery, as we had enjoyed and used it from 1820 down to that hour.

But the Treaty of 1854 was terminated, as its provisions permitted, by notice from the United States. And why? Great Britain had obtained from us a general free trade. Large parts of the United States thought that free trade pressed hardly upon them. I have no doubt it was a selfish consideration. I think almost every witness who appeared upon the stand at last had the truthfulness to admit that when he sustained either duties or exclusion it was upon the selfish motive of pecuniary benefits to himself, his section, his State, or his country; and if that were the greatest offense that nations or individual politicians committed, I think we might well feel ourselves safe. We had received, in return for this advantage, a concession from Great Britain of our general right to fish, as we always had fished, without geographical exclusion. My learned friend Judge Foster read to you (which I had not seen before, and which was very striking) the confidential report of Consul Sherman, of Prince Edward Island, in 1864. I dare say my learned friend the counsel from that island knows him. Now, that is a report of great value, because it was written while the treaty was in existence, and before notice had been given by our government of the intention to repeal it. It was his confidential advice to his own country as to whether our interests, as he had observed them, were promoted by it; and he said, if the Reciprocity Treaty was considered as a boon to the United States, by securing to us the right to inshore fishing, it had conspicuously failed, and our hopes had not been realized. I think these are his very words. He spoke with the greatest strength to his country, writing from Prince Edward Island, which claims to furnish the most important inshore fishery of any, and declared that, so far as the United States was concerned, the benefit that came from that was illusory, and it was not worth while for us any longer to pay anything for it. And that, as your honors have seen, and as I shall have the pleasure to present still further by and by, was borne out by the general state of feeling in America.

The result was that in 1866 the Reciprocity Treaty was repealed. That repeal revived, as my countrymen admitted, the Treaty of 1818, and it revived, of course, the duties on the British importation of mackerel and herring. We were remitted to the antiquated and most undesirable position of exclusion; but we remained in that position only five years, from 1866 until 1871, until a new treaty could be made, and a little while longer, until it could be put into operation. What was the result of returning to the old system of exclusion? Why, at once the cutters and the ships of war that were watching these coasts spread their sails; they stole out of the harbors where they had been hidden; they banked their fires; they lay in wait for the American vessels, and they pursued them from headland to headland, and from bay to bay; sometimes a British officer on the quarter-deck, and then we were comparatively safe, but sometimes a new-fledged provincial, a temporary

officer, and then we were anything but safe. And they seized us and took us, not into court, but they took us into harbor, and they stripped us, and the crew left the vessel, and the cargo was landed, and at their will and pleasure the case at last might come into court. Then, if we were dismissed, we had no costs, if there was probable cause; we could not sue if we had not given a month's notice, and we were helpless. Not only did it revive the expensive and annoying and irritating and dangerous system of revenue-cutters, and secret police, marine police, up and down the coast, telegraphing and writing to one another, and burdening the provinces with the expense of their most respectable and necessary maintenance, but it revived, also, the collisions between the provinces and the Crown; and when the provincial governments undertook to lay down a ten mile line, and say to the cutters, "Seize any American vessel found within three miles of a line drawn from headland to headland, ten miles apart." such alarm did it cause in Great Britain, that the Secretary of State did not write, but telegraphed instantly to the provinces that no such thing could be permitted, and that they could carry it no farther than the three mile line. Then attempts were made to sell licenses. Great Britain said, "Do not annoy these Americans; we are doing a very disagreeable thing; we are trying to exclude them from an uncertain three mile line; we would rather give up all the fish in the ocean than have anything to do with it; but you insist upon it; we have done nothing with that fishery from the beginning," which, according to the view we took of it on our side of the line, was pretty true; and they said, "Do not annoy these Americans; give them a license, just for a *nominal* fee." So they charged a nominal fee, as I have said, of fifty cents a ton, which was afterward raised—they know why, we do not—to a dollar. We paid the fifty-cent fee and some Americans paid the dollar fee; and why? They have told you why. Not because they thought the right to fish within three miles was worth that sum, but it was worth that sum to escape the dangers and annoyances which beset them, whether they were innocent or guilty under the law.

Then, at last, the provinces, as if determined that there should be no peace on that subject until we were driven out of the fisheries, raised it to an impossible sum, two dollars a ton, and we would not pay it. What led them to raise it? What motive could there have been? They lost by it. Our vessels did not pay it. Why, this was the result—I do not say it was the motive—that it left our fishermen unprotected, and brought out their cutters and cruisers, and that whole tribe of harpies that line the coast, like so many wreckmen, ready to seize upon any vessel and take it into port and divide the plunder. It left us a prey to them and unprotected. It also revived the duties, for we, of course, restored the duty of two dollars a barrel on the mackerel and one dollar a barrel on the herring. It caused their best fishermen to return into the employment of the United States, and their boat-fishing fell off. That has been stated to your honors before, but it cannot be too constantly borne in mind. We restored the duties, and that broke up the vessel-fishing of the provinces; it deprived them of their best men; it caused trouble between the old country and the provinces; it put us all on the trembling edge of possible international conflict. But we went on as well as we could in that state of things, until Great Britain, desirous of relieving herself from that burden, and the United States desiring to be released from those perils, and having also another great question unsettled, that is, the consequences of the captures by the Alabama, the two countries met together with High Commissioners at Wash-

ington, in 1871, and then made a great treaty of peace. I call it a "treaty of peace" because it was a treaty which precluded war; not restored peace after war, but prevented war, upon terms most honorable to both parties; and as one portion of that treaty—one that, though not the most important by any means, nor filling so large a place in the public eye as did the congress at Geneva, yet filling a very important place in history, and its consequences to the people of both countries, was the determination of this vexed and perpetual question of the rights of fishing in the bays of the Northwestern Atlantic; and by that treaty we went back again to the old condition in which we had been from 1620 down, with the exception of the period between 1818 and 1854 and the period between 1866 and 1871. That restored both sides to the only condition in which there can be peace and security; peace of mind at least, freedom from apprehension, between the two governments.

And when those terms were made, which were terms of peace, of goodwill to men, of security for the future, and of permanent basis always, and we agreed to free trade mutually in fish and fish-oil, and free rights of fishing, as theretofore almost always held, Great Britain said, "Very well; but there should be paid to us a money-compensation." The United States asked none; perhaps it did not think itself entitled to any. Great Britain said, "This is all very well; but there should be a compensation in money, because we are informed by the provinces"—I do not believe that Great Britain cared anything about it herself—"that it is of more pecuniary value to the Americans to have their right of fishing extended over that region from which they have been excluded than it is to us to have secured to us free right to sell all over the United States the catchings of Her Majesty's subjects, free from any duty that the Americans might possibly put upon us." "Very well," said the United States, "if that is your view of it, if you really think you ought to have a money-compensation, we will agree to submit it to a tribunal." And to this tribunal it is submitted: First, under Article XVIII of the Treaty of 1871, what is the money-value of what the United States obtains under that article? Next, what is the money-value of what Great Britain obtains under Articles XXI and XIX? Second, is what the United States obtains under Article XVIII of more pecuniary value than what Great Britain obtains under her two articles? Because I put out of sight our right to send to this market and the right of the people of the provinces to fish off our coasts, as I do not think either of them to be of much consequence. "If you shall be of opinion," says the treaty, "that there is no difference of value—and of course that means no *substantial* difference in value—then your deliberations are at an end; but if you shall think there is a substantial difference in value, then your deliberations must go further, to show what the two values are, which is the greater, and what is the difference."

I hope, if your honors are not already persuaded, that you will be before the close of the argument on the part of the United States, and may not be driven from that persuasion by anything that may occur on the other side, that the United States were quite honest when they made the statement in 1871 that in asking for the abandonment of the restrictive system in regard to the fisheries, they did not do it so much from the commercial or intrinsic value of the fishing within the three-mile line, as for the purpose of removing a cause of irritation; and I hope that the members of this tribunal have already felt that Great Britain, in maintaining that exclusive system, was doing injustice to herself, causing herself expense, loss, and peril; that she was causing irritation and danger to the United States; that it was maintained from a mis-

taken notion, though a natural one, among the provinces themselves, and to please the people of the Dominion and of Newfoundland, and that the great value of the removal of the restriction is, that it restores peace, amity, and good-will; that it extends the fishing so that no further question shall arise in courts or out of courts, on quarter-decks or elsewhere, whatever may be the pecuniary value of the mere right of fishing by itself; and that it would be far better if the Treaty of Washington had ended with the signing of the stipulations, except so far as the Geneva award was concerned, and that this question had not been made a matter of pecuniary arbitration; that either a sum of money had been accepted at the time for a perpetual right, as was offered, or that some arrangement by which there should be the mutual right of free trade in timber, in coal, and in fish, or something permanent in its character, should have been arranged between the two countries. But that is a by-gone; we are to meet the question as it comes now directly before us. I think my learned friend, Judge Foster, said all that need be said, and all that can be said of much value, in taking the position that we are not here to be cast in damages; we are to pay no damages, nor are we to pay for incidental commercial privileges, nor are they to pay for any; but it is a matter of remark, certainly, that when this cause came up, we were met by a most extraordinary array of claims on the opposite side, sounding in damages altogether, or sounding in purchase of commercial privileges which were not given to us by Article XVIII of the treaty. Why, if there was a British subject in Prince Edward Island who remembered that his wife and family had been frightened by some noisy, possibly drunken, American fisherman, he was brought here and testified to it, and he thought that he was to obtain damages. Undoubtedly that was his opinion. If a fisherman in his boat thought that a Yankee schooner "lee bowed" him, as they call it, he was brought here to testify to it, and that was to be a cause of damage and to be paid for, and ultimately, I suppose, to reach the pockets of those who in their boats had been "lee-bowed," for that would seem to be poetic justice. Then we had the advantage of being able to buy our bait here, which we had always done, about which no treaty had ever said a word, and they had the great advantage, too, of selling us their bait. They went out fishing for themselves, they brought in the bait, they sold it to us, and when our vessels came down after bait or for frozen herring, they boarded the vessels in their eagerness to be able to sell them; and so great was their need of doing something in that season of the year when those mighty merchants of Newfoundland and those mighty middle-men of Newfoundland, planters, had nothing for them to do, that they made a bargain to furnish us frozen herring and our fishing bait at so much a barrel, went out and got it for us, and brought it on board.

Those were privileges for which the Americans were also to pay something. I have no doubt that those ideas gained great currency among the people of these provinces. They supposed it to be so, and hence a great deal of the interest which they took in the subject; hence the millions that they talked about. It is impossible to tell what limitation could have been put by this tribunal upon the demand, if you had opened that subject, and made up an award on the right to buy bait, on the right to buy frozen herring, on the right to buy supplies, on the right to trade, not considering that these are mutual rights, for the benefit of both parties, and as to which it is almost impossible to determine which party gains the most. Then a great deal of anxiety was created through the provinces, undoubtedly, by the cry that we were ruining their fisheries by the kind of seines that we were using—purse-seines; we were

destroying the fish, and the ocean would be uninhabitable by fish; would be a desert of water. We were told that we were poisoning their fish by throwing gurry overboard, and for all that there were to be damages. Now, these inflammatory harangues, made by politicians, or published in the Dominion newspapers, or circulated by those persons who went about through the Dominion obtaining affidavits of witnesses, produced their effect, and the effect was a multitude of witnesses who swore to those things, who evidently came here to swear to them, and took more interest in them, and were better informed upon them, than upon any of the important questions which were to be determined. When we came to evidence to be relied upon, the evidence of men who keep books, whose interest it was to keep books, and who kept the best possible books, men who had statistics to make up upon authority and responsibility, men whose capital and interest and everything were invested in the trade, then we brought forward witnesses to whom all persons looking for light upon this question would be likely to resort. And I have no doubt that as fast as it became known through the line of these provinces that no damages would be given for "lee-bowing," for poisoning fish, for purse-nets (which it appears we could not use), nor for the right to buy bait, and that it was to come down to the simple question of, on the one hand, participating with them in the fisheries of this region to the full extent, instead of to a limited extent, and they be relieved from all duties on their fish and fish-oil on the other, with the consequent stimulation of their boat-fishing, and vessel building and fishing, they all began to look at it in a totally different aspect. I am not able to produce it at this moment, but I will produce before the argument closes a memorial addressed to the Province of Nova Scotia, requesting them to bring things back to the old condition—that the fishing shall be left in common—without any idea that free trade was to be set off against it.

Such was the state of things and the condition of feeling in the provinces. I need not press upon your honors that we are right in that position, for, as to all except the question of damages, your honors have already by a unanimous vote passed in our favor, and of course it requires no argument to show that, as we are to make compensation for the value of what we obtain under the Article XVIII of the Treaty of 1871 in addition to what we had under the Treaty of 1818, provided the British side of the account does not balance it, that is all that we have to consider; and I dismiss all those elements which have undoubtedly been the prevailing means of securing witnesses and of stimulating witnesses throughout these provinces, up to the present time.

After the sound sense and humor of my learned friend, Mr. Trescott, on the subject of the light-houses, I suppose I should be inexcusable if I touched upon them again. I see that the counsel on the other side already feel the humor of the thing, and I suppose they rather regret that the subject was ever opened, because it shows to what straits they were driven to make up a case against the United States, to balance the overpowering advantage to them derived from the freedom of trade. Why, they come together, the wise men, and they say among themselves, "Free trade is a boon to us in our mackerel and in our herring; it is stimulating our fisheries; it is recalling our sons from afar, and employing them at home in our own industries; it is building up boat-fishing; it is extending the size of our boats, and building up vessel-fishing; the profits on our trade are now all that we have a right to make, with no discount whatever. How can we meet that case of advantage? What can we say they ought to pay us, that shall be any-

thing like a set-off for what we ourselves have received? The right to fish within three miles? Why, the Americans had the whole Gulf of St. Lawrence and all its bays; they had all its banks and all its eddies; they had Labrador and the Magdalen Islands; they had the north, west, and south parts of Newfoundland; they had everything except the three-mile line of the island, as it is called, and the western shore of Nova Scotia. And what did they get? Not the value of the fish; not what the fish sold for in the American market; not the profit which the American dealer made on his fish. That is the result of his capital, industry, and labor. What did the American get? The value of the fish as it lies writhing on the deck? No; for that is the result of the capital that sends the ship and fits it out, of the industry and the skill of the fishermen. What did they get? They got only the liberty of trying to catch the fish, which were eluding them with all their skill in the water of the ocean; the right to follow them occasionally, if they desire to do so, in their big vessels within the limits of three miles.

But it will not do to go to such a tribunal as this with such a case as that. The free-swimming fish in the seas, going we do not know how far off, and showing themselves here to-day and there to-morrow, schooling up on the face of the sea, and then going out of sight in the mud, having no habitat, and being nobody's property—the right to try to catch them nearer the shore than heretofore, that is not capable of being assessed so as to be of much pecuniary value; we must have something else." So they started the theory of adding to this compensation that ought to be made for right to buy the bait; for a right to refit; for a right to get supplies; for a right to trade; to unload cargoes of fish at Canso and send them to the United States, and for all the damage that fishermen might do anywhere by their mode of fishing; for the injury done by throwing overboard the gurry, and for collisions between boats and vessels that might occur in the waters of the island bend; and, adding those all together, they might make a claim that what they lost in damages, and what they gave to us in facilities of trade, added to Article XVIII might make up something to set off against what they knew they were receiving in dollars and cents from us by the remission of duties. They felt that we had on our side a certainty; they had on their side altogether an uncertainty, and a mere speculation; that we remitted from our Treasury and put back into their pockets exactly two dollars a barrel on every barrel of mackerel sent into port, and one dollar on every barrel of herring, that was to be computed and estimated, so that the British fisherman, when he landed his fish on the wharf in Boston, landed it on the same terms that the American landed his while heretofore he landed it handicapped by two dollars a barrel, which he must first pay. Our charge is substantial; ours can be put into the columns of an account; ours is certain. Theirs is speculative and uncertain, and unless it was backed up with some certainties of damages and of trade, they felt that it fell beneath them.

It will be my duty hereafter to press upon your honors a little further the consideration of the utterly uncertain estimate that can be put upon the mere franchise or liberty of attempting to catch the free-swimming fish within certain limits of the ocean. Now, first, with your honors' leave, I will take up the consideration of the money value of the removal of this geographical restriction, for that is what it is. The ancient freedom is restored; the recent and occasional restrictions as to three miles is removed, and the colonists say that that has been of pecuniary value to us. Whether it is a loss to them or not, is utterly immaterial, in this consideration. They cannot ask you to give them damages for any loss

to them. It is only the value to us. It is like a person buying an article in a shop, and an arbitrator appointed to determine what is the value of that article to the purchaser. It is quite immaterial how great a mistake the man may have made in selling it to him, or what damage the want of it may have brought upon his family or himself. If I have bought an umbrella across the counter, and I leave it to an arbitrator to determine the value of the umbrella to me, it is totally immaterial whether the man has sold the only one he had, and his family have suffered for the want of it. That is a homely illustration, but it is a perfectly true one. The question is, what is the value to the citizens of the United States, in money, of the removal of this geographic restriction? Not what damage this may have been to the colonists, by reason of the treaty which Her Majesty's Government saw fit to make with us.

What, then, is the money-value of the removal of the restriction? On the subject of Newfoundland, which I desire to treat with great respect, because of the size of the island and its numerous bays, and because of my respect and affection for the gentleman who represents the semi-sovereignty before this tribunal, there is an article in the *Revue des Deux Mondes* of November, 1874, on the value of Newfoundland and its fisheries to France, of extreme interest, from which I would like to quote largely. It seems to me to be exhaustive. It gives the whole history and present condition of these fisheries, and among other things, it shows that in attempting to grant us a right there, Great Britain made us overlap very much the rights of the French; and that if we should undertake to carry into effect some of the rights given us by the Treaty of 1871, we might have the republic, or monarchy, or empire, or whatever it may be, on the other side of the water, to settle the question with as well as this tribunal. I suppose this tribunal is satisfied that we do not catch cod within three miles of Newfoundland; that we do not catch even our bait there, but that we buy it. Finding that we had proved a complete case, that we bought our bait there, the very keen argument was made by the counsel on the other side, that though we bought our bait, we must be held to have caught it. "*Qui facit per alium, facit per se*," says the counsel; and so, if you buy a thing of a man and he sends a boy out to get it, the boy is your messenger, not his; and you have not bought it of him, but of the person to whom he sends for it. This is a homely illustration, but it is perfectly plain. When a fisherman comes and says, "I will sell my fish at so much a pound," and has not got them, but goes off and catches them, and I pay him that price, I buy the fish of him, do I not? What is it but a mere illusion, a mere deception, a mere fallacy to say, that because I knew that he had not the fish on hand at the time and is going off to get it, though I agree to buy it of him at a fixed rate, and I am not going to pay him for his services, but for the fish when delivered, that I am fishing through him and not buying of him? It is very hard to argue a perfectly clear case, and one that has but one side to it. Nothing but stress of law, or stress of facts, or stress of politics, could possibly have caused so much intelligence to be perverted upon this subject into an attempt to show that we were the catchers of the Newfoundland bait.

I will now take up for a moment the question of the cod fisheries, and I know that, whatever I may have been thus far, I shall be somewhat tedious here in the course which I am about to pursue; but I do not wish it to be said on the other side, and my instructions are not to leave it to be said, that we have asserted and stopped at assertions, however certain we may be that our assertions are well-founded, and even that they have the approbation of the court. I shall endeavor to refer to

the evidence, without reading much of it, on the principal points which I have so far assumed, and would be quite authorized in assuming.

In the first place, as to the cod fishery, it is a deep-sea fishery not a fishery within three miles. I do not mean to say that a stray cod may not be caught occasionally within that limit; but as a business, it is a deep-sea business. With your honors' permission I will read some of the evidence on that point.

Nathaniel E. Atwood, of Provincetown, page 47 of the American evidence, says:

Q. Is the codfishery, as pursued by the Americans, exclusively a deep-sea fishery?—A. Well, we call it a deep-sea fishery; this is the case—the Labrador coast excepted, where it is prosecuted close inshore—in the Gulf of Saint Lawrence, on the Grand Banks and on all the Banks between that place and Cape Cod, and away out to sea in other parts. It is true that some codfish come inshore, but they do not do so to such an extent as to enable the catching of them to be made a business of.

Wilford J. Fisher, of Eastport, page 316, says:

Q. How about the pollock?—A. The pollock is caught more off shore than in.
Q. Then the codfish?—A. The codfish is caught almost exclusively off shore, except, as I tell you, in the early spring or late in the fall there is a school of small codfish that strikes within the limits, and the people there catch them more or less.

Prof. Baird, on page 455, of the American evidence, says:

Q. Take them as a whole then, they are a deep-sea fish; I don't mean the deep sea as distinguished from the Banks?—A. An outside fish? Well, they are to a very considerable extent. The largest catches are taken off shore, and what are taken inshore are in specially-favored localities, perhaps on the coast of Labrador, and possibly off Newfoundland. They bear a small proportion generally to what is taken outside, where the conveniences of attack and approach are greater.

Bangs A. Lewis, of Provincetown, page 96, American evidence, says, on cross-examination, in answer to Mr. Davies:

Q. And codfish, we all know, are taken chiefly outside of the limits; it is a deep-sea fishery as a rule?—A. Yes.

E. W. French, of Eastport, page 403, is asked:

Q. What is the fishery at Grand Manan and the Bay of Fundy generally?—A. Codfish, pollock, hake, haddock, and herring.

Q. Are any of those fisheries entirely off-shore fisheries?—A. Codfish is an off-shore fishery. Hake are taken off shore.

Capt. Robert H. Hulbert, of Gloucester, p. 296, testifies:

Q. And your codfish have not been taken within how far from land?—A. From 15 to 25 miles of Seal Island, and in that vicinity.

John Nicholson, Louisburg, C. B., p. 207 of the British evidence, says:

Q. Well, cod are often caught inshore; but would you not say cod was a deep-sea fishery?—A. Yes.

Q. And halibut is the same?—A. Yes.

These are only passages selected from a large mass of testimony, but they were selected because the persons who testified in that way were either called by the British side, or they were persons of so much experience that they are fair specimens of our view of the subject.

Now, cod fishery is the great trade and staple of the United States, and is growing more and more so. The small fish that were once thrown overboard are now kept. The oil is used a great deal, codfish-oil, and there are manufacturing establishments in Maine, Connecticut, and Massachusetts which, we have been told by the witnesses, work up a great deal of this material that used to be thrown overboard; they draw oil from it, and the rest is used for fertilizing the land, and that is a

gradually increasing business. One of the witnesses, I recollect, from Gloucester, told us how greatly the trade in codfish had improved, so that now, instead of sending it out as whole fish, it is cut in strips and rolled together, and put into cans, and sold in small or large quantities to suit purchasers, and in that very easy manner sent all over the United States.

Charles N. Pew, of the firm of John Pew & Sons, on page 496 of the American Evidence, testified that the total value of fish production in seven years from 1870 to 1876, inclusive, was:

Bay mackerel	\$77,995 22
Shore mackerel	271,333 54
Codfish, &c	702,873 10
	<hr/>
	1,052,201 86

These figures give what our vessels caught. They do not give what we purchased outside of what the vessels caught.

The cod fishery is also one as to which there is no fear of diminution, certainly none of its extermination. Professor Baird told us, on p. 456 of the American Evidence, that a single cod produces from three to seven million eggs, each one capable of forming another living animal in the place of its mother. He said that owing to the winds and storms to which they were exposed, and by their being devoured by other fish which sought for them, the best information was that about a hundred thousand of these eggs prosper so as to turn into living fish, capable of taking care of themselves, the undefended and unrestricted navigators of the ocean. Although that is not a large percentage of the amount of ova, yet an annual increase of a hundred thousand for every one shows that there is no danger of the diminution, certainly none of the extermination, of that class of fish. It is enormous in quantity, something which the whole world combining to exterminate could hardly make any impression upon; and when the argument is made here that we ought to pay more for the right to fish because we are in danger of exterminating what codfish we have—if that argument is made—it amounts to nothing. But if the further argument is made, that we have no cod fishery to depend upon, then we have the statistics, and we have information from witnesses from all parts, that the cod fishery shows no signs of diminution, and that it is as large and extensive and as prosperous as ever. Gloucester has gone more into the business than it ever has before, and I do not recollect that there is any evidence, of the least value, showing that that fishery is likely to fall off materially as a commercial product in our hands. There is a single British concurrence out of several others, I think, in this statement, which I will read.

George Romeril, agent of Robin & Co., one of the British witnesses, page 306, says:

Q. Is there much difference in the results of the cod fishery year after year?—A. No; just as much fish are now caught as ever was the case.

Q. In making this statement, you refer to an experience of 21 years?—A. Yes.

Q. What is your evidence on this point?—A. That the cod fishery is not precarious.

Q. You have always an average catch?—A. It is always about the same.

Q. This fishery can always be depended upon?—A. Yes.

Q. Do those who engage in this fishery as a rule make a living?—A. A thriving fisherman will always make a good living about our coast.

Q. But what will a fair average man do?—A. He can always make a good living.

I read that, because it is the testimony of an intelligent British witness, who represents one of those great Jersey firms that deal in codfish on the west coast of the gulf.

The bait of the codfish need not be caught within the three-mile line.

That, I think, we have pretty well established. I referred just now to their argument, that we caught whatever we bought, but that I certainly may pass by. We may buy it when we wish it, but we need not have it. Your honors recollect the testimony of our witnesses from Provincetown, as well as those from Gloucester, who said that they believed it was more for the interest of all concerned that the cod fishery should be carried on with bait kept in ice as long as it can be, and salted bait—with fish, and bait, and liver, and everything else that can be carried out and kept there, and what birds and fish can be caught on the Banks, and the vessels stick to their business. The testimony was uniform; there was not one who failed to join in the expression of opinion, that that course was far better for the mercantile purposes of our community than that our fishermen should run inshore and buy the bait. But if they did go inshore and buy the bait, it would be a question entirely beyond your honors' consideration. We have a right to buy it where we please, even here, and we certainly need not catch it. Among the curious grounds set forth to swell up the English claim against us, to make it meet, if possible, the obvious money claim we had against Great Britain, if it was seen fit to enforce it—we now put it in only as a set-off—appears in the testimony that our fishing vessels going into Newfoundland employed the men there to fish, and that it had a very deleterious moral effect upon the habits of the Newfoundland fishermen; that they had been, up to the time the Americans appeared there to buy their bait, an industrious people, in a certain sense; they had fished a certain part of the year under contracts, which it seems they could not get rid of, with a class of owners who held them in a kind of blissful bondage; but that when the Americans appeared, they led them to break these contracts, sometimes tempted them to fall off from their agreements, and put money into their pockets; they paid them for work; they gave them labor at a time when they ought to have been lying idle, when it was better for them to lie idle! O, it steadied them, improved them, raised their moral tone to be idle, and tended to preserve those desirable relations that existed between them and the merchants of St. John! A great deal was said about that; but at last there came upon the stand a witness, whose name, if I recollect, was Macdounnell (p. 313 of the British Testimony), a British witness. I did not know that he would not be fully as well filled with these feudal opinions as the others had been. He said the people at Fortune Bay were well off. I asked him:

Q. You say the people down at Fortune Bay are well off?—A. There are some poor people there, but, as a general thing, the people are all comfortable.

Q. You say they have piles of money stored in their houses?—A. Some of them have. I know men who went from LaHave down there, who were so well off they retired from the fishing business. The largest part of the money they made was in supplying bait to those French vessels which come from France to fish.

Q. Where did you find them?—A. At St. Peter's. The men of Fortune Bay seine herring, caplin, and squid, and run them across to St. Peter's and sell them to the French vessels which are lying waiting for them.

Q. That is their market?—A. Yes.

Q. They also sell to the Americans?—A. Yes, they go in and obtain a great deal of bait in Newfoundland, not so much at Fortune Bay as at St. John's.

Q. The men with piles of money, where do they live?—A. They may have plenty of money and yet live in a hovel. They are not sensible enough to enjoy the money after they have made it.

Q. We have been told, on the contrary, that they spend all their money as fast as they get it on rum and tobacco; did you find that to be true?—A. I doubt that. For the last two or three years in Newfoundland, I found very few men who drank rum, but when I first went there I found many rum-drinkers. I think they must have had a reform club there.

Q. You think they have improved?—A. Yes. They are comfortable in their homes.

Q. They are saving people?—A. Yes.

Q. I mean those people who catch bait, who are paid in cash on the spot; have they any market for that except the French and Americans?—A. I think not.

Nothing has been attempted since to contradict that statement. It is in accord with the nature of things. There is always danger in putting money in any man's hands, and there is also danger in poverty. The wise man saw that poverty had its perils as well as wealth; and nothing can be worse for a people in the long run than the condition to which the fishermen of Newfoundland had been reduced. And now, believing fully in this testimony of Mr. Macdonnell, I cannot doubt that our coming among them and buying their bait, stimulating them to work, and paying them money, has led to their hoarding money; has led to the abstinence from those habits which beset much more the half-employed and the idle man, who has a large season of the year with nothing to do, but has a reasonable expectation that, what with his labor and what with his credit, somebody or other who owns a ship will support him and his family.

I would like, also, to call your attention on this question of getting bait, which is of some importance, to the testimony of Professor Baird, which, I suppose, none of you have forgotten, which shows that we need not catch our bait for the cod in British waters. He is asked on page 457 of the American Evidence:

Q. Well, now, what are the methods of preservation of this bait? We have heard of their using salt clams, &c. Has much attention been paid to the possibility of greater preservation of the bait than we have ever yet had?—A. Yes. The science of preserving bait, as well as of the preservation of fish on shipboard, is very low, indeed, far below what can be applied, and I have no doubt will be applied, both in keeping fish for food and keeping it for bait.

Q. Now, will you state what observation you have made respecting the method of preserving fresh bait from the start all the voyage through?—A. As a general rule it is now preserved either by salting or freezing. Of course they keep it as long as it will remain without spoiling, and when you have to carry it beyond that time either ice it or salt it. Salting, of course, is a very simple process, but it alters materially the texture and taste to such a degree that fish or other bait that under certain circumstances is highly prized by the fish, is looked upon with a great deal of indifference when salted. Now, there are special methods of preserving the fish or bait by some chemical preparation, which preserves the fish *without giving the saline taste*. There are preparations by means of which oysters or clams or fish can be kept in solutions for six months without getting any appreciable taste, and without involving the slightest degree of deterioration or destruction. One process submitted to the group of judges, of whom I was chairman, was exhibited by an experimenter who placed a great jar of oysters in our room prepared in that way. I think about the 1st of August those were placed in our room, and they were kept there until the middle of September, for six weeks, during the hottest portion of the Centennial summer, and that was hot enough. At the end of that time we mustered up courage to pass judgment upon this preparation, and we tasted these oysters, and could not find them affected. We would have preferred absolutely fresh oysters, but there was nothing repugnant to the sensibilities, and I believe we consumed the entire jar. And we gave the exhibitor without any question an award for an admirable new method. That man is now using that process on a very large scale in New York for the preservation of fish of all kinds, and he claims he can keep them any length of time, and allow them to be used as fresh fish quite easily. I don't suppose any fishermen ever thought of using any preservative except salt.

Q. Well, there is a newer method of preservation, is there not?—A. There is a better method than using ice. The method described by the Noank witness, by using what is equivalent to snow, allows the water to run off or to be sucked up as by a sponge. The mass being porous prevents the fish from becoming musty. But the coming methods of preserving bait are what is called the *dry-air process* and the *hard-freezing process*. In the dry-air process you have your ice in large solid cakes in the upper part of the refrigerator and your substance to be preserved in the bottom. By a particular mode of adjusting the connection between the upper chamber and the lower, there is a constant circulation of air, by means of which all the moisture of the air is continually being condensed on the ice, leaving that which envelopes the bait or fish perfectly dry. Fish or any other animal substance will keep almost indefinitely in perfectly dry air

about 40° or 45°, which can be attained very readily by means of this dry-air apparatus. I had an instance of that in the case of a refrigerator filled with peaches, grapes, salmon, a leg of mutton, and some beefsteaks, with a great variety of other substances. At the end of four months in midsummer, in the Agricultural building, these were in a perfectly sound and prepossessing condition. No one would have hesitated one moment to eat the beefsteaks, and one might be very glad of the chance, at times, to have them cooked. This refrigerator had been used between San Francisco and New York, and between Chicago and New York, where the trip has occupied a week or ten days, and they are now used on a very large scale, tons upon tons of grapes and pears being sent from San Francisco by this means. I had a cargo of fish-eggs brought from California to Chicago in a perfect condition. Another method is the *hard-frozen* process. You use a freezing mixture of salt and ice powdered fine, this mixture producing a temperature of 20° above zero, which can be kept up just as long as the occasion requires, by keeping up the supply of ice and salt.

Q. How big is the refrigerator?—A. There is no limit to the size that may be used. They are made of enormous size for the purpose of preserving salmon, and in New York they keep all kinds of fish.

Q. Now, to come to a practical question, is this a mere matter of theory or of possible use. For instance, could this method be adapted to the preservation of bait for three or four months, if necessary?—A. The only question, of course, is as to the extent. There is no question at all that bait of any kind can be kept indefinitely by that process. I do not think there would be the slightest difficulty in building a refrigerator on any ordinary fishing-vessel, cod or halibut, or other fishing-vessel, that should keep with perfect ease all the bait necessary for a long voyage. I have made some inquiries as to the amount of ice, and I am informed by Mr. Blackford, of New York, who is one of the largest operators of this mode, that to keep a room ten feet each way, or a thousand cubic feet, at a temperature of 20° above zero, would require about two thousand pounds of ice and two bushels of salt per week. With that he thinks it could be done without any difficulty. Well, an ordinary vessel would require about seventy-five barrels of bait, an ordinary trawling-vessel. That would occupy a bulk something less than six hundred feet, so that probably four and a half tons of ice a month would keep that fish. And it must be remembered that his estimate was for keeping fish in midsummer in New York. The fishing-vessels would require a smaller expenditure of ice, as these vessels would be surrounded by a colder temperature. A stock of ten to twenty tons would, in all probability, be amply sufficient both to replace the waste by melting and to preserve the bait.

Q. Have you any doubt that some method like that will be put into immediate and successful use, if there is sufficient call for it?—A. I have no doubt the experiment will be tried within a twelvemonth. Another method of preserving is by drying. Squid, for instance, and clams, and a great many other kinds of bait can be dried without using any appreciable chemical, and can be readily softened in water. I noticed lately in a Newfoundland paper a paragraph recommending that in view of the fact that the squid are found there for a limited period of time, the people should go into the industry of drying squid for bait, so that it would always be available for the purpose of cod-fishing. I think the suggestion is an excellent one, and I have no doubt it will be carried out.

Q. Now, what is the supply of bait for codfish on the American coast?—A. Well, as the codfish eats everything, there is a pretty abundant stock to call upon. Of course, the bait-fish are abundant, the menhaden and herring. The only bait-fish that is not found is the caplin. The herring is very abundant on the American coast, and the alewives enormously abundant. Squid are very abundant of two or three species, and, of course, clams of various kinds. Then we have one shell-fish that we possess. It is never used here, although it is very abundant, but it is almost exclusively the bait for trawling on the coast of Great Britain. This shell is known as the whelp or winkle.

Q. From all you have learned, have you any doubt that, supposing the fishermen of the United States were precluded from using any bait except what could be got upon their own coast, they could obtain a sufficient supply there?—A. Well, unless the American fishery should be expanded to very enormous limits, far in excess of what it is now, I can't see that there would be any difficulty.

That is, of course, not very material, because it only goes to the point that we are not dependent upon catching bait within three miles of the British coast, anywhere. We have ways of using salt bait, and the use of all these scientific methods of preserving bait, which will, no doubt, be resorted to and experimented upon, and we may be quite certain that they will, in skillful hands, succeed. Nothing further upon that point need be considered by your honors.

I now call your attention to mackerel. It is a word that we have heard before. It is a word that we have become familiar with, and one

which I hope we shall not view with disgust or distaste for its frequency when we shall have left this hospitable coast, and scattered ourselves to our far distant homes.

The mackerel, may it please your honors, is a deep-sea fish. He does not lurk about anybody's premises. He does not live close into the shore. He is a fish to whose existence and to whose movements a mysterious importance is attached. A certain season of the year he is not to be seen, and at other times they are so thick upon the waters that, as one of the most moderate of the British witnesses said, you might walk upon them with snow-shoes, I believe it was from East Point to North Cape. I do not know that I have got the geography quite right, but it is something like that.

Mr. THOMSON. You are only sixty miles out of the way.

Mr. DANA. Well, that is not very far for such tales as these. Still, the story is as improbable with the limitation that my learned friend puts on it as it was in the way I put it. However, I do not doubt that the number is extraordinary at times, and at other times they are not to be seen. We do not know much about them. We know they disappear from the waters of our whole coast, from Labrador down to the extreme southerly coast, and then at the early opening of the spring they reappear in great numbers, armies of them. They can no more be counted than the sand of the sea, and are as little likely to be diminished in number. They come from the deep sea, or deep mud, and they reappear in these vast masses, and for a few months they spread themselves all over these seas. A few of them are caught, but very few in proportion to the whole number, and then they recede again. Their power of multiplication is very great indeed. I forget what Professor Baird told us, but it is very great indeed. Methods have been taken to preserve their spawn, that it may be secured against the peril of destruction by other fish and the perils of the sea. They are specially to be found upon the banks of the Gulf of St. Lawrence, the Bradelle or Bradley Banks, the Orphan, Miscou, Green, Fisherman's Bank, and off the coast of Prince Edward Island, and especially, more than anywhere else, about the Magdalen Islands; and in the autumn, as they are passing down to their uncertain and unknown homes, they are to be found in great numbers directly off the western coast of Cape Breton, near the highlands opposite the group of Margaree Islands, and near Port Hood; but in the main they are not to be found all over the deep sea of the Gulf of St. Lawrence. The Gulf of St. Lawrence is full of ledges, banks, and eddies formed by meeting tides, which Professor Hind described to us, and there the mackerel are especially gathered together. The map drawn on the British side, in the British interest, shows this enormous field for the mackerel fisheries, and though very few comparatively of the banks and ledges are put down, yet, in looking over this map, it seems as if it was a sort of great directory showing the abodes of the mackerel, and also the courses that the mackerel take in passing from one part of this great sea to another. There is hardly a place where mackerel-fishing grounds are not marked out here, and they are nearly all marked out at a considerable distance from the shore, all around the Magdalen Islands, for many miles, and at a distance from Prince Edward Island and on the various banks, ledges, and shoals that are to be found; and it is there, as I shall have the honor to point out to the court more particularly hereafter, that they have always been caught in the largest quantities, and the best of them, by American fishermen.

There are one or two experienced witnesses from Gloucester who have dealt with the subject carefully for their own interests, not testifying for

any particular purpose, but having kept their books and accounts and dealt with the mackerel in their own business, whose words I would like to recall to the attention of the court for a few moments.

Captain Maddocks, of Gloucester, on page 135 of the American Evidence, testifies as follows:

From my experience my judgment leads me to think that our vessels would get full as many, if not more, by staying outside of the three-mile range altogether. By going inshore *they may sometimes get a spurt of mackerel*, but they are then liable to go farther into the harbors and lose a good deal of time; whereas if they would fish farther off they would save a good deal of time. I think that for ten or twenty years back they might have caught, well, somewhere from a tenth to a fifteenth part of the mackerel within the three-mile range. I don't know but they have. I don't think anything more than a tenth part certainly.

Joseph O. Proctor, of Gloucester, on page 196, says:

From the best of my judgment, the knowledge I have where my vessels have been, and conversation with the masters of the vessels, I believe that not one-eighth of the mackerel have been caught within; I should say less, and I should not say more. It is nearer a tenth than an eighth.

Q. Do you know where the bulk is caught?—A. At the Magdalenes, or between the Magdalenes and Cheticamp.

Capt. Ezra Turner, of Gloucester, page 226, testifies:

Q. Have you ever fished off Prince Edward Island?—A. Yes; I have fished all round the east side, wherever anybody fished.

Q. Did you fish within three miles of the shore there?—A. No; it is a rare thing that ever you get mackerel within the three miles. When they come within three miles they rise in schools, and we never calculate to do much out of them; but from four to six and seven miles off is the common fishing-ground there.

The Commissioners will recollect the testimony of Mr. Myrick, an American merchant, who had established himself on Prince Edward Island. The inshore fishery, he said, is not suited to American vessels. Our vessels are large; they are built at a distance; they are manned by sixteen or seventeen men; they cost a great deal; they require large catches, and dealing with fish in large quantities; they deal at wholesale altogether, and not at retail. Retailing would ruin them. Anything short of large catches, large amounts, would be their end, and compel all the merchants to give up the business, or to take to boat-fishing, which, of course, Gloucester, or Massachusetts, or New England, or any part of the United States could not undertake to carry on here. It has been stated to the tribunal, by experienced men, as you cannot but remember, that our fishermen object to going very near shore in the Gulf of St. Lawrence. There are perils of weather connected with the coast which cannot be set aside by ridicule. Gloucester is a town full of widows and orphans, whose husbands and parents have laid their bones upon this coast, and upon its rocks and reefs, trusting too much to the appearance of fine weather, as we all did last night, waking up this morning in a tempest. Gloucester has tried to provide for these bereft people, by every fisherman voluntarily paying a small percentage of his earnings to constitute a widows' and orphans' fund. Even the tempestuous Magdalen Islands are safer for vessels than are the inshore coasts of those islands, where we are now permitted to fish; their harbors are poor, their entrances are shallowed by sand-bars, which are shifting, which shift with every very high wind, and sometimes with the season. They are well enough after you get inside of them, but they are dangerous to enter to persons inexperienced, dangerous to any by night; and if a vessel is caught near the shore by a wind blowing inshore, against which she cannot beat with sails, for none of them carry steam, then she is in immediate peril. They therefore give a wide berth to the inshore fisheries in the main. They resort to them only occasionally. They are not useful for fishing with our seines. We find that the

purse-seines are too deep; that they are cut by the ground, which is rocky; that it is impossible to shorten them without scaring the mackerel, which must be taken by seines run out a great distance, for they are very quick of sight, and very suspicious of man; and they soon find their way out of the seines, unless they are laid a considerable distance off.

We need not catch our mackerel bait, any more than our cod bait, within the three-mile limit. On the contrary, the best mackerel bait in the world is the menhaden, which we bring from New England. All admit that. The British witnesses say they would use it were it not that it is too costly. They have to buy it from American vessels; and they betake themselves to an inferior kind of bait when they cannot afford to buy the best bait from us. And another result is that the Americans have shown for many years that what are called the shore mackerel, that is, those that are caught off the coast of Massachusetts and several other of the New England States, are really better than the bay mackerel. The evidence of that is the market prices they bring. It is not a matter of opinion. We have not called as witnesses persons who have only tasted them, and might have prejudices or peculiar tastes, but we have shown the market value.

James H. Myrick, page 433 American Evidence, in answer to the question, "For a few years past, which have sold for the highest price, number ones from the bay or number ones from the American shore?" says, "O, their shore mackerel have been the best quality of fish."

Benjamin Maddocks, of Gloucester, page 134, says:

Q. Well, I take No. 1 then. How do those marked as No. 1 shore mackerel compare with those marked as No. 1 bay mackerel?—A. Well, the bay mackerel, at least I should say the shore mackerel, has been a great deal better than the bay mackerel the last seven or eight years.

Q. That is not simply an opinion, but the market prices are better? How much more do the No. 1 shore mackerel bring than the No. 1 bay mackerel?—A. Well, there has been \$7 or \$8 difference between them. I have seen the time when the bay mackerel was equal to our shore mackerel. It has not been for the last seven years.

It is also true, a matter of testimony and figures, that the American catch, the catch upon the American shore, is very large, and has increased, and is attracting more and more the attention of our people engaged in fishing, and it is only this year that the shore fishing proved to be unprofitable, and the confiding men who were led to send their vessels to a considerable extent, though not very great, into the gulf, by reason of the British advertisements scattered about Gloucester, have come away still more disappointed than they had been by the shore fishing, because they had employed more time and more capital than their catch compensated them for. There are some statistics which I will read, taken from a prominent and trustworthy man, as to the American catch. David W. Low, on page 358 of the American Evidence, states the figures as follows:

	Barrels.
1869.—194 vessels in gulf, average catch 109 barrels.....	40,546
151 vessels off shore, average catch 222 barrels.....	33,552
Mackerel caught by boats and some eastern vessels packed in Gloucester.....	19,028
Mackerel inspected in Gloucester.....	93,126
1875.—58 vessels in gulf, average catch 191 barrels.....	11,078
117 vessels American shore, average catch 409 barrels.....	47,853
	58,921

The average catch is based on the average catch of 84 vessels from 17 firms in 1869; and 28 vessels in bay and 62 vessels off American shore from 20 firms in 1875. These firms have done better than the rest.

The statistics of John H. Pew & Sons, put in by Charles H. Pew, p. 496, for the last seven years, from 1870 to 1876, inclusive, show that the total, for that time, of bay mackerel that their own vessels caught, amounted to \$77,995.22, and the shore mackerel for the same period was \$271,333.54. Your honors will recollect the statistics put in, which it is not necessary for us to transfer to our briefs, showing the exact state of the market on the subject of the proportion of American fish caught on the shores and the proportion caught in the bay.

We have introduced a large number of witnesses from Gloucester, and I think I take nothing to myself in saying that the greater part of them, those who profess to be engaged in the trade or business at all, were men of eminent respectability, and commended themselves to the respect of the tribunal before which they testified. You were struck, no doubt, with the carefulness of their book-keeping, and the philosophical system which they devised, by means of which each man could ascertain whether he was making or losing in different branches of his business; and as the skipper was often part owner, and usually many dealers managed for other persons, it became their duty to ascertain what was the gain or loss of each branch of their business. They brought forward and laid before you their statistics. They surprised a good many, and I know that the counsel on the other side manifested their surprise with some directness; but, may it please the court, when the matter came to be examined into, it assumed a different aspect. We made the counsel on the other side this offer. We said to them, "There is time enough, there are weeks, if you wish it, before you are obliged to put in your rebuttal; we will give you all the time you wish; send anybody to Gloucester you please, to examine the books of any merchants in Gloucester engaged in the fishing business, and ascertain for yourselves the state of the bay and shore fishing as it appears there." You say that bay fishing is as profitable as the shore fishing; that it has made a great and wealthy city of Gloucester, and you assume that it is owing to their having had, for the greater part of the time, a right to fish inshore. It would seem to follow from this reasoning that, whenever we lost the right to fish inshore, Gloucester must have receded in its importance, and come up again with the renewal of the privilege of inshore fishing. Nothing of that sort appears in the slightest degree. But they say "The bay fishing must be of great importance, because of the prosperity of Gloucester." Now, the people of Gloucester have no disposition to deny their prosperity, but it is of a different kind from what has been represented. Gloucester is a place altogether *sui generis*. I never saw a place like it. I think very few of your honors failed to form an opinion that it was a place well deserving of study and consideration. There is not a rich man idle, apparently, in the town of Gloucester.

The business of Gloucester cannot be carried on as mercantile business often is, by men who invest their capital in the business and leave it in the hands of other people to manage. It cannot be carried on as much of the mercantile business of the world is carried on, in a leisurely way, by those who have arrived at something like wealth who visit their counting-rooms at 10 o'clock in the morning and stay a few hours, and then go away to the club, return to their counting-rooms for a short time and then drive out in the enticing drives in the vicinity, and their day's work is over. It cannot be carried on as my friends in New Bedford used to carry on the whale fishery, where the gentlemen were at their counting-rooms a few months in the year, and when the off-season came they were at Washington, Saratoga, or wherever else they saw fit to go, and yet they were prosperous. No; the Gloucester

tradesmen are hard-working men, and they gain their wealth and prosperity on the terms of being hard-working men. The Gloucester merchants, if you see fit to call them so (they do not call themselves "merchants," but "fish-dealers"), are men who go to their counting-rooms early and stay late. If they go up to Boston on business, they take a very early train, breakfast before daylight, and return in season to do a day's work, though Boston is twenty-five or thirty miles distant. And when their vessels come in they are down upon the wharves, they stand by the large barges and they cull the mackerel with their own hands; they count them with their own hands; they turn them with their own hands into the barrels and cooper them, and scuttle the barrels, and put in the brine and pickle the fish and roll them into the proper places; and when they have a moment's leisure they will go to their counting-rooms and carry on their correspondence by telegraph and otherwise with all parts of the United States, and learn the value of these mackerel. They are ready to sell them to the buyers, who are another class of persons, or they are ready to keep and sell them in the larger market of Boston. By their patient industry, by their simple hard days' works, they have made Gloucester an important place; but they have not added much to the mackerel fishery of the United States. Gloucester has grown at the expense of every other fishing town in New England. We have laid before your honors, through Mr. Low, I think it was, or Mr. Babson, the statistics of the entire falling off of all the fishing towns of New England; those that had dealt in mackerel fishing.

Where are Plymouth, Barnstable, where Marblehead, which was known the world over as a fishing-town? There are no more fishing-vessels there. The people have all gone into the business of making shoes and other domestic manufactures. So with Beverly, so with Manchester, so with Newburyport, and so with the entire State of Maine, with the exception of a very few vessels on the coast. Two or three of the last witnesses gave us a most melancholy account of the entire falling off of fishing in Castine, Bucksport, and all up and down that bay and river, so that there is hardly any fishing left. When they were fishing-towns people employed their industry in it; their harbors were enlivened by the coming and going of fishing-schooners; and now there is an occasional weekly steamer or an occasional vessel there owned, but doing all its business in Boston or New York. But the fishing business of all the towns of New England, except the cod fishery of Provincetown and of the towns near, has concentrated in Gloucester. It seems to be a law that certain kinds of business, though carried on sparsely at periods, must be eventually concentrated. When they are concentrated they cannot be profitably carried on anywhere else. The result is, that the mackerel fishery and cod fishery, with the exception of the remote points of Cape Cod, have concentrated in Gloucester. There is the capital; there is the skill; there are the marine railways; there is that fishing insurance company, which they have devised from their own skill and experience, by which they insure themselves cheaper than any people in the world ever did insure themselves against marine risks; so much so, that merchants of Gloucester have told us that if they had to pay the rates that are paid in stock companies the fishing business could not be carried on by merchants who own their ships; the difference would be enough to turn the scale. Now, it appears to be the fact—I will not trouble your honors by going over the testimony to which every Gloucester man swore; it turns out to be the fact that the prosperity of Gloucester, while it has additional resources in its

granite, and as a sea-bathing place, has been owing mostly to the prudence and sagacity, the frugality and laboriousness of the men brought up as fishermen, who turn themselves into fish-dealers in middle life, and carry their experience into it; and it is only on those terms that Gloucester has become what it is. An attempt was made at Salem, under the best auspices, to carry on this business, with the best Gloucester fishermen, and most experienced men concerned in it, by a joint-stock company; but in the matter of deep-sea fishing, "the Everlasting" seems to have "fixed his canon" against its prosperity, except upon the terms of frugality and laboriousness. It never has succeeded otherwise, and scarce on those terms, except it be with the aid of a bounty from the government.

Now, we say that the whole bay-fishing for mackerel is made prosperous simply on those terms; that it is no treaty-gift that has created it, but it is the skill and industry of the fishermen, the capital invested by the owners, and the patient, constant labor and skill of the owners in dealing with their fish, after they are thrown upon their hands on the wharf, and they have paid their fishermen, that has given it any value in the market. I do not think it is worth while to speculate upon the question whether fish in the water have any money value. I can conceive that fish in a pond and that fish that cling to the shore, that have a habitat, a domicile, like shell-fish, have an actual value. They are sure to be found. It is nothing more than the application of mechanical means that brings them into your hands. But certainly it is true that the value of the free-swimming fish of the ocean, pursued by the deep-sea fishermen, with line or with net, must be rather metaphysical than actual. To pursue them requires an investment of capital; it requires risk and large insurance; it requires skill, and it requires patient labor; and when the fish is landed upon the deck, his value there, which is to be counted in cents rather than in dollars, is the result of all these things combined; and if any man can tell me what proportion of those cents or dollars which that fish is worth on the deck of the ship is owing to the fact that the fishermen had a right to try for him, I think he will have solved a problem little short of squaring the circle, and his name ought to go down to posterity. No political economist can do it. I will not say that the fish in the deep sea is worth *nothing*; but, at all events, the right to attempt to catch it is but a liberty, and the result depends upon the man.

If there can be no other fishery than the one which you have the privilege of resorting to, then it may be of great value to you to have that privilege. If there be but one moor where he can shoot, the person who is shooting for money, to sell the game that he takes, may be willing to pay a high price for the privilege. But recollect that the fishing for the free-swimming fish is over the whole ocean. The power of extending it a little nearer shore may be of some value, I do not say that it is not, but it strikes my mind as an absurd exaggeration, and as an utter fallacy, to attempt to reason from the market-value of the fish there caught, to the money-value of the privilege so extended. The fish are worth, I will say, \$12 a barrel; but what does that represent, when the American merchants, Hall and Myrick, both tell us that the value on the wharf at Prince Edward Island is about \$3.75 a barrel? Well, suppose the mackerel to be worth \$3.75 a barrel on the wharf at Prince Edward Island, what does that represent? Is that a thing which the United States is to pay Great Britain for? Has Great Britain sold us a barrel of pickled mackerel on the wharf? Has anybody done it? I think not. That represents the result of capital and of many branches

of labor. Then, if you ask, "What is the worth to Mr. Hall or Mr. Myrick of the mackerel on the deck of the vessel?" I say it is next to nothing. The fish will perish if he is not taken care of. Skill is to be used upon him, then; what costs money is to be used upon him, ice and pickle, and he is to be preserved. All this to the end that he may eventually, after a great deal of labor, skill, and capital, be sent to the market. But recollect that the vessel from whose deck he was caught cost \$8,000. Recollect that the men who maintain that crew and feed them, and enable them to clothe themselves and follow that pursuit, are paying out large sums of money. Recollect that the fisherman who catches the fish has, as the result of many years' labor, which may be called an investment, learned how to catch him; and it is by the combination of all these causes that at last the fish is landed. Now, in my judgment, it is purely fallacious to attempt to draw any inference from the market-value of the fish to the right to extend your pursuit of those animals nearer the coast than before, or to the market-value of any right to fish over a certain portion of the ocean, when all other oceans are open to you, and all other fisheries.

Your honors, of course, recollect that the mackerel fishery, taken at its best—I don't confine myself to the inshore fishery, I mean the mackerel fishery of the bay and gulf, at its best, the whole of it—is of a greatly decreasing and precarious value. I speak only of the salted mackerel that is sent into the United States. The lake fish are fast becoming a substitute for salt mackerel. I will call your honors' attention to two or three rather striking proofs which were not read previously by Judge Foster. Sylvanus Smith, of Gloucester, on page 336 of the American evidence, is asked:

Q. What causes have been in existence interfering with the sale of salt mackerel during the past few years?—A. I think there have been several causes. One is the facility of carrying our fresh fish into distant parts of the country. That has materially interfered with it. Then there is the lake herring; during the months of November and December until May they are very plenty. They are now used in very large quantities all throughout the West.

Q. What are lake herring?—A. A species of white fish, only smaller.

Q. What do they sell for per barrel?—A. This party I referred to, speaking of his trade, said that last year he used 30,000 packages. A package is a half barrel.

Q. How are these put up?—A. Pickled. And he told me they sold at \$2 a package. Q. You say they have interfered with the constancy of the demand?—A. I think during the months we used to depend very largely on the consumption of our mackerel, the lake herring has been one great cause for the decline during these months in the value of mackerel.

On page 468 Professor Baird testifies as follows:

Q. Have you any statistics respecting the lake fishery for the years 1876 and 1877?—A. I have only partial statistics for 1877. I published the statistics in detail in my report for 1872, and I am now having statistics for 1877 collected, and will have them, I suppose, by the end of the season.

Q. Eighteen hundred and seventy-two represents but faintly the present state of things. Can you tell us how it was in 1872?—A. In 1872 the American production of fish in the great lakes was 32,250,000 pounds. That quantity of fish was taken, but how much more I cannot say. Those were marketed in Buffalo, Cleveland, Chicago, and many other stations.

Q. Does that include the Canadian catch?—A. I presume there is no Canadian catch in that amount. Those are the figures as they were obtained by my agents from the fishermen and dealers.

Q. You obtained them from the dealers in the large cities?—A. Yes; and the fishermen at the grounds. This year I have had every station on the American side of the lakes visited and canvassed.

Q. You have steady communication with and reports from the dealers?—A. I have reports only when I send specially after them, as I did in 1872 and am doing this year.

Q. How far have you got in your inquiry for this year?—A. I have only a partial return for Chicago.

Q. What does that show?—A. The total marketing of salted fish in Chicago up to the middle of October amounted to 100,000 half-barrels, with about 20,000 half-barrels expected for the rest of the season, or equal to 60,000 barrels of those fish for Chicago alone for the present year. The corresponding supply of barrels of fish in 1872 were 12,000 in Chicago, so that the Chicago trade has increased from 12,600 in 1872 to 60,000 in 1877, or almost five fold—4%. The total catch of fish in the lakes in 1872 was 32,250,000 pounds. If the total catch has increased in the same ratio as that market has done at Chicago, it will give 156,000,000 pounds of fish taken on the American side of the lakes for the present year.

Then there are other fresh fish that are taking the place of the salt mackerel. The question is not between British mackerel and American mackerel, but it is between mackerel and everything else that can be eaten; because, if mackerel rise in market price, and in the cost of catching, people will betake themselves to other articles of food. There is no necessity for their eating mackerel. The mackerel lives in the market only upon the terms that it can be cheaply furnished. This tribunal will recollect that interesting witness, Mr. Ashby, from Noank, Conn.; how enthusiastic he was over the large halibut that he caught; how his eyes gleamed, and his countenance lightened, when he told your honors the weight of that halibut, the sensation produced in Fulton market when he brought him there, and the very homely, but really lucid way in which he described the superior manner by which they were able to preserve those fish in ice, and the way they were brought into market; and how the whole horizon was dotted with vessels fishing for halibut, and other fish there, with which to supply the great and increasing demand in the New York market. There is also the testimony of Professor Baird, who speaks of various kinds of fish. It is not worth while to enumerate them all, but he speaks especially of a fish known as "mullet," on the Southern coast. So long as slavery existed, it is undoubtedly true that there was very little enterprise in this direction. It suffered like every thing else, but cotton, rice and sugar, staples which could be cultivated easily by slave labor. Almost every other form of agriculture, almost all kinds of maritime labor, ceased. The truth was, the slaves could not be trusted in boats. The boats would be likely to head off from South Carolina or Virginia, and not be seen again. The vessels that went to the ports of the slave States were Northern vessels, owned and manned by Northern people. Southern people could not carry on commerce with their slaves, nor fishing with their slaves. That system being now abolished, the fisheries of the Southern States are to be developed. The negro will fish for himself. He will have no motive for running away from his own profits. The result has been that this mullet has come into very considerable importance. Professor Baird has his statistics concerning it, and he has certainly a very strong opinion that that fish is in danger of excluding salted mackerel from the Southern markets (indeed it is almost excluded now), and that it will work its way up to the Northern markets. Some of the Southern people think very highly of it, as the best kind of fish, think it has not its superior in the ocean; but, supposing that to be local exaggeration and patriotic enthusiasm, yet certainly it is a useful and valuable fish, and the demand for it is rapidly increasing. Professor Baird says, on page 460, that one million barrels of mullet could be furnished annually from the south shore off Chesapeake Bay to the south-end of Florida, if they were called for.

Q. How far has the mullet come into the market now?—A. The mullet does not come into the Northern market at all, but in the North Carolina, South Carolina, and Georgia, it fills the markets at the present time, excluding other kinds of imported fish. In former years there was a great demand for herring and mackerel, but the mullet is supplying the markets, because they are sold fresher and supplied at a much lower

price, and they are considered by the Southern people a much superior article of food.

Q. Is it preferred to mackerel as a salted fish?—A. The persons familiar with mackerel and with mullet from whom I have made inquiries (I have never tasted salt mullet) give the preference to mullet. It is a fatter, sweeter, and better fish, and of rather larger size. They grade up to 90 to a barrel of 200 pounds, and go down to three-quarters of a pound, and as a salt fish the preference is given by all from whom I have inquired, to the mullet.

Q. Do you think the failure of the mackerel market in the Southern and Southwestern States is largely attributable to the introduction of mullet?—A. I cannot say that, but I imagine it must have a very decided influence.

Q. Can the mullet be caught as easy as mackerel?—A. More easily. It is entirely a shore fish, and is taken with seines hauled up on the banks by men who have no capital, but who are able to command a row boat with which to lay out their seines, and they sometimes catch 100 barrels a day per man, and sometimes as many as 500 barrels have been taken at a single haul. The capital is only the boat, the seine 100 or 200 yards long, the salt necessary for preserving the fish, and splitting boards and barrels.

Q. Can pounds be used?—A. They have not been used, and I doubt whether they could be used; pounds are not available in the sandy regions of the South.

Q. They are taken by seining?—A. Yes, seines can be used. This work is entirely prosecuted by natives of the coast, and about two-thirds of the coast population are employed in the capture of those fish.

Q. Then the business has grown very much?—A. It has grown very rapidly.

Q. When was it first known to you as a fish for the market?—A. I never knew anything about it until 1872.

Q. Then it has been known during only five years?—A. I cannot say; it has been known to me that length of time.

Q. During that time the business has very much increased?—A. I am so informed; I cannot speak personally. All my information of it is from reports made to me in replies to circulars issued in 1872 and 1873. I have not issued a mullet circular since that time, when I issued a special circular asking information regarding the mullet.

Q. Then it is your opinion that the mullet has become, to some extent, and will become an important source of food-supply?—A. It is destined, I suppose, to be a very formidable rival and competitor of the mackerel. I know, in 1872, a single county in North Carolina put up 70,000 barrels of mullet, a single county out of five States covering the mullet region.

Your honors will recollect, as a striking illustration of the truth or the power of propagation, the statement of Professor Baird in regard to the River Potomac, where a few black bass, some half dozen, were put into the river, and in the course of a few years they were abundant enough to supply the market. Fish culture has become a very important matter, and what we call in New England our "ponds," small lakes, and rivers, are guarded and protected, and every dam built across any river where anadromous, or upward-going fish, are to be found, has always a way for their ascent and descent; so that everything is done to increase the quantity, kind, and value of all that sort of fish, making the salted mackerel less important to the people and in the market.

Then the improved methods of preserving fish are astonishing. I think the evidence on that point was principally from Professor Baird, who has described to us the various methods by which fish, as well as bait, may be preserved. He told us that for months, during the hottest part of the exhibition season at Philadelphia, during our Centennial year, fish were kept by these improved chemical methods of drying, and methods of freezing, so that after months the Commissioners ate the fish and found them very good eating. There was no objection whatever to them, although, of course, they were not quite as good as when they were entirely fresh. So that all science seems to be working in favor of distribution, instead of concentration, of what is valuable for human consumption; and the longer we live and the more science advances the less can any one nation say to the fishermen of another, Thus far and no farther. We turn upon such an attempt at once and say, "Very well; if you choose to establish your line of exclusion, do it. If you

choose to throw all open, do so. We prefer the latter as the generous, the more peaceful, and safe method for both parties. If you prefer the former, take the expense of it, take the risk of it, take the ignominy of it. If you give it up, and it costs you anything to do so, we will pay you what it is worth to us."

I certainly hope that after our offer to open the books of any merchant in Gloucester, or any number of merchants, to the other side, it will not be said that we have selected our witnesses. The witnesses that we brought here, both fishermen and owners, said that the bay fishery was dying out. They show it by their own statistics, and the statistics of the town of Gloucester show how few vessels are now engaged in the bay fishery; that they are confining their attention to cod-fishing and shore fishing, and fishing with nets and seines.

We did not bring the bankrupt fish-dealers from Gloucester, the men who have lost by attempting to carry on these bay fisheries, as we might have done. We did not bring those who had found all fishing unprofitable, and had moved away from Gloucester, and tried their hand upon other kinds of business. We brought, on the other hand, the most prosperous men in Gloucester. We brought those men who had made the most out of the fisheries, the men who had grown richest upon them, and we exhibited their books; and as we could not bring up all the account-books of Gloucester to this tribunal, we besought the other side to go down, or send down a commission, and examine them for themselves. We did not ask them to examine the books of the men who had become bankrupt in the business, but the books of those who had been prosperous in the business; and after that, I certainly think we have a right to say that we have turned Gloucester inside out before this tribunal, with the result of showing that the bay fishing has gradually and steadily diminished, that the inshore fishery is unprofitable, that the bay fishery has been made a means of support only to the most skillful, and by those laborious and frugal methods which I have before described to this tribunal.

At this point Mr. Dana suspended his argument, and the Commission adjourned until Saturday at noon.

SATURDAY, November 10, 1877.

The Commission met at 12 o'clock, and Mr. Dana continued his argument.

May it please your Excellency and your Honors :

We are met to-day, the seventieth of our session, to hear what may be said by me in behalf of the United States, closing the argument in our favor, a post which, by the kindness and partiality of my associates, has been assigned to me. While without, all is cheerless and wintry, we have within the bright beams of friendly, and, if not sympathizing, at least, interested countenances. I feel most painfully that, having the last word to say for my country, I may omit something that I ought to have said; or, perhaps, which is quite as bad, that I may say more or other than I might well have said. Yet the duty is to be performed.

I have no instructions from my country, gentlemen of the Commission, and no expectation from its government, that I will attempt to depreciate the value of anything that we receive. We are not to go away like the buyer in the Scriptures, saying, "It is nought; it is nought"; but we have referred to a Commission, which will stand neutral and impartial, to determine for us; and no proclamations of opinion, however loud, will have any effect upon that Commission. My country stands

ready to pay anything that this Commission may say it ought to pay, as I have no doubt Great Britain stands content, if you shall be obliged to say what we think, in our own judgment, you should say, that you cannot see in this extension, along the fringes of a great garment, of our right to fish over portions of this region, anything which equals the money value that the British Dominion and Provinces certainly receive from an obligation on our part to lay no duties whatever upon their importations of fish and fish-oil. But while we are not here to depreciate anything, it is our duty to see to it that no extravagant demands shall pass unchallenged, to meet evidence with evidence, and argument with argument, fairly before a tribunal competent and able. We do not mean that our side shall suffer at all from too great depreciation of the evidence and arguments of the counsel for the Crown, as we feel quite sure that the cause of the Crown has suffered from the extravagant demands with which its case has been opened, and the extravagant and promiscuous kind of evidence, of all sorts of damages, losses, and injuries which it saw fit to gather and bring before this tribunal, from the fisherman who thought that his wife had been frightened and his poultry-yard robbed by a few American fishermen out upon a lark, to the minister of marine and fisheries of the Dominion, with his innumerable light-houses and buoys and improved harbors. We are to meet argument with argument, evidence with evidence, upon the single question submitted, and that is, as I have had the honor to state before, "Is there a money value in this extension of our right, or rather this withdrawal of the claim of exclusion on the part of Great Britain, greater than the value which Great Britain certainly receives from our guarantee that we will lay no duties whatever upon her fish and fish-oil?"

Now, may it please your excellency, the question is not whether two dollars a barrel on mackerel and one dollar a barrel on herring is prohibitory, because we had a right, before making this treaty, to lay duties that should be prohibitory, if those were not. If two dollars were not, we could lay as much as we pleased, so that it would be an imperfect consideration of this case, it has been all along an imperfect consideration of this case, to ask the question whether two dollars a barrel is prohibitory, whether two dollars a barrel on mackerel or one dollar a barrel on herring can be overcome by any commercial method or enterprise of the Dominion and the provinces. The question has been between the right to be secured against laying duties indefinitely, on the part of the United States, on the one hand, and this extension of the right of fishing a little nearer to the shores, on the other. We could, if we saw fit, make a kind of self adjusting tariff, that whenever fish rose above a certain price, then the Dominion and Canadian fish might be admitted, and otherwise not; or we could hold it in our hands, and legislate from day to day as we saw fit. Before leaving this question of the money value of the withdrawal of the claim, of exclusion from a portion of this coast by Great Britain, I must take the liberty to repeat to this court, that I may be sure that it does not escape their fullest attention, that the right to exclude us, independent of the Treaty of 1818, we do not and never have acknowledged; and by the Treaty of 1818 we arranged it as a compromise on a disputed question. That claim to exclude is contested, difficult of interpretation, expensive, and dangerous. The geographical limit is not easily determined; in respect to bays and harbors, it is entirely undetermined, and apparently must remain so, each case being a case a good deal *sui generis*, and the meaning and extent of the power and authority which goes with that geographical extension beyond the shore, whatever it may be, is all the

more uncertain und undetermined. Under the Treaty of 1818, my country certainly did agree that she would not fish nor assert the claim to the right of fishing within three miles of a certain portion of this great bay. Great Britain, by the Treaty of 1871, has withdrawn all claims to exclude us from that portion, and we agreed that if there is any pecuniary value in that beyond the pecuniary value of what we yield, we stand ready to make the requisite compensation. It is extremely difficult, certainly to my mind, and I cannot but think, from conversation and reading, that it must be to others, to determine the pecuniary value of a mere faculty, as we may call it, a faculty according to the Roman law, a liberty, perhaps, of endeavoring to catch the free swimming fish of the ocean. What is its pecuniary value? How is it to be assessed and determined? Why, it is not to be assessed or determined by the amount of fish actually caught. That may be very small, or may be very large. The market value may be raised or decreased by accident; a war may so cut us off from making use of the privilege, that we should take nothing. It does not follow, therefore, that we are to pay nothing. Some cause, some accident, some mistake of judgment may send a very large fleet here, at a very great expense of men and money; we may make a very large catch, more than we can dispose of, but the pecuniary value of that catch is no test of the value of the liberty of trying to catch the fish. Then, what is the test? Is the use made, a test? Although, at first glance, it might seem that that was scarcely a test; yet I think that, on the whole, in the long run, if you have a sufficient period of time to form a fair judgment, if your judgment is based upon the use made by persons who are acting for their own interest in a large market, then you may form some judgment from the use actually made. This case has been likened by the counsel for the Crown to one where an individual has hired a farm, and on the farm there is a house or dwelling, and he has not used it. Of course he has to pay for it, whether he uses it or not. It is at his disposal; it belongs there; it is fixed there, and he may enter it when he pleases, and it is of no account whether he does use it or does not. But if the question was, whether a certain region of a city and the buildings thereon were of real value or not, and it was brought up as an argument against them, that they were not wholesome and not habitable, certainly the fact that in the market for a long period of years, purchasers or tenants could not be found, would be a very strong argument against their value.

Now, with reference to these fisheries, what is the value of the mere faculty or liberty of going over these fishing-grounds, and throwing overboard your costly bait, and embarking your industry, capital, and skill in the attempt to catch the fish? We venture to say that we have had many years of experience, and that there have been long periods of time when those fisheries have been opened to us, and they have been closed for short periods of time; that from 1871 down to the present time we have had a fair test; and when we show, by undisputed testimony, that the citizens of the United States, during long periods of time, and as a result of long experience, have come to the conclusion that they are not of sufficient value to warrant them, as merchants and as men acting for their own interests, to make much use of them, I submit that we have brought before the tribunal a perfectly fair argument and a very valuable test, because it is not what one man will do with one house; it is not what one ship-master or one ship-owner may fancy about the inshore or the offshore fisheries; but it is a question of what a large number of men, acting for their own interests, in a very large market, full of competition, will do. If, on inquiring into the state of

that market, and the conduct of such men, who cannot be governed by any peculiar and special motive bearing upon the case, we have produced a fair and influential consideration, we claim that that is entitled to its fair weight. You might well say, perhaps, of one fisherman of Gloucester, or of two, that so deep was their hostility to the British provinces that they would be willing to abstain from using these fisheries, just for the purpose of reducing the amount that this tribunal might find itself called upon to adjudge. But if there should be one such man so endowed with disinterested malice, I am quite certain that this tribunal will not believe so of the entire fishing community of buyers and sellers, fishermen and merchants, acting for a series of years, in view of their own interests. If, therefore, we have shown, as we certainly have, that the use of this bay fishery, as an entirety, the whole of it, deep-sea and inshore alike, has steadily diminished in market value, that our ship-owners are withdrawing their vessels from it, that fewer and fewer are sent here every year, and that they have said, man after man, that they do not value the extension of the territorial privilege, where that extension is always inshore, bringing them into more dangerous and less profitable regions; that being the case, we ask your honors to consider all this as fair proof of the slight value which is actually put, by business men, acting in their own interests, upon what has been conceded to us.

Now, what is this that has been conceded to us, or, rather, what is this claim of exclusion from which Great Britain has agreed to withdraw herself during the period of this treaty? What is the privilege? It is the privilege of trying to catch fish within that limit. That is all it is. All attempt to measure it by the value of the fish in barrels brought into the United States is perfectly futile and fallacious. A barrel of fish salted and coopered and standing on the wharf in Gloucester represents something very different from the value of a right to cross over a portion of the seas and attempt to catch the fish. It represents capital; it represents the interest on a vessel costing \$8,000; it represents the interest upon the whole outlay of a permanent character, and it represents the absolute cost of all the outlay which is of a perishable character; it represents the wages of skilled labor; it represents mercantile capacity; and if you eliminate from the value of the mackerel standing upon the wharf at Gloucester all these elements, and turn me back to the mere fact that there was some mackerel, more or less, thin, meager, fat, or heavy, as we please, to be found by the diligent and skillful mariner within that little fringe of this great garment, what do you show me at all by which I can estimate its value? And that is the whole of it. Furthermore, if you take, instead of that, the value of the mackerel as it stands upon the wharf at Prince Edward Island, soon after it is caught, \$3.75, that represents, again, the interest on the cost of the ship, and all the outfit and all the labor, and all the skill, and all the risk. Eliminate them, and what have you left? You have nothing left but the right or liberty to do something within certain limits; and that right is one, any attempt to exclude us from which is very dangerous, uncertain, and precarious. I do not know what to liken it to. It certainly is not to be compared at all to a lease, because the lessor furnishes everything that the lease requires. Now, if, in company with this privilege, Great Britain had furnished the fish, so that we should not have to employ vessels, or men, or skill, or labor, or industry, furnished them to us on the wharf at Prince Edward Island, then there might be some analogy between that and a lease. What is it like? Is it like the value of a privilege to practice law? Not quite, because there always will be lawsuits, but it is not sure that

there always will be mackerel. Suitors, irritated men, may be meshed within the seine which the privileged lawyer may cast out; but it does not follow that the mackerel can be. On the contrary, they are so shrewd and so sharp that our fishermen tell us that they cannot use a seine within their sight; that they will escape from it. But the lawyer is so confident in the eagerness of the client for a lawsuit, that, instead of concealing himself, and taking him unawares, he advertises himself and has a sign of his place of business. Suppose we were to compare it to the case of a lawyer who had a general license to practice law in all parts of a great city, but not a monopoly. Everybody else had the same right; but he was excluded from taking part in cases which should arise in a certain suburb of that city, not the best, not the richest, not the most business-like, and which had alwyers of its own living there, accustomed to the people, who maintained the right to conduct all the lawsuits that might arise in that district. What would it be worth to a lawyer who had the whole city for the field of labor, plenty to do, to have his right extended into that suburb? What would it be worth if that suburb was an indefinable one, not bounded by streets, but by some moral description, about which there would be an eternal dispute, and about which the lawyer might be in constant trouble with the policeman? What would be its value? Who can tell? Or a physician or merchant? Suppose a merchant is asked to pay for a license to buy and sell, to keep a retailer's shop; everybody else has the same right that he has, and half the people are doing it without any license; but he is asked to pay for a license. What is it worth to him? Why, not much, at best. But suppose that the license was confined to the right to deal in Newfoundland herring. While everybody else could deal with other fish, his license extended his trade to Newfoundland herring alone. Why, his answer would be, "There are plenty of herring from other places that I can deal with. There is a large catch in the gulf; there is a large catch on the Labrador shore; and what is it worth to me, with my hands full of business, to be able to extend it a little farther, and include the dealing with this particular kind of fish?"

None of the analogies seem to me to hold. Your honors can do nothing else than first to look at the practical result in the hands of business men; and the result is this: To those who live upon the shore and can go out day after day, and return at night, in small boats, investing but little capital, going out whenever they see the mackerel, and not otherwise, and coming back to finish a day's work upon their farms—to them it is profitable, for almost all they do is profit; but to those who come from a distance, requiring a week or a fortnight to make the passage, in large vessels, which the nature of the climate and of the seas requires should be large and strong, and well manned, who have the deep sea before them, and innumerable banks and shoals, where they can fish—to them the right to fish a little nearer inshore is of very much less value. That is the position of the American; the other is the position of the Englishman. And the fact that we have steadily withdrawn more and more from that branch of the business is a proof that it is of little value.

Then, beyond that, I suppose, you must make some kind of estimate, for I am not going to argue that the faculty is of no value. I suppose the right to extend our fisheries so far is of some value. I can find no fair test of it. But recollect, Mr. President and gentlemen, as I say again, that it is but a faculty, which would be utterly useless in the hands of some people. Why, it has been found utterly useless in the hands of the inhabitants of this Dominion. What did they do with it until they took to their day and night boat fishing? What has become

of their fishing-vessels? Gone! The whole inshore and outshore fishery became of no value to them, until they substituted this boat-fishing, which we cannot enter into. Then, having before you this very abstract right or faculty, obliged to disconnect from it everything except this—that it is an extension of the field over which we had a right to work—you can get nothing, I think, upon which you can cast a valuation. Nor is it strictly analogous to a field for labor, because a field for labor is a specific thing. When you buy it, you know what it will produce; and if you sow certain seed, you will get certain results; and then, having deducted the value of your labor, and skill, and industry, and capital, and allowed yourself interest, the residue, if any, is profit. That depends upon the nature of the soil with which you have been dealing. But nothing of that sort can be predicated of the free-swimming fish. They are here to-day and there to-morrow; they have no habitat; they are nobody's property, and nobody can grant them.
